Tea.—Business for the past week has been fairly brisk, settlements rather exceeding 4,000 piculs. Prices still continue to rule rather irregularly and precise quotations at the present juncture are impossible.

Second crop picking may be expected in bulk in course of the current month, some few lots having already come in; the general opinion of native dealers is that the yield of the tea crop this season for all Japan will equal if not exceed that of last season.

We have no sailing craft departures to report: the *Stillman B. Allen*, *Mora*, and *Annie Braginton* are on the berth loading on terms formerly stated, and the *Walton* is daily expected from Kobe to fill up here for New York.

Common	None.	Fine	$37 00 to 40.00
Good Common	$27.00 to 30 00	Finest	41 00 to 45 00
Medium	31.00 to 34 00	Choice	46.00 to 50 00
Good Medium	34.50 to 36 00		[in small supply.

EXCHANGE AND BULLION.

Exchange.—During the past week there has been scarcely anything doing. Rates looking somewhat easy for private paper, first class credits having found buyers at 4 2½, and for francs at 5.34 to 3 4½.

Gold Yen continue scarce, some small parcels have been placed at 410.60 to 411.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2d¼. to ⅜	On Hongkong Bank Bills on demand	¼ per cent. pre.
„ „ Sight	4s. 1¼d.	„ „ Private Bills 10 ds. sight	⅛ „ dist.

NORTON'S PATENT "ABYSSINIAN" TUBE WELLS.

THESE celebrated Tube Wells, of which many thousands are in use throughout the world, are the most rapid, simple, and economical means of obtaining water, from the wants of a cottage to supplies of upwards of a million gallons a day. In use at Bass's, Allsopp's and other large Breweries.

Full printed directions are furnished with the Driving Tackle, which any ordinary workman can manage. The average time required to drive a Well is *one to six hours.*

LE GRAND & SUTCLIFF,

Proprietors of Letters Patent,

3, Talbot Court, Gracechurch Street, and Magdala Works, Bunhill Row,

LONDON.

March 27, 1875. 12m. 1f.

CROSSE & BLACKWELL'S

CELEBRATED OILMEN'S STORES.

ALL OF SUPERIOR QUALITY.

PICKLES, SAUCES, SYRUPS.
JAMS, IN TINS AND JARS.
ORANGE MARMALADE, TART FRUITS, DESSERT FRUITS
PONCONS, LISBON APRICOTS AND PEACHES.
MUSTARD, VINEGAR
FRUITS IN BRANDY AND NOYEAU.
POTTED MEATS AND FISH.
FRESH SALMON, OYSTERS AND HERRINGS.
KIPPERED SALMON AND HERRINGS.
HERRINGS A LA SARDINE.
PICKLED SALMON.
YARMOUTH BLOATERS.
BLACKWALL WHITEBAIT.
FRESH AND FINDON HADDOCKS.
PURE SALAD OIL.
SOUPS IN PINT AND QUART TINS.
PRESERVED MEATS IN TINS.
PEAS, CARROTS, BEANS AND OTHER VEGETABLES
PRESERVED HAMS AND CHEESE.
PRESERVED BACON.
OXFORD AND CAMBRIDGE SAUSAGES.
BOLOGNA SAUSAGES.
YORKSHIRE GAME PATES.
YORKSHIRE PORK PATES.
TONGUES, GAME, POULTRY.
PLUM PUDDINGS.
LEA AND PERRINS' "WORCESTERSHIRE SAUCE."

Fresh supplies of the above and numerous other table delicacies may always be had from every Storekeeper.

CAUTION.

To prevent the fraud of refilling the bottles or jars with native productions, they should *invariably be destroyed* when empty. Goods should always be examined upon delivery, to detect any attempt at substitution of articles of inferior brands.

Every Cork is branded with Crosse & Blackwell's name.

CROSSE & BLACKWELL,

PURVEYORS TO THE QUEEN.

SOHO SQUARE, LONDON.

At the Paris Exhibition of 1867, THREE Prize Medals, and at Vienna 1873, Two Grand Medals were awarded to CROSSE & BLACKWELL, for the marked superiority of their productions.

June 5, 1875. 1f. 12ms.

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d, 10d., 1s., 1s. 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s, 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s. 15s, and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 26.] YOKOHAMA, SATURDAY, JUNE 26, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The native Press is much exercised by its exclusion from the Assembly of provincial officials. The Government is fearful that the reports of the sittings given by the Press will contain mistakes. The Press pleads on the other side that as its business is to be the eyes and ears of the nation, its reports are more likely to be correct than those given by any other persons.

The Press is clearly in the right as a question of common sense. The competition among the newspapers will tend to ensure accuracy, and any corrections of errors, (which will undoubtedly occur at first,) can easily be made in the newspapers in which such errors have appeared. The possibility or even certainty of such errors occurring is not a sufficient reason for excluding the Press. If we look back to our own history we see that the reason for forbidding the publication of parliamentary debates was the danger of the displeasure of the Crown which the members incurred by their free speech. A man might be sent to the Tower for upholding popular rights and discharging the most sacred duty of his conscience. All these dangers have now passed away, and the laws regarding the publication of the parliamentary debates have been gradually relaxed until in the present session the whole matter has been or is being settled in a manner entirely in harmony with the relations existing between Parliament and the Press on one side, and the Press and the people on the other. In this country there are no such dangers to the members of this assembly of the provincial officials as those against which our own members of Parliament were so wise as to guard themselves. Let the Government interfere as little as possible in the whole affair, and trust for the correctness of the reports by the Press to its own self-interest. It is certain that the political education of the people must be one of the objects aimed at by the Government, and this will be promoted by the course we advocate.

As we have said elsewhere, the dread of something like flippancy and ridicule on the part of the newspapers has probably dictated the exclusion of the Press. The feeling is not unnatural; but one of the first things to be learnt by public men is to disregard ridicule. A man can no more exercise his reason if in constant dread of ridicule than he can enjoy life if in constant fear of death. There is no more important principle to inculcate into the minds of men who are to occupy public positions than a firm resistance to all encroachments of annoyance or fear from this source. The clever article on the whole subject from the *Nichi Nichi Shimbun*, a translation of which will be found elsewhere, is practically unanswerable. In these days, when great assemblies are convoked in a country where a Press exists, any shrinking from publicity is not to be thought of twice. Publicity is as sun-light and fresh bracing air to men accustomed to artificial light and a close enervating atmosphere. The plunge from the one to the other brings a shiver or two at first, but in a very short time the invigorating effects are apparent in a thousand improvements both mental and moral.

THE *Nichi Nichi Shimbun* says that the Assembly of Local Authorities went into Committee yesterday on the Police Bill. Kauda the *Kenrei* of Hiogo, and Chairman of the Committee, took the Chair. There was some complaint that each member had not been furnished with a copy of the Bill, there being only one copy for each section of the Assembly. There was some excitement caused by the discovery of some errors of account and other mistakes in the Bill, and the members expressed their dissatisfaction strongly both with the mistakes and the scant number of copies supplied. They, at last, refused to proceed any further till the errors were corrected and a printed copy supplied to each member, and immediately adjourned till this could be done.

The proceedings in the case of Regina *v.* King commented upon in our leading columns of last week continue to occupy the attention of all classes of the public, but specially those whose thoughtfulness and intelligence qualify them to deal with it on broad grounds. The result of the trial is a feeling of profound dissatisfaction, and we think it right to record this Not the slightest confidence is reposed in the constitution of the tribunal, which, though not impeached as irregular according to the Order in Council, shows the state in which that Order is in some respects. If there is any means by which a fresh trial could be obtained, whether by any clause in the Order, by petition or otherwise, we trust that it may be availed of to this most important end. The question of King's guilt or innocence we refuse to discuss. The sense most wounded is that which Englishmen have of their rights to trial by jury. If King had been found guilty of the offence imputed to him by a jury charged by a professional Judge, not a word would be said. All the discussion of the subject which we have heard proves to us that there is no desire to screen a guilty man, if proved to be guilty. There is not a shadow of *pro*-English or *anti*-Japanese feeling in it. A strong wish for justice and fairness pervades the views of all who are most earnest in the matter. But nothing can be more marked and profound than their dissatisfaction with the proceedings—a feeling in which we entirely sympathize with them.

A native who has recently returned from the province of Shinshiu writes to the *Nisshin Shinjisshi* that the crops of tea, wheat and other cereals in the provinces of Shinshiu and Kôshiu are highly satisfactory. The condition of the silk-worms is reported to be good, but the growers have decided upon limiting their production of both silk and grain in consequence of the unfavourable results of last year.

We have been requested to state that the report, published in our issue of last week among our translations, of a discussion which took place in the *Meiroku* Society, was not

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

authorized by the Society, and contains several errors of an important nature. This discussion was one of an informal nature, and, indeed, was rather in the nature of a conversation before the debate than part of the regular proceedings.

Whether a play be better or worse, there is no appeal from the decision of the pit. If the pit laughs or weeps, there must be cause for its emotion, and the playwright may defy the critics,—especially when the latter have joined in the laughter in spite of themselves. Yet the "Babes in the Wood" is as poor a burlesque as it would be possible to find. It murders an extremely pretty story. The writer is forced to resort to fifty artifices to conceal the extreme poverty of his own invention. (We speak only of this piece, for Mr. Byron undoubtedly is a clever writer of burlesques.) He drags in a Greek chorus to open his work. He then takes a prologue out of "A Midsummer Night's Dream,"—though, if the Coryphœus gave it as Mr. Byron has punctuated it, it is clear that he dared not trust the intelligence of his audience to discover that confusion of the sentences which Theseus so beautifully describes to Hippolyta as "like a tangled chain, nothing impaired, but all disordered," and in which all the humour of the thing lies. He intersperses shreds and patches of Shakespeare throughout the whole piece. He cruelly mangles Arthur's speech to Hubert, and cannot even keep his hands off the sleep-walking scene in Macbeth, almost the last which ought to have met with such irreverent treatment. Sir Rowland's rant against society is thoroughly juvenile and utterly out of place. The sentiments are pretty much those which might be expected from Alceste, but they are given in laboured blows, instead of in the mordant acid of Molière's misanthropist—the finest acid because made from the noblest wine. The piece is such an one as might have come from a clever boy, who had fallen under the fascination of the stage, was fond of his Shakespeare, delighted in a rattle of puns, and, who could not be satisfied until he had written a burlesque. To say that it is not clever would be unfair; but there is no getting over the fact that it is a dull specimen of a wretched class of piece, known only to the English stage at this period of its degradation, and unaffectedly abhorred by all whose tastes have been formed upon the better models of France and Germany or those of England. If acting is anything, it is an art, and art has certain ends and certain rules by which those ends may be attained. It has also certain limitations the transgression of which *cannot* be right.

—sunt certi denique fines,
Quos ultra citraque *nequit* consistere rectum.

The theatre manager or professional actor may plead that necessity forces him into burlesque. "He who lives to please must please to live," and he may urge that he has to cater for national tastes. If they are higher, well and good. But, if lower, he must abide by the decision of the public. It is not his fault. He does not profess to be an educator or a prophet. His business is to amuse; if in so doing it elevates, so much the better; if it does not, so much the worse; but he is not going to run into inevitable bankruptcy in order to elevate or educate a gross and ungrateful public. He pleads that he has no mission except to maintain himself and his family, and from this point of view he is perfectly right. And indeed, it is curious to observe parenthetically how much store the world sets upon being amused. Speaking broadly the writers alone live who amuse. Those who merely instruct die, though they may certainly gain a vicarious immortality by moulding the minds of successive generations. Homer amuses, so do Cervantes, Shakespeare, Molière, Walter Scott, Bunyan, Fielding &c., and the consequence is that we are always reading them. Milton and Dante are not livings powers as are the men we have named, nor even are Racine and Corneille, neither is Goethe, though undoubted he is *at times* amusing enough. This being so, we must make ample provision for smiles and laughter. (F. W. Newman even makes it an objection to Christianity that it would produce an ideal of human character from which these two features are excluded—a remark assuredly not without a certain weight, though answerable perhaps on more general grounds.) Not only we may laugh, but it is delightful to laugh—delightful to forget care and toil and heart-aches and anxieties, to turn the cupboard key on our skeleton, and kick over our pot of Agathocles.

But where ought this laughter to come from? What should be its fountains, and of what nature should it be to prevent our nature being perverted and degraded by it? Considering the undoubted and very close alliance which exists between humour and the lower parts of our nature—an alliance illustrated by the highest minds of all ages—it is clear that there are sources from which, though prone to come, it undoubtedly ought not to come, and thus it is obvious that restrictions exist which it is our business to discover and conform to.

We have, however, neither time nor space to go into all the metaphysics of the question. All we shall venture to say is that whatever has a tendency to degrade an art of a high character like the dramatic art, or to bring the persons of the actors into contempts as artists, can hardly be within the bounds of toleration. Tried by this test, is it quite fair to travestie a very beautiful story and very beautiful scenes from other plays? Is it fair to see an actor of such powers and such a presence as Mr. Spurgeon, for instance, as a mountainous girl dressed in a short frock, a pink sash, short frilled trousers unreconciled with his socks, and strapped shoes? We have seen him this year as Falstaff, Lavater and Plumper, and though it goes much against us pay him any compliments, his fine presence was shamefally thrown away in this burlesque. There is Mr. Fredericks, too. When we saw him as Poins he looked every inch a fit companion for a prince. But what was he like as Tommy? We utterly begrudge the extravagance of wasting such material to produce such effects. The play-bill was ominous enough. The draftsman of it should take pains to remain unknown. If his name once escaped he would be a marked man for life. Of course, the fairy scene with the "cockyolly birds" was pretty and extremely amusing, though far more so from the half-scared and half-delighted appearance of the Japanese children who hopped in as the birds than from anything else. (We must admit the attractions of their Queen). But say what we may, and not forgetting the amusement Mr. or Mrs. Vernon always gives us, the whole affair was repellent and absurd, quite unworthy of the troupe, and justifiable only from the point of view of an empty exchequer. It is unnecessary to criticize the piece or the actors more narrowly. The music—we do not speak of the band, though we have strong views on that subject—was excellent. Mr. Newcome sang his best, and the chorus from first to last was really admirable. Whether we are right or wrong the burlesque brought a splendid house for the first performance and a very good one for the second—an almost unparalleled feat here, and those who disagree with us may fairly laugh at us from this side from the argument. The thanks of the public are certainly due to the corps for the amusement it has afforded them during the winter and spring, and no one will disagree with us on this point.

There is yet an unpaid tribute, however. The public has been indebted during the season to a gentleman who has lent a fine piano-forte to the orchestra, and has always been at his place before it to supplement the deficiencies of the little band which the rather scanty musical resources of the settlement have afforded. When we say that without this instrument the orchestra would hardly have ventured upon any performance at all, the extent of the obligations of the residents to the gentleman referred to will be sufficiently apparent. Nor will they, we are sure, forget that their thanks are due to the members of the orchestra, who are fair judges of how very much they stand in need of some assistance from other members of the community who might do more to help in this direction than they have yet done.

(From the Japan Mail Daily Advertiser.)

A party of divers from H. M. S. *Charybdis* proceeded to Kawasaki by train yesterday morning. It is understood that they have been employed to inspect the timbers of the Railway bridge crossing the Rokugo River at that village.

Pending an arrangement for the benefit of the creditors of the estate of Messrs. Staples and Whitney the United States

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Consul-General has, on the application of the former, placed Mr. J. Whitney in the custody of the Consular marshal.

A woman of Mita, Yedo has been sentenced to undergo fifty days hard labour for having stolen 3 *sen*.

WHATEVER may have been the cause the burlesque, "The Babes in the Wood," was played last night with a spirit which it certainly lacked on the first night of performance, and which drew hearty plaudits from a well-filled house. The chorus, excellent before, did its part with increased effect and spirit; Sir Rowland had improved; "The first Ruffian" sang generally in time; the *gouvernante* looked bewitching and played with grace, the Babes themselves—monstrous infants that they are!—went through their schoolroom revolution and the blackberry performances which cause their death, with an exuberance which almost justified their existence, while Sir Rowland's lady—her name escapes us at the moment—was wildly ludicrous. The Queen of the Cockyolly birds ushered in her little flock with all a fairy's grace, and had the satisfaction of hearing the house roar and scream alternately with the antics of the brood.

The burlesque itself is a poor one, but there can be no question about the success of last night's performance, and the heartiness of the reception it met with.

THE Chinese officers, whose arrival in this country for the purpose of examining its mines we noticed about three weeks since, have left Yedo on a visit to the silver mines of Ikuno.

IN reference to the food and other crops the *Nisshin Shinjisshi* says that in both Joshiu and Bushiu the yield of barley, wheat and colza affords promise of an excellent harvest. The condition of the silk-worms is also satisfactory, but the producers, warned by the disastrous result of last season, are raising them in smaller quantities and the price of mulberry leaves is consequently very much lower than in former years.

We read in the *Choya Shimbun:* A serious robbery of warlike stores occurred at the Yokosuka arsenal about the middle of the present month. The articles removed were gunpowder, cartridges, &c.

A canoe race will take place this afternoon at 5 o'clock, starting from a position opposite the Club. Nine of the smaller canoes will compete.

THE cargo of the *Great Republic* hence and from Hong Kong comprised 12,233 packages of Tea and 55 bales of Silk.

Possession of the schooner *Iris* was given up to the Comptoir d'Escompte yesterday.

The examination of the piles of the Rokugo bridge by the divers from the *Charybdis* has proved that the timbers under water are in a most satisfactory state, and as sound as when first put in their places.

Messrs. Mitchell Cope & Co.'s premises were again feloniously entered on Thursday night. The perseverance of the burglars has, however, again met with but a slender reward and a barometer and two umbrellas are all that they took by their motion. The premises were entered by the back door and a large Chubb padlock was broken to permit of this.

AN incident which illustrates the eccentric direction in which Japanese detective skill is accustomed to operate deserves mention. The fact that the building in the rear of this office had been entered having been reported to the Police a constable was sent to investigate the burglary. He did not deem the barred windows at the back, through which the thief had obviously entered, deserving of special attention, but before leaving was observed to make a very accurate drawing of the *padlock* on the large gate which opens on the street. If this be a fair criterion of its detective action the inability of the local police to moderate prevailing crime can hardly be thought to furnish material for surprise.

A correspondent of a native newspaper writes as follows:—It is rumoured that complaints are being made of the license into which our free press is now rapidly degenerating and that measures to restrain its extravagance of expression must soon be adopted. The Mombusho, with whom the supervision of the press has rested, is understood to favour perfect freedom of language, and the Se-in, I hear, is much troubled by the necessity of dealing with the situation. It is further reported that the Censorate has been transferred from the Mombusho to the Naimusho.

I hear other rumours that the press laws are to be made more severe with the view of bridling some of these free-spoken authors and editors; while many affim that the change in the Censorate indicates no desire to curtail the existing freedom of thought and language. In such circumstances it is hardly likely that the press will forbear to express itself.

THE *Hôchi Shimbun*, speaking of the discussions in the *Chihokuan*, says that so far they have been devoted to the subject of police and the determination of the liability for their expence. The Governors of the Kobé, Niigata and Chiba *Ken* have distinguished themselves prominently in these discussions, while the Mayor of Tokiô has manifested a talent for silence which appears unaccountable to those who expected better things from him.

Mori, whose complaint against the authorities of the Sakata *Ken* was referred to in a recent issue, has received permission to attend the sittings of the Assembly.

A report was current yesterday of severe fighting at Foochow, in continuation of the affray with the opium smugglers on the 27th ult.; but we have been unable to trace it to any authentic source. On the contrary, it is disbelieved in quarters likely to be well-informed.—*N.-C. Daily News*

The P. & O. str. *Zambesi* took 2,269 bales of silk, destined as follows:—For London, 974 bales; for Marseilles, 604 bales; for Lyons, 497 bales; for Milan, 119 bales; for Basle, 12 bales; for Venice, 63 bales.—*N.-C. Daily News.*

A meeting of shareholders in the Hongkew Wharf Co. was held yesterday, to confirm the proposal of amalgamating with Hunt's and Heard's Wharves which had been agreed to at the meeting in April last.—The necessary alterations in the Deed of Settlement were agreed to, and a revised draft of terms of agreement was passed.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

THE ASSEMBLY OF PROVINCIAL GOVERNORS.

AN event of considerable political importance, partly on account of its immediate connections, but chiefly because of its probable influences upon the future, took place in Tôkiô on the 20th inst. This was the opening of a deliberative assembly composed of officers summoned from the provincial seats of government, for the purpose of discussing the affairs of the department under their charge, offering suggestions for local reforms, and in various ways assisting in such re-adjustment of interior administration as may be found expedient at this moment. It is commonly understood that the convocation was inspired by a double motive:—a genuine desire, on the one hand, to secure certain practical advantages by the interchange of opinions based upon exact experience, and, on the other, a desire to meet, in a limited degree, the growing demand for a more direct representation of the popular needs than exists at present. Anything like a parliamentary body, chosen by the voice of the community, is now looked upon as totally out of the question, and all persons who are truly conversant with the social characteristics of the nation heartily concur in supporting the government upon this point. It would not be difficult to demonstrate that the experiment of establishing a thoroughly popular legislative assemblage would be not only impracticable, but even perilous; but the authorities are not unwilling to go to such lengths as prudence will allow, in authorizing conventions for tolerably free debate respecting the progress of public affairs. What the *Genro In* may accomplish in this direction remains to be seen. That body, whose functions are to be of a somewhat ambitious character, is still in course of organization. Meanwhile, the more modest gathering of the provincial rulers has been put into effective operation. About seventy delegates responded to the call, and arrived in Tôkiô during the first weeks of this month. They are, without exception, the highest officers of the several districts which they represent, although differing in rank, according to the relative importance of their different localities.

At eleven o'clock, on the morning of the 20th, they met in the large Monzeki temple at Asakusa, and were promptly organized under the Presidency of the *Sangi* KIDO, whose interest in the movement is sufficiently demonstrated by his acceptance of at least the nominal direction. It can hardly be more than nominal, his attention being just now closely required in the discharge of other and more important duties. The active management will be in the hands of three members of the body itself. The reason for the selection of the edifice above named for the gathering was that it is almost the only available building of suitable size. It is the largest of the Tokio temples, although, as it stands in a comparatively secluded place, its existence is not known to all foreigners. The fact that in all the structures devoted to public purposes there is no hall sufficiently spacious to accommodate a body of this kind affords a significant illustration of the usages under which the government has hitherto been necessarily conducted. The interior of the temple was, on the 20th, arranged in a manner best calculated for the convenience of all concerned. It was divided into nine compartments, in the centre of the most important of which the throne was placed. Close beside the Imperial seat were the stations assigned to four members of the reigning family, and beyond them, on either side, those of SANJO and SHIMADZU Daijin, the latter of whom, however, did not appear on this occasion. IWAKURA Daijin, as is well known, is absent from the capital. These were the only occupants of the principal enclosure. The sections next in order were devoted to members of the *Daijokuan*, on one side, and of the *Genro In*, on the other, these latter holding a rank equivalent to that of the Chief Councillors. In the central compartment, directly in front of the Emperor, and between him and the body of the assemblage, the President, KIDO, stood alone. The space on his left was allotted to officers of the second class, and that on the right to the Diplomatic Corps, none of whom, however, assisted, although an attaché of the British Legation was present unofficially, in another part of the building. Facing the throne were the seventy odd delegates, flanked on both sides by representatives from the various Departments of State. Further in the rear were the few non-participating spectators of the proceedings. Previous to the Emperor's arrival, the business of electing the three permanent managers and of appointing Committees for the preparation of reports upon the five subjects to be discussed, was rapidly accomplished.

The real interest of the occasion was naturally centred in the reception of the Sovereign, whose personal participation was undoubtedly the striking feature of the ceremony. The fact that he would be present was generally known in Tôkiô, and the thoroughfares leading from the Imperial residence to the temple grounds were lined with spectators throughout the morning. A continuous chain of police extended along the route, rather for the sake of formal display than for the exercise of any restraint, as order always preserves itself among the Japanese on such occasions. His Majesty arrived soon after eleven o'clock, and was received with the tokens of respect that are customary under the new order of affairs, and which, it is needless to say, are totally different from those which would have signalized his appearance among his subjects a few years ago, even supposing it to have been possible for him to come in contact at all with an assemblage of this description or with individuals occupying the humble position of governors of provinces. The members of the assembly, together with all public officials below the second rank, proceeded to the outer gate, remaining in the open street until after the cortège had passed in. Those of the second rank stationed themselves outside the inner gate, and those of the first rank outside the doors of the temple building. The Emperor, with his attendants, entered a private room, and, with little delay, signified by a messenger that he was ready to receive his highest subjects then present. These were ushered in, offered their salutations, and retired to the positions above described. The others then assumed their several posts, and the Emperor advanced to the central platform, from which he read the following brief speech:—

Our object in opening in person this the provincial parliament has been to secure by its means the thorough discussion of all matters affecting the interior economy of Our Empire and of securing to the provinces adequate representation. You have been convoked for this purpose, and in order that your knowledge of the condition and feeling of the people of your several districts may aid you in discussing their requirements and introducing such reforms and changes as may seen to you to be most urgently demanded.

It is Our wish that your deliberations should be marked by general harmony, and that, sinking minor differences, they should tend to promote the ends in view in calling you together.

If with one mind you adhere steadily to this course your conduct will be surely productive of the general welfare, and thus your deliberations may become the foundation of the eternal well-being of the Empire.

Understand, therefore, Our views.

This having been done, the Emperor withdrew and the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

meeting dissolved. On the following day the assembly visited the palace, where the following address in response was delivered :—

We cannot foretell the results of this our assembling, in which we have no experience to guide us. But if happily inspired by Your Majesty's benevolence and justice, the results of our deliberations, duly made known to Your Majesty, should contribute towards the welfare of the people, then not in vain will the Imperial will have gone forth, and the efficiency of the *Chihokuan Kuaigi* will be apparent to all. Our earnest endeavours shall be directed to this end.

This in turn, was answered in these words :—

It was Our intention to have convoked this assembly in the May of last year. But at that time Our foreign relations were attended with some perplexities and demanded its postponement. We now greatly rejoice that the members have assembled together.

This being your first meeting, for which our history affords neither precedent nor guiding law, our hopes are based on the tenour of your reply, and We confidently trust that your efforts will avail to bring forth from deep sources streams of lasting happiness to the people.

On the 22nd commenced the consideration of the business for which the body was called together. At one period it was intended that the transactions should be entirely unconcealed, and arrangements were made for the publication of full reports in the native newspapers; but the permission was subsequently rescinded, and nothing more than an official record will be printed. This change was probably not caused by any objection to the appearance of legitimate reports, but grew out of an apprehension that the somewhat loose and flighty pens of certain journalists might deal in a disagreeable and perhaps wanton way with an experiment that required delicate treatment, at the outset, from all quarters. Under any circumstances the debates are not likely to be of a nature to require extensive circulation in detail. They are limited to five topics. They will not touch upon questions of general policy, but will be restricted to purely local interests. The assembly has not even the power of passing any enactments of its own. Its functions are only consultative and advisory. It is for this reason that we have said its chief significance is in the influence it may have upon the future. The fact that such a body has met, discussed, and acted, within the circle of its privileges, will be recorded as a precedent; and, the first step having been taken, others of wider range will be almost sure to follow. The results of this inaugural attempt at intelligent deliberation over certain branches of internal politics will be looked for with serious interest. The session will continue only twenty days, after which we shall speedily learn toward what consequences its actions are likely to tend.

H. M. ship *Thalia*, in steaming up to her anchorage off the Settlement yesterday, was fouled off the Pacific Mail Wharf by a large junk, carrying away the foremost port quarter boat davit and damaging the boat. The junk's stern was also much damaged and her mizen mast knocked over the side. The cause of the collision was that the junk captain, fearing he would not clear the *Thalia*, let go an anchor which turned the junk round to the strong ebb that was running.—*N.-C. Daily News.*

The barque *Westbury*, which arrived on Wednesday morning from Freemantle, W.A., after a voyage of eighty-four days, brings six Australian horses; one other died on the passage. The most numerous of her passengers, however, are small and lively monkeys, who are there in quantities; and must have been causing to those on board, though a certain want of perfume-vaporizers is even now noticed in

PASSPORTS.

THE following additional directions to bearers of passports granted by H. B. M. Minister to British subjects have been issued by request of the Japanese Government:—

I.—The local Regulations noted at foot must be observed by the bearer of this Passport while in the interior.

II.—If the Bearer does not commence his journey within thirty days from the date of this Passport he must return it.

III.—If the Bearer, while in the interior, finds that he cannot complete his journey within the time named in the Passport, he must inform Her Majesty's Minister by post of the reasons which prevent his doing so.

IV.—Refusal to produce this Passport to any local officials, such as Kuchô or Kochô or to any policeman demanding it, renders the Bearer liable to arrest. He should also show his Passport to the landlord of any Inn at which he may lodge.

V.—The Bearer must surrender this Passport on returning to the Port or place from whence he set out, even if he have not visited all the places named in it. A new Passport is required for every fresh journey.

VI.—The Bearer, while in the interior, is forbidden to shoot, to trade, to conclude mercantile contracts with Japanese, and to rent houses or rooms for a longer period than his journey requires.

VII.—This Passport is not transferable.

VIII.—Any breach of these Directions will be reported by the Japanese Government to Her Majesty's Minister, and the person so offending renders himself liable to be refused a Passport at a future time.

NOTE.—The Local Regulations referred to above forbid the following and similar offences.

1.—Travelling at night in a horse carriage without a lantern.
2.—Attending a fire on horseback.
3.—Disregarding notices of "No Thoroughfare."
4.—Driving quickly on a narrow road.
5.—Neglect or refusal to pay ferry or bridge tolls.
6.—Destruction or defacement of notice boards, house signs or mile posts.
7.—Scribbling on Temples, Shrines or Walls
8.—Injury to crops, land or other property, or to trees or shrubs on the high roads, or in Public Gardens.
9.—Trespassing on fields, plantations, enclosures or game pre-serves.
10.—Lighting fires in woods, or on hills or moors.

DAILY RECORD OF THE ASSEMBLY OF LOCAL OFFICIALS.

June 22nd.

("Nichi-nichi Shimbun" of June 24th, 1875.)

Opened at 10.10 A.M.

Washinoö Takatomo, prefect of the Aichi Ken, and Zeisho Atsushi, prefect of the Sakai Ken, did not attend the meeting.

The President said that although—as was stated in the reply to the Throne yesterday,—it was impossible to determine beforehand the nature of the work to be performed, still he hoped that all the Councillors would, with unity of spirit and combined exercise of powers, be diligent to fall in with the Imperial wishes.

At the commencement of the Revolution there existed the three forms of Government of the *Fu*, *Han*, and *Ken*, and the rule of the local authorities had not yet returned to a single power, while the police arrangements again varied in different localities. In the 4th year of Meiji (1871) the rule of the *Fu* and *Ken* was freshly established, and the Regulations for the Government of the *ken* contained rules relating to Police matters, and an estimate was temporarily fixed for the expenditure for detective purposes. In the 5th year of Meiji (1872) there was founded the Kei Rorijô (Police Department) under the judicial Department, and it was intended for the most part to give active effect to Police management. At the present time these regulations are in force in Tokiô, but they have not yet been carried into operation in the provinces. It is however intended this year to publish for the first time general regulations for all the local jurisdictions.

It is my opinion that the duty of protecting the people

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

this principle, there is no more urgent matter than Police regulations. But still, in putting these into effective operation, there is, from the very outset, need of heavy outlay; and again, the regulations for their establishment must be duly determined after consideration of what is best for each particular district. It is now necessary to settle the means of carrying into effect this important measure.

Although police matters are urgent and important affairs in local districts, still it has of course been impossible for all the police expenses of the whole of Japan to be defrayed from the official treasury. On the other hand undue pressure must not be put on the furnishing thereof by the people. For this reason, with the desire of drawing up regulations suitable for the raising of funds from both the government and the people's resources, and in order to make what has been done known to the members by the Government, there are laid before you the Queries and the Draft Replies with regard to police affairs in the local districts. Do all you members put forth your opinions thereon!

At this moment the Secretary rose, and read aloud the Queries and Draft Replies, as follows:—

QUERIES REGARDING LOCAL POLICE REGULATIONS.

Clause I.—The establishment of Police Regulations having for their object the protection of the people must not be otherwise than strict, and when desiring to make these strict, the amount of the expenses cannot but be increased. In increasing them, what is to be the decision as to the proportion to be furnished from the Government account, and again from the people:—how is this to be apportioned?

Clause II.—When a decision has been arrived at regarding the proportion in the payment of the expenses, rules must be determined for the distribution of officials and Police. In fixing upon these, must the decision be made according to the size of the districts, or according to the number of houses, and population thereof?

Clause III.—If the rules for the distribution of Police be already determined, there must also be fixed rules for the enrolment of Police:—of what nature should these rules be?

DRAFT REPLIES TO THE QUERIES CONCERNING LOCAL POLICE AFFAIRS.

Clause I.—Upon consideration of the estimates for police expenses for 1874, it is found that the amount disbursed in one year comes to somewhat more than 830,000 *yen*—the Tôkiô *Fu* being excepted,—and upon examination into the proportion of this amount charged to the Government and to the people, it is seen that 380,000 *yen* were paid by the Government, and 440,000 *yen* by the people. Out of the latter sum there has yet to be paid by instalments 163,861 *yen* 73·8 *sen*:—Of these expenses furnished by the people some jurisdictions give as much as several ten thousands of *yen* each, others as little as one hundred *yen*, and there are a few that furnish no contributions whatever from the people. It being desired at present to make the Police arrangements strict, if the expenses of the monthly pay and the clothing of the officials and subordinate police posts, as also of the stations guard-houses, and branch guard-houses, &c., be calculated, they will come to many times more than those of the last year. We consider that if this amount be charged, as in previous years, to the people's expense, it will not come within the compass of the people's power. Consequently, supposing at present that the police expenses of one *Ken* come to 30,000 *yen*, then ⅔ of this amount,—20,000 *yen*, —should be charged to Government, and ⅓,—10,000 *yen*, —charged to the people.

Clause II.—The numbers of the police officials and subordinate policemen should be determined according to the wants of the locality, but still an approximate decision should be arrived at as to their number. Thus, in all localities, except the two cities of Yedo and Ozaka and the three ports of Kanagawa, Hiôgo, and Nagasaki, about every 10,000 inhabitants should be portioned off to every police office, one official and 50 policemen should be stationed there, and 7 guard-houses and 8 branch guard-houses also established in such district, where the men should be posted and remain on duty in turn. Besides this, 2 officials should be placed at the Head office, to take general charge of the police affairs of the local jurisdiction.

Clause III.—None should be appointed to the duty of police save those who are of good character and of robust frame. If, in their enrolment, there be not any rules observed it is impossible to avoid the evil of reckless selection. They should consequently be enrolled according to the following table of regulations.—

TABLE OF REGULATIONS FOR ENROLMENT.

1. Age to be from 25 to 45 years.
2. Frame to be robust, and height 5 feet and upwards.
3. To be able to read without difficulty ordinary writings.
4. They must be able to undertake to serve for three years.
5. To be free from syphills or constitutional disease.
6. To be of quiet and forbearing temper, and not addicted to drink &c.
7. To be of reputable birth, and to have two or more guarantees,
8. To have previously committed no disgraceful action or theft.

The President again said:—

If you have any questions to ask with regard to the above Queries and Draft Replies, the official who is charged with this measure is here present. Ought the second meeting for the consideration of these Draft Replies to be forthwith opened to-day, or shall we hold it on a future day? This may be arranged in accordance with what seems suitable to the members.

Shibawara Kadzu said:—These Draft Replies have already been perused and understood by all the members, whose opinions on the various points must be already formed. As, too, (the assembly) is only to remain in session for 20 days, the second sitting should at once be commenced. As, however, it is now almost noon, I propose that the second sitting should take place in the afternoon.

Yasuöka Yoshisuké said:—As the careful discussion of these Draft Replies is a matter involving a great deal of calculation, I think it would be best for opinions to be expressed later on.

Watanabé Nobori said:—If there be any points in connection with these Drafts, upon which it is desired to put questions to the official charged with the affair, such questions should be put at once. Should there not be any such questions to be put, the second sitting should forthwith be proceeded with.

The President said that the question as to whether the second sitting should be held immediately or in the afternoon, should be decided by a majority,—and explained that the suggestion offered by Yasuoka Yoshisuké as to making a written statement should on account of its coming under the head of the rules for the proper operation of the clauses of the Draft Replies, be deferred for a while to a later date. Upon the members being caused to rise, those who agreed about the second sitting being opened in the afternoon were 43 in number, and so the matter was decided by the majority.

Watanabé Nobori observing that he had some question to put, in connection with these Draft Replies, to the official charged with the matter, the President beckoned to an official of the Home Department and caused him to take his place in the seat specially set apart for the official whose business it is to give explanations. This person was Ishii Kuninori, an Assistant Commissioner of Police.

Question.—By Watanabé Nobori:—

For what purpose are there to be stationed, as shown in Clause II. of the Draft Replies, the two officials at the Head Office?

Answer—To exercise general supervision regarding the daily statistics, accounts, and regulations, in connection with the Police affairs of the local jurisdiction.

Q.—By Watanabé Nobori:—Then, whether the population of one *Ken* be 10,000, or whether it be 1,000,000 is the number of officials to be limited to two?

A.—It is.

Koga Sadaö said:—Though, in these Draft Replies, it is stated that a proportion of the police expenses is to be charged to the people, still in places like my own prefecture of Miodo, the people do not possess the means of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

furnishing this, and therefore I am desirous of stating the rules that I consider preferable instead.

The president, however, replied that as such rules had to do with the people's contributions, they should be stated after the matters of the police expenses had been duly discussed.

Q.—By Shimayama Shigénobu:—What is the estimated expense for each policeman per annum?

A.—In forming an approximate estimate there are two rules, one being to calculate the total and so arrive at a knowledge of the items, and the other to add together the items and thus ascertain the total. It is estimated that there will be an expense of about 2,620,000 *yen* incurred in connection with the establishment of a police system, at present, throughout the whole of the country. Out of this it is desired to make the sum of 1,800,000 or 2,000,000 *yen* chargeable to the people. Again, the pay of the police is divided into four classes, and there are differences of rank, but on an average 130 *yen* odd are necessary for each man per annum. As this, however, is merely an average, there may no doubt be more or less variation when the system comes into actual operation.

Q.—By Nakashima Nobuyuki:—In clause II., there are mentioned seven guard-houses and eight branch guard-houses. What is the difference between these?

A.—The police are divided into four classes, and the name guard-house is given to the place where directions are given, through the first-class police, to those of the 2nd, the 3rd, and 4th classes; while those places where directions are given, through the 2nd class police, to those of the 3rd and 4th class, are called branch guard-houses.

Q.—By Nakashima Nobuyuki:—What is the number of police stationed at each branch guard-house?

A.—In point of fact, their numbers, both at the guard-houses and branch guard-houses, vary; but on an average three policemen are allotted to each branch guard-house.

Q.—By Koteda Yasusada:—Is the salary of the officials also to be paid jointly by the Government and the people? and again, of what grade of rank are the two officials placed at the Head Office?

A.—The officials are as a rule confined to those of from the 9th to the 14th grade. The monthly pay of the police subordinate to the officials, and the cost of their clothes, daily allowances, travelling expenses, and outlay on stations are charged to the Government; the remaining expenses for guard-houses and branch guard-houses are levied from the people. Thus, then, the people are not required to provide for the monthly pay &c.

Q.—By Kotéda Yasusada:—The police expenses being extras, are they not required to be paid from out of the fixed allowance of the *ken* office?

A.—Just so. The custom is that the expenses down to the station-house in, say, each single district, are all defrayed by the Government, but in the case of such matters as the minor guard-houses and branch guard-houses, these are all charged to the people, seeing that they were desired by the people.

Q.—By Shibawara Kadzu:—Then, the pay of the officials and their subordinates being all charged to the Government, is the establishment of the seven guard-houses and eight branch guard-houses, and posting and relief of the men to be charged to the people, as having been desired by them?

A.—As I replied to Mr. Kotéda, there is no intention of charging, on an average, more than one-third to the people; of course, according to the poverty or wealth of the locality, the difficulty or ease of furnishing this sum will naturally vary. There are localities where more than one-third is furnished at the people's expense, and again there are localities that cannot furnish this.

Q.—By Shibawara Kadzu:—Upon what is stated in the text of the Draft Replies, I am of opinion that there ought to be a separate regulation other than that charging the sum to the people.

A.—That is a matter that is submitted for the discussion of the members.

The President explained the tenor of the Draft Replies, for the benefit of the members, and stated that the idea of the Government was to fix, for instance, the present police expenses of one *Ken* at 30,000 *yen*, and that it was intended, chiefly, to levy about one-third from the people.

Q.—By Nabéshima Takashi:—Have the stations, guard-houses, and branch guard-houses been already established, or have they not yet been constructed?

A.—There are some localities in which they have not yet been constructed.

Q.—By Kanda Takahira:—Mention has been made of portioning out a population of about 100,000 persons to one district, and of placing therein one official and 50 police. Has this been decided in regard to the proportion of the population, or according to the size of the locality?

A.—Although these Draft Replies are but approximate estimates, the proportion has been decided upon the double grounds of the population and the size. In case of a wide district, where the population is but scanty, attention is given to the size and one guard-house constructed for about every 5 *ri*; while in the case of a place that is small, but has a large population, attention is given to population and one policeman is allotted to about every 2,000 persons.

Q. by Kanda Takahira:—What is the approximate number of the population throughout the whole of Japan? and again,—What is the approximate extent of the area of Japan?

A.—Although the investigation into these matters has been concluded, still I am unable now to give an immediate answer.

The President observed that when the time arrived for the opening of the Minor Assemblies or General Minor Assemblies selected for the purpose of discussing the regulations (for police), the documents of reference relating thereto should be forwarded to the Assembly by the official in charge thereof.

Watanabé Kiyoshi remarked that as the written documents containing remarks upon the regulations were to be furnished at the second sitting in the afternoon, there would not be sufficient time for that purpose, and enquired whether there would be any objection to discussing their suitability or otherwise by word of mouth, without sending in the written documents. The President replied that this would be sufficient.

Yasuba Yasutoshi observed that as this matter of the police affairs was one of grave importance to the people, the second sitting ought to be convened after the various members had given the subject their full consideration. As time for the second sitting had been already fixed, there appeared no means of obtaining delay, but he was desirous that the reply should be given after all possible consideration. The President explained that as the opening of the second sitting had already been fixed by the assembly for that afternoon, this could not be deferred.

Tanaka Mitsuyoshi refuring to Clause II of the Regulations for the assembly, enquired whether if at the 2nd meeting in the afternoon, no objection was made for 30 minutes,—*i. e.* half an hour,—after the Draft Replies had been read aloud, would the Draft be considered as approved.

The President replied that it would.

The President then turned to the members and said that if there were no further questions to be put to the official in charge of the matter, the second meeting would be held in the afternoon. The Assembly broke up at 11.40 A.M.

We have also received, a communication, describing the sitting in the afternoon of the same day.

At one o'clock P.M., the second sitting was held and a careful discussion took place regarding Clause I., of the Draft Replies, when the opinions of the members varied considerably and took three lines of argument. The first of these was that the original Draft should be accepted,—the second contended that the whole of the police expenses should be paid out of the Government Treasury,—while the third held that two-thirds of the police expenses should be furnished from the Government Treasury and the remainder levied from the people according to the circumstances of each locality, and that therefore one-third ought not to be fixed upon beforehand. Upon a vote being taken upon these views, the third view was approved by a vote of more than 30 members. The assembly then broke-up, at half-past three in the afternoon.

SPIRIT OF THE NATIVE PRESS.

The Provincial Assembly and the Press.

Nichi Nichi Shimbun,
20th June, 1875.

The day before yesterday being the 20th instant the long expected opening of the Assembly of Local Authorities at last took place, and on this auspicious occasion, the Emperor in person conducted the opening ceremony. Not only, however, have we and our fellow editors been without exception simply refused permission to attend the meetings, but we were also unable to witness this ceremony. (The publishers of this paper have been particularly disappointed in this matter of attendance at the meetings, and the public will be informed of it on another occasion). We publish in our miscellaneous column of this date an account of the proceedings derived from the reports of persons who were present, but of course we cannot help feeling some irritation and regret. What we most regret, however, is not so much that we were unable to witness the opening ceremony, but that we cannot attend the meetings of to-day and all the future meetings, and report the proceedings in this journal. And why? This opening ceremony derived all its importance from the presence of the Mikado, while for the rest, granting that it was conducted in great state, and according to the laws of etiquette, there was after all nothing but mere ceremony. When the ornaments opposite the throne have been described as splendid, and the pretty effect of the gold lace of the glittering uniforms of the high officials has been referred to, there is nothing more to be said. Practically it has no important concern for Japanese subjects.

This cannot be said of the ordinary meetings of the Assembly. On account of the intimate acquaintance with the feelings of the people possessed by the chief authorities (or their deputies) of the three *Fu* and sixty *Ken*, they have been consulted on five points, and it is most desirable that the whole Japanese nation should learn without an hour's delay what views they hold, and what arguments they set forward. Now whether this can more conveniently be done by means of private communications from the Auditors or interviews with them, or by allowing the newspapers to become eyes and ears for the nation, is evident even to a child.

The newspaper editors, in order to respond to the earnest desires of the people, petitioned for leave to be present at the sittings, but all, viz, the *Nisshin Shinjishi*, the *Hochi Shimbun*, the *Akebono Shimbun*, and ourselves received refusals. As these sittings are of course sittings of the Government, the refusal of the Government to allow strangers to be present is much like saying "I am only refusing to show what belongs to myself. Why should I care for any body?" Strangers have no right to insist on being admitted as spectators, and so we were obliged to content ourselves with this answer.

We have therefore refrained for the present from taking any further steps in the matter, but we cannot help considering what can be the reasons of the Government for disliking to admit the newspapers as spectators. After mature reflection, we believe that the only reason why the newspapers have been excluded from the debates is simply that it is wished to screen inexperience. This is in other words nothing more than a fear of public discussion. Owing to the anxiety of the high officers of State to maintain the tranquility of the minds of the people, the present assembly of Local authorities is radically different in its constitution from the elective assemblies of Europe and America. It is an official meeting of a special character, and it by no means follows, when they have decided for or against a measure, that their conclusion will be carried into practice. Besides, the members have had no experience and will probably fail to observe the order of the debates. The Government probably thought that if the reporters were allowed to note everything down freely, it might be feared that the members of the assembly would perhaps incur the ridicule of the country or bring upon themselves the dissatisfaction of the people, and they were therefore at the trouble to form this resolution and confirm it with the lesser seal, viz, that it would be better to exclude the newspapers, alleging as a reason the inconvenience of having incorrect reports published and the smallness of the space.

Now some writers for the public press, hearing of the refusal to admit the reporters, have already had recourse to ridicule, and have already become dissatisfied. Some of them even go so far as to hold the opinion that it may be inferred from the circumstance of the exclusion of the newspaper reporters, who are the eyes and ears of the nation, that this Assembly has been opened, not in order to benefit the people, but to meet the convenience of the Government. We believe that this is certainly not the case, but on logical grounds this argument is unassailable.

Some writers have objected that if there were not space to spare, why were the assessors from the provinces allowed admittance? To this we would reply by saying that these assessors are the representatives of the people, but we are met with the sarcastic rejoinder "Do not allow "servility towards the Government to induce you to adorn "their faults with fine phrases. The assessors from the "provinces are present by their own desire, and not as "Representatives. The answer received by the Kenrei "of Chiba when he addressed an inquiry to the Home "Office respecting their travelling expenses shows this "clearly. He was told that these travelling expenses "must not be made a charge on local funds. You have "already expressed your opinion on this point, and have "also had before you the observations of the Kenrei. "How can you now be so inconsistent! I am convinced "that the real reason why the presence of the Assessors "is allowed is that they are quiet and peaceable men and "not fond of discussion, but the newspaper writers are "blunt outspoken fellows whose forte is logical argument, "and it would consequently be mischivous to allow them "admittance." We cannot see how this argument can be replied to and are obliged to remain silent.

It is stated that the Government have selected a literary gentleman as secretary, and that it is their intention to publish his reports of the debates. We are doubtful, however, whether such a journal will be a detailed report of the proceedings such as is prepared for European newspapers, or whether, as we fear, it will be a meagre out-line in the style of other official documents.

The Government may, perhaps, really fear the publication of incorrect reports. But if our writers should unfortunately be unable fully to seize the drift of the arguments of the members as they appear in the official journal, we shall be obliged to ask for explanations from the assessors. The Government cannot surely close their mouths. Besides, we have not been prohibited from listening to reports from the assessors, or from publishing their written communications. Now, which is more likely to be correct, a direct report, or a report at second hand? It really seems as if the very means taken to avoid erroneous reports were about to become a cause productive of them. The Government may be desirous of preventing discussion of the debates in the assembly by the editors of newspapers, or by contributors to the press, but if they are allowed to express their views formed from the official reports or from those of the Assessors, will the Government go so far as to scheme how they may control our inestimable liberty of argument, or will they in carrying this scheme into effect, at last snatch the pen from the editor's hands, and prohibit the publication of the effusions of his contributors.

We are plain commoners, and this newspaper is only a private undertaking. If we break the law, we are subject to its penalties; there are police to arrest us, prisons in which to confine us, and courts to try us. It would be easy for the Government to gain the accomplishment of their wishes in a moment. But if they did, the Yokohama newspapers, the *Herald*, the *Mail*, the *Gazette* and the *Echo* would throw open their columns, and pen in hand would joyfully welcome the writers for our native press to a common occupation with them of the field of free expression of opinion. In that case the Government would find that not only had they not accomplished their wishes, but that on the contrary they had drawn into the field against them a mighty enemy that they little expected.

Considering the matter in this way, we are unable to discover, looking at it from the east or looking at it from the west, what possible advantage the Government can derive from the exclusion of the press from the meetings

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

of Assembly. But the strangest circumstance of all is that some foreigners who had asked permission were allowed to attend. Supposing now that these foreigners had been newspaper editors or reporters. What would have been the result?

After all, however, our Government is a body of wise and capable men, and there must certainly be some advantage gained by excluding the press and not allowing them to be present at the meetings of the Assembly. No doubt we ourselves are alone to blame for not being able to discover it.

The Assembly and the Press.
(Nisshin Shinjisshi.)

I am the editor of a newspaper and sincerely anxious by any means in my power to advance the welfare of my country. With this view, as the assemblage of the Governors of the different *kens* was to take place, I sent in a memorial requesting permission to attend the debates, but it was not granted to me, on the ground that we are liable to fall into mistakes. Now, this Assembly has not been constituted solely to further the views of the Government, but the interests of the people as well, and I thought that the officials of the Assembly would be pleased to have the steps they took recorded. These officers are afraid that we shall make mistakes, and this sounds as if the reporters for newspapers alone were liable to error. But hearing and seeing is the business of the newspapers, and they have to hear what others have not heard and see what others have not seen, and thus the nerves of the eyes and ears of the reporters are stronger than those of the officials. It is superfluous to observe that if the discussions cannot be reported correctly by those who have the stronger nerves, much less will the reports of those who have weaker nerves be correct. Although it is said that the reports are to be published, we greatly regret that we are unable to give our own report to-day, for on the morrow it will be impossible, and besides that we cannot give a full description of all the circumstances.

On this the first meeting of the Assembly, even foreigners have been admitted; but the newspapers, which are doing all they can to advance the welfare of the country, are excluded. This seems like a retrogression upon the steps to which we have been accustomed of late years. No! no! I suppose that for some good reason or another the officials have acted as above, and I therefore leave the matter as it stands.†

The Freedom of the Press.
(Choya Shimbun.)

The words 'civilization' and 'enlightenment' are in every body's mouth and whenever tongues are put in motion these words are heard. But, if we look abroad, we shall find that they are mere words and there is neither civilization nor advancement. The only advance made is by the newspapers.*

It is but a few years since newspapers were started, and now they have become a great power, because by their means the people have been able to express their views freely, the Government not repressing this. The newspapers reflect the mind of the people and the Government to each other, and this is a very important thing on both sides. Among the advantages gained by this means have been the establishment of the *Genroin* and *Daishinin*, which have originated in the demand of the people for a House of Commons; the dissolution of the various sects of Buddhists and Shintoists which had been forced into union by the Kiobusho (Department of Religion). Again, the newspapers urged that cremation should be permitted, and this was done. These are evidences of the results brought about by a free expression of public opinion, results brought about by the power of the Press.

Newspapers having produced these results, further freedom of writing should be permitted in the interests of the Government and the people. But we have lately heard that some discussions have taken place in the Cabinet about restrictions upon the newspapers, though we have not heard what changes are to be made. But we do not believe that our Government is such a bad one as to repress the views of the people, so that we do not experience the slightest anxiety on this head. Should there be in any country a ruler so atrociously wicked as to deprive his people of the right of expressing their opinions, it would be like the damming up of a stream, and the people certainly would not be satisfied by expressing their views only by their eyes. We have no doubt that those who have spirit in their hearts would unite and oppose themselves to the oppression of so bad an administration.

† This is but a feeble ending. The writer should have argued out his point. In advance or support irony is a fair enough weapon, but it is wretched in retreat. The point at issue is of great importance in the political education of the nation.

* "There is nothing like leather, gentlemen!"—Ed. *J. W. M.*

The Schools of Kagoshima.
(Hioron Shimbun.)

It was stated in No. 11 of this journal that there were about 30,000 stout scholars in the schools of the Kagoshima *ken*. It is now reported to us on very good authority that the power of the schools has greatly increased of late and that there are 50,000 scholars studying in them, among whom are many of the soldiers of the Imperial Guard who left Tôkiô the year before last, and many of the soldiers who were in the Formosa expedition. The private school called the reward-school which affords instruction in military drill, is supported by the pensions given by the Government to those who had done noble deeds in the late war. Sharakusai says:—The *Kadzuku* and *Shizoku*, without any duty to perform, are supported by the common people, and, besides, are deficient in intellect, so that they cannot support themselves, and among them there are many who have no idea of work. We think, therefore, that they ought zealously to bestir themselves like the people of the Kagoshima *ken*, and unite their minds and powers so as to become good soldiers.

But, Oh! we cannot understand by what department of the Government these schools are controlled.

扶桑耳袋
FU SO MIMI BUKURO.
A Budget of Japanese Notes.

Mythological and Legendary.

In the days of Senka Ten O (A. D. 636) there was war with Chosen and fighting going on at Shinran and Mimana. Sate-hiko, the son of Otonomo Kane-mura set sail from Hizen to join the warriors of Japan, and as the vessel which bore him away from his native shores receded from view, his loving wife Sayohime ascended the hill Matzoura to obtain a parting glimpse of her beloved lord and master and to offer up prayers for his safety and speedy return victorious. Such was the intensity of her thoughts and gaze that she became transformed into stone, and ever since Matzoura Sayohime has become an expression for devoted affection.

About A.D. 732 the daughter of the Dai-jin Tan-kai-ko was given in marriage to Gen-so of the To (Tang) dynasty of Kara (China), and the father sent, amongst other valuable presents, a crystal containing an image of Shaka, the features of which, turned in whatever way, could always be seen and hence called *Men-ko-fu-hai*. The vessel bearing this precious jewel (*tama*) was wrecked. Tan-kai-ko, anxious to recover such a treasure, went to the fishing village of Shido-no-ura, in Sanuki, in the Island of Sikoku, and there fell in with an *ama* (a female-diver) who became his concubine. She, being a notedly good diver, was confided after a few months by Tan-kai-ko with the story of his loss, and volunteered to risk her life to recover the treasure from the deep, if he would vow to make her yet unborn child, should it prove a male, his heir. Then, fastening a rope of great length round her person and placing a small keen blade in her girdle, she disappeared below the sparkling waves, diving down to Riugu (the Dragon-shrine), where among temples and pagodas built of *Shipo*—seven precious jewels—*gold and silver, she found the *tama* enshrined in a temple guarded by fierce dragons. Unable to find an opportunity of ab-

* The seven jewels are *Sango* (pink coral), *Rotaku* (Amber), *Shako* (Mother-of-pearl), *Ruri* (Emerald), *Meno* (Agate), *Shinju* (Pearls) and *Suisho* (Chrystal): *kin* (Gold) and *gin* (Silver) are both usually included in the term.

stracting the prize she saw and sought, it occurred to her that in Riugu dead bodies † were abhorred, and she made a deep incision under her left breast, and then, snatching the the jewel, concealed it there. Then, violently jerking the line attached to her, as a signal to those waiting for her on the shore, she feigned death and was hauled to the abodes of mortals unmolested, to all appearances dead. On an examination of her body the coveted jewel was found, and then her still warm corpse was delivered of a male child, who, at the age of thirteen became a Dai-jin and was named Fusa-saki. Wishing that due respect should be paid to his mother's memory and that proper funeral rites should be performed over her body, he went to Sanuki, and there, walking on the shore, he met an old woman whose appearance denoted great poverty, and who, accosting him, said she was the spirit of his dead mother. Expressing her joy at his high position she then explained to him the means by which she had recovered the jewel, thereby earning for him the right to be his father's heir, and then vanished. He caused prayers to be celebrated in the temples for the repose of her soul and remained a prosperous man until his death.

At the beginning of the ninth century Ono-no-yori-kase was absent from his mistress for an unusually lengthened period, and she, fearing he had deserted her, drowned herself in the Yodogawa near Otokoyama Kito. He returned but a day too late to save her, and, burying her and erecting a tablet to her memory, daily visited her tomb. Over her grave grew a golden flower that bent its blossoms towards the mourner, but resumed their natural position when he departed; it was a hitherto unknown plant, and he named it Omi-na-meshi (the Maiden's flower). After the period of mourning had expired, he desired to follow her to her home in paradise, where he hoped she had become *Jobutzu* (an angel), by his prayers and by the same path by which she had preceded him, and on the same spot drowned himself.

Tawara Tôda Hide-sato, a celebrated leader of the warriors of the day and ancestor of the Fujiwara family, was an expert archer. Once on a time, about the year A. D. 938 he was journeying through the province of Omi, and near the bridge of Seta was accosted by a lovely woman attired in *jiu-ni-shi-to-ye* (twelve robes and an upper robe, worn by the Imperial ladies) who begged of him as a loyal warrior to protect her from her enemy, who destroyed the produce she raised for the support of her family. He could not but consent, and said that having but one shaft in his quiver, he would go for one or two more and return speedily, when she should conduct him to the lair of her foe. Having returned with his arrows, she conducted him to the mountain of Tonami, and by this time night had overtaken them. Tawara's attention was suddenly directed to what appeared like two moons glaring down from the heights upon him, and, discharging a shaft at one of them, it suddenly faded. He sent another shaft at the other, when it too disappeared; but bethinking himself that this must be the great centipede (*O mukade*) he touched the head of his remaining shaft with his tongue ‡ and with a huge effort sent it at the hideous reptile whose faint outline he could but just perceive. That the swift messenger had gone surely on its errand was immediately apparent, for the struggles of the mortally wounded reptile caused the most horrid noises which were weirdly echoed by the surrounding hills. It proved to have coiled itself seven times round the mountain, such was its great length. The lovely woman expressed her unbounded gratitude and wafted him off to the paradise beneath the surface of the *Omi no midzu Umi* (Lake Biwa), § where, before being sent back to earth once more, were given him to robes of silk, sacks of rice, jars of wine, a sword and a bag of money. These were so enchanted that the silk was endless, neither the rice sacks nor the wine jars could be emptied faster than they would refill themselves, the sword was invincible and the money-bag inexhaustible.

† The horror of the gods of the sea for the dead is said to be the cause that the bodies of the drowned invariably float ashore if not speedily devoured by fishes.

‡ Centipedes abhor human saliva. These insects are said to die if the head is kept wet with saliva; it kil's the young ones certainly, hence the allusion to spitting on the arrow-head.

§ This lovely creature was the *Ja* (serpent) of Riu zu and supposed to be the same as that deified as Tchikubu Shima no Benten in Omi.

In A. D. 935 at the Kitano no Tenman Gu, the spirit of Sagawa appeared to the *Kannushi* (keeper of the shrine) and told him that henceforth he would watch over the devotees at this place, in testimony whereof one thousand pine-trees should grow around the shrine. This occurred, and the Ten O Murakami hearing of it, ordered that thenceforth the posthumous name of Sugawara Michizane Ten man (heavenly-endowed) should be given the affix *Dai-ji-zai ten-jin* (great fertile heavenly spirit).

Ume waka maru, the son of Yoshida-no-sho-sho of Kiôto was kidnapped ‖ and carried off to the north, but when arrived at Sumidagawa, where Yedo now stands, the boy, who was about thirteen years old, was so worn out with fatigue and cruel usage that he was abandoned in a ditch. A charitable farmer found him, but he was too far gone to be restored, but lived long enough to give his name and tell where to find his friends, and, as a dying wish, asked that a willow ¶ tree should be planted on the mound over his grave. A year after, to a day, his mother arrived on the spot, and the spirit of her lost child appeared from the tree: then, after mutual explanations, joined with prayer for the peaceful rest of his spirit (*jobutzu*), it disappeared.

In the temple-grounds of Mokuboji at Mukojima (a suburb of Yedo) on the banks of the Sumida may yet be seen the tree on the grave.

Raiko (Minamoto Yorimitzu) went hunting in the forests of Sagami. At Ashigara yama he met a boy in a lonely spot who had round him a number of wild animals, evidently on very friendly terms, and was at the moment amusing himself by wrestling with a young bear. The lad conducted him to where he saw a woman, the boy's mother, who appeared to have once possessed great beauty. He was desirous to obtain the boy who showed so much courage, in order to adopt him, but succeeded only by allowing the mother to accompany them. It subsequently turned out that she, since known as Yamauba (old woman of the hills), had been the wife of Sakata no Toki yuki, a warrior of the Genji party, and when he died the mother and child fled to the hills of refuge from their enemies. The father is known in children's stories as Kintaro, the son as Kintoki; and common pictures represent him in company with his mother and beasts of the forest. He afterwards became known as Sakata Kintoki and a famous warrior. This occurred about A. D. 1,004.

Several years afterwards the Ten O Ichi-jo ordered Raiko to subdue the wicked *Shui ten do ji*, the ghouls that appeared at the *Ra-sho-mon* and others *Tsuchi gume*. He took with him the four strongest of his followers, first of whom was Kintoki, the others being Watanabe, Usuie and Urabe. Their adventures form the foundation of numerous legends.

About 1084 a priest named Rai go ajari died, and it is related that his spirit transmigrated into a rat, and that the vermin went to Kiôto and eat or destroyed all the prayer-books and other temple furniture of Hiyesan.

Taira Kore mochi of the Heike family went to Taka o san for pastime to view the maple trees. He saw a group of maidens pic-nicing, and, dismounting from his horse, would fain have passed without alarming or disturbing the fair nymphs. But the queen of the party ordered him to be invited to join them, and he, nothing loth, accepted the wine-cup, which had but just been touched by her own sweet lips, from her fair hands. What with the wine he drank and the feminine charms around him, he soon became fairly intoxicated and went off to sleep, but he was aroused by the violent trembling of the earth to see before him a gigantic *Oni* who was fain to devour him. But quicker than thought, the trusty steel was drawn from its sheath as he bounded erect, and, almost with the same spring, reached the ghoul and slew him.

‖ Kidnapping boys and girls to be sold for the basest purposes was not uncommon; these thieves were called Kado-mukashi.

¶ Willows are very commonly planted over graves as emblems of the grief of the departed, in strange contradistinction to our idea of them as betokening the weeping of the sorrowing relations.

THE KIOTO EXPOSITION OF 1875.

The project of an annual Exposition of Japanese Industries, to be held at Kiôto, the former residence of the Mikado, originated in the desire to supply a partial remedy for the declining prosperity of that ancient capital, whose material welfare had been seriously disturbed by the abrupt removal of the Court to Tokio, immediately after the revolution of 1868. Although there was little likelihood that the city would ever again become the seat of government, there were sufficient reasons why it should not be suffered to full into decay. It was not fitting that the traditional distinctions of what had been the Imperial dwelling-place for nearly eleven hundred years should suddenly perish; and, apart from sentimental considerations of this sort, the practical interests of great numbers of faithful adherents of the old régime were identified with the fortunes of the locality. Most of the higher class of nobility, known as kugé, were in a degree dependent upon their scanty possessions in the neighbourhood. Although they were generally allied by direct descent with the family of the sovereign, their resources were, as they had always been, extremely limited, and it was important that the value of the little they retained should not too rapidly decrease. Kiôto was not without solid advantages of its own. It was the centre of the best tea production of Japan, and in the manufacture of silks it was still preeminent. But it had formerly enjoyed a prosperity outside of that which it claimed by its commercial operations. As the home of the Mikado, it had been the scene of important political gatherings at regular periods. Numerous officials of high rank, with profuse retinues, from various parts of the Empire, were permanently quartered there. It was the resort of pilgrims, pleasure-seekers and amateurs of antique lore for a score of generations. Its "floating population" was thus exceptionally large, and of a great part of this it was forever deprived by the migration of the Court. It was no longer the recreation ground of the whole nation. All its business began to droop, and its property to sink in a way that rendered the future outlook of the residents, especially owners of real estate—excessively uncomfortable. Among other devices for its relief, that of attracting new crowds of visitors, during several months in the year, by collecting and exhibiting industrial products from the various provinces, was conceived. It was first put into execution in the spring of 1872, and the result was as happy as could possibly have been hoped for. Kioto had never before been so thronged with excursionists of every degree. Foreigners were admitted for the first time, and it was found that they did not abuse the privilege to a greater extent than, on the whole, had been expected—although it was discovered to be necessary to hold them to good behavior by bonds registered in the Consulates of their several countries. The financial condition of the old capital was once more rosy and blooming, and the whole experiment was so successful that its repetition every year was decreed forthwith.

The first three Expositions were held in the grounds and buildings of various temples. That of 1875 is remarkable in the circumstance that its locality is no less imposing a place than the actual former Palace of the Mikado—the great "Dairi," the precincts of which had hitherto been, since the erection of the first mansion in the year 794, accessible only to the Imperial "descendants of the gods" and their loftiest followers. Probably no more striking evidence of the radical overthrow of conventional forms and effete superstitions in Japan has ever been given than the surrender of this spot, with which the most sacred and romantic mysteries were once associated, to the prosaic purposes of utilitarian progress. Whatever readers at a distance may *not* know about Japan, they are probably at least aware that the reverence attached to the person and name of the Mikado was of a nature that infinitely exceeded every other sense of humility and devotion. In the eyes of the multitude he was literally a god. To the enlightened, he was the impersonation of a Majesty which time and faith had so consecrated as to lift it far beyond the measurement of ordinary human standards. The blind abasement of the populace was not a particle more sincere than the profound conviction of the statesmen and scholars. All the forms of divinity that hedged this sovereign were sanctified alike by the cherished traditions of the masses and the loyalty of the ruling classes to a system that had lasted unbroken for at least twenty-five hundred years. His name could not be uttered by the people. His countenance could be seen only by those who most nearly approached him in rank. When he moved from place to place in his closed and guarded car of state, the highways were deserted, the houses sealed, and the region over which he passed was hushed in a silence like that of death. His very dwelling was invested with such attributes that its name, (Dairi) had for ages been identical with the monarch's actual personality. Its gates were approached with significant demonstrations of homage. Only its exterior and official chambers were known to even the highest of the subjects. The interior apartments were familiarly visited by none, and, once completed by the artisans, were never visible except to members of the Imperial family. When the Court was transferred to Tokio, it was natural that the glamour of the abode should begin to fade. But it did not entirely disappear until a very recent date. In 1872, as an especial and almost unprecedented concession, I was allowed to enter this former refuge of impenetrable secresy, and it was curious to observe the reverential dread with which the attendants even then regarded the vacant corridors, blank walls and abandoned moveables. This was likewise the case in 1873 and 1874; but in the beginning of the present year, it was determined to devote the wasting space to a profitable use. Perhaps it was supposed that the privilege of penetrating the old palace grounds would be an additional attraction to many—as it certainly is to foreigners. Whatever the motives, the doors were unfastened, the halls were cleared, the gardens opened and the shrine of immemorial pomp, glory and spiritual supremacy was converted to a bustling repository of industry and trade. The extremes of old and new Japan met in the one sanctuary which, it might easily have been imagined, would have remained forever free from the invasions of progress and reform.

The Exhibition opened on the 1st of March, but, as in previous years, reached its highest point of attraction only in May when the season for excursions fairly sets in. About the 1st of that month, the experienced providers of public amusements—theatre managers, impresarios of the ballet, acrobats, jugglers, funambulists and Homeric minstrels of history and romance—began to assemble in force and to spread their allurements before the community which is most devoted to diversions of any in the world. Then the inns, which had already been replete for two months, overflowed with occupants for whom no sufficient accommodation could be found, but who, with the characteristic good nature universal in Japan, accepted such comforts—or discomforts—as could be supplied them, without a murmur. Civilization has not advanced so far in this country as to create that rage of defiance and hostility between hotel-keepers and their guests which is inseparable from Western institutions. The streets became more picturesquely gay than before with bright varieties of costume, and more tumultuous with incongruities of dialect—for the provincial diversities of speech in Japan are as marked as in England. The whole city was like a vast fair. From the earliest dawn until close upon midnight, day after day, it seemed as if the entire multitude, residents as well as strangers, had abandoned all thoughts of the serious avocations of life. The shops were open and in brisk activity, but it was not difficult to fall into the illusion that their transactions were simply a part of the general merry-making. The merchants wore a benevolent air of continuing their operations solely from a sense that to interrupt the liveliness of traffic at this period would be throw a gloom and a restraint over the spendthrift spirit of the moment. The contagion of mirth was universal, and it was a marvel to me, as it always is in a Japanese jubilee of whatever kind, how any observer could avoid yielding to it and heartily sharing the generous and exuberant, but invariably gentle and decorous enthusiasm that prevailed. But, as I have said that foreigners were admitted to Kioto for the occasion, I need hardly add that there *were* lookers-on who not only took no part in the merriment, but even frowned upon it as the flighty ebullition of a frivolous race. Some of these, the typical tourists

of more than one continent, stalked in stately grandeur, not only miserable themselves, but the cause of misery in others. Wherever these miracles of stolidity appeared, they were treated with a respect that manifested itself by an absence of familiarity which was none the less impressive for being involuntary. As they travelled the length of a thoroughfare they produced upon the body of the citizens an effect not unlike that which might follow the passage of a procession of icicles along the human spine. Of course they never enjoyed themselves—they were too superior for that; but day after day they wandered forth with elaborate pretence and ceremony, to seek new motives for fault-finding and to revel in detraction; and at night returned to their hotels to compare notes and to wonder why the Japanese do not adore foreigners.

Excepting on rare occasions nobody can go to Kiôto, and, consequently, everybody wants to go. The beauty of the place, its charms of legend and poetry and its host of historic associations count for little. Strangers are excluded, as a rule, and they are determined to get in whenever they can, but experience has taught the Japanese that the privilege must be accompanied with precautions. Foreigners are therefore required to obtain passports countersigned by their consuls, and to give bonds in a considerable sum as security for their proper conduct. This condition is a necessity which the consular authorities are prompt to recognize and enjoin. The Japanese would gladly waive it, for the moment, if they could do so with safety. They do, from time to time, make little efforts to relax the severity of their regulations, but the results are not encouraging. Sometimes a week or two may go by without any instance of rudeness or impropriety being reported. Then the system is relaxed. Tourists may pass from point to point without surveillance, and with no demand for their passports. They may even go beyond the defined limits of visitation, and take short trips to the places of interest that surround the old capital. But suddenly some spirited excursionist exhibits his appreciation of the newly bestowed freedom by some act which gives just offence to the people of a village. Complaints are useless in such cases, and, unluckily, the Japanese have only their own amiable weakness to blame, for allowing the range of travel to be extended beyond the stipulated boundaries. Then follows a sudden renewal of the original requirements—passes to be examined at each station, no person to set foot outside the authorized lines, and so forth. Visitors submit without a murmur to these rules—as of course they should do under any circumstances,—until they discover that their predecessors of a few days before were exempt from them. Learning this, and without waiting to inquire into causes, they proclaim themselves injured and outraged, and write to the newspapers that they are trampled under the iron heel of a Pagan despotism. But still they continue to invade the unknown regions, growling harmoniously as they go. If they do nothing worse than growl, the natives with whom they come in contact are truly fortunate. And thus it is that the many perfectly well-conducted foreigners suffer for the behaviour of the few less well-conditioned.

And yet it would seem as if there were here as few incentives to bad humor and at least as many stimulants to rational content as in any part of the world. The journey from Kobe, which is the point of foreign departure for Kiôto, is full of attraction and variety. The little railway line that stretches to Ôsaka is a capital piece of mechanical work, and possesses novelties of construction which are not common in other places;—such, for example, as the passage under the beds of no less than three mountain streams. The appointments of the road are so neat and convenient that it is a pleasure to look upon them. There are no prettier first-class carriages anywhere to be found, and the way-stations are models of their kinds. From the great city of Ôsaka, which in itself is an object of interest from its political pre-eminence in past times and its great commercial importance in all ages, the route to Kiôto may be either by the river, on which steamboats are constantly plying, or over land, by means of the popular vehicles of the country, *jinrikisha*. The latter transit is usually preferred, as it affords a wider range of observation, the banks of the river being so high as frequently to shut in the view from those who are upon its surface. For many miles the road runs through a rich and level plain, less diversified than most regions of Japan, but with noble vistas of mountains and valleys at a distance. The course from Ôsaka to Kiôto is about thirty-five miles in length, and it is accomplished, with a couple of men to each *jinrikisha*, in about six hours, without the least sign of exhaustion or even fatigue. There is nothing particularly noticeable in the demeanor of the inhabitants in the vicinity of Ôsaka, but as soon as the radius of foreign influence has been passed—and I regret to say that, in its effect upon the manners of the natives, influence is too nearly synonymous with contamination—the winning courtesy that is natural to the race shines out.

Of Kiôto itself it is, fortunately, unnecessary to speak in minute description, for, once, upon the topic, I could not answer for my own reticence. It is unquestionably the most most beautiful city in Japan. It had the advantange, originally, of being built "to order." The location was chosen by the Mikado Kuanmu, the fiftieth of his dynasty, about the year 792, after a careful examination of the whole surrounding country, not by himself alone but also by a commission of military, civil and religious officials. Up to that time the Imperial residence had been fixed in no one spot, but had been shifted, generally with each reign, to different towns in the province of Yamato or its neighbors. The whole of the year 793 and the greater part of 794 were occupied in laying out the plans for the new capital, building palaces and temples, planting parks, and making it ready in all things for occupation at a moment's notice. As a result of this elaborate preparation, Kiôto possesses a symmetry and a regularity which are not found elsewhere in the cities of the Empire. But the regularity is never formal or oppressive. The union of practical convenience and picturesque effect seems to have been successfully achieved. I have in my mind a certain capital which was similarly selected and constructed with determination aforethought; but I do not think it has fulfilled its purposes, in the nineteenth century, so satisfactorily as the seat of Kwanmu did, in the eighth. But Kiôto was not built by Congressional contract, and experience has shown that in matters of architectural or other municipal embellishments, an arbitrary autocracy goes a great way. Moreover, the situation of Kiôto gives it unparalleled advantages. It lies in a basin formed by a circle of mountains which embrace it so closely that their sides often form a part of the actual decoration of the city. Many a nobleman here has an Alpine acclivity rising from his garden, and the Sintoo prophets might mount to the clouds from the doors of their own temples.

The dwelling place of seventy successive Mikados is conspicuous only by the walls of yellow tinted plaster that surround it. It occupies a considerable, though not excessive, space, and is by no means so imposing in appearance as many of the religious edifices in its neighbourhood. The ancient military stronghold close at hand, which was built by the warrior Nobunaga, in the sixteenth century, and afterward held by the "Taikuns" of Yedo, is far more majestic and striking. Within the palace walls are clustered numbers of houses of various dimensions, in some of which the sovereigns formerly executed the highest official duties of the Empire, residing, with their families and closest attendants, in others. They are mostly of extremely simple form, and their exterior is so plain as to present no appearance whatever of intentional decoration. Some of them, however, are adorned within in the highest style of Japanese art; with elaborate and costly paintings, carvings and tapestries, all specially wrought for the Emperors' use, and of a character that is nowhere else reproduced. But these apartments are not yet opened to the public view. Neither are the great halls of state, like the *Si Sin Den*, where the monarch was wont to receive visits of homage and submission from his mightiest vassals. The buildings given up to the exposition are of a comparatively inferior class, and anciently served for the transaction of business of minor consequence or as halls of diversion, or, in some instances, as residences for guests of exalted rank,—princes of the Imperial House or high *kugés*. They are connected by corridors and covered passages, and a temporary path-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

way has been laid through them, so that visitors may proceed from one end to the other without the chance of omission or repetition. The course is about two miles in length, of which perhaps three-fourths are occupied with the various articles collected, while the other fourth runs through the gardens. About eight thousand persons seek admission every day, and the number has once or twice reached twelve thousand. The entrance fee is only five cents, so that the humblest may enjoy the privilege as freely as the richest. Five cents for the right to ramble without restraint in precincts which, ten years ago, no human power could have penetrated, and which, to the popular mind, were as inaccessible as Heaven itself, being in fact, nothing less than a section of divine territory, temporarily established for supreme and inscrutable purposes in the heart of this land of the gods!

The Exhibition is interesting, without offering any especial features of brilliancy or variety. Its chief merit is in the opportunity it affords for mutual examination and comparison of the products of different and widely separated provinces. Until a very recent time there had been no interchange of ideas upon these subjects. There was no general intercourse among the people, and the workmen of one district were quite ignorant of the methods employed and the results attained by those of another. The feudal system planted not only social and political barriers, but also held the growth of industries in artificial restraint. That is now all changed, and in these annual expositions are gathered the evidences of what can be accomplished by the intelligence and energy of diverse sections, working independently and often under totally opposite conditions. Nothing is more noticeable than the eagerness with which the artisans from one quarter investigate the achievements of those from another. Processes are discussed and the details of manufacture scrutinized with laborious care. It is a common thing to see groups of workmen who have met by chance and who have come from regions so far apart that they can hardly make their speech understood by one another, engaged in earnest consultation over a piece of pottery, an implement of agriculture, or a strange device of labour-saving machinery. These debates sometimes last for hours, the parties adjourning from the thoroughfare of the show to the tea-houses in the pleasure-grounds. As the articles contributed are almost exclusively Japanese, the Exhibition has, in this respect, a more practical value than if foreign wares were largely displayed. There is less to marvel at but a great deal more to yield material advantage. A classified list of the entire collection would not cover many pages. There are specimens of the vegetables—not yet numerous—that Japan has learned to produce, with abundant supplies of seeds for distribution; various kinds of woods; all the known articles of national food; the animals of the islands, also limited in number; minerals in profusion; manufactures in different stages of progress—porcelain, silk, tobacco, lacquered wares, bronzes, etc.; altogether a miniature epitome of the industrial capacities of the country. Of course it must be understood that, although the names of the contributions may be briefly stated, there are infinite variations in kind. The different qualities of porcelain and silk and delicate wooden wares may be counted by hundreds. The extent to which these modifications are carried can be understood by the fact that of paper alone there are not less than one thousand different sorts. The display is enlivened at intervals by objects which more directly recommend themselves to the pleasant senses—priceless works of art from the Imperial stores, now visible to the public for the first time; relics of antiquity brought forth from the treasuries of religious houses, where they have been jealously guarded to this day; and a multitude of articles of inexpensive luxury, always tasteful and ingenious, and in which the Japanese take great delight. Prominent among these latter are the supplies of toys for children. There is no land like this for toys. It seems as if every resource of invention had been exhausted for the amusement of the young, and the charm of them is that results which seem amazing even to adult eyes are accomplished by appliances so simple as to make them doubly marvellous. Among the historical gatherings are weapons of several periods, the most curious of which are breech-loading cannon of nearly three centuries ago. There are likewise models of the ships of war in which the Japanese accomplished their venturesome expeditions to Corea, Formosa, Luzon, and even Siam, almost before the country was known, by Western nations, to exist. These vessels were evidently of formidable bulk and power, and certainly not inferior to the best Spanish craft with which they were contemporaneous. They were not very different from the largest English ships of a hundred years past. Their antiquity is attested by the fact that by a decree of the third Shiogun, early in the 17th century, when the principle of national seclusion was resolved upon, they were all destroyed, and a form adopted which would make distant voyages impossible. This form has never since been changed. The old models have been carefully preserved in the Kiôto temples, from which they now emerge after a concealment of three centuries or more. Side by side with these emblems of ancient prestige are collected a few tokens of modern prowess—arms and other trophies the sight of which transported me suddenly, in imagination, to the fiery wilderness of Formosa, where I had witnessed their capture in the summer of 1874. Far more agreeable to contemplate than any of these are the pretty achievements of the pupils of a philanthropic society recently established in Kioto "for the encouragement of female labour." The women who are thus brought together and invited to turn their hands to useful work, are, I believe, social outcasts. Under ordinary circumstances, having once entered upon their dreary career, there would be no possible reclamation for them, as they are unskilled in reputable methods of self-support; but the plan of the institution is to give them instruction in different kinds of needlework, chiefly ornamental, and to find a market for all that they produce. Embroideries of the most ambitious description are exhibited in this department, and if the attention they attract be any assurance of success, the society has a fair prospect of accomplishing its designs.

With all the merits of the exposition, judged from a Japanese stand-point, it must be admitted that to strangers, (outside of the *nil admirari* class) the paramount attraction is in Kiôto itself, its natural charms, the beauty of its environs, and, at present, the multitudinous sea of light-hearted humanity that overflows it. Perhaps it may not be easy to picture an assemblage of fifty thousand excursionists gathered compactly together without a thought of anything but mutual good feeling and amiable regard for the common comfort and content. Such a state of things may be ideal in other lands, but in Japan it is a literal reality. Individual discourtesy is never seen, because it is never cultivated as one of the elements of success in the pursuit of happiness. Disorder or turbulence would be the cause of a far greater astonishment than the most startling curiosities of the Exhibition could create. The tidal wave of merriment has nothing vicious or destructive about it. The main object of the mass of visitors is amusement—free as their fancies can conceive and unlimited as their finances will allow. Those whose means are very narrow roam incessantly by day and night, as gay as any, and never appear to be burdened by reflections upon the superior opportunities of others. Those who have funds to spare are embarrassed only by the multiplicity of channels through which they may disburse them. It is a continuous carnival, with no affectation of flesh-forsaking significance, to be sure, but with a comfortable absence of the envy, hatred and malice and all uncharitableness that Christian nations pray to be delivered from but do not invariably succeed in getting rid of—not even in the gigantic World's Fairs of Europe and America. If success, in an enterprise of this nature, consists truly in attaining the desired end by the most engaging means, and securing the completest gratification to the interests of all concerned at the least appreciable cost of exertion and constraint, then that of of the modest and unpretending Industrial Exposition of Kioto may be pronounced as nearly perfect as ordinary human calculations are ever likely to achieve.

A STUDENT'S VIEW OF FUTURE SERVICE.

THE following extract from a letter written by a student in America is interesting as an example of the ease and fluency in English expression that has been attained, not only in this instance, but also in many others that have come to our knowledge, and as showing the consideration that is given to the material necessities of Japanese development, even by those from whose youth and whose delicate culture the avowal of such practical theories could hardly be expected. The writer eighteen years of age, is the son of an officer of the Kanagawa Kencho, was for two years a scholar in the Kai Sei Gakko of Tokio, and has resided for about the same period in a New England city. It is perhaps fair to say that his letter was a hasty communication to a private friend, and that its slight deviations from strict accuracy of composition would doubtless have been avoided if it had been supposed that greater care was required. We print it, without alteration from the original. Respecting the views which it sets forth, it is unquestionally true that great numbers of the rising generation might well serve their country in the manner indicated; but a doubt will probably arise, in their case, as to whether the special intellectual qualities which the style and method of thought seem to demonstrate would be most profitably employed in such a direction. At least the deficiency of "mind," which is naïvely asserted by the modest reviewer of his own capacities, will not be apparent to others.

"As I was the other day deeply engaged in various thoughts as to what I should do in my future life, and in what capacity it would be that I could best serve my fellow countrymen, the idea struck me of becoming a farmer, and it has not forsaken me since. Should you be surprised to see me turn farmer? At first the idea was repugnant to me, and the very word "farmer" sounded insignificant and even mean. But as I thought more on the subject, I was soon reconciled to it; and moreover, I argued that there was nothing disgraceful in the profession, and no more so to those who pursue it. I also know this, that one profession is as honorable as any other, and that a man can make himself useful among his people as a farmer, quite as much as in some other calling; and honour is always with him who performs his branch of labour faithfully and effectually. No doubt, the *Sangis* and the *Kiôs*, and such others soar high in the social world, enjoying several privileges and artificial honours, if I may so express myself, which must needs be withheld from the more modest class of men, farmers. But what is that to me? I have no ambition to aspire to high ranks or dignities, nor am I envious of the luxuries and splendor of a Court. Perhaps I misinterpret my own meaning to say this. I also am a human being, and am far from despising the situations of these officials, who, filling high ranks in various departments of the Government, play their parts on the great political stage, and influence the people's minds. I admit there are grandeur and nobleness in all these. But I must not forget that those who expect to lead such lofty lives, and to shine forth above their fellows, must, in the first place, possess minds and proper qualifications. I, for my part, have no mind, and not having the foundation, the good I derive from education in this direction will go only a little way. "No," I say, therefore, to myself, "I cannot, I will not be one of those people; but will study Agriculture, while I am in this country, and when I go home, I will carry back the knowledge with me and teach and practise it among my countrymen."

Now, do not mistake my meaning. I do not mean that when I finish my education and go back from here, I shall confine my existence and labor within the limited societies of the poor, ignorant farmers; much the less am I willing to have myself numbered among the common "water-drinking" class. My object is, and I hope it is a worthy one, to endeavor to introduce the foreign system of farming as fully as possible into our country, and to contribute with my best ability to the improvement of the land; causing such articles to be produced there as the natives have not seen, and as will soon be appreciated and used by them. It is quite needless to remind you of the importance of real scientific agriculture; and this is nowhere more needed than in Japan. It is true, the natives are skillful in this art, nay, they even excel other nations in some particular branches, such as cultivating rice, &c.; but then their knowledge is limited, and nobody will question but that they will be improved by additional instructions to a great extent. Moreover, a fast change is now taking place among the people at large in social views; and they are at this moment gradually adopting European manners and of living, and are beginning to use various animals' flesh for their diet. And it is evident to me that in not many years rice, fish, and vegetables will cease to be our universal food, and your mode of living will be practiced on a large scale. This will cause a demand for domestic animals, and then the proper methods of grazing will become necessary.

And again, lately, on the part of our government, many assiduous efforts have been made to open the island of Yezo for human habitation; and in spite of various obstacles, which the settlers have met with there, I have no reason to think the people's zeal on the question has in any degree abated—but, on the contrary, it is likely the Kuaitaku-shi will push this piece of work right straight on. And here, too, in the course of a few years, a man, educated for the profession, who knows how to adapt proper ways of cultivation to the nature of the soil, will not be an unwelcome assistant in their labors, and his service is not likely to be rejected.

All these I have here recounted somewhat at length, not because, as I said before, I wished to point out to you the importance of fitting up some of us for this rural science, but because I hoped to have you understand my ideas about this matter, and to let you know my willingness and desire to volunteer for the service.

Of course, I will write to my father this time in full, and let him know my opinion, and will ask his counsel, too. I hope my parents and my friends at home will have no objection to my choosing this profession. Although, as you know, we are remarkably quick in throwing away many unreasonable prejudices, and in adapting ourselves to new ideas, yet there remain a great mass of people still fostering many old fashioned notions. Particularly among the women, partial respects are made to family pride and dignity, and should their husbands or brothers propose to step down from their family-rank and become farmers, they might yet incur their displeasure. However, my mother is too much enlightened for this,—she is above this, and I have no doubt, if my thought be intimated to her, she will soon be reconciled to it, and will perhaps come finally to approve of it. As to my father, I know, he is altogether too liberal minded to oppose my inclination. I am thankful I am not living in those old times when we were not allowed to select callings to our own liking."

Law & Police.

H. B. M.'s CONSULAR COURT.

Before H. S. WILKINSON, Esq, Acting Consul.

June 22 1875.

Samual Topping, carpenter of the British barque *Spirit of the Age*, was charged by Mr. John-on, master of the barque, with assaulting him.

The prisoner pleaded "Not guilty."

Richard Johnson, master of the *Spirit of the Age*, swore that the accused shipped as carpenter and seaman, and that he soon discovered that he was not up to his work as carpenter. He could not even handle his tools, and was put to seaman's duty. On the morning of the 19th April the prisoner was reported by the chief officer for disobedience of orders, and was reprimanded, when he became violent and abusive, and used bad language. The witness ordered him off the poop, and on his refusing advanced to compel him to go. The accused then struck the witness with his fist a heavy blow on the head, and retreated from the poop An entry of the assault was made in the official log-book.

John Stansfield, chief officer of the *Spirit of the Age*, deposed to having witnessed the assault by the accused upon the captain. The witness signed the charge in the official log, and at that time the accused said he had not committed the offence. The prisoner had not been on board the vessel six hours before his incompetence as a carpenter was evident. He was either not a tradesman, or he had not chosen to show his ability.

To the Court: The accused made a royal yard in a manner to convince any experienced person that he was not a carpenter. In small vessels it is usual for the carpenter to assist in washing the deck When he assaulted the captain he struck him on the head with his right hand. His work was always done reluctantly and once when called up at night he would not turn out, on the ground that the cook was not turned out too.

The prisoner denied having committed any assault upon the master, and called.

Charles Harris, steward of the vessel, who was sworn, and said that on the morning in question he heard the mate order the carpenter to wash decks. During breakfast the mate told the captain that he had disobeyed orders. After breakfast the captain called the carpenter on to the poop, and asked him why he had refused duty, to which the carpenter replied that he had not done so. An altercation ensued, and the captain told accused once or twice to leave the poop, adding that if he did not go he would throw him off. The captain went to execute his threat, pushed the accused, who

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fell, and in trying to break his fall threw up his hand, striking the captain on the head, evidently unintentionally. The captain's hat was knocked a little on one side, and he shouted out, "Did you see him strike me?" to which the mate answered "Yes." Next morning, after breakfast, the accused was brought to the cabin by the captain's orders. Witness was in the pantry, and heard the captain threaten to below the man's brains out if he came down stairs to do anything. Witness saw the captain take his revolver from his room and put it under a bench in the after cabin.

To the prosecutor: I saw all that occurred on the occasion of the alleged assault. I was standing on the companion ladder and the disturbance took place at the break of the poop.

The captain said that a man standing on the companion ladder could not see what happened at the spot indicated.

His Honour animadverted upon the conduct of the prisoner. Though he did not quite credit the statement of the last witness, yet there was a doubt as to the assault having been committed, and as the accused denied all intention of striking the captain, and there was no specific charge of refusing duty against him, he would be discharged.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General.

June 21st, 1875.

W. L. CLARK v. STAPLES & WHITNEY.

This was a claim for $2,119.25, with interest from the 1st April last. The amount claimed is made up of $2,100 commission on the lease of the Occidental Hotel and premises, and $19.25 expenses incurred by plaintiff.

Mr. Clark deposed to having been engaged by the defendants after their arrival in this settlement, to procure for them the lease of the hotel premises at No. 18, lately under the management of Captain Purvis. After some delay, occasioned by the necessary negotiations, he brought the matter to a head, and arranged with Mr. De Rosa on behalf of his clients to lease the place for ten years, at a monthly rental of $700. He had arranged, he said, to charge 2½ per cent. on the amount of the lease and contended that he meant, and was understood by the defendants to mean, on the *whole* amount of the rent, which would be $84,000. He had repeatedly applied for the money, and was told by the defendant. Whitney that he would settle up with him early in June. When this promise was not redeemed, plaintiff threatened to bring an action to recover the money due to him and Mr. Whitney told him to "go ahead."

Mr. James Winstanley, of Messrs. Bourne & Co., was called by the plaintiff, and testified to 2½ per cent. being a customary rate of commission. For an ordinary lease, his firm would charge 2½ per cent. on the gross rental. In a ten years' lease, they might make a reduction. They would probably charge a commission of 2½ per cent. on the rent for the first five years, and make a reduction on the amount for the remaining five.

Mr. Whitney, one of lessees of the Occidental Hotel, was examined, and did not deny the liability. He said, however, that he understood that commission was only to be charged on the first year's lease.

James M. Staples, the senior partner in the firm of Staples & Whitney, was sworn, and said that he was privy to the engagement with Mr. Clark, who was to charge 2½ per cent. commission. Witness had not heard any time mentioned on which commission was to be charged. He supposed, though, that the same custom prevailed here as in the United States, where commission was charged on the first year's rental, unless a special agreement were made to the contrary.

His Honor remarked upon the apparently enormous extent of the charge. It was evident, however, that an agreement had been made: the bill was sent and in had not been disputed. He would pronounce his decision on the case to-day (Tuesday).

22nd June, 1875.

The following judgment was delivered by the Consul-General this evening:—

This action is brought to recover the sum of $2,119,25, amount of commission and expenses claimed by plaintiff for procuring for defendants the lease of the premises known as the Occidental Hotel, in Yokohama. It clearly appears from the evidence that the plaintiff was employed by defendants to procure the lease of the property, and that the same was so obtained by the procurement of the plaintiff. That the lease, as executed, provided for a tenancy of ten years, at $700 per month, with the privilege of terminating the same by the lessees in five years, upon a previous six months notice to the lessors; that the plaintiff stated his terms before entering upon his task to be 2½ per cent. commission, which terms were ageeed upon by the defendants; that nothing at that time was said about the gross sum upon which said 2½ per cent. was to be paid,—whether upon the rental of ten years, or any other period, the plaintiff testifying that he understood it to refer to the gross ten years' rental, one of the defendants, that he supposed it to mean only the amount of one year's rental.

In April, however, it appears that plaintiff presented his account to the defendants for the sum of $2,119.25 on ten years' rental, and $19.25 expenses.

To this bill defendants never made any objection, but on the contrary defendant Whitney repeatedly promised to pay it.

The charge is evidently disproportioned to the labour performed; but the defendants, with the singular recklessness that seems to have characterised all their financial proceedings in this country, promised to pay it without the slightest demur or remonstrance, which, if properly presented, would probably have resulted in a reduction of the same by the plaintiff.

By the lease, however, it appears that the defendants had the right to terminate the tenancy in five years. In fact, it was terminated within three months. When the defendants promised to pay the bill, I am at liberty to presume they did so under the intention of continuing in possession of the premises for the whole term of ten years. Having, however, given the same up within a few months, it appears to me equitable to hold their said promise as binding only for the per centage upon the rental for five years.

It is therefore ordered and adjudged that the plaintiff do recover from the defendants the sum of one thousand and fifty dollars, being commission at the rate of two and one-half per cent, upon $12,000, the rental for five years, and nineteen dollars and twenty-five cents expenses, being for the gross sum of one thousand and sixty-nine dollars and twenty-one cents, and interest from the 1st day of April last, and costs of suit.

THOS. B. VAN BUREN,
U. S. Consul-General.

June 21, 1875.

W. H. Scriggins was charged with being drunk and incapable.

This man, whose real name is Livingstone, was asserted to be a deserter from the *Lackawanna*. He was discharged, and ordered to eave the port within ten days, otherwise he would be tried on the charge of desertion.

1 E. Scott, a seaman of the U. S. S. *Saco*, was charged with being drunk and disorderly. The evidence of the police showed that he was very violent. The consul expressed a wish that the police would complain against the low grog houses in town. At many of these places decoctions were sold of the vilest description, manufactured expressly to kill sailors. If the police would show good grounds of complaint against any of these houses kept by American citizens, he would shut them up immediately. Sergeant Perceval promised to lodge a complaint in due form and course.

FRENCH CONSULAR COURT.

Before the Chancellor.

June 21, 1875.

Louis Gaugroe, a seaman of the French iron-clad *Montcalm*, was drunk and disorderly yesterday. He was brought before the French Consul this morning, who ordered him to be sent on board his ship for punishment.

GERMAN CONSULAR COURT.

The following is the translation of the judgment in the case of Simon, Evers & Co. *versus* Dau, of which we gave the purport on the 21st inst.:

"It is hereby made known and declared that the judgment of this Court is that the defendants are to pay the costs of this suit, and are to pay to the plaintiffs for the damage done to the 27 bales of pilot cloth and 299 rolls of felt the sum of 2,820 dollars and 31 cents, together with interest on the same at the rate of 5 per cent. from the date of the arrival of the *Mathilde*.

Consul for the defence has notified his intention to appeal against this decision.

Before E. ZAPPE, Esq., Consul.

J. MAMMELSDORF and H. FRANCKE, assessors.

Friday, 25th June, 1875.

K. OKURA & Co. *vs.* BUSCH SCHRAUB & Co.

This was a claim for the recovery of 1,000 *yen* damages, together with 1,000 *rios* deposit money and interest, paid on a contract en-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tered into with defendants in July, 1874, for 60,000 pairs military drill gaiters, to be ordered from home.

Mr. Motz, of the Judicial Court of Kanagawa, appeared for the plaintiffs, and stated that in July, 1874, the plaintiffs entered into a contract as above. There was a clause in the agreement to the effect that in case of its non-fulfilment by the defendants, that they were to pay 1,000 *yen* damages. 1,000 *rios* were paid as deposit money.

Defendants, in answer, admitted having made the contract, and having failed to fulfil it on account of the high price ruling at home for the article; but stated that the contract was made with a partner of the plaintiffs' firm named Yokuyama, who had since gone to London. He had consented, before leaving, to an amicable arrangement of the matter, by which they were to return the 1,000 *rios* paid as deposit, and pay plaintiffs 400 *yen* as damages.

This defendants failed to prove, and the plaintiffs having sufficiently shown to the Court by documents that this was not the case, judgment was given for the plaintiffs as follows: 1,000 *yen* damages, to be paid by the defendants as in the contract, and the 1,000 *rios* bargain money to be returned, together with interest on it, at the rate of 6 per cent. per annum from the 24th July, 1874.

THE LATE ECLIPSE.

(The Saturday Review.)

It has been well said that when, in the distant future, the scientific history of the present century comes to be written, the wonderful advances in our knowledge of the constitution of the sun, and therefore in our knowledge of star-structure generally, will occupy a large, if not the foremost, place. We believe this opinion to be correct, because, although to many persons the generalizations of Darwin or Thomson, and such practical successes as the electric telegraph, seem to dwarf the revelations of the spectroscope; in the case of the latter instrument the ground is only just broken, and many of the results already acquired, marvellous as they are, are as yet but imperfectly understood; while physicists and chemists have not yet realized, as they must shortly do, that in the various stellar bodies which give us light, not only is matter to be studied under conditions impossible of realization upon the surface of this planet, but its laws can be investigated under the most simple conditions in celestial laboratory experiments upon the most stupendous scale. Be this, however, as it may, it is satisfactory to remember that, when the history of scientific progress in our time comes to be written, the efforts of the English Government and of English Scientific Societies will have to be recorded. The Government, however niggardly it may have been with regard to other scientific questions, has never refused aid to observe total eclipses of the sun. Since the importance of the use of the spectroscope in such observations was demonstrated by the discoveries made during the eclipse of 1868 we have had three such expeditions aided by Government. In 1870, 1871, and in the present year, observers have gone from England, armed with all the appliances of modern science, to meet at their stations friendly rivals from other civilized countries. Both in 1870 and 1871 great advances were made, necessitating more or less complete changes in the method of attack to be adopted when a subsequent occasion presented itself, until, in the observations made on the eclipse which was visible in the Islands in the Bay of Bengal, in Burmah, and in Siam on the 6th of the present month, eye observations have been abolished altogether. The telegrams which have arrived during the present week from the observing parties in the Nicobars and in Siam tell us that, although the weather proved treacherous—the eclipse itself generating a cloud over the stations at Camorta in the Nicobars which prevented all observations during totality, and the sky being hazy in Siam—valuable results have been obtained, and in one of the telegrams sufficient details are entered into to enable us to form an idea of the kind of new knowledge which has been obtained.

To show in what this consists a few preliminary remarks will be necessary. The first application of the spectroscope to the sun by Stokes, Kirchhoff, and Angström showed, as might have been anticipated, that the materials of that luminary and of our own planet are similar, the main difference between the two bodies being one of temperature. Our earth, which must once have shone out as the sun itself, though of smaller mass, has cooled down so completely that, with the exception of the gases, oxygen and nitrogen, of which the atmosphere is at the present epoch chiefly composed, all the other chemical elements as a rule have combined to form the solid crust of the earth and the various organisms which occupy its surface, such combinations having been rendered possible by the cooling. In the sun we find a very different state of things. In consequence of its tremendous temperature, its atmosphere is mainly composed, not of cool metalloids as ours is, but of incandescent metals, such as iron, magnesium, and the like. The detection of this atmosphere was one of the first triumphs of the spectroscope. In the last century the sun as it is familiar to us was supposed to be all the sun. It was thought that the bright surface was due to a stratum of clouds at the extreme upper limit of the atmosphere of a cooled globe like our own; we now know that it lies at the base of an incandescent atmosphere at least half a million of miles high, and surrounds a nucleus which must be hotter than itself. But we know very much more than this; we know the chemical constituents of the lower part of that atmosphere, and in this study we have come across the very remarkable fact that the various chemical constituents are not equally mixed up, but that they thin out, so to speak, in such a manner that although all are present at the surface of the bright layer, or photosphere—that is, at the boundary of the sun as ordinarily visible to us—the atmosphere becomes less and less rich as we ascend, so that at length we reach a region where only one chemical element—namely, hydrogen—is present among all the known substances with which we started at the bottom.

The constituents of the sun's atmosphere, taken as a whole, have recently been thus classified by Professor Prestwich:—

1 Permanent Gas	Hydrogen.		
2 Metals of the Alkalies	Sodium.	Potassium.	
All the Metals of the Alkaline Earths ...	Calcium,	Strontium	Barium.
3 Metals of the Zinc class	Magnesium.	Zinc.	Cadmium.
All the Metals of the Iron class	Manganese.	Cobalt.	Chromium.
	Iron	Nickel.	Uranium.
2 Metals of the Tin class	Tin.	Titanium.	
1 Metal of the Lead class (probably)	Lead.		

To the metals of the alkalies in this list may now be added Lithium, which Mr. Lockyer has recently detected.

It will be seen that the metals of the tungsten, antimony, silver, and gold classes are entirely unrepresented, while, if we accept the metallic nature of hydrogen, there is not a single metalloid on the list, although they have been diligently searched for. But even this is not all. It has been remarked that the order in which these metallic vapours thin out, in the manner we have before referred to, is that of the old atomic or combining weights, and not that of the modern weights; this is indicated in the following statement:—

	Old Atomic Weights.	New Atomic Weights.
Hydrogen	1	1
Magnesium	12	24
Calcium	20	40
Sodium	23	23
Chromium	26	52.5
Manganese	27	55
Iron	28	56
Nickel	29	58

Aluminium is not included in the list, because its order in the layers has not yet been determined by observation, but the principle referred to would place it between magnesium and calcium.

So much then for the chemical constitution of the lower regions of the solar atmosphere. It was found during the eclipse of 1871, observed in India, that while the spectroscope and photography quite agreed in their records of this part of the atmosphere, they parted company, so to speak, when the higher reaches of the atmosphere, called by Janssen the "coronal atmosphere," were in question. Photography gave us great extension, exquisite details, and a rugged boundary. Spectroscopy gave us small extension, no details, and a perfectly circular outline. Hence the terms "photographic corona" and "spectroscopic corona," then introduced to represent the idea that, while the light from some of the materials was more competent to impress itself upon the photographic plate, that from the hydrogen chiefly came to the eye in the instrumental arrangement employed. This important conclusion gave a new incentive not only to eclipse observations and laboratory researches, but also to an examination of the solar spectrum from a new point of view. Since 1871 some evidence has been communicated to the Royal Society in support of the suggestion that the metalloids or non-metallic elements as a group lie outside the metallic atmosphere. This, if it were established, would at once explain the difference between the photographic and spectroscopic corona; while fortunately, later researches have shown that, if the metalloids did exist there, the spectrum they would give would probably have considerable photographic action, which would be denied to them lower down, because, as they descended, by the breaking up of their particles, their light, instead of being confined to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

blue end of the spectrum, would be distributed over the whole of it, while in addition it would be enfeebled, owing to mixture with the other gases and vapours in the lower regions.

We believe we shall not be far wrong in ascribing the anxiety of the Royal Society to secure observations of the present total eclipse, and their appeal to the Government for aid, to the great interest which attaches to the question to which we have referred not only from an astronomical, but from a physical, a chemical, and a geological point of view. Of course there were other questions which would be settled by the way, but the paramount ones were—(1) Is a cooling star surrounded by strata, so to call them, in which complexity of molecular structure, whether due to compounds of the same or of different elements, increases as the distance from the greater heat at the centre increases? and (2), Near the centre where the molecular structure of the so called elements which can withstand the dissociating force of that most highly heated region is necessarily of the simplest, what is the exact order in which these molecules of strictly comparable physical constitution sort themselves out by the action of gravity? Could a definite answer be given to the first question, speculations as to the origin of the crust of our earth would be enormously simplified and kept within a certain fixed boundary, while it is clear that the second question has to do with both physics and chemistry; for in the lower region of the sun's atmosphere we are in presence of a continuous experiment on a gigantic scale on the relative vapour densities of at least twenty metals—an experiment, be it remarked, in which the temperature affords us a guarantee, and the spectroscope a proof, that the vapours are all in similar molecular conditions. To answer these questions the Royal Society looked to photographs of the spectra of both the upper and lower parts of the solar atmosphere, especially in the ultra-violet region, such that the difference between the photographic and spectroscopic corona observed in 1871 might be explained, and the variour heights to which the vapours in the lower atmosphere extend could be demonstrated.

Now Dr. Schuster, the chief of the Eclipse party in Siam, has apparently succeeded in photographing the spectra both of the upper and lower parts of the sun's atmosphere. To explain his telegram, we may state that the arrangements adopted by the Royal Society with infinite skill and care were such that each particular kind of vapour in the sun's atmosphere would register itself on a photographic plate; so that, if it extended all round the sun, as in point of fact we know they all do, we should get a ring—a thin one if the vapour extended only a short way above the photosphere, one of considerable breadth if the vapour extended from the photosphere high up into the atmosphere. Further, while in the case of those vapours which we know to rest on the photosphere, the interior diameters of all the rings would be the same, however great the breadth of the rings might be, if there were any vapours which existed at a higher level but did not extend down to the photosphere, and which therefore form no part of the lower atmosphere or enter into the composition of the prominences, these rings would have a greater interior diameter, and in this way clearly indicate the different position in the atmosphere of the vapours which gave rise to them. Dr. Schuster tells us that "the prismatic camera shows the rings with protuberances at the edge of the sun, and at least one more ring towards the ultra-violet without prominences." It is not too soon therefore to state that one of the fundamental questions put to the eclipsed sun has been answered, and although we may regret that either some unexplained delay, or a haze, or both, prevented some of the more delicate work being done, enough has been secured amply to repay those on whom the labour of love has fallen of planning the various expeditions.

The photographs, the fruit of so much labour, will soon be in this country, and if the careful examination of them justifies the hopes raised by the telegrams, the results obtained during the present eclipse will not soon be forgotten, while the methods employed will doubtless supersede all former ones until new successes have been achieved and the various problems have been pushed still further towards solution.

Judging from a piece of news which appeared on the 27th of May in the *Singapore Daily Times*, there is some probability of our having extra concerts in Shanghai, next season. The paragraph is as follows:—"We understand that the prima "donna Signora Maria Palmieri, assisted by Signor Fito (?) "Palmieri and Signorina Alice Persiani, will visit Singapore "in a few days, on her way to China and Japan, and intends "giving two concerts here. She has been giving very "successful concerts in Australia, and is at present in Java." —*The Celestial Empire.*

REUTER'S TELEGRAMS.

London, 18th July 1876.

Further Failures.

Messrs. Young Borthwick & Company, Bill Brokers, Messrs. John Strachan & Company of Bishopsgate Street, J. C. Fowlie, Leadenhall Street, Messrs. John Anderson & Company of Philpot Lane, J. P. Westhead & Company of Manchester and many other minor failures.

Shanghai, 18th June, 1875.

The American Consul and his wife have been insulted at Chinkiang by soldiers. Some disturbance followed but subsequently quieted.

Mr. Medhurst and Mr. Seward in the *Thalia* and *Palos* respectively have proceeded to Chinkiang.

London, 17th June, 1875.

Further Failures in London.

Messrs. Robert Benson & Company of Kings Arms Yard and Messrs. Rainbow Holderton of Saint Helens Place, have suspended payment and further failures are expected.

London, 15th June, 1875.

Marshall MacMahon has reviewed 25,000 troops.

A Terrible Earthquake has occurred at Cucuba (sic) in New Granda. The loss of life has been very great.

Messrs. Alexander Collie of London and Manchester have suspended payment. The liabilities are estimated at three millions.

Bombay, 12th June, 1875.—The Sassoon Wet Dock was successfully opened on the 9th instant. Steamer was docked on the occasion.

London, 12th June, 1875.

ASCOT HUNT CUP.—Thuringian, 1 Prance, 2 Whitebait, 3.

GOLD CUP.—Doncaster, 1 Aventurière, 2 Mongol, 3.

The Sultan of Zanzibar has arrived in London.

Shipping Intelligence.

ARRIVALS.

June 20, *Volga*, French steamer, Nomdedeu, 960, from Hongkong, Mails and General, to M. M Co.

June 20, *Niigata Maru*, Japanese steamer, Walker, 1,685, from Shanghai, &c., General, to M. B. S. S. Co.

June 20, *Spirit of the Age*, British barque, Johnson, 347, from Liverpool, General.

June 22, *Great Republic*, American str., H. C. Dearborn, 3,881, from Hongkong, General, to P. M. S. S. Co.

June 22, *Auguste*, British schooner, Watt, 210, from Taiwanfoo, Sugar, to Order.

June 23, *Ascold*, Russ. flag ship, Tartoff, 2,016, from Hakodate.

June 23, *Costa Rica*, American steamer, Connor, 1,917, from Shanghai and Ports, General, to P. M. S. S. Co.

June 23, *Peter*, German brig, Holm, 241, from Takow, Sugar, to Chinese.

June 26, *Malacca*, British steamer, Bernard, 1,660, from Hongkong, Mails and General, to P. & O. Co.

DEPARTURES.

June 20, *Cheviot*, British steamer, Watt, 764, for Hiogo, General, despatched by Kniffler & Co.

June 22, *Gaucho*, British barque, Crighton, 379, for Nagasaki, Ballast, despatched by E. C. Kirby & Co.

June 23, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

June 24, *Otto*, German brig, Adamson, 231, for Chefoo, Ballast, despatched by Captain.

June 24, *Great Republic*, American steamer, Dearborn, 3,880, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

June 24, *Victoria*, British barque, Briscold, 748, for Vancouver Island, Ballast, despatched by Captain.

June 24, *Oxfordshire*, British steamer, Jones, 1,640, for Hiogo, General, despatched by E. Fischer & Co.

June 25, *Annie Braginton*, British barque, Smith, 413, for New York, Tea, despatched by Cornes & Co.

June 26, *Niigata Maru* Japanese steamer, Walker, for Shanghai and ports, Mails and General, despatched by Mitsu Bishi Co.

PASSENGERS.

Per *Niigata Maru* from Shanghai and ports.—Messrs. S. M. Sato, A. Thomas, M. Nickel, A. Helm, Blakesly, Sutton, Kon-kee, Weintraub, Goldstand, Capt. Hubbard, Duncan, Glover and 6 Japanese in the cabin, and 102 Japanese, 11 Chinese in the steerage.

Per *Volga* from Hongkong.—Madame Steckens, Captain Stevens, Messrs. R Negre, Whitall, and 14 French mariners.

Per P. M. S. S. *Great Republic*, from Hongkong:—For Yokohama.—Baron Francois Seillien, J. Lumsdaine and Servant, 1

European in the Steerage and 1 Chinese. For San Francisco.—Rear Admiral A. M. Pennock, U. S. N., Mrs. Capt. D. B Harmony, Lieut. E. L. Amory. U. S. N., Dr. T. W. Leach, U. S. N., John S. Stodder, U. S. N., Walter Moffett, Richard Devens, Alexander McLeod, D. M. Forbes, 3 Europeans in the Steerage and 938 Chinese.

Per P. M. S. S. *Costa Rica*, from Shanghai and way Ports: For Yokohama.—Rev. J. Davison and Wife, Rev. D. Green and Wife, L. W. Kiss and Wife, Mr. and Mrs. Craven, Mrs. Captain Stevens, Baron D'Anéthan, Messrs. Schnell, S. J. Morris, Ching Chu, F. A Wheeler, E. L. Reed, Beasley, Tanigaya, W. Buscott, G. Abell, J, Potida, Captain Hashian. For San Francisco.—Miss J. J. Mansfield, Paymaster C. H. Thompson, U. S. N.

Per P. & O. Steamer *Bombay*, for Hongkong.—Dr. Morehead, Mr. Newbigging, Major Buller, Mr. and Mrs. Taro, Aubo and H. Wagner.

Per American steamer *Great Republic* for San Francisco.—Capt and Mrs. Harris, Mrs. Harmony, Rear-Admiral Pennock, U.S.N., Lieut. Amory, U.S.N., Dr. T. W. Leach, U.S.N. J. J. Mansfield, W. Moffat, A. Everson, D. Morita, F. Jones, C. Wagner, R. Deven, J. Stodder, U S N., E. H. Nicholl, C. C. Blakeslee, A. S. McLeod, D. M. Forbes, and 938 Chinese in the steerage.

Per *Niigata Maru* for Shanghai and ports.—Messrs. Frousad, Pryon, Benson, Kumoshiro, Kogiro, Mr. and Mrs. Payne Bennet, Walker, Hukeyu, Yoshimaga, Pauncefort, Wagner, Henry, Ota, Kujimura, Torii, Yasui Ito, Yoshikawa, Fujiimoto, Tamayaki Chiyo, Matsuwo, Matsuyoi, Shee Yak Po, Chong Tak Cha, Kam Kee, See Jee Jee See, Lee Chong Kui.

Per P. & O. steamer *Malacca* from Hongkong: Miss Gibbs, from Singapore; Mr. Oishi and 18 Chinese.

CARGOES.

Per P. & O. Steamer *Bombay*:—
Silk for England, 60 bales; France, 45; Italy, 10.

Per P. & O. str. *Malacca* from Hongkong:—

Overland Cargo.

18 Boxes Dollars value £3,038.
118 Packages General cargo.

Local from Hongkong.

Sugar	10,208	Packages.
Wine	184	,,
Tea Mats	78	,,
Vermillion	30	,,
Tin	60	Slabs.
M'dse	54	Packages.
Leather	39	B'dles.
Sundries	133	Packages.
Cigars	2	Cases.
	10,778	Packages.

REPORTS.

The *Otto* reports pleasant weather and light wind till off the Kii channel on the 8th, when they experienced a very heavy westerly gale.

The *Spirit of the Age* reports experienced some heavy weather in the Atlantic, called at the Cape for water and some repairs, left there on the 10th March, came up through the Eastern passages, and had generally fine pleasant weather.

The British schooner *Auguste* reports S. W. winds and moderate weather throughout.

The Russ. flag ship *Ascold* reports experienced light southerly winds and fine weather.

The *Gaucho* which left on the 21st put back last night, through stress of weather.

The *Peter* reports fine weather till coming on the coast of Japan; the last two or three days very stormy.

The P. & O. steamer *Malacca* reports left Hongkong on the 20th June, at 0.30 p m., experienced light southerly winds with smooth sea and fine weather to Yokosima, from thence to Oosima light variable winds and overcast, from Oosima to Rock Island thick misty weather with drizzling rain, from Rock Island to port, same thick weather with fresh N. E. wind; arrived and anchored at 4.50 p.m., 26th June.

„ No. 2 Ching-pak	„	7.30	to 7.90	Daitong	„	3 40	to 3.70
„ No. 3 Ke-pak	„	6.70	to 7 25	Japan Rice	„	3 25	to 3.30
„ No. 4 Kook-fah	„	5.70	to 6 20	Kerosine Oil	per case	3.25	

EXPORTS.

Silk.—Our fortnightly report dated 24th inst. was to the following effect:

"Cocoons have been brought to market in some of the Hanks' districts and the quality is reported to be better than last year. As, however, fair specimens of new silk can scarcely be expected to make their appearance here before August, it is prudent to suspend one's judgment on this all-important point. From the quality and size of the few musters of new Hanks hitherto submitted for inspection, it would appear that the Japanese intend reeling their inferior Cocoons in view of the native market where low silks are likely to pay better than in the foreign.

Settlements since the 10th inst., are 175 bales leaving a stock of about 200 bales. The shipments of the fortnight are 286 bales making the total export to date 11,803 bales against 14,511 last year for the corresponding period."

Since then no business has been done worth mentioning. Last year, the first parcel of new Silk reached this market on the 26th June. This year the crop is later and none but insignificant musters have as yet made their appearance.

	At Exchange 4s. 2¼ in London.	At Exchange 5.35 at 6 m.s. in Lyons.		At Exchange 4s. 2¼ in London.	At Exchange 5.35 at 6 m.s. in Lyons.
Hanks—			Oshiu—		
Medium No. 2½	390 to 410	15s. 4d. to 16s.	frs. 42 to 44	Best Nominal 530 to 560	20s. 3d. to 21s. 5d. frs. 56 to 59
Common No. 3 / Inferior	330 to 370	13s. 4d. to 14s. 6d.	frs. 36 to 40	Good ... 490 to 510	18s. 9d. to 19s. 6d. frs. 52 to 54
				Medium ... 460 to 480	17s. 9d. to 18s. 6d. frs. 49 to 51

Tea.—The demand for this staple continues active, settlements amounting to same 10,000 piculs since last overland market report. Purchases have run principally on "Good Medium" to "Fine" classes and, so far, the supply of both "Medium" and "Common" grades has been small and prices asked relatively dear in comparison with better descriptions.

Supplies just suffice to meet the demand, and native dealers seem determined to keep stocks in Yokohama at a low figure.

Prices to-day rule rather weak but yet far too high to induce free operations, guided by last accounts from New York: the following are about current quotations.

Common	Nom.			Fine	$37.00	to	40.00
Good Common	$27.00	to	31.00	Finest	41.00	to	45.00
Medium	32.00	to	34.00	Choice	46.00	to	49.00
Good Medium	34.50	to	36.00				

The *Stillman B. Allen* will have despatch for New York on 26th inst.; the *Annie Brayton* and *Mora* will quickly follow; rates of freight still continue £3 per ton of 40 cubic feet

EXCHANGE AND BULLION.

Exchange.—Sterling rates are easy with but little doing since the departure of the American mail.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 27.] YOKOHAMA, SATURDAY, JULY 3, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The champion race for the larger class of canoes took place on Wednesday last, the weather being unusually favorable for the sport with a pleasant breeze blowing from the southward. Four out of the six entered appeared at the starting point, and a start was made punctually at 5 p.m. opposite the Club, the course being, under sail to the wreck of the *America*, then paddling with all sail down to the *Emilie* powder-hulk, again setting sail, outside the *Vigilant*, round a boat off the P. M. S. S. Wharf and finishing off the Club—a long and arduous course. The *Abunai* (Mr. J. Dare) was the first to get away, but was overtaken and passed by *Club Law* (Mr. James) before she had proceeded 100 yards. The *Skerry Vohr* (Mr. Hamilton) was some time in getting her canvas set, but when fairly underweigh quickly overhauled the others, and succeeded almost in rounding the first point with *Club Law*, the *Abunai* being third and *Cape Pigeon* (Captain Sedgwick) bringing up the rear. Sails were now lowered and the *Skerry Vohr* took the lead in paddling, closely followed by the *Abunai*, *Club Law* falling hopelessly in the rear. Sail was again made when off the "*Emilie*," but the *Skerry Vohr* ran off before the wind, evidently ignorant of the position of the next turning-point, and thus yielding the leading position to the *Abunai* which was the first round the "*Vigilant*" closely accompanied by *Cape Pigeon*. It was now a dead beat to windward, and *Cape Pigeon* at once took the lead, holding it to the turning-point off the P. M. Wharf with the *Skerry Vohr* close behind her, notwithstanding that she had lost a good deal of ground in consequence of her mistake when off the "*Emilie*." The wind had now fallen very light, and it was a free run to the Flag Boat, but the *Skerry Vohr* quickly passing *Cape Pigeon* shot well ahead and won the race by more than two minutes. The position of *Abunai* in the race promised fairly for the third place, but both this canoe and *Club Law*, which followed her, retired from the contest before rounding the boat off the P. M. S. S. Wharf.

Another race between the two leading boats will probably take place ere long. We are inclined to augur favourably for the success in any contest of the present champion, who, but for his oversight, would undoubtedly have secured a less close success than that which fell to him on Wednesday.

(From the Japan Mail Daily Advertiser.)

The race for the championship of the smaller boats came off on Saturday last, at 5 p.m., the time appointed for the start. There was not a breath of wind stirring, but seven out of the nine entered presented themselves at the post, and as it appeared as if a light air from the eastward might be expected they were started paddling to the buoy off the Pacific Mail Wharf shortly after the time appointed. The *Pom Pom Maru* (Mr. Tripp) went off with a 'spurt' and quickly gained the lead which it held half way, when it was overtaken and passed by the *Devastation* (Mr. A. H. Dare) who was the first to pass the buoy, the *Pom Pom Maru* being second and the *Pirate* (Mr. Amsden) third. The order was then given to cease paddling and set sail; and as there was scarcely a breath of wind moving this was virtually a fresh start as the last boats paddling reached the turning point before the first had proceeded twenty yards. A light breeze, however, came up from the eastward, and the *Devastation* and *Pom Pom Maru* gradually drew away from the rest, the former leading till within two hundred yards of the next turning-point (the spit buoy), when the *Pom Pom Maru* took the lead and, rounding cleverly, went away as if she had a screw at her stern, finishing off the Club, a long way ahead. The *Devastation* came in second, only just saving its place from the *Viking* (Mr. Hunt) which was fast overhauling it. The rest were "nowhere." The *Pom Pom Maru*, therefore, holds the champion flag till beaten. She is, however, liable to be challenged, the race in such case to come off a fortnight after the challenge has been given.

THE officers of the Kens, constituting the new *Chihokuan Kuaigi* were permitted to bring with them to the capital certain of the people of their districts, some of these being elected by popular suffrage while others were nominated by themselves. Referring to the latter, the *Hochi Shimbun* says that they have exhibited neither ability nor force, while the elected of the people are in nearly all cases men of judgment and good sense and urge the necessity of granting their full rights to the people. A few days since some thirty of these representatives attended a meeting of the *Jijosha* (or self-help club) and evinced much soundness of judgment in the discussions which they participated in. It is noticed that the Hiroshima, *Ken* has contributed the largest number of these representatives, while the Satsuma, Saga and Itaraki *Ken* have sent none.

Real Admiral Ryder, commanding the China Squadron, arrived here on Sunday last in H. M. S. *Vigilant*.

THE *Akebono Shimbun* writes: It is rumoured that the supervision of the newspaper press has been at length transferred to the Naimusho department, and that the writers of certain articles, said to possess an objectionable tendency, will be put upon their trial. How dreadful! adds the newsman.

ANOTHER sitting of the *Chikuhokuan Kuaigi* took place on the 27th instant and was attended by H. I. M. The Mikado who arrived at half-past eight o'clock. The subject of discussion was the road system, but it is understood that no change from the existing mode of administration is contemplated.

WE read in the *Choya Shimbun*: The Government has dismissed Archibald King paying him the salary due to him. King's

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

agreement, which was for three years, was entered into in August, 1874.

Messrs. C. A. Fletcher & Co. sold the hulk *Emilie* by auction yesterday for $4,800.

We are informed by the Agent of the Great Northern Telegraph Co. that all lines are now in working order.

From the *Yomiuri Shimbun*, we learn that the contents of the temple of Nikko may be inspected by the Public from the 15th July, when it will open, to the 15th September.

We learn that the Japanese newspaper laws have been to some extent modified but have failed to learn the nature of the change.

The Consular Offices of the German Consulate have been removed to 81, Main Street.

The Messageries Maritimes Steam-ship *Menzaleh*, with the mails to the 23rd May from Marseilles, left Hongkong for this port on the evening of the 30th ultimo.

On the authority of a native newspaper we stated that the usual display of fire-works in celebration of the opening of the Sumida river at Yedo would be dispensed with this year. The *Nichi Nichi Shimbun*, however, says that they will be exhibited on the 10th instant as usual.

We have received for publication the following statement of the accounts of the Private Fire Brigade of Yokohama:—

From June 1872 to June 1873.

Expenditure.

June 1872 *to June* 1873.

To purchase of Fire Engine from Yokohama Fire Brigade	$200.00
„ purchase 2 Extincteurs	78 25
„ Building Engine and Coolie House	46.25
„ 10 Fire Ladders	45.00
„ 67 Coolies Jackets	67.00
„ Ribbons and Scarves f r Officers and Members	41 25
„ 9 Fire Helmets and Belts	27.00
„ Fire Bell and Gong	17.00
„ Hand Saws, Hammers, Pincers &c.	15 50
„ 10 Fire Axes	22 00
„ Repairing Leather and Canvas Hose	47.00
„ New Hose	85.00

FINANCIAL.

WE strongly think that it is the duty of the foreign journals published in this country to give as full and accurate information as possible to the public at home regarding the financial condition of the Empire. The stream of intelligence and comment furnished by them has, in no inconsiderable measure, been instrumental in inducing European capitalists to lend money to Japan, and to that intelligence they look for guidance in selling or retaining their stock. The reputation of a nation differs from that of an individual in this important respect, that it cannot bring an action for libel against a person who wilfully asperses it, or ignorantly writes that which tends to bring it into discredit or contempt. Credit is so delicate a thing that the greatest possible reticence is observed in any comments upon the action of individuals or commercial houses which might directly or indirectly affect it, and the law rigidly enforces such reticence. People cannot be deprived of freedom of speech, and it is quite open to any blockhead to say in private conversation that ROTHSCHILDS or BARINGS are hopelessly insolvent. Against such idle and harmless folly there is and can be no law. The *consensus* of mankind makes and unmakes credit, and it rarely comes to false conclusions on the subject. But the financial condition of a nation is not protected by any such laws as those which apply to individuals. It is quite open to any ignorant or malignant person to take the yearly Financial Statement of a country in hand, and argue in public speech or writing that it is one tissue of falsehoods from beginning to end, that the country is ruined and bankrupt, and that any investor in its stock had better sell his securities at any sacrifice and get out of them. He renders himself of course liable to public contradiction, and to the discredit, in case he is wrong, of being considered an ignorant and light-minded man, without insight, judgment, or any such qualities as extort the respect of mankind. The world will soon estimate him at his real value, and probably the only person he will harm is himself. But the law will take no notice of him, and it is wise and right that it should not do so.

It seems to us, however, on this very account that writers who treat such subjects as that of the financial condition of nations should be as careful as possible in their statements and inferences. The pivot of human affairs is now undoubtedly a pounds-shillings-and-pence one. No nation, civilized or semi-civilized, can now go to war, or raise a loan, or construct railways, or erect telegraphs, or inaugurate improvements in its internal economy, without a debit and credit statement of its affairs, and its credit and status in the world will largely depend upon the fulness, accuracy, trustworthiness and demonstrated results of such a statement. Japan has wisely recognised this necessity for making public the condition of her finances, and submits it openly to the world for comment and criticism, trusting that public opinion will eventually come to sound conclusions regarding it. Nor have her securities suffered from this course. On the contrary, indeed, they have steadily risen in public favour, while an opportunity has been given to investors to estimate for themselves their stability and consequent value. The public comments made upon them have of course varied considerably. Both careless and careful writers have attacked and defended them. One of the local journals, in its mail summary, lately stated, without a word of surprise, suspicion or apparent hesitation, that the year's surplus was 18,000,000 *yen*. (We have not the authority or figures at hand to verify the exact sum.) Of course, statements of this kind demand no contradiction or comment. No one pays attention to the gabble of the village idiot, and we only refer to the fact as demonstrative of the entire want of that sense of responsibility to investors at home of which we shall now adduce another far less glaring, yet still not unimportant, instance.

A letter signed A. B. C. appeared in the edition of the *Japan Herald* of the 28th ultimo, in which the writer comments upon the financial condition of this country in a manner which seems to call for some short comment.

After referring to the statistics of the trade for 1874 just published by the Japanese Bureau of Revenue, and to the fact that $16,776,238 went out of the country in the shape of coined money or bullion, he says, "A year or "two ago it was computed from the Mint returns that "there was something like $40,000,000 in bullion in the "Treasury, but according to the last budget this has "dwindled down to $14,000,000. It only requiries another "year more at the present rate the Government is spending "the national finances to drain the country of what little "bullion is left in it, and, unless another foreign loan be "contracted another fresh deluge of paper currency will, "I suppose, take place."

Now, the error of the writer here is clear and is absolutely without justification. He assumes the amount which has been coined at the Mint to be bullion in the Imperial Treasury, in other words, the cash balance of the nation. It needs hardly be said that no such sum ever existed in the Treasury, or has even been asserted to exist there. The Mint coins bullion for private persons and for the Government, and makes no distinction, in its returns of the work done, between the one and the other. A large proportion of the precious metals which pass through it is no more the property of the Government than is the gold which the Bank of England sends to the English Mint and which it has just bought with its own notes from the Australian or Californian merchant. How any one can deliberately sit down with the Budgets of 1873, 1874, and the half-yearly statement of 1875, accessible to if not open before him, and make a blunder of this kind, is to us inconceiveable.

A little further down, after some addition and subtraction sums, the items of which have as little real relation to each other as the amounts just commented upon, or as the name of a ship's captain to her tonnage, we come to this statement....."there remains a "further sum of $11,590,127. This money the Govern- "ment has expended—the greater part of it probably in "Embassies and expenses of students sent abroad, the For- "mosan Expedition, Legations, and the interest on and "portion of the principal of foreign loans contracted for "railways and other purposes." In the first place the amount of $11,590,127 is arrived at by an arbitrary process, but let us suppose it real. The Formosan Expedition cost between five and six millions of dollars, minus the value of several steamers now at work on the coast and between this and China. But let us say six millions, which leaves a balance of five millions and a half for the purposes enumerated. The interest and principal of the foreign debt to be repaid amount to $1,295,801, the estimate for Legations abroad, (reduced from $363,235 in 1874) is $250,000, and if we put down $100,000 for special embassies, the balance $3,944,326, is left for the students to play with. Now, the students sent home by the Government have all been recalled, and a score or two only are now sent home by way of special reward for marked merit in the pursuit of their studies. Say there are fifty, (which there are not) and give them a thousand dollars a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

year a-piece—more than the sons of thousands of gentlemen at home receive—and we have a sum of nearly four millions of dollars unaccounted for. We ask the writer, in all good humour, is this sober writing upon such a grave matter as finance? Then again; surely the amounts which represent interest on and part of the principal of money borrowed for railways is not money thrown away? It now belongs to capital account. There we have the railways—as much as there is of them—the rolling stock and all the necessary buildings and apparatus. Think for a moment of the moral value to this Government which these little lines, expensive though they have been, have proved to the country. What was really the main difficulty of Japan six years ago? To bring the people into harmony with the policy of the Government on foreign questions. We shall hardly be wrong in saying that the the railway between Yedo and Yokohama has done more towards this than all the proclamations and edicts and foreign travel and despatches of the last six years. Whoever may be the Japanese officials who pushed this matter to an issue, in the teeth of the violent opposition which it certainly encountered, they saved their country millions of money and years of strife.

Again the writer says:—"The Government last year paid away $16,000,000 odd more than the country produced, and to meet this drew it out of the specie reserve." Now the Reserve Fund last year, after deducting the estimated subtractions from it, amounted to $21,029,841, part of which,—we do not know how much—was gold, and part notes. This year the balance is $15,935,303, *after deducting* $2,300,000 for vessels of war, and of this balance we have the assurance of the FINANCE MINISTER, who issues his accounts to the country through the PRIME MINISTER, that $14,390,700 of this cash balance or Reserve Fund consists of gold and silver. To such preposterous conclusions do careless or ignorant men come when touching questions with which they are unfitted to deal. The whole letter is of a piece. "Once more," says the writer, "I say that this country does not produce this "gold and silver which is constantly ebbing away." Perhaps he will explain then whence it has come. If $40,000,000 of gold and silver which a country does not produce have gone through its Mint, and $16,000,000 of this have run away, there is no great harm done. We regret the expert of gold and shall be pleased to see such an extension of the silk and tea trades as will stop it. It is certain to our mind that it will very soon stop. People who do not consider or understand the real sources of national wealth are always in such fearful distress when gold begins to run away. The fallacy underlying this terror is that gold is the only representative of wealth, that nations only grow rich when they import it, and that the nation which exports it is necessarily growing poorer proportionately to this export. Do not all nations grow more wealthy by their trade? and, if so, now that the whole mind of mankind is set upon truck and traffic, can they all import gold? Who in that case is to export it? The gold-producing countries? But they do not produce in one year a tithe or a twentieth part of the value yearly added to the world's wealth. Whence is it then to come? The fallacy disappears the moment it is touched.

As for all the fustian and stuff at the end of the letter, to which we may refer our readers—for we are not concerned in it—about "ruin" and "mad career" and "candle at both ends," and all the stock silliness and notes of exclamation which belong to this school, whose twaddle should of course never be admitted into the columns of a respectable paper, we may leave that to those who can read it and be frightened by it. If writers on financial questions wish for a model on which to form the style and quality of their comments let them read the *Economist's* article entitled *The present State of Peruvian Finances* in its issue of the 24th April. It is really lamentable to turn from this admirable specimen of statement, analysis and advice to the silly letters and the senseless cackle about circulation and advertisements which have lately brought a just measure of more than usual contempt upon the evening papers of this place. To anything like scientific finance this country is yet a stranger. But it is yearly dealing with its money matters in a more systematic manner; it is publishing its accounts; reforming its coinage and currency, and making a strong effort to reduce the latter from a paper to a metallic form. Unfortunately, the most prominent foreign advice which it sought on this subject of paramount importance, was worthless, and worse than worthless, because it stood in the way of better obtainable advice. In this piece of disinterested friendship, the American Government—possibly we should narrow matters to a point by saying President GRANT and President GRANT alone—is to blame,—certainly not the instrument of his indecent nepotism. But, meanwhile, it is the duty of the foreign Press so to shape its comments that it may encourage the Japanese to a perfectly frank and accurate statement of their financial affairs, in view of the importance to them as a rising eastern nation of submitting to, and standing firm under, the tests which the conditions of modern finance and the theories of national stability, impose. It is not the business of that Press to encourage the anonymous vapouring of boobies whose vanity dictates letters every sentence of which proclaims their incapacity and ignorance, and in doing so lowers its own influence both in the eyes of foreigners and natives.

THE NEW PRESS-LAWS.

THE laws regarding the Press have been recast, but without much appreciable alteration in their spirit. Their scope and intention, however, are more accurately defined, and the loose wording of the old laws, which enabled transgressors to plead all kinds of excuses for evading them, has given place to closer and clearer forms, less susceptible of different interpretations and therefore more certain guides both to judges and journalists. This is well. There is ample scope within these laws, a translation of which will be found elsewhere, for all purposes of practical discussion, and in the present condition of affairs in this country it would be folly to enlarge it. Whatever may be the value of good newspapers, and we do not think this can be over-rated, the Press is by no means an unmixed good. Those who are attracted towards it by admiration of the power it wields and the good it may effect, and who have known no more of it than can be learned in its highest walks or from observing it in its most perfect developments, cannot long remain undisgusted with the lower manifestations of it with which they are soon brought into more or less immediate contact. Nothing but a firm faith in the moral order of the universe, and an attentive consideration of the lower forms of animal life from a teleological point of view, could reconcile a political philosopher to the apparently eternal necessity for maintaining haunts for all manner of noisome creatures and a machinery for giving their voices utterance—for bad newspapers are nothing better than these. But the trader who deals in human flesh or human

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

vice does not degrade the honourable merchant, any more than the Houndsditch attorney, who makes law a bar to justice, detracts from the merit of the honourable advocate who spends his life in procuring and maintaining it. It lies within a man's own self whether journalism becomes in his hands a high calling or a dirty trade. Upon his motives and habitual attitude of mind it depends whether he will be a blessing or a curse to society, whether the interests of our race will be advanced or retarded, howsoever little, by his exertions. His profession is one which permits at least, though it does not demand and rarely enjoys, the possession of every faculty of the mind of which man is and ought to be proud. If a merchant gives the rein to his imagination or adduces even the most apposite historical parellels to justify operations which leave a loss, his correspondents will vote him a fool and most probably close their mutual relations. The young or even old official who should think about Plato or Shakespeare between the hours of ten and four, so far at least as to permit traces of their wisdom to appear on his foolscap, would be irretrieveably ruined. He might possibly under extraordinary circumstances be permitted to relieve the weight of a report by a quotation from Mill or Ricardo, but the chances are wholly against the success of his experiment or the safety of repeating it. The clergyman rarely dares to exceed the bounds of a dull and decorous conventionality in his sermons. He may appeal perhaps to astronomy, because it is a celestial science; and of late years he has timidly ventured upon some of the best known household words of Shakespeare; there are no prohibitions against his use of Milton, though the bulk of his congregation would never recognize the quotation. Since Charles the Second's time, even since Swift's, wit and humour have been banished from the pulpit, and Swift himself discouraged it by severe precept and example. The familiarities of Mr. Spurgeon and the Sankey and Moody school appear to us in odiously bad taste, and rather than go giggling and grinning to Heaven, we should make some other election. The priest is thus rather confined in his orbit, though we are bound to say that ordinary pulpit dulness is not referable to this cause. In his speeches the lawyer may sweep over the whole range of wit and wisdom; he may take parallels from history, aphorisms from Bacon—as Basil Montague did—images from Dante, metaphysics in verse from Cowley or in prose from Hamilton. But he has weary work in his office with his "quiddits, his quillets, his cases, his tenures, his tricks, his actions of battery, his statutes and fines and recognizances, his double vouchers, his recoveries and indentures." But the journalist is under no such limitations, provided always he uses his books or his memory to illustrate, enliven, or enforce his arguments. The Sacred Scriptures are not closed to him because his Shakespeare is always open. He may, like Gladstone, if he only can, bring the wealth of a well-stored mind to enliven a discussion on a Budget or a Poor-law; his wit may be all the sharper for having borrowed an edge from Aristophanes; his pleading on a legal question all the closer and loftier for the study of Erskine or Plunket; Cervantes and Molière never come amiss; "Seneca cannot be too heavy, nor Plautus too light." The whole world of politics, morals, science, art, literature and religion is, or may be, his, and he may roam freely in each of them at his will. This is no small prerogative, and assuredly it possesses attractions which are not to be disregarded. The world's literature is its most unfading glory, and he who marches, in whatever humble capacity in the same army of conquest as that of which Shakespeare is, and for ever will remain, the generalissimo, may always be proud of his mission and his weapon.

Not the less, however, must the true journalist be practical in his views. It is no excuse for an ill-fitting coat that it is beautifully shaped and tastefully embroidered. The world is a work-a-day one, and we have all to conform to its eternal conditions. We have to obey the laws imposed by the State and those imposed by our consciences. We must be just, fearless and honest, taking success or reputation as accidents. Though often wrong and sometimes unfair, especially to individual opponents, losing the higher sense of duty in the lower emotion of anger or wounded vanity, our fault is venial if acknowledged, regretted and atoned for. A thousand examples in bigraphy, sacred and profane, show us that it is not the sin, or even the crime, committed in passion which demoralizes, undermines and gradually destroys our nature. It is the mean and unjust bias of mind which does this, the unchecked harbouring of malignant feeling, the vile habit of studied detraction, the jealousy of superiority, the contempt rather of that which is weak than of that which is bad and wrong, the worship rather of what is powerful than what is worthy of worship.

These reflections, which are but platitudes to our foreign readers, may not be without some value to our Japanese brethren, the new laws for whose guidance have been issued this week. By their own acknowledgement, as we hear, and by general consent, they are very liberal and sensible. The discouragement of anonymous writing we look upon as an excellent thing, taking all things into consideration. It is indeed against the traditions and feeling of the English press, but the tone of English life is generally so healthy, and the character of the Press in England so high, that no Editor of an English journal would insert an anonymous letter which he would not himself write, presuming he held the views it embodies. Of a Press in the hands of Englishmen, in which, as here, any masked villian or any fool may discharge his dirty and poisoned arrow at his betters and sneak away in the dark, the respectable classes in England know nothing, and of this we may confidently assure the Japanese. Where there is discussion there will often be high words and bitter feeling. But the English Press never lends itself to these for the personal purposes of anonymous writers. It may be observed too, that even in England, the habit of signing communications to newspapers, magazines and reviews is becoming more common than in former years, though there are fair arguments against the practice, while the generally manly tone of the English mind and the limitation of most unportant discussions to public questions of general interest, greatly obviate the necessity for it.

It seems to us a very remarkable thing that the Government should have conceded to the Press, so early in its history, so large an amount of freedom. But it is possible that the explanation may be found in two sources: first, the paternal nature of the Government, which wishes to place no 'mute' upon the voices of its children if properly and respectfully raised; and second, a sound appreciation of the vast part played by the Press of the Western world in the education of the people, and in what may be somewhat indolently termed 'the general economy of things.' It is certainly an evidence of honesty of purpose towards the people, which the Press should acknowledge and respond to by its judgment and moderation. This freedom has not been extorted by political

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It has been almost spontaneous, so much so, indeed, as to inexplicable except on some such theory as we have ventured to suggest. In view of the revolution of opinion which is going on in the country, and which brings new difficulties with every new advantage, we trust the Press will pursue its work with a proper sense of those difficulties. He who listens attentively to the opinions expressed around him will observe that they are generally entirely wrong at first, but gradually become far more sound as time goes on. It is as much so in estimates of persons as of things. The errors gradually, sometimes very slowly, evaporate, and leave a deposit of truth, or something approximating to truth, behind them. The mind is an engine which turns out better or worse work as it is better or worse put together. With some men the work is done so quickly and so well, the engine is so exquisitely constructed and works so beautifully, is so little disturbed by heat, is so *clean* and so regular in its operations, that its conclusions are arrived at as if by intuition and are rarely at fault. But such minds are extremely rare, and this perfection of mechanism is only acquired by incessant and perfectly regulated motion, by watching the errors made, removing the causes which tend to produce them, and seeing that they are never again permitted to intrude themselves into the machinery. The mind has to be cleared of its own 'idols,' and of those external to it, before it will do this beautiful work and can be relied on to do it. And this should be a warning to all public writers how they express dogmatically opinions hastily formed, and often so formed on a knowledge of only half the facts of the case. The temptation to do this, and the danger of it, must be well known to all who have been forced to formulate their judgments rapidly; they must have yielded, often unconsciously and quite honestly, to the temptation, and fallen into the danger. The cure can only be arrived at by a steady education of the faculty of judgment. It may be their duty all their lives to make and act upon conclusions thus rapidly formed, and unless they can improve their mental machinery, they will wander for ever in the dark regions of error.

It only remains for us to hope that these laws will conduce to the greater efficiency of the Government, the improvement of the Press and the increased welfare of the country. They are unquestionably creditable to the Council of State, and will be acknowledge as such by the western world.

If we have appeared of late to pay excessive attention to this question, it is because we are strongly impressed with its paramount importance, and with the fact that on a wise solution of the points it raises, much of the future quiet and orderly progress of this country depends.

From private sources we hear that besides the two hundred soldiers stationed on the hills near the Customs-house at Pagoda Anchorage, which is mentioned in our Foochow gleanings elsewhere, a force of three thousand men was sent to the village where the piratical smugglers lived. On their approach, a few hundred abandoned the village and took to the adjoining mountains; the remaining inhabitants remained quietly at their homes, and were not molested by the troops. Nor, indeed, did the latter make any very earnest attempts to molest the fugitives. They entered the village as the smugglers left it; but contented themselves with occupying it, and contemplating the departure of the offenders to a mountainous region where apparently they have no desire to follow. They remain in occupation of the village; and the fact that no complaints by the villagers of any excesses have reached us, speaks well for their discipline. There was no fighting at all.—*Celestial Empire.*

THE TEA SEASON 1874-75.

WE now submit to our readers our usual annual report on the past season's tea crop, and more especially that portion of it which finds its way to the Yokohama market.

The encouragement given to natives to increase the area of their tea plantations by the high and lucrative results obtained by the growers has created a marked and steady increase in the amount of leaf produced and cured, and at this moment it seems difficult to fix any limit to the production of tea in this country. The improvement of inland roads, and increased facilities afforded by coasting steamer, not only lighten the cost and risk of transit, but also enable the produce to reach this market in less than one-sixth of the time occupied prior to the establishment of the coast lines, and thus the grower speedily enjoys the fruits of his labour, while the risk to the middle-man of shipwreck or fire in course of transit is greatly diminished. The foreign buyer, also, benefits by receiving the leaf in a fresh and sound condition, and the teas fire much better early in the season than later on, when perhaps they have been, as in old times, lying for six weeks or two months weather-bound in a native junk.

Our Season 1874-75 opened, as we noticed in our last Annual Report, very early, and by the middle of June some 18,000 piculs had been settled, prices averaging for the month $15 to $46 per picul, and during this period only three or four small lots of very inferior and ragged mixed leaf were sold under $40 per picul. With the commencement of June it became possible to grade parcels, and prices, which had rather steadied, ranged at $38 to 40 for "good medium," $41 to $44 for "fine," $45 to $49 for "finest," and $50 to $55 for "choice," "medium" and lower grades being entirely wanting. Prices during the month of June tended slowly downwards, and later on in the month some parcels of lower grade teas made their appearance; settlements were on a most extensive scale and from the 10th June to the 1st July 10,000 piculs had changed hands. For all July a brisk business was done, total purchases for the season to the middle of that month amounting to 42,000 piculs, and by the close exceeding 55,000 piculs. About this date the cheapest period of the season, considering the quality of the goods offered, may be noted. With the commencement of August full arrivals came in of "medium" and lower grade teas, and as the results of the few limited parcels of these grades shipped earlier in the season were telegraphed across, shewing relatively much more profitably than shipments of better classes, they at once commanded attention, and the bulk of the business, amounting to 25,000 piculs for the month, was done in these. Our market being supplied with all grades, the following is about the scale of prices current on August 15th;

Common	$26 @ 28	Good Medium ...	$36 @ 38
Good Common ...	29 @ 32	Fine	40 @ 43
Medium	33 @ 35	Finest	45 @ 48
		Choice	50 and upwards.

Stocks as usual were not allowed to accumulate, supplies being kept light, and sellers had decidedly the best of the market during the latter part of the month. The total export from Yokohama to the end of August was seven and three-quarter millions pounds, to which Kobe added nearly three and a quarter millions, making the total export from Japan, exclusive of some small amount from Nagasaki, about eleven millions pounds to 31st August.

Business continued active during September, though rates ruled rather irregularly, and at the close of the month appeared rather weak; settlements amounted to 14,500 piculs consisting of various grades. In October

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a greater inclination to buy became apparent and prices hardened. Some whispered rumours of a possible re-imposition of duty in the United States induced speculative operations, although at this period the likelihood of such an eventuality was not much considered on this side.

Towards the close of October and during November the market was rather inactive, the only feature worth noting being the appearance of a good many parcels of "finest" to "choice" teas, which found buyers at from $45 to $49 for the former and $50 to $57 for the latter; full figures considering the late date in the season. The month of December opened quietly, but, the duty excitement reviving, a brisk business was done, although the number of firms operating was rather limited. Settlements amounted to 10,000 piculs for the month, and prices, which were decidedly firm, ruled as follows.

Common	$23 @ $27	Fine	$41 @ $44
Good do	$28 @ $31	Finest	$46 @ $50
Medium	$33 @ $35	Choice	$53 and upwards.
Good Medium	$38 @ $40		

Our shipments from Yokohama and Kobe to the 31st December 1874, amounted to 18,253,614 lbs., or, according to figures obtained from the American Consulate in Yokohama, 13,743,096 lbs., and from Kobe, 4,510,518 lbs. the latter amount not including 866,751 lbs. which was forwarded ready packed and fired to this port for shipment and invoices of which were certified at the Yokohama U. S. Consulate.

For the balance of the season there is but little of interest to comment on. The market continued to rule very irregularly—being occasionally without any demand whatever and at other times exhibiting fitful revivals; prices fluctuated somewhat, but on the whole kept at a figure far above the value of the class of goods offering.

The total export for the Season 1874-75 closed on the 30th April with an aggregate of

From Yokohama for the United States ...		*16,546,289
„ Kobe „ „ „ ...		4,292,159
„ Nagasaki „ „ „ ...		643,704
		22,182,152
From Nagasaki for London about		400,000
		22,582,152

We may now consider the result of last season's crop in the interior, deriving our information from the most trustworthy sources accessible. Tea farming not being a very laborious pursuit and the crop not more hazardous than most other products, has attracted much attention, especially among the disbanded *samurai* class, and the fruits of their labors for the past two or three years must have proved very satisfactory. A steady and regular increase in the amount of leaf brought to the foreign centres has been perceptible for the past three years, and as the younger plantations come into full bearing, we may find their yield further augmented. Strennous efforts are being made to establish tea plantations along the north-west coast, but the weather there is rather inclement, and it is doubtful whether the planters can compete successfully with their more favored brethren in the south-east. The defective means of transit is also another obstacle, Niigata being the centre to which the growers bring the leaf, whence it comes either overland on horses—a long journey of fourteen days—or has to await the infrequent and uncertain arrival of a coasting steamer.

The following is a return of the produce of the principal tea districts for the past season:—

Province.	No. of pcls. produced.
Yamashiro	22,000
Inshiu	23,500
Goshiu	9,000
Surunga	26,000
Isé	28,000
Mino	9,000
Shimosa / Kadsusa	6,000
Adsogee	3,000
Yamato / Kawatchi / Kawami / Inga / Kishiu	12,000
Echino / Echisen (North west coast) ...	3,500
Tamba	5,000
Kiusiu (Nagasaki leaf)	20,000
Sundry small unenumerated districts	5,000
Total piculs.	172,000
Against similar return last season ...	149,000

The bulk of this, as our export figures show, has come to the Yokohama market.

Our export table, with an addition of 9 per cent. for loss in firing, would give us a total of nearly 184,000 piculs as the crop; but it is very difficult to get accurate returns from native sources and we therefore submit the figures as furnished to us.

An idea appears to gather force amongst certain classes of Japanese that they can fire and pack teas for the foreign markets in the country in the same manner as the Chinese, but this is a question which must be deferred for years. The experience of silk inspectors as to the various frauds endeavoured to be perpetrated in the delivery of an article, which the native seller must know cannot fail to be easily detected by an expert in silk, would be sufficient to prevent the purchase of tea packed for shipment, and which could not be thoroughly inspected without great detriment to the leaf and repacking in fresh leads; besides which, the leaf should be packed warm and elastic to reduce its breakage to a minimum. The Chinese from long intercourse with foreigners have found it almost without exception to their interest to sell their teas fairly up to muster through the whole chop of black tea, or series of lines in greens; but the commercial integrity of the Japanese tea market would require a marked improvement before the foreign inspectors could be satisfied with the percentage of sampling customary in China, and to increase the same here would seriously affect the good condition of the chop to be bought. On the whole, the expectations of the Japanese tea-men to sell their produce on the same terms as the Chinese will hardly be realised for years to come, and, even then, it is doubtful whether they would be actual gainers in pocket although their self-respect might be raised. They should, however, steadily keep this important end in view.

The general out-turn of last year's crop was of more than average good quality, and so far appears to have been better than the bulk of arrivals received this season. The principal features for comment were the short supply of low-grade leaf and the very inferior quality of parcels grading from "low medium" downwards.

Our season 1875-76 having fully opened we append a few remarks on operations so far, and venture our own

* This includes about 950,000 lbs. packed, shipped from Kobe but certified to in the United States Consulate, Yokohama.

conjectures as to the probable course of the tea-market within the ensuing three months.

Early as the tea season 1874-75 opened, it has been far surpassed this year, and our market was in full swing by the middle of May. Supplies poured in freely, and if the same extreme rates for first arrivals did not obtain for as long this season as last, the amount of business done in "new crop" up to the 30th June this year exceeds that of the corresponding period last season, by fully one third; the amount of the export, from Yokohama alone, being nearly half a million in excess in comparison with figures at the same date last season, while from Kobé a similar state of affairs is reported. A check, however, seems imminent, and how far Japanese merchants will accept the necessary reduction to meet the present condition of affairs in the American markets, remains to be seen. Should the tenor of recent telegrams be fully confirmed by letters, a temporary suspension of trade will probably ensue before a sufficient reduction can be established to even cover cost, still less to leave a mercantile margin of profit. It depends much on what may be the views of the merchant in the States: whether his instructions are concise and exact as to limit of cost and standing of grade of goods shipped; or whether, having made a lucky hit in receiving teas of doubtful standard, and assisted by the speculative movement based on a possible re-imposition of duty and his shipments proving profitable, he, being more or less indifferent to classification, is thus induced to renew his orders without any strict understanding either to laying-down cost or standard grade of goods bought. With "new crop good medium" quoted by a recent telegram at 34 c gold per lb, and with a market weak and declining at that figure, we can only look forward to an all but suspended market and a suspension assuredly of reckless "plunging." It is to be hoped that this year will see a safe scale of prices established, bearing in mind the ever-increasing amount of tea this country is capable of producing; and that at length this staple export from Japan may rule at rates which will return the shipper a fair and remunerative profit—a circumstance which has not occurred for the last few years—without having to accept the concomitant risk of a heavy if not a disastrous loss.

SPIRIT OF THE JAPANESE PRESS.

The New Press Laws.

(Nichi Nichi Shimbun, June 30th.)

Notification No. 101.

It is hereby notified that the Newspaper Law published by Notification No. 352 of October 1873 is now repealed, and the following accompanying new law ordained in its stead.

(Signed) Sanjo Saneyoshi,
Daijo daijin.

28th June, 1875.

Newspaper Law.

I.—Whenever it is wished to publish a newspaper or periodical magazine, the proprietor, or, if a company, the director, must send in a petition to the Home Department through the office of the *Fu* or *Ken* for permission to do so. In any case of publication without such permission a charge will be laid against the offender before the Judicial Authorities,* the publication will be put a stop to, and the proprietor or director as well as the editor and printer will severally be punished by a fine of one hundred *yen*. Any one who falsely describes himself as having obtained permission will be fined not less than 100 *yen* and not more than 200 *yen*, and his types and machinery will be confiscated.

II.—The following particulars are to be inserted in the petition.

1. The title of the proposed publication.
2. The time when published, whether daily, weekly, monthly, or at indefinite times.
3. The name and residence of the proprietor, or if a company, of the director or directors, exclusive of persons having only a share in the newspaper.
4. The name and residence of the editor, or where there are several editors, of the principal editor.
5. The name and residence of the printer. If the editor and printer are the same person, this should be stated.

Any false declaration with regard to the above five particulars will be punished by the stoppage or suspension of the publication, and by a fine of from ten to one hundred *yen*.

III.—In the event of the death or resignation of an editor or chief editor, the publication may be continued with a provisional editor or chief editor, but the name and residence of the new editor or chief editor must be reported by the proprietor or director to the office of the *Fu* or *Ken* within 15 days at latest, counting from the day after the death or resignation. If a report is not made within this time, the publication will be suspended, and the proprietor or director will pay a fine of one hundred *yen*.

If any change should occur in any of the other particulars mentioned in clause II., the proprietor or director and editor or chief editor should report it jointly within at least fifteen days after. Failure to report within the time specified subjects the proprietor or director and editor or chief editor to a fine of one hundred dollars each.

IV.—No other persons than Japanese subjects can be proprietors or directors, editor or chief editors.

V.—The proprietor or editor may himself be also the editor or chief editor.

VI.—Where there are two or more editors one shall be selected and made chief editor.

The names of the editor and printer shall be inserted at the end of each number or volume, and where there are several editors, of the chief editor. If the editor or chief editor is ill, a substitute should be provided, and his name published instead.

An infraction of this rule subjects the editor, chief-editor or substitute to a penalty of not less than 100 *yen* and not more than 500 *yen*, and the printer to a fine of 100 *yen*.

VII.—If anything contained in the number or volume infringes the prohibitions of Clause XII and the following clauses, or if an offence is committed against the law of slander, the editor will be considered the principal, and the writer an accessory, and if the proprietor or director is cognizant of it, he will be considered as if he were the responsible editor.

VIII.—With the exception of the ordinary paragraphs of news, the writers of articles in newspapers or magazines (in which contributors are included) must sign their names in every case where the discussion turns upon foreign or domestic politics, finance, the feelings of the nation, the aspect of the times, learning or religion, or matters affecting the rights of officials and people.

The writer who signs a feigned name subjects himself to imprisonment for thirty days and to a fine of ten *yen*. If he signs another man's name he subjects himself to imprisonment for seventy days and to a fine of 20 *yen*.

Either or both of the above-named punishments may be inflicted. The same rule holds for the punishments mentioned below.

IX.—When articles are translated from foreign newspapers or magazines, the translator, except in the case of ordinary paragraphs of news, must sign his name to them, and if such articles infringe the prohibitions of Clause XII and the following clauses, or if they offend against the law of slander, the responsibility of the translator is the same as that of the writer in Clause VII who is considered an accessory.

X.—If the editor only is sentenced to imprisonment for an offence, the proprietor or director may appoint an act-

* The *Fu* and *Ken* authorities will act as prosecutors in the case of offences against this law.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ing-editor or a new editor and continue the publication, except it has been at the same time suspended. If the publication is continued without an editor having been appointed, it will be suspended.

XI.—If in any newspaper or magazine, any public office, company or private individual is mentioned by name, the newspaper or magazine must publish in their next issue after receiving it any explanation or correction which such public office, company or person may furnish to them. An infraction of this rule subjects the editor to a penalty of not less than 10 *yen* and not exceeding 100 *yen*.

XII.—Any person who in a newspaper or magazine incites to the commission of any crime will be considered equally guilty with the person who has been caused to commit it, and if his inciting has not resulted in any offence being committed the penalty is imprisonment for not less than five days and not more than three years and a fine of not less than 10 *yen* and not exceeding 500 *yen*.

Any one who incites to riot a number of evil-disposed persons or who stirs up to a violent attack upon the authorities will be considered equally guilty with the ring-leader. If his persuasions do not result in causing a crime to be committed he will be punished as above.

XIII.—Any one advocating a revolution in the Government or the subversion of the State, or who attempts to stir up rebellion, is subject to imprisonment for not less than one year and not more than three, and in the case of crime committed (owing to such instigation), to the same punishment as the principal offender.

XIV.—Any one who reviles existing laws, or confuses the sense of duty of the people to observe them, or who by perverted reasoning attempts to justify offences plainly contrary to the criminal law, will be punished with imprisonment for not less than one month, and not more than one year, and with a fine of not less than five *yen*, and not exceeding 100 *yen*.

XV.—It is not allowed to publish the preliminary proceedings in Criminal Courts before sentence has been publicly delivered, nor the deliberations of the judicial officers respecting the trial. Any breach of this rule is punished with imprisonment for not less than one month and not exceeding one year, and a fine of not less than 100 *yen*, and not exceeding 500 *yen*.

XVI.—Memorials and petitions may not be published without the sanction of the *In*, *Shô*, *Shi* or *Chô*. Any breach of this rule subjects the offender to the same penalties as in the preceding clause.

Additional Regulation.

Any person who has already received authorization to publish a newspaper or magazine before this law was notified need not send in a fresh application, but he should report to the Home Department, through his *Fu* or *Ken*, within ten days counting from the day following his receipt of the notification, the five items specified in clause II. If after ten days have elapsed, this report has not been sent in, the *Fu* or *Ken* will suspend the publication. Fresh application must follow the rule laid down in clause I.

When there have hitherto been several editors but no chief editor, a chief editor or provisional chief editor must be appointed within two days, counting from the day following the receipt of the notification.

If after two days, the newspaper or magazine continues to be published without the name of any chief editor, the *Fu* or *Ken* will suspend the publication. Fresh application should follow the course described above.

The New Press Law.

(A leading article from the *Chiyo Shimbun* of June 30, 1875.)

The article opens by stating that the New Press Law and the law for libel have been perused by the writer, who testifies his great surprise and satisfaction with their leniency.

"As" continues he "these Regulations are Regu-"lations issued by the ministry of our Government, "whether they are good or whether they are bad we "must obey them with submission, and how much more "imperative upon us is this obedience when these "Regulations are liberal, lenient far beyond our ex-"pectations! We hail with profound satisfaction the "intention of the Government not to cramp and re-"strain free discussion amongst the people, and we trust "that all right-minded persons will be careful not to trans-"gress these new laws, and will observe rectitude in argu-"ment and propriety in discussion."

Still, in spite of having read these laws over some three times the writer is unable to comprehend fully and exactly their purport. He must therefore devote himself carefully to a closer attentive consideration of them, and if after having exhausted all his reasoning faculties he then still fails to understand them, he will seek instruction on the point from the highest officials of the Government.

But he has a word to say to writers and critics.

The 11th article of the new press laws ordains that all criticisms or explanations furnished to the papers, whether supplied from the Government offices, from private companies or individuals must be inserted in the succeeding number of the paper to which they are sent under the penalty of a fine.

The writer therefore begs that anything sent to the papers may be sent as early in the day as possible.

Again by the 8th Article of the Press laws it is made compulsory upon writers to furnish their real names and residences, and persons giving false names or borrowing other people's names will be subject to imprisonment or fine.

He begs that attention be paid to this.

In conclusion it is pointed out with regard to the law for libel that the present state of morals and the conduct of people in general has of late years deteriorated greatly, and that the press, by exposing the bad and holding up for eulogy the good, has exercised a considerable influence for the better upon society at large. If this power be taken from them what means do the Government propose to take to supply the deficiency thus created by the restrictions in this respect placed on the press? With what will they replace the influence thus exercised by the paper? In future all articles appearing unsigned may be known as written by some one on the staff of the paper, and not by an outsider.

The Japanese Law of Libel.

The following is a translation of the newly instituted Law of Libel which possesses significance in connexion with the revised press regulations which have been simultaneously issued

Article 1.—Any statement, whether it be intrinsically true or false, which tends to injure the character of the individual is a *zangen** and that which tends to give him a bad reputation is a *soshiri*.† Whosoever shall exhibit, sell, or paste up books, manuscripts, pictures or likenesses for the purpose of disseminating *zangen* or *soshiri* will be punished in the manner hereafter described.

Art. 2.—Should the object of slander be of Imperial rank the offender will render himself liable to imprisonment for not less than three months and not exceeding three years, or shall be, in lieu thereof, subject to a fine of not less than fifty and not exceeding one thousand *yen*.

Art 3.—Should the object of slander be a *kodzoku* (member of the imperial family) the offender will render himself liable to imprisonment for not less than fifteen days and not more than two years and a half, or in lieu thereof may be fined a sum not less than fifteen, nor exceeding seven hundred, *yen*.

Art. 4.—Should the effect of the slander be to bring into contempt any official, the punishment to the offender shall be not less than ten days imprisonment nor more than two years; or a fine not less than ten *yen* nor exceeding five hundred; the offence of *soshiri* being punishable with imprisonment for not less than five days and not more than one year, or with a fine of not less than five nor exceeding three hundred *yen*.

Art. 5.—Such as may slander *Kadzoku*, *Shidzoku* or *Heimin* render themselves liable to imprisonment for not less than seven days nor more than one year, or, in lieu thereof, may be fined not less than five nor exceeding three hundred *yen*.

* *Zangen* is a libel which may or may not be susceptible of proof.
† *Soshiri*, a libel which is substantially true.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ART. 6.—Should information tending to bring to justice guilty persons be laid before the officers of the Government or of Justice, then shall the first article of these laws be without force. But a false accusation shall be punished as the law directs.

ART. 7 provides that prior to investigating a charge of slander the alleged criminality of the accused shall be fully enquired into. If substantiated, then he shall be punished for such offence as the common law of the land shall take cognisance of, and the charge of slander against his accuser shall lapse. Should the offence, however, be not proved the charge of slander may be proceeded with.

ART. 8.—Unless an accusation be laid against offenders in the cases provided under the Articles 4 and 5, the Government will take no cognisance of such offence.

FALSE ANALOGIES.

(Akebono Shimbun.)

Some few of our politicians have assumed a joke of foreigners that Japan is the England of the East, to be true, and are extremely vain of it. To our own mind there is nothing either in the way of administration, customs or works of art analogous in the condition of the two countries. The only point of resemblance is in their shape and insular position. This being the case, we see nothing for us to be vain of. But the resemblances between ourselves and the Turks are not few. The absoluteness of the administration, the low form of religion, the deficiency of education, the methods of transacting business, the state of the arts and customs, all present analogies with Turkey. Japan, therefore, is not the England but the Turkey of the East.

A newspaper called the *British Mail* came into our hands a short time back, and from it we learned that it is not only in customs but in our national debt that we resemble Turkey, as may be seen from the following translation (Translation from the *British Mail.*) After reading it we cannot but feel anxious about our own position. True, our financial affairs are not so bad as those of Turkey, but in the growth of our national debt we resemble it very much. If we take good care for the future we can avoid the dangers with which that country is threatened, but if we persist in our present course affairs will be as bad here as there.

THE PRESS REFUSED ACCESS TO THE *Chikuhokuan Kuaigi.*

(Choya Shimbun.)

The *Chikuhokuan Kuaigi*, the Assembly so long and so anxiously awaited by us, is at length sitting. I have been told that the various newspapers had requested permission to attend the meetings but that permission was refused with them. Now what is the value of newspapers? It is clearly their duty to ascertain all that is passing and to publish for general information such intelligence as may possess interest for its readers. The wholesome spirit of rivalry between competing publications secures to the latter the earliest information from the public prints. Such being the case, I conceive it to be the duty of the Government to afford the newspapers the fullest opportunities to hear and report such proceedings as those of the *Chikuhokuan Kuaigi.*

I have, indeed, felt at a loss to account for permission being granted to hold the present Assembly while leave to attend its proceedings is refused to the Press, through whose instrumentality they may be disseminated. But I think I have discovered a reason which is intimately related to our eastern habits. The language of our Government is very impartial, liberal and open, but its conduct is far from being equally praiseworthy. It avows its desire for civilisation while many of its acts may be styled barbarous. For instance, we are told that the freedom of the press is to be cancelled because, *on dit*, the Kiobusho required certain statements to be denounced by the Press as unjust which were nevertheless just and proper. Of this last we have had more than one example.

It is impossible but that officials should show more or less of the selfishness of human nature, and the language of the Press has no doubt raised sentiments of anger against it in the minds of many of this class. Hence, no doubt, the prohibition to the newspapers to attend the *Chikuhokuan Kuaigi.* This is certainly bad, and should our Government allege that the habit (selfishness) is inalterable we should not have a word to say. But if we claim the character of a civilised nation our actions must be consonant. Now a civilised Government would assuredly not adopt repressive measures against a free Press.

It may perhaps appear rashness in me that I should say any thing against our Government, but I trust my words may find a hearing as the language of a patriotic heart, and I hope the prohibition to the Press may meet with a prompt revocation.

It may perhaps be alleged that the Government has refused this permission to the newspapers because it is intended to publish the transactions of *Chikuhokuan Kuaigi* as soon as its sittings have come to a close. But, notwithstanding this, a long time must elapse before the intelligence can reach those who are at a distance, and I think the daily publication in the newspapers a much more eligible course, especially when accompanied by such editorial comments as the subject may seem to suggest.

What think you?

ON GOVERNMENT EXPENDITURE.

(Hochi Shimbun.)

A distinction must of course be made between expenditure by the Government and by the People, although as the means for the former has been in the first instance obtained from the people there is in reality but little difference between them. The Government has not of itself the power to create capital, and its expenditure is made from the funds contributed by the people and placed in its hands for proper administration. Therefore, the Government can only spend money which the people have entrusted to it.

We Japanese have been led astray by this distinction, and forgetting that our governmental expenditure has been furnished by the people, speak as if the Imperial Treasury were filled with gold from heaven. Ignorance of, or inattention to, the source of our national income has bred indifference to the manner in which it is spent in the minds both of the people and Government, the former imagining that it is a matter which concerns the Government alone and not themselves. But when the Government repairs a bridge or mends a road at its own charge the people exclaim, "How good of our Government to do so much for us" and tears of gratitude fill their eyes. But let the cost of such repairs be demanded from the people directly, and the eyes which were overflowing with tears of gratitude turn round and stare with surprise, and feelings of bitterness rise in the heart towards the Government, and people exclaim, "Such work as this is unnecessary; repairs to our bridges are not a pressing matter." And thus, although in each case the money proceeds from the same source, the people seem absolutely indifferent to the expenditure of that which has once entered the Treasury, and are greatly delighted, indeed, to witness its use for the repair of a certain road or bridge. This truly is strange!

This may be compared with a father who presents to his three sons 100, 80 and 50 *yen* respectively as their yearly allowance. They usually exhaust this allowance, and at the end of the year there is but little left. If one son should buy a handsome hat the others will surely envy him its possession and will follow his example, so also with boots &c. In this vain way they generally spend their allowance, and desire even more in order that they may add another suit of clothes to their wardrobes. It is not only in domestic life that the unwise spirit of rivalry is to be observed: it penetrates society, and may be met with in town and country alike; in the citizen and in the peasant.

Our Government departments assuredly offer no exception to the custom. Let us suppose, for instance, that any one of our public offices causes a handsome stone building to be erected for its accommodation. No sooner are its officers lodged in their new quarters than some other department discovers that it, too, requires a new suite of offices; the country is recklessly pledged to a needless expenditure by this insane spirit of rivalry,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and the people, already miserable enough, are further taxed to provide for the extravagance and ill-judgment of their rulers.

On the other hand we have the promise of the Government that it will assist the people by constructing large poor-houses for their reception. This is the work of a short-sighted people, who indeed can only see that which is immediately under their nose. I earnestly hope that instead of spending so enormous a sum as 1,000,000 *yen* upon poor-houses the Government will limit its outlay for this purpose to half that sum.

It is our duty as a people to watch narrowly the manner in which the money we contribute to the State is laid out by the Government, since, whether we spend such money as individuals, or confide its expenditure to a governing body (who are, so to speak, the trustees of the nation), it comes alike from our pockets.

The happiness and wellbeing of this country depend, I am convinced, upon the proper administration of the national revenue. And it is for the people from whom this revenue has been obtained to see that the expenditure of its finances is conducted with care, prudence and economy.

(THE SAME No. 2.)
(Hochi Shimbun.)

As we live in the capital we know but little of what goes on in the country, and on this account can only speak of it indefinitely. The circumstances of the different *ken* vary greatly, so that recommendations made for one might not suit the other. But thinking that were we permitted to attend the *Chikohokuan Kuaigi* we should have a fine opportunity of learning what is required in the various *ken*, and discussing the questions to which their demands give rise, (because this information could be gathered from the governors or vice-governors of these sixty provinces) we made a request for permission to attend these discussions regularly, but as this has been refused us, we will comment on the subject as it were from a distance.

On looking over the reports of the meeting of the *Chikuhokuan Kuaigi* which took place on the 22nd inst., certain doubts had arisen in our mind. On that day the Governors and Vice-governors of the *Ken* and *Fu* discussed the question of the government paying two-thirds of the police expenses and the people paying the other third, the object of the discussion being to bring the people peace and contentment. But during the course of the discussion its original object seemed to be lost sight of.

On the 30th May we wrote upon the question of the expenditure by the Government and that by the people, and yesterday the *Nichi Nichi Shimbun* has treated the same subject, and coincides with us in saying that these two expenditures are practically the same. It seems well therefore now to advance the question another step.

One of the debaters of the 22nd instant said —"The burdens now borne by the people are so great as not to admit of any increase at present, and the expenses of the Government are also very great. Of the disbursements incidental to the police the people should only pay one-quarter, the remaining three-quarters being paid by the Government, and if the people cannot pay their full share, the Government should make up the difference." Now, as in these views, from beginning to end, a distinction is made between the money of the Government and that of the people, it is impossible to determine who is right and who wrong. The whole basis of the discussion is vain. Does not all the money, whether disbursed by the Government or by the people, come out of the people's pockets? As we have said before, the Government has not one cent which can be said to be its own capital, and all the money it uses comes from the people. From this point of view it matters not who pays these expenses, which eventually all come from one pocket.

If the people pay for protection and get it, this is giving a dollar for a dollar's worth. There is neither profit nor loss in it. It is merely that they get something done for them which they cannot do for themselves.

Among the ordinary dues and taxes paid to the Government, there is a certain proportion paid for protection. But should this be insufficient for the end in view, there is nothing for it, but to give more, and if the people cannot do it, it merely shows that they cannot afford to pay for efficient protection. To speak accurately, if the whole of the expenses of police is to be borne by the Government, it will say, "so much of the dues or taxes paid by you have gone towards the maintenance of the police, but it first went into the Treasury and was thence disbursed for that purpose." If the whole expense is to be borne by the people, then all the funds taken by the Government for police purposes must be specially set aside and collected under the name of a protection-tax. If the people refuse to pay for efficient protection, the question arises whether they really cannot do so. If not protected they cannot live contendedly and peacefully, therefore protection must be given to them. But if they have not money enough the question arises, What should the Government do? If the people cannot remain in peace the country cannot maintain its independance, and the Government should limit some of its vain expenditure and bestow this upon more efficient protection. It is therefore a question whether the Government is using its funds vainly or not.

If we argue the questions out in the above manner it seems useless to make these imaginary distinctions between the expenditure of the government and that of the people. This being the case, it does not seem unreasonable to take taxes or duties from the people in the ordinary way, and tell them at the same time that such and such part of their money was devoted to their protection. This would abolish the distinction between the disbursements of the government and those of the people. As we have before said, all comes out of one pocket, and it is idle to regard one as more precious than the other or to debate further upon the question.

The Japanese ruling party has thought that according to ancient custom the taxes and duties taken from the people could be used as its pocket-money; while the people, thinking they were destined to pay cared not for the manner in which their money was spent. This idea must exist more or less in the minds of our present rulers, or they would not raise such questions, because if it was understood that all the expenditure of the Government was to be devoted to the people, and the people paid their money for protection, the uselessness of such discussion would be obvious.

YOKOHAMA RACE CLUB.

The semi-annual meeting of the Race Club took place this afternoon at the Chamber of Commerce Rooms. Amongst those present were Messrs. Abbott, Dodds, W. J. Cruickshank, T. Cruickshank, Strachan, Kingdon, Cope, Fraser, Watson, Harries, Mollison, Mitchell, Bennett, Pinn, D'Iffanger, Hay, Molesworth, Urquhart, Reimers, and Wilson.

Mr. Kingdon was voted to the chair.

The Hon. Sec. (Mr. Cruickshank) read the minutes of the last meeting, and also a statement of accounts for the last half year, showing a balance in favour of the Club of $2,055.59; but it was stated that the sale of tickets at the spring meeting this year had been $500 less than at the same time last year.

Mr. Bennett proposed and Mr. Dodds seconded, "That the letter addressed by several of the pony owners to the committee previous to last meeting be read."

This was carried, and the letter was accordingly read.

Mr. D'Iffanger then proposed "That the Committee be increased from five to seven."

Mr. Abbott seconded this, but suggested that the two extra members should consist of a President, and of the Governor Yokohama, who should be invited to act as Vice-President.

This proposition was lost.

Mr. Abbott then proposed, and Mr. Kingdon seconded, "That programmes be issued three months prior to the races."

This was also negatived.

A desultory conversation then took place respecting the letter, etc., addressed to the committee, but there being no substantial proposition brought before the meeting

Mr. Harries proposed, and Mr. Reimers seconded the adjournment of the meeting.

After some further conversation, in the course of which Mr. Fraser said that the Committee, as a whole, were responsible for the programme, and not any particular members of it, and that any complaint should be made against the whole body, Mr. Harries' proposition was carried and the meeting adjourned.

BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA FOR 1874.

BRITISH CONSULATE.
Hiogo 16th June, 1875.

SIR,—I have the honor to forward to you Report of the Trade of the Ports of Hiogo and Osaka for the year, 1874, together with the following Returns :—

HIOGO.

I.—Return of the Import Trade.
II.—Return of the Export Trade.
III.—Return of all Foreign Shipping entered and cleared.
IV.—Return of the duties collected on Imports and Exports, and of Shipping dues.
V.—Return of the Import and Export of Treasure.
VI.—Return of Foreign Firms and Residents.

OSAKA.

VII.—Return of the Import Trade.
VIII.—Return of the Export Trade.
IX.—Return of the duties collected on Imports and Exports, and of Shipping dues.
X.—Return of the Import and Export of Treasure.
XI.—Return of Foreign Firms and Residents.
XII.—Return of all Foreign Shipping entered and cleared.
XIII.—Statement showing the total of the Trade and shipping of the Ports of Hiogo and Osaka.

Before proceeding to compare the Trade of Hiogo and Osaka for the past year with that of 1873, and to comment upon it, I consider that a few remarks are necessary in explanation of the differences to be observed in the quantity of many of the articles in the Import Table attached to this Report as compared with the quantity of the chief Imports touched upon under the heading of Imports.

The entries in the Table of Imports show the actual quantity of goods laid down in Hiogo, and which have passed through the Custom House during the past year,—whereas the statistics of the trade of these two ports as published by the Chamber of Commerce show the actual business done during the same period, and which in some instances considerably differ from the quantities in the Import Table. Take for instance camlets. The imported quantity, according to the Custom House return, amounted to only 9,775 yards, valued at $2,643, whereas the business done in this sort of woollen for the past year amounted to 1,924 pieces, valued at $33,320. Again, take cloth. The Customs Returns give 13,333 yards and $17,370 against 29,308 pieces and $49,465 being the deliveries and value of cloth as stated by the Chamber of Commerce; and this will apply to many of the other articles of Import.

The value of the deliveries in 1874 amounted to $6,588,926, showing an increase over 1873 of $383,722.

HIOGO.

The import and export trade of Hiogo for the years 1873 and 1874 exclusive of treasure, has been as follows :—

Imports.		Exports.	
In 1873.....	$5,911,386	In 1873.....	$2,435,271
In 1874	6,030,239	In 1874.....	4,956,724
Increase of....	$ 118,853	Increase of	$2,521,453

The large excess in the export trade of last year is almost entirely to be attributed to the considerable quantity of Tea which left this Port. 7,091,165 lbs. of Tea, to the value of $2,506,179, were shipped off, nearly all to America,—showing an increase in this staple alone over 1873 to the extent of 2,402,895 and 1,260,032, in dollars.

Notwithstanding the increase which both the imports and exports give, yet the trade of Hiogo for the past year has been a most unhealthy one. Large quantities of stocks had to be disposed of, generally at a considerable sacrifice, as merchants could no longer afford to keep goods on hand. Shipments to Europe and other countries, generally met with serious losses, and none more so than the considerable speculations made in rice, which turned out very disastrous to the exporters of this grain. In no former period were stocks so heavy, especially of woollens. The import trade has been highly unprofitable, but the worst is said to be now past, as manufacturers and shippers at home have by this time correctly gnaged the consumptive capacities of the country, and are therefore not likely to repeat the mistakes of former years.

There is an article of import, however, which I consider worthy of the attention of the English manufacturer. I mean mousselines de laine, of which deliveries were made during the past year to the extent of 103,760 pieces, valued at $654,200. This article has hitherto entirely been imported by French and German firms, and finds a ready market in Japan. An imitation of mousseline de laine, which could be laid down at a cheaper rate than the real fabric, would be, I am of opinion, largely purchased by the Japanese.

IMPORTS.

The deliveries of cotton goods during the last season compare favorably with those of the preceding year. The most noticeable feature in this department of our import trade is the great falling off of direct shipments for England, which have, however, been more than counterbalanced by importations from China. This remark applies chiefly to Grey Shirtings, Grey Drills, T.-Cloths and Turkey Reds, Cambrics, the chief importers of which are Chinese, who throughout the year successfully competed with direct shipments from England. For this class of goods, this market will, it is expected, continue to draw its supplies from Shanghai, as the telegraph wires and increased shipping facilities enable houses here, particularly Chinese firms, to speedily avail of these sudden spurts which from time to time visit this as all other Eastern markets. Another feature deserving of notice is the introduction of Indian made yarn, several parcels of which have recently been sold in this market. The quality is favorably spoken of, and a little improvement in the manner of packing is all that is required to place it on an equal footing with home-made yarns.

I may point out that since the quality of Manchester goods has so greatly deteriorated the Japanese have become quite as particular when making their purchases as the Chinese, which here, as elsewhere, prejudicially affects trade by curtailing business. The consumptive powers of these ports for cotton goods is remarkable, for hardly a native steamer arrives from Yokohama without bringing purchases of some kind or other made in that market, many of the Osaka merchants, unfortunately for Importers here, having reverted to their old custom of replenishing their stocks from Yokohama, where they consider there is always a greater field for selection.

The trade in woollens fell considerably short of the expectations of importers, partly owing to the policy of the Japanese Government in ordering direct from Europe the anticipated requirements of the army, and partly to the embarrassments caused by the failure of two of the leading native Banks, which calamity for a time quite disorganized all departments of trade, and seriously restricted enquiries for woollens at a period of the year when in former seasons they have commanded most attention. In cloth more than in any other article the Japanese have displayed their characteristic unstableness; their taste of late having been so varying that the past year witnessed the return of large shipments to England, and as many more sacrificed by public auction.

Blankets met with a steady demand until the settlement of the Formosan difficulty, when the enquiry gradually subsided, but the highest prices paid during the excitement produced by impending troubles failed to cover cost, though it is well known that the Government purchased through an agent in Yorkshire upwards of 100,000 pairs, at four cents per lb. beyond what they could have been bought for on the spot.

It is curious to notice that, notwithstanding the importance of the trade in plain, figured and printed mousselines, as evidenced by past and present returns, which places them second in importance on the list of imports, this branch continues to be monopolized by French and German houses, which is the more surpris-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ing considering the number of years Japan has been opened and the opportunities which have been afforded to British manufacturers for competing with their French and German neighbours.

Latterly the business that has been transacted in imports has, however, been upon a more satisfactory and healthy basis, as the speculative furor to import clothing, cloth and fancy articles (which the Japanese readily bought up, when the first extraordinary change was made in the native costumes) has been checked by the business being largely overdone, and by the consequent very heavy losses to all interested. And since the attention of importers has gradually returned to more legitimate and less speculative business.

The principal Imports are Cotton Yarn, Shirtings, Drills, Chintzes, Turkey Reds, Velvets, Taffachelass, Camlets, Lastings, Lustres, Mousselines-de laine and Victoria Lawn, also Iron, Sugar, Raw Cotton, Kerosine oil, Safflower and Medicine.

Most of the former find their way from England, although some few, and, as before-mentioned, mousselines-de laines, principally come from the Continent. Sugar, Raw Cotton. Safflower, and Medicine are imported from China, and Kerosine oil from the United States.

Grey Shirtings.—Sales are reported at 485,407 pieces, representing a value of $1,166,134, and showing a falling off, as compared to the previous year, of 80,000 pieces. These goods constitute the principal staple article of import and 8¼ lbs are the most saleable weight, the best chops of which ruled at 2^{75} in January, declining gradually until 2^{55} was reached in May, when a slight improvement brought the value up to 2^{65}. This rate was, with occasional fluctuations, maintained until November, since which date extreme weakness prevailed, and at the close of the year the prospects of the trade were most unfavourable, the dealers being oversupplied with common goods. 7 lb. cloth is consumed to a less extent; other weights meet with little or no enquiry. A considerable proportion of the trade is in the hands of Chinese, who purchase largely for the market at the Shanghai auctions.

Cotton Yarns.—The outlet for these goods is small, in consequence of the preference given by the native wearers to Japanese Cotton, which is largely grown in these districts, and probably suits their looms better than foreign yarn. Total deliveries for 1874 amounted to 8,385 piculs, against 7,013 for 1873. Owing to a scarcity of number 28 32 the value of this article advanced in December to $128 per bale for best chops of water twist. Number 16 to 24 has declined steadily throughout the year, and for the last six months has been saleable to a limited extent only. There is no market for number 38 42.

T. Cloths.—Although the consumption has increased from 9,700 pieces in 1873 to 29,308 pieces in 1874, it is still so insignificant as to be scarcely worthy of notice. Imports have been principally by Chinese.

Turkey-Red Cambrics.—Deliveries have increased from 40,000 pieces in 1873 to 66,250 pieces in 1874. In consequence of heavy arrivals in June and July prices sustained a considerable decline at that period, but subsequently recovered, and at the end of the year good colors were quoted at from 90 cents for 3 lbs. to $1.05 per lb. for 2 lbs.

Black Velvets. (Cotton) A large and increasing trade is done in these goods, deliveries of which amounted to 19,960 pieces, against 17,185 for the previous year. Prices ruled with extreme regularity until August, when reduced stocks gave rise to an advance, quotations reaching $10.50 for good quality. This rate was fairly maintained with slight fluctuations until the end of the year.

Victoria Lawns.—81,750 pieces have been taken during the year against 23,820 pieces for 1873. Prices were fairly maintained throughout, and reached a maximum of $1.12½ in October, contrary to former experiences of the course of the market, which has usually declined towards the cold weather. These goods are evidently in favor with native consumers.

Drills.—Principally English, were purchased to the extent of 31,163 pieces, as compared with 16,470 pieces for 1873. The increase in consumption is probably due to the requirements of the troops during the Formosan expedition, as a large proportion of the deliveries was without doubt for Tokio.

Chintzes.—Total deliveries of all descriptions were 46,514 pieces, a large portion of which was composed of importations by Chinese from Shanghai of common qualities and sold at about $1.50 per piece or lower. A small proportion of superior goods was also taken, and for special patterns $3.50 was paid.

Taffachelass.—The consumption of these goods, which has for some time been falling off, has during the past year recovered a little, the figures for the period under review reaching 42,820 pieces.

The demand has been confined almost exclusively to single weft, double weft being entirely neglected, and quotations for the former make ranged between $2.60 and $3.00 per piece.

Handkerchiefs.—Sales of these goods which in 1873 were reported at only 7,200 dozen, increased during 1874 to 23,250 dozen.

Miscellaneous Cotton Goods.—In addition to the articles enumerated above there has been a limited consumption during the year of white shirtings, brocades, spots, satins, and some fancy goods, which do not call for any special notice.

Mousselines de laine.—These goods continue to hold a prominent position in the list of woollen imports, total sales reported at 103,760 pieces representing a value of $654,200 showing, however, a decline as compared to 1873 of 23,000 pieces. Supplies are furnished exclusively by French and German manufacturers, who have adapted colors and patterns to the native taste with considerable success, and the business of the past year, in this class of goods, is said to have been profitable. With so great a variety of qualities it is impossible to give particular quotations. Prices appear to have gradually improved during the early part of the year, reaching their highest point about August, and remaining without much change until the close.

Plain Black Lustres or Orleans.—A large business was done in these articles especially during the month of September, when the best chops of 42 yards were quoted up to $8·15 per piece. These high prices naturally attracted considerable supplies, which weakened the market to some extent, although at slightly reduced rates and also continued upon a satisfactory scale during the rest of the year. Imports have consisted mostly of goods measuring 40 to 42 yards, but latterly 30 yards appear to be coming into favor.

Camlets.—The business done in Camlets during 1874 amounted to 1,924 pieces, valued at $33,320, against 1,730 pieces, and $30,631 in 1873. The favorite colors for this article are scarlet and black.

Black Lastings.—Deliveries have increased from 3,775 pieces in 1873 to 10,410 pieces in 1874. During the first three months of the year the market was entirely bare of stock, and considerable sales for arrival were made, up to $15.50. Prices have since fluctuated between $13 and $14, and at the end of the year were steady with a moderate demand.

Italian Cloth. The consumption of this fabric showed a decrease of nearly one half as compared to 1873. The lowest prices ruled during the month of January, and again, in July. Subsequent to the latter date a gradual improvement took effect, and a fair demand existed at the close of the year. Black is the principal color used.

Cloth.—Although the deliveries for 1874 were rather larger than in 1873, the result of the business of the year was eminently unsatisfactory. Between the months of March and September no sales whatever were effected, but with the approach of the winter a demand set in, and during the next three months 130,000 yards were delivered. The consumption was confined principally to Unions and Sealskins, and holders as a rule were eager to clear their stocks, although the prices offered showed a heavy loss. The current quotations at the end of the year were 35 cents per yard for Sealskins, 75 cents for Presidents, 50 to 60 cents for Unions and Pilots, superior goods being entirely nominal.

Blankets.—Deliveries for the year amounted to 31,000 pieces. The principal business done was during the month of October, when prices for best assortments of 7 lbs. reached 48 cents per lb., but the demand subse-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

quently slackened and the year closed with a decidedly downward tendency.

Miscellaneous Woollens.—These consisted of Long Ells, Alpacas, Fancies, Merinos, Figured Orleans, Corded Orleans, Barathea, Flannel, the deliveries of which in the aggregate form an important item, although the individual articles call for no special remark. Under this head may also be inclined foreign clothing, consisting principally of singlets and drawers, which figure in the list of deliveries to the value of $25,000. These goods have been placed, principally by public auction, having been imported in considerable excess of demand, at unremunerative prices.

Metals.—The trade in Iron largely increased, deliveries of all descriptions being stated at 42,200 piculs against 24,200 in 1873. The bulk of the business has been in small sizes of nailrods, the quotations for which in January reached as high as $6 per picul. A gradual decline was experienced throughout the year, and in December this description was valued at $450 with increasing stocks, composed largely of inferior quality. The consumption of other metals is too limited to require particular notice.

Sugar.—Deliveries had increased from 31,800 piculs in 1873 to 55,500 during the past year. The bulk of this consisted of Formosa and Swatow kinds, and the business is conducted principally by Chinese. The lowest quotation for Formosa was $360 in July, the market gradually improving until November, when $5.25, for the same quality was reached. Considerable quantities of sugar are produced in Satsuma, resembling in appearance Swatow black, but possessing superior saccharine qualities, and in consequence realizing higher prices than the imported article.

Cotton.—Deliveries were 17,400 piculs, against 1,400 piculs only in 1873. A partial failure of the native crop created a demand for China staple, which advanced to $1,625 per picul during the month of October. The market was, however, quickly supplied by considerable importation, and has since been in a languid state. A prejudice appears to exist against the employment of imported cotton, as the native staple, which is little, if at all superior in quality to the best Ningpo, invariably sells at a very much higher price.

Kerosene Oil.—The trade in this commodity promises to be a most important one, and the consumption has increased to 28,300 cases against 19,600 in 1873, and 4,200 in 1872. Prices ruled between $3.25 and $3.60 per case, with some firmness towards the end of the year. Petroleum is known to exist in many parts of Japan, and the increasing demand will probably cause some attention to be paid to making it available for use, and thus in time dispense with the importation of foreign oil.

Sundry Imports.—Amongst these Umbrellas figure to the extent of $29,900. Dyes of various kinds $57,000, Safflower $116,432, Medicine $71,000. Boots and shoes have been sold to the extent of $6,420; these are now largely manufactured in the country, and imported goods are almost entirely superseded. Arms to the value of $25,000 have been delivered, in consequence of a demand from China, which completely cleared the market. In addition to the above goods, is a long list of unenumerated imports valued at $953,200, which includes all articles imported for the use of foreigners, besides a variety of commodities, such as window-glass, cement, toys, furniture, liquors, &c., sold to Japanese, which do not come under the denomination of staple goods.

Exports.

The total value of exports for 1874 is estimated at $5,751,155 against $3,477,537 in 1873, showing an increase of $2,273,618, for the two ports.

Tea—has continued to form the chief export from this district, and the total shipments for the year amounted to 7,091,165 lbs., valued at $2,506,179, against 4,688,270 valued at $1,246,147 in 1873.

With the exception of 28,700 lbs. to London, and 507,000 lbs. to Yokohama, the whole of the above export was made to the United States and Canada.

The new teas commenced to arrive on the 11th May, and were brought forward in much larger quantities than usual, 9,500 piculs being settled during the first month. The market opened at extreme rates, which, however, were not long maintained, owing to unfavorable advices from New York, and the bulk of the purchases were made at reasonable prices. From that date a comparatively large business was done until the end of October, when a check took place, and purchases for the rest of the year fell to about 1,500 piculs per month.

With the exception of a short period at the beginning of the season, when fine teas commanded temporarily extreme rates, prices have ruled throughout with unusual regularity. The following table shows the price of good medium, which may be considered the standard quality, throughout the year.

January,	old.....	$34 to $38, per picul.
February,	„	$34 to $38, „ „
March,	„	$34 to $38, „ „

The general quality of the crop of 1874-75 was superior to that of 1873-74, and the proportion of fine teas larger than usual. This attached an exaggerated value to the lower qualities, and to make up for the scarcity of the latter, the tea plants appear to have been subjected to an extra picking late in the year, which threw a large quantity of very inferior leaf upon the market. The result will probably be that the first crop of next season will be of superior quality, but of limited extent.

The production of tea in this district will no doubt steadily increase, as a considerable stimulus has within the last three years been given to the cultivation of the plant, which returns a most profitable result to the farmer.

Rice.—This article was next in importance to tea, having been exported to the extent of 318,556 piculs, valued at $796,390, of which 243,700 piculs were shipped to London. At the beginning of the year prices ruled at $2.30, but in consequence of disturbances in the country joined to an apprehension of war with China, rapidly advanced to $2.90, which precluded further shipments on foreign account. In June the quotation for best grain was $3.40, and since that date the value has steadily declined. In August the Government took the ill-advised step of prohibiting the exportation of this grain, being apparently under the mistaken supposition that the high prices had been caused by foreign demand. This prohibition was withdrawn on the 1st April last. Although the extreme rates current had some time previously led practically to the same result, it was felt that such interference with trade is most mischievous and contrary to all sound commercial rules. Shipments of Japan rice had left a heavy loss to exporters, but on the other hand the grain had been introduced into the London market with such results as gave hopes that a valuable trade had been inaugurated, and that with nominal prices ruling on this side shippers might eventually recoup themselves. The action of the Government has not only destroyed this chance, but has left the uncomfortable feeling that in the event of the trade being re-opened at some future time, a succession of further losses will be sustained, with eventually a like useless result. That the export of rice has had no injurious effect upon native consumers is evident from two significant facts. First, that the bulk of the purchases by foreigners was made under contract at from $2 to $2.25 per picul, and the higher price paid was for a small quantity at $2.20, whilst the market value continued to rise for some months after shipments finally ceased, and eventually reached $3.40 per picul. Second,—that no demand existed for foreign grain, only one cargo of Saigon rice being imported during the year, which realized $1.50 per picul, whereas in 1870 the importations of this grain amounted to 893,000 piculs. It should also be remarked that between January, 1872, and April 1873, the Japanese Government exported on its own account to foreign countries no less than 2,000,000 piculs, or 120,000 tons.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

If this operation could be conducted without danger of causing a scarcity of food in the country, the export might safely have been left in succeeding years to be governed by the usual laws of supply and demand.

Copper bronze &c.—Total export 17,532 piculs, against 24,428 in 1873. Prices were at their highest in May, when best slabs and fingers were quoted at $24.50. The market thence declined to $22 in October, when an improved demand set in which continued until the end of the year. A few small settlements of rough Copper were made at about $21. The supply of bronze and gun metal appeared to have been exhausted, and for the limited quantity on offer during the year extreme prices were asked.

Tobacco.—Shipments for 1874 were 9,649 piculs, against 10,440 piculs, in 1873, the whole of which was taken for the London Market. This trade is capable of considerable development, and the native growers would find it to their interests to prepare the leaf by cutting and sorting before bringing it to market, thereby commanding a higher price. Heretofore the foreign exporter has had to purchase the tobacco as it comes from the field, often imperfectly dried, with stalks attached, and good and bad leaves mixed. These defects have to be remedied, as far as possible, before shipment, but they greatly detract from the marketable value, and the dampness of the leaf besides causes fermentation during the voyage, the result of which is that a very large proportion of the tobacco imported from Japan is sold in London as "country damaged." These circumstances, which are entirely under the control of the native grower, have up to the present time made the trade highly unsatisfactory and subjected those engaged in it to wholly unnecessary risk.

Camphor.—A large increase is shown in the export of this commodity, the figures being 7,455 piculs in 1874, against 2,588 piculs in 1873. Of this quantity 4,455 piculs have been taken for London, 2,000 for New York, and the remainder for China. Prices have fluctuated between $13.50 to $15 throughout the year. The quality of the produce of this district is good, and fetches a higher price in London than that imported from China.

Vegetable Wax.—A very marked falling off has taken place in this produce, the export for 1874 being only 7,410 piculs against 12,301 piculs in 1873. The cause may be looked for in the state of the London market, which declined from 98 shillings per cwt. in January 1873, to 64 shillings in January 1874, and to 55 shillings in June in the same year. Prices on this side have fluctuated between $14 and $9.50, the lowest price having been reached in August. After that date the market became stronger, and in October $13 per picul was again asked. The dealers say that this article cannot be produced at a lower cost than $11 to $12 per picul, as in its unrefined state it goes largely into native consumption at at the equivalent of this price.

Curios.—Exports under this head, which comprises fans, lacquered ware, bronzes, and the like, amounted to $129,500, of which $84,500 worth was sent to London, and $45,000 to New York.

Rugs.—The quantity exported, principally to America, amounted to 1,328 piculs. The high freight that ruled throughout the year checked business in this direction, and the unsatisfactory result of shipments to London has apparently entirely stopped export to that market.

Remaining exports were principally in the hands of the Chinese, and consisted of Seaweed, Medicine, Sulphur, Isinglass, Ginseng, Rapeseed oil, Cuttle fish, Sharks' fins, Mushrooms, &c, &c. 3,079 head of cattle. valued at $82,960, were exported to Yokohama for the consumption of the foreign troops and residents.

Law & Police.

H. B. M.'s CONSULAR COURT.

Before H. S. WILKINSON, Esq., Acting Consul.

June 29, 1875.

Alfred Brown and Charles Lover, seamen of the British ship *Abana*, were charged with refusing duty at sea, and pleaded not guilty.

David Mathias, master of the *Abana*, sworn, deposed that on the 22nd April the second mate complained to him that the prisoner Brown had refused duty. He called him aft and asked the reason, when the prisoner told him that the "second mate was working him up, and that he would do no more duty." He then refused to go to relieve a man on the lookout at the topsail yard. The other prisoner, Lover, refused duty the same day, and his excuse was that he was ordered to pull on ropes when he could not get an inch of them. He went forward and refused duty until such time as Brown, who had been put in irons should be released. This he repeated to the witness when called aft.

David Williams, the chief officer of the *Abana*, was sworn, and gave evidence corroborative of that of the captain.

William Williams, second officer was also sworn, and deposed to the insubordination and misconduct of the prisoner. He denied to the Court having ever called the men by abusive names, or having "worked them up," or given them anything to do beyond their ordinary duty, or having ever thrown a belaying pin at any of the men. He had once slung a belaying pin out of his hand.

To prisoner Brown: Witness had never said that he wished the belaying pin had knocked a man's brains out. Henever told the third mate to throw belaying pins at the men.

To prisoner Lover: Witness had never, to his knowledge, called this man bad names.

Andrew James Ross, third officer, was called and sworn. He corroborated, so far, the testimony of the previous witness, that the prisoners had been insubordinate and insolent. Brown was punished by having extra duty to perform. Witness had once been ordered by the second mate, when one of the men was asleep on the fore-castle, to takea belaying pin and to heave it on to the forecastle. He did so, and did not know whether the order was to the effect that he should heave it at the man asleep or on to the forecastle. It hit the foresail, and fell on the forecastle. After some questions asked by the prisoners, the witness said to the Court that sometimes the second mate appeared to have a "down" on the prisoners and himself.

Captain Mathias, recalled, said that he had not known anything of the extra duty said to have been imposed on the men. They had never complained to him.

His Honour, having read letters from the two prisoners attempting to exculpate themselves, but failing to do so, ordered each prisoner to be imprisoned for two weeks, and to be sent on board ship at the expiration of that time, or sooner if the vessel should leave before its expiration.

The Acting Consul reprimanded the captain for irregularity in keeping his log.

The second mate was also rebuked by his Honour for irregular conduct in the discharge of his duty. The discipline of the ship was endangered by his conduct.

Edward Baker, Henry Allens, and Thomas Young, seamen of the ship *Abana*, complained to His Honor of the state of the water and provisions on board. His Honor promised to inquire into the matter.

June 30, 1875.

David Williams, chief officer of the British ship *Abana*, was charged by Richard Lebor, a seaman of the ship, with striking him on Saturday last. He admitted the charge.

Richard Lebor was sworn, and said: Last Saturday the chief officer ordered the men to wash decks. He afterwards came to the forecastle and asked me what we were doing there. I told him I was putting my sea boots on, when, after having threatened to kick me if I did not make haste, he knocked me down. The second mate interfered, and took me clear of the chief officer.

In reply to the accused, witness said that he (witness) was kicked by the former when he was lying down. Witness did not kick the mate.

Edward Baker, seaman of the *Abana*, was next sworn, and corroborated the previous witness' testimony. On Saturday the crew were called to wash decks, and went forward to put their sea boots on. Some of the men got aft before the others, and the witness was seized by the second mate, who pushed him roughly

Original from UNIVERSITY OF CALIFORNIA

along. He saw the mate strike Lebor on the nose with his clenched fist. Lebor fell down, and the mate kicked him. Witness told the mate he was unmanly to hit a man half his size. The second mate interfered and carried Lebor away. Witness told the mate that if he wanted to fight, he was a better match for him than Lebor. The captain interfered then, and threatened to confine the witness. The crew resumed work. The captain was on the poop and saw the whole affair.

In answer to the accused, this witness said that Lebor was marked by the blows given him by the mate. He had his nose swollen and lips cuts, and on his ribs was the mark of the toe of a boot.

Thomas Young, a seaman of the *Abana*, was called. His evidence was corroborative of that of the other witnesses, and he stated positively that he had seen the mate kick Lebor in the scuppers.

Charles Lover, also a seaman of the same vessel, who was sentenced yesterday to two weeks' hard labour, deposed that he saw the mate strike Lebor, who fell. The mate kicked him when he was down, and kept hitting him and kicking him for about a quarter of an hour. The captain was in his cabin. He came on deck after the mate had left off hitting Lebor. The mate challenged the whole watch out to fight. Witness did not see Lebor strike or kick the mate.

The accused having been called upon by his His Honor for his statement, denied having kicked or struck Lebor "in the manner the witnesses said," and called

John Thomas, boatswain of the *Abana*, who swore: I signed articles at Cardiff. I was sitting at dinner, and heard a row on the port side. I could not see on that side. Presently I saw the chief mate and Lebor pass to the starboard side, fighting. I saw Lebor kick the chief mate, and the latter knock him back. The starboard watch came up, and each of them wanted to fight with the chief mate. They said they would fight as long as they could, and did not care what they did when fighting was commenced.

To Lebor: I did not see how much fighting you did on the port side. I saw you when you came starboard.

To the Court: This is the only row the mate was in on board

William Williams, second officer of the *Abana*, testified that a row had taken place on board and explained the circumstances which led up to it. From his evidence, it appeared that the watch turned to reluctantly. When he came aft, he saw the first officer and Lebor fighting. The first officer told the witness that Lebor had given him check. He saw Lebor, when on his back, kick at the officer. One or two of the men took Lebor's part, and stood in a fighting atitude, and said they would as soon fight as work. Witness took Lebor away from the mate, and persuaded him to go to his work. The captain then came out of the cabin, and said he would have no fighting on board. The men went to work.

To the accused: I saw Lebor, when on his back, kick you. He had on sea-boots. I did not observe what you had on your feet. The weather was fine.

His Honor remarked that if the case before him had happened on shore, he would not attach great importance to it; but the responsibility of officers on board ship was great. After animadverting on the evident want of judgment among the officers on board, His Honor fined the accused $20 and costs. A charge preferred against the second mate by one of the seamen is to be heard to morrow at 11 a. m.

July 1, 1875.

W. W. Jones, a seaman of the *John McKean*, was charged by Yasu, a Japanese seaman of the same vessel, with assaulting him on board the vessel whilst at work.

Accused pleaded guilty.

From the evidence it appeared that prisoner and complainant were at work cleaning out a tank, when the second mate gave some order to Yasu, which he did not obey, and the chief mate gave him a push. He fell off some spars on which he was standing, and said something in Japanese, whereupon the prisoner gave him a slap across the face.

His Honour said he would fine the prisoner $3 and costs. There was some excuse, as they were working at the time.

Before RUSSELL ROBERTSON, Esq., Consul.

William Williams, second officer of the British ship *Abana*, was charged by Richard Lebor, a seaman of that vessel, with assaulting him whilst the ship was at sea.

Accused pleaded not guilty.

It appeared by the evidence that one morning, whilst the ship was at sea, the accused ordered [illegible] to be squared and that, whilst this was being done [illegible] laughed and mimicked the officer's orders, and got pushed off the poop. Complainant never reported the case to the captain, so it was not logged.

His Honour dismissed the case, at the same time commenting severely on the number of cases that had come before the Court in connection with the vessel.

U. S. CONSULAR COURT.

Before Gen. T B. VAN BUREN, Consul-General.

THE "KANKE MARU" *vs.* P. M. S. S. Co.

This is an action brought by the owners of the Japanese junk *Kanke Maru* and her cargo against the P. M. S. S. Co. damages for the alleged sinking of the junk and cargo by the defendants' steamer *Oregonian*.

The facts proven show that between 4 and 6 o'clock on the morning of the 15th of February, 1873, the steamer and junk came into collision in a portion of the Inland Sea of Japan known as the "northern passage," one of the narrow straits of that sea. The steamer was on her trip from Yokohama to Shanghai, her nearest objective point being Kobe, a Japanese port. The junk was proceeding in an opposite direction.

This action was not commenced until the 9th day of September, 1874, for the reason given by the plaintiff that he was ill for a long time after the collision, and failed to ascertain the name of the steamer.

The steamer carried the usual lights; the junk carried no light whatever. When the junk was first seen from the steamer, upon which a proper look-out was kept, she was a little on the starboard of the steamer, holding a direction across her bows, and supposed to be about an eighth of a mile distant.

To avoid the collision it was the duty of the steamer to put her helm a-port, and of the junk to do the same or keep on her course.

The steamer did so port her helm, but the junk, instead of porting or keeping on her course, put her helm a-starboard. This made a collision inevitable, without a change in the direction of the steamer, the helm of which was immediately starboarded to avoid the collision if possible. The change, however, occurred too late, and the junk struck the steamer on the starboard side, just forward of the wheel-house, and drifted along her side until clear. Had the helm of the steamer not been starboarded, she would have run the junk down.

At the time of the collision the wheels of the steamer had been stopped. A strong current was running against the steamer, and high lands were on either side about an eighth of a mile distant.

Preparations were made to lower the boats of the steamer, but they were not lowered, for the reason given by the officers that the steamer's interpreter, on calling to the junk if assistance was required, was understood to be answered in the negative: that from the steamer boats were seen coming to the assistance of the junk, and that the swiftness of the current and the proximity of the land made launching the boats difficult if not dangerous.

One man from the junk at the time of the collision clambered on board the steamer, and the remaining two were rescued by a junk which, hearing cries for help, came to their assistance.

The junk, which was then very near the shore, was described by the plaintiff Chuski as being in a sinking condition, and was abandoned without the slightest effort being made to get her to a place of safety. She was not seen to sink, but some hours afterwards search was made for her without success.

From these facts, the Court is of the opinion that the parties on board the steamer did everything under the circumstances that, could be done to avoid the collision, and that the same was brought about by the junk in starboarding her helm, and in not carrying lights.

It is undoubtedly the duty of steamers passing through the intricate passages of the Inland Sea to watch with great care that they do no injury to the numerous small craft that ply in those waters, in many instances the property of poor men, to whom their preservation is of the utmost importance; but it is equally the duty of these smaller craft to carry the proper lights at night, showing their position and character,—a duty the Government should see strictly enforced.

The Court is not fully satisfied from the evidence in this case that the commander of the steamer was justified in making no effort whatever to render assistance to the injured vessel after the collision.

Courts of Admiralty have always held the preservation of life at sea an imperative duty, not to be neglected except in cases of extreme danger to the rescuing vessel.

The judgment of the Court, therefore, is, that the complaint be dismissed, and that the defendants pay the costs of this action.

THOS. B. VAN BUREN,
U. S. Consul-General.

We, the undersigned assessors, agree to the foregoing judgment.
J. MENDELSON.
G. P. SPOONER.

Shipping Intelligence.

ARRIVALS.

June 26, *Vsadniek*, Russia corvette, Novosselsky, 1,069, from Hakodate.

June 27, *Abana*, British ship, Mathias, 1,278, from Cardiff, Coal, to P. & O. Co.

June 27, *Takasago Maru*, Japanese steamer, Eckstrand, 1,160, from Shanghai and ports, General, to M. B. Co.

June 27, *Curlew*, British gun-boat, Capt. Church, 660, from Nagasaki.

June 27, *Vigilant* British Despatch, Capt. H. C. D. Ryder, 835, from Kobe.

June 27, *Curacoa*, Netherlands frigate, Capt. Vandervelde, 1,800, from San Francisco.

June 28, *Alaska*, American steamer, Howard, 4,010, from Hong kong. Mails and General, to P. M. S. S. Co.

June 29, *Frolic*, British gun boat, Captain Buckle, 464, from Kobe.

July 1, *Oregonian*, American steamer, Harris, 1,914 from Shanghai and ports, Mails and General, to P. M. S. S. Co.

July 3, *Ukraine*, American barq., Melcher, 709, from New York, Kerosene, to Order.

June 3, *Duke of Abercorn*, British ship, Dalrymple, 1,050, from London, March 10th, to Kniffler & Co.

DEPARTURES.

June 27, *Nevada*, American steamer, Williams, 2,145, for Shanghai, General, despatched by P. M. S. S. Co.

June 30, *Tanais*, French steamer, Reynier, 1,010, for Hongkong, Mails and General, despatched by M. M. Co.

June 30, *Stillman B. Allen*, American barque, Taylor, 586, for New York, Tea, despatched by Smith, Baker & Co.

July 1, *Auguste*, British 3 m. schooner, Watt, 210, for Chefoo, Ballast, despatched by Captain.

July 3, *Takasago Maru*, Japanese steamer, Eckstrand, 1,130, for Shanghai and ports, Mails and General, despatched by M. B. Co.

July 3, *Costa Rica*, American steamer, Conner, 1,917, for Shanghai, General, despatched by P. M. S. S. Co.

PASSENGERS.

Per P.M.S.S. *Alaska*, from San Francisco.—For Yokohama—Paymaster Jordan U.S.N., Mrs Jordan and 2 children, Marshal Basing, H. Takase, Major C. F. Powell, H. Comstock, Dr. G. Koenigs, Max Liebecke, S. Carrington, P. S. Dowson. Steerage—E. S. Fowler. For Shanghai—Hon. W. A. Richardson, wife and daughter, S. S. Gilbert.

Per *Taka ago Maru*, from Shanghai and ports.—Messrs. E. Girault, E. C. Fail, R. Hardman, E. Cordoza, R. Wyper, W. Holkam, Spahe, Von Siebold, Captain Bonger, and 14 Japanese in the cabin, and 132 Japanese and 8 Chinese in steerage.

Per *Nevada* for Shanghai and ports.—Dr. Antisell, A. B. Glover, F. Waters, W. A. Sturrock, W. G. Howell, E. C. Kirby, Frossard, Piron, Geo. Batchelor, Benjamin Fatsin, Ashikawa, and 17 Japanese, and 230 in the steerage.

Per *Tanais* for Hongkong.—Messrs. Philips, Bochard, Bouxin, Bienaimé Orange, F. Feliciano, Germain Sico, Marcelo Magno, Tonias Dionisio, John Powilco.

Per *Oregonian* from Shanghai and ports.—Lady Howard de Walden and servant, The Hon. Miss C. Ellis, R. Robertson and servant, T. Kemperman and servant, E. De San and servant, T. Haki, Mr. Howell Mr. Hori, F. Da Ro a, Nagano, A. E. Jones, Mr. and Mrs. A. Harron F. Howlden, Major T. G. O'D Hervey, Dr. McMurtrie, U.S.N, Sawato Yano, Yashikawa, Okawa, Saito, Kamura, Matsua, Nanto, Hwai, Fourteen Japanese and 119 in the steerage.

Per *Takasago Maru* for Shanghai and way ports.—Mr. and Mrs. Sakada, Tak Sing, Emamura, Okusera, Mr. and Mrs Matsuda, C. Molsen, G. Abell, Mr. and Mrs Yoyamura and child, Kawashima, Ihiye, C. R. Hardman, Shimadzu, and servant, Yenoshi and servant, Yamada jur and servant, Tashiro jur., Tashiro and servant, Yamada, Arkijeki, Konishi and servant, Huchiye, Tada, Tai, Mr. and Mrs. Matsumoto, a Japanese Officer, Takagaki, Takashi, and 2 Europeans, 3 Chinese and 192 Japanese in the steerage.

Per American steamer *Costa Rica*, for Shanghai and ports:—Mrs. Clark, Mr. and Mrs. Lomas, Whittall, Col. Browne, F. Mayers, W. Robertson, Mr. and Mrs Goddard, F. S. Jacobs, H. Ferries, and 11 Japanese.

CARGOES.

Per *Tanais* for Hongkong.—
Silk for Marseilles ... ... 16 bales.
London ... ... 7 „

Per *Oregonian* from Shanghai and ports.—Treasure value $1,243.

Per *Takasago Maru* for Shanghai and ports.—Treasure $5,100, *yen* 5,631.

REPORTS.

The British ship *Abana* reports heavy weather after leaving Cardiff, latter part of the voyage pleasant weather, light winds and calms in the China sea. Spoke the *Ukraine* in Straits of Sunda bound to this port.

The British gun-boat *Curlew* reports had much rain, coming through the inland sea.

The Netherlands Frigate *Curacoa* reports: in Ocean 10 months from home, calling at Falmouth, Lisbon, Rio Janeiro Monte Video, and passing the Straits of Magellan; called at Valparaiso, on her way to San Francisco from which port sailed on the 10th May. Passing through the Sandwich Islands experienced, light easterly winds, between 18° and 19° North latidude. May 13th spoke the American ship *George Moon* from San Francisco to Manilla.

The *Ukraine* reports: Rough weather at commencement of voyage: latter part pleasant with light winds. Were detained outside for a week, on account of calms.

The *Duke of Abercorn* reports, pleasant weather throughout the passage: passed the 3 masted schooner *Jessie MacDonald* in the China Sea, bound to this port.

„ No. 3 Ke-pak	„	6.80 to 7.40	Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah	„	5.90 to 6.50	Kerosine Oil	per case	3.30

EXPORTS.

Silk.—The first few bales of new Silk made their appearance in the market on the 28th ultimo. They were Joshiu Hanks, apparently reeled from *bivoltini* cocoons, and fetched at $355 to $370. Prices for silks of the same description opened last year at $400 to $430 and shortly after rose to $460, We hear that the Japanese crop is not larger than last year; but the report is confirmed, we are glad to say, that the quality of cocoons is much better.

Since the 24th ultimo arrivals are 62 Bales, and delliverles about 100 piculs,

Tea.—Since our last issue a considerable amount of tea has changed hands, settlements for the closing week amounting to 4,000 piculs.

Several wire despatches have been received reporting the American tea market as completely panic-struck, and prices there almost nominal; a state of affairs which will not be improved by the receipt of statistics of shipments to the United States to date, which, with the departure of the steamers *Belgic* and *Oxfordshire* will shew a considerable excess, in comparison with similar figures at a corresponding date last season.

Our market is nominally some $1.50 to $2 per picul cheaper than quoted last week, but should settlements continue on such a scale as reported yesterday viz, 1,120 piculs we must look for a recovery in quotations rather than the requisite decline to meet recent valuations as reported from New York.

Stocks on hand are ample say 8,000 to 10,000 piculs.

Another sailing vessel, to follow the *Mora*, is reported likely to be laid on; freight at present £3 per 40 cubic feet.

Common	Nom.	Fine	$35.50 to 38.50
Good Common	$25.50 to 29.50	Finest	39.50 to 43.50
Medium	30.50 to 33.30	Choice	44.50 to 47.50
Good Medium	33.00 to 34.50		

EXCHANGE AND BULLION.

Exchange.—Sterling rates are again easier with but little doing in either Bank Bills or Private paper. *Gold Yen* are again higher and continue very scarce.

Rates close as follows:—

On London, Bank, 6 Months'	4s. 2d⅛. to ¼	On Hongkong Bank Bills on demand	⅛	per cent. pre.
„ „ Sight	4s. 1d.	„ „ Private Bills 10 ds. sight	⅛	„ dist.

The Sale will take place on the ground.

Further particulars may be obtained at the Municipal Office, where a Plan of the Property can be seen.

C. A. FLETCHER & Co.,
Auctioneers.

Yokohama, June 26, 1875. D&W td

ROWLANDS' MACASSAR OIL

Is the best and safest Restorer and Beautifier of the Human Hair. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandriff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 5d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. CAUTION—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipeint decay, and polishes and preserves the enamel, to which it imparts a PEARL LIKE WHITENESS. Price 2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling and purifying it eradicates all Cutaneous Eruptions and Discolourations. Price 4s 6d. per bottle. ROWLANDS' ESSENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Back, which colour remains so durable that neither washing or perspiration can remove it Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES," A ROWLAND & SONS, Hatton Garden, London.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 1872. 12m.

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s. 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d., and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s., and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s., 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s., 15s., and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 28.] YOKOHAMA, SATURDAY, JULY 10, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIED.

On the 3rd inst., at the English Legation, Yedo, in the presence of H.E. Sir Harry S. Parkes, K.C.B., H.B.M.'s Envoy Extraordinary and Minister Plenipotentiary to the Court of Japan, by the Rev. Wm Ball Wright, M.A., HERBERT A. W. ST. GEORGE, only son of the late Frederick St. George, Esq., of Worcestershire, England, to AUGUSTA, youngest daughter of W. Ellis, Esq., Belfast, Ireland.

Notes of the Week.

A difficulty, we regret to learn, has been experienced in procuring the services of a Minister for Christ Church pending the arrival of a successor to the Revd. Mr. Syle, and some alterations in the service will for the present be inevitable. We are requested to say that the Revd. C. J. Corfe, Chaplain of H. M. S. *Audacious*, has kindly consented to take to-morrow's service, which, for this occasion, will be at 9 o'clock, morning. There will be no afternoon service.

A correspondent has drawn attention to the use of the word *yatoi* by Japanese officials in reference to foreigners in the employment of the Imperial Government. The term he maintains, is of offensive signification and he strongly urges its abolition. So far as we can learn, however, the absolute opprobrium of the term may very fairly be doubted, as it would seem customary to apply it to all Japanese who, though officially employed, have not as yet received definite rank. The development of the new government has of necessity largely increased this class of persons, which existed formerly we believe to only an inconsiderable extent. Probationers are at present more numerous, and pending their appointment to any of the fifteen classes are designated *yatoi*, being necessarily subordinate to those upon whom a status or official rank has been conferred. It follows of of course that foreigners who occupy government posts, but who possess neither local nor official rank, are comprehended in this classification, and this has certainly provoked irritation on more than one occasion within our knowledge. If, unlike the Governments of Egypt and Turkey—which employ foreigners largely and distinguish them by elevation to the highest position attainable by subjects—the Japanese are unwilling to allow local rank to their foreign employees, there can be little doubt that they should discard a term which, rightly or wrongly, and possibly from mistaken analogy, has come to be associated with a position of inferiority in the minds of certain of the latter.

Sir Charles Dilke in his "Greater Britain" would seem to be to some extent responsible for the eulogistic term "Britain of the East" which has occasionally been applied to this country as a substitute for the time-worn "Land of the Rising Sun" and is no doubt equally figurative. But the analogy which a native writer, whose lucubrations we published last week, has found in the dominions of the Sultan is, if less flattering, more completely capable of illustration in many of its points of approach, and notably so in the skill which the people of the Levant would seem to have exhibited in the imitative art. The British Consular Trade Report relates that spurious trade marks are largely forged in Constantinople, and that, through the Levant, the foolish people are deceived by all sorts of adulterated commodities, purporting to be the genuine product of some famous manufacturer.

"In the hardware trade" says the *Pall Mall Gazette* from which we quote "an article bearing the stamp of crown is considered by the ignorant natives to be of British manufacture; the consequence is that this mark is impressed in Galata on all descriptions of base and inferior goods. In German and Belgian, however, the Levantines go further, and similar inscriptions to that of L. Nomill and Sons, Schemfield, are to be found in abundance. In the sale of Hennessy and Martell's cognacs, British ales, Jamaica rum, pickles, &c., a large business is done, either with forged labels, or by the purchase of bottles bearing intact the original label, and the placing therein of an adulterated compound. The abuse becomes really of vital importance when, as is the case, it is extensively applied to medicines. Quinine, or a bitter preparation containing but a small percentage of the alkaloid, is eagerly sought for, especially by the purchasers of supplies for ships, and even by captains themselves, the advantage being that it is bought at a price lower than that at which quinine could be purchased wholesale in England. French wines are extensively, and in taste tolerably successfully, imitated in Constantinople. A deleterious mixture, of which native wine is the foundation, is made to pass for "Medoc" or "Chateau-Margaux," by the bottles which contain it being furnished with capsules and labels ostensibly belonging to a firm in France, but really manufactured and to be obtained to any extent in Galata. The skill of the Levantine lends itself with great facility to these and similar fraudulent practices.

The practise of forging brands in repute, is, we are satisfied, in the absence of repression likely to increase here. The only trustworthy remedy is the institution of international treaties for the protection of trade marks, and until this can be carried into effect, or some local government act can be brought into force, the home manufacturers must be satisfied to suffer from the abuse of their reputable names.

In treating the subject of Japanese newspapers, the *Globe*, one of the oldest of the London papers, the traditions of which extend back at least as far as the early part of this century, writes as follows:—

It may be doubted whether, so far as the internal condition of Japan is concerned, the influence of newspapers is altogether healthy. They are not sufficiently restrained in their judgments by a sense of responsibility, or by the conviction that all reform, if it is to endure, must be cautious and temperate. When a country is in such a position that in the course of a few years a sovereign, once considered almost a demigod, falls so low in public esteem that he is scarcely observed when he drives along the street, it seems time to reflect whether it is not somewhat too rapidly changing one set of social ideas for another.

The wisdom of these views becomes all the more apparent when contrasted with the blatant claptrap of part of the local foreign press.

We publish this week the only translation from the native press which has reached us in time for our present issue. The *Herald*, indeed, insinuates that our translations are garbled and that they are selected to suit some undisclosed purpose,

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

Now a gift horse, we are told, should not be looked at too curiously in the mouth, and as it has suited that journal to do us the honour to copy our "garbled" selections it were but gracious to abstain from questioning their authenticity, even if there were any ground for suspecting it.

It may be well, however, to state that our translator is under no restriction whatever as regards the choice of the articles selected for translation, and that we have never in any case withheld from publication any article of interest or importance on account of its tone or bias. The critical vigour of many of these articles is an ample refutation of the captious and puerile charge made against the selection.

We reprint elsewhere from the *Pall Mall Gazette* an article which appears in its issue of 21st May, on the attitude of the Indian Government with regard to the native press, to which an unrestrained freedom of comment has to the intense chagrin of Anglo-Indians been so far permitted. It must appear anomalous that a license of discussion which is promptly suppressed in Ireland—where seditious Editors are even now very unceremoniously locked up—should be allowed to an inferior coloured race in another portion of the British dominions, and we have the assurance of the European Press of India that this freedom has been most unwisely granted. How far it may be prudent or safe to entrust a free press to a people unfit for free institutions has been determined in no equivocal manner by Anglo-Indians, and the rulers of other Asiatic countries will be wise if they decline an experiment which a reasonable experience of its operation under the most favourable circumstances has up to this point shewn to be disappointing and dangerous.

We publish this week a further instalment of Mr. Consul Annesley's exhaustive report on the trade of Hiogo and Osaka in 1874. The accompanying tables will be published next week.

At two o'clock this afternoon the new American Mission Church for Native Christians which has for sometime past been in course of construction was opened with a benediction by the Rev. Dr. Verbeck of Yedo in the presence of a large congregation of foreigners and Japanese. Addresses were subsequently delivered both in English and Japanese by the Rev. Mr. Ballagh, the Rev. Dr. Brown, (who briefly sketched the sources of contribution and the history of the church) and some native gentlemen, being followed by prayer and hymns. The building which had been erected from the plans of Mr. J. Smedley is in the early decorated style but in simple treatment. It is constructed in solid brick, resting upon concrete and granite foundations of great solidity. Its interior area is 73 by 39 feet, with an entrance porch of 14 feet which is surmounted by a bell-turret 43 feet in height. The roof is of the open hammer-beam design and covered with American red pine. The windows are at present only partially glazed with stained glass. In time, however, and as funds shall be available for this purpose, it is intended to introduce it in all the windows by which the general effect will be very largely heightened. The church, which is provided with abundant means for ensuring effectual ventilation through the roof, is calculated to accommodate a congregation of about 400, and though erected for the native Christians will be at the service of other congregations.

Our attention has been drawn to an error of some importance in the deductions from the report published by the Lyons Union of Silk Merchants into which the *Pall Mall Gazette* has been led by the incorrectness of certain of its figures. From the following table with which we have been obligingly furnished, it will be observed that the production of Italy is 30.63 per cent of the total harvest, while that of China is 39. 40 or, together, a fraction over 70 per cent. The *Pall Mall Gazette* assumes the relation to be 80 per cent.

List of Silk produced in Europe and imported into Europe of the harvests of 1874.

(From the Japan Mail Daily Advertiser.)

The following address was delivered by H. I. M. The Mikado on the opening of the *Genro-In* on Monday, the 5th instant:—

Some short time since We issued Our proclamation ordering the institution of the *Genro-In* with the view to the enactment of laws for this realm.

For this purpose you have been been nominated *Gikuan*, and We confide in your wisdom and discretion for the due execution of the important functions of your high office, which, if conscientiously discharged, cannot fail to redound to the happiness and well-being of Our subjects.

Understand, therefore, Our object and aid us.

The *Hochi Shimbun* states that there is, in a village called Daiju in the Mioto *ken*, an old woman by the name of Soye who is 101 years of age. She has a son aged 78, who has a son aged 47, who has a son aged 24, who has a son aged 7.

Shortly after midnight of the 3rd inst., a fire broke out in the *Naimusho* and destroyed part of it and many adjacent buildings. Fears were entertained for the *Okurasho*, but it was saved together with the newer parts of the *Naimusho*. Many among the firemen were wounded. Among other valuable records destroyed in the conflagration, the whole of the recent survey maps of the city and suburbs of Yedo, upon which the foreign staff of surveyors has been engaged for the past three or four years, has perished.

The anniversary of National Independence was observed by the American element of the community on the 5th inst., with the usual demonstrations, although, owing to the circumstance that neither of the two United States war-ships in harbour were saluting vessels, no salutes were fired. Fireworks were let off during the day and evening with the customary profusion. The Hon. Mr. Bingham and Mr. Consul-General Van Buren received their friends in Yedo and Yokohama in the evening.

KIDO, the *Gicho* or president of the *Chihokuan Kuaigi*, was prevented by indisposition from attending the meeting of the 3rd inst.

We briefly adverted to the accident which had occurred to the *Kanagawa Maru* (*Madras*) in our yesterday's issue. The attendance of some boats from the shore allowed of the discharge of a quantity of her cargo, lightened of which she was extricated from her awkward position and able to proceed on her way.

We have been requested to give publicity to the accompanying testimony of the passengers by the Mitsu Bishi Company's steamer *Kanagawa Maru* to the discretion and ability evinced by Captain Allen Moore under the circum-stances described.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

S.S. *Kanagawa Maru.*

At a meeting of the passengers of the Mitsu Bishi Company's steamer *Kanagawa Maru* held on board that ship July 4th, 1875 the following resolutions were unanimously adopted and ordered to be inserted in the Yokohama newspapers.

Resolved

That the meeting constituted of the passengers of the S.S. *Kanagawa Maru*, while returning thanks to Almighty God for His providential care on the morning of the 4th of July, and while regretting the unfortunate circumstances which have led to that vessel running on shore, do hereby tender to Captain Allen Moore their sympathy, and express their high sense of his readiness and activity in his efforts to prevent the vessel being injured by running on a rocky shore under the conditions of darkness, fog, and adverse tides which then prevailed.

Resolved also

That the efforts of Captain Moore in his attention to the care and comfort of the passengers, not only after the accident but during the whole voyage, entitle him to their warmest thanks, and they do hereby assure him that should circumstances require them to travel on this line again, they would very willingly take the ship which he might command.

Signed on behalf of the passengers,

THOMAS ANTISELL, M.D., *Chairman.*
WILLIAM W. PORTAL, *Secretary.*

July 4th, 1875.

THE *Eiri Shimbun* relates that a native of the province of Oshiu, has been recently preaching Christianity at Suruga Dai, Yedo. The congregation was subsequently addressed by the Père Nicolas, whose exhortations drew tears from his hearers. The discourse of Oshiu man was, on the other hand, in parts somewhat obscure.

THE 6th instant, say the *Nichi Nichi Shimbun*, being a holiday of the *Chikuhokuan Kuaigi*, the deputies of some thirteen *ken*, who had accompanied the governors, assembled in Kofuku Anzén Hall in Ginza, Yedo. The object of the meeting was to take into consideration many subjects for which the brief period allowed for the sittings of the convocation did not permit the full discussion. Of the twenty days allotted to the Assembly more than one-half had already passed, and only two subjects had received consideration. The meeting decided upon addressing a memorial to the Government, praying that in view of the brief interval available for discussion, the question of a popular assemblage, as the most important subject to be dealt with, should be at once taken into consideration.

WE take the following from the *Hochi Shimbun*:—

At 9 o'clock a.m. on the 7th instant, the *Fuku Gicho* of the *Genro-in* was honoured with an interview by H. I. Majesty at the Imperial Residence.

Addressing His Majesty the *Fuku Gicho* (Vice-President) said "On the 5th instant Your Majesty was pleased to open "the sitting of the *Genro in* with a speech in which Your "Majesty expressed your wishes. It shall be our aim to give "them full effect, and so to discharge the duties for which Your "Majesty has been pleased to summon us together as to "promote in the largest possible manner the material prosperi- "ty and happiness of Your Majesty's subjects and this Em- "pire."

There was a very large attendance at *Chikuhokuan Kuaigi* on the 8th instant, albeit, says the *Nisshin Shinjisshi*, it was raining heavily all day. The question under discussion was that of popular assemblies and the debate was listened to with considerable interest.

A notification has been addressed to all Government officials by the Prime Minister, forbidding their communicating to the press anything having reference to their several departments. An exception is of course made in favour of official notifications.

ON the 2nd and 3rd of the month, says the *Hochi Shimbun*, an unusual rainfall occurred in the Niigata Ken. The banks of many of the rivers were washed away and the neighbouring villages destroyed by the violence of the deluge. The postal service has been so far interrupted as to prevent the communication of more exact intelligence.

The *Nisshin Shinjisshi* relates that an order has been given to a Japanese kite-maker by a foreign house for 50,000 *Tombi-dako* (or hawk-shaped flying kites) which is now in course of execution. The export of kites and paper fans is, it seems, largely on the increase.

WRITING on Tuesday last, a correspondent states:—"Reports from Ningpo and also from various places in the interior "express fears that the protracted and excessive rains of the "past few weeks will prove detrimental to the crops. Already "all the rain has fallen that is considered advantageous; so far "as the barometer can be taken as a guide, I see no prospect "of an immediate suspension."—*Celestial Empire.*

We hear that a meeting of tea buyers and tea tasters was held on Tuesday evening at the Club, to consider what steps should be adopted with regard to the new conditions of sale imposed on foreign buyers by the native dealers; but that, following the usual course of such deliberations in Shanghai, no conclusion was arrived at and the Chinese are to be allowed to have their own way. This result might have been expected Tea-meetings are not generally productive of great effects either in Shanghai or elsewhere.—*Celestial Empire.*

We are informed by the United States Consul-General that the U. S. Consul at Amoy advises him that the Export duty on coal shipped from Formosa has been reduced from $1—to one mace per ton.—*Celestial Empire.*

We learned with much regret on Wednesday that telegrams had been received in various quarters announcing that Messrs. Russell & Co.'s premises in Hongkong were early that morning destroyed by fire. Only the books and papers were saved,—*Celestial Empire.*

FINANCIAL.

IT is a new pleasure to sit down to reply to a letter so temperate as that signed X. Y. Z. which appeared in the *Japan Herald* of the 6th instant in answer to the article headed 'Financial' in our own issue of last week. There are indeed two or three paragraphs in it which are not quite fair to ourselves personally, and others where our meaning is wholly perverted—doubtless unintentionally, but certainly from more careless reading than is justifiable in a letter which begins "It shall be my task to reply" &c.—but we shall only touch upon these incidentally as we go along, not deeming them greatly relevant to the discussion.

We shall not doubt the writer's entire sincerity when he says that he desires the welfare of this country; we only wish he would give others credit for the same feelings. He seems to refer to us in his opening paragraphs, and perhaps as he alludes to our views on the subject of the Press-laws he will do us the favour to read the remarks we have made elsewhere this week on the subject. As to "throwing stones at those who do not draw the most favourable and rose-colored conclusions from the Budget," we are profoundly innocent of any such act. We have certainly on a late occasion explained what seemed an erroneous inference made elsewhere in regard to the Budget; but we did so by a statement of facts never subsequently impugned, and we are entirely persuaded that our explanation was a correct one. As to "the untold wealth of this country," which we appear to be charged with extolling, we have always flattered ourselves that we were the first to show how entirely destitute of accumulated wealth it is and the causes for this deplorable fact. No one has so constantly reiterated it as ourselves. No one has used it more repeatedly as a key to many of the problems the country presents, or pressed it so warmly as an argument for economy and wise commercial legislation.

X. Y. Z. says that the sole cause for the importation of gold into this country is the money borrowed from abroad. Surely he forgets that during the early days of the trade the precious metals flowed into Japan abundantly. It is true that this tide has turned during the past two years, but the Mint returns prove that a quantity of bullion has passed through it since its opening, in relation to which, the export, as we said on Saturday last, is not very formidable.

As regards the foreign loans being a source of such impoverishment to the country, we cannot see the force of X. Y. Z.'s argument, and thus his censure of journalists who neglect to draw the attention of the Government to this fact falls but lightly on us. The expediency of a foreign loan entirely depends on the use to which the the money so raised is put, and the conditions on which the loan is made. Two loans have been contracted by this country; one of £1,000,000 at 10 per cent, the other of £2,400,000 at about 8 per cent. The first was for the purpose of making railways, and we have yet to be informed on good grounds that we were wrong in thinking that the expenditure of the money in this manner has not been of great advantage to the Government and the country. The second loan was raised for the purpose of extinguishing the pensions of the nobles and *samurai*, a scheme of which no one has ever doubted the prudence, but the details of which found many severe critics, none more so than ourselves. But the money was, or is being, spent in purchasing perpetual and terminable annuities very cheaply, and as a mere financial operation this is an excellent one. Could all this money have been raised in this country? What is the normal rate of interest here? Twelve per cent. But the average rate of these loans is less than 8¾ per cent. and the second of the two is put out at about 17 per cent, an advantage apart from the political gain of the measure in furtherance of which the loan was contracted.

Regarding the amount ($30,000,000) which X. Y. Z. says might be borrowed by Japan on the Customs' revenue and that of the two lines of railway already constructed, (forgetting apparently that these securities are under lien for the first loan), we cannot find that they would, even if free, avail for so great a sum. The Customs' Revenue amounts to about $1,500,000, and the net earnings of the railways cannot be much more than ten per cent. of the amount spent on them (say $5,000,000). This makes together $2,000,000, a revenue assuredly insufficient to offer as security for a loan of $30,000,000.

That the making of roads is more important at this moment than the making of railways we do not doubt. No one has so constantly drawn attention to the fact as ourselves. But in view of more general political considerations referred to last week, we are persuaded that the introduction of railways has been more than justified by the result, and, at the time they were made, they were more important even than roads.

The following sentence of the letter is so curious that we must quote it as it stands:—

> Notwithstanding what the *Japan Mail* may say, it is nearly certain that the paper money has displaced the greatest part of the metallic currency, and if we judge from the experience of all those who know Japan, the only estimate of the amount of coins existent in Japan, at least approximately, is the amount turned out by the Mint, less the amount exported. Considering all these figures, the cash balance of the Treasury absorbs the greater part of the metallic coins, as far any foreigner or even native can make calculation.

Our reply must be taken from the words of our own article touching on financial affairs dated the 3rd April, 1875.

> As this inconvertible currency issued by the Government *not only superseded much of the coin in circulation, but also exceeded it in amount*, it led to a rise in prices which has always at first a very stimulating effect upon trade. Subsequently, however, this inflation subsides, and a stagnation sets in during which, though the foreign trade of the country is not affected, the exchanges are, *and the gold begins to run away; and if we mistake not, it is in this condition that we find Japan at this moment.*

We could point, were it necessary, to half-a-dozen passages of precisely the same tenour in our columns during the past two years. It was partly on this account that we were so grieved and alarmed at the expenditure necessitated by the Formosan Expedition, which absorbed the $5,000,000 destined to reduce the paper currency; and on this account that we hailed with so much satisfaction the expressed intention of the FINANCE MINISTER to appropriate $9,000,000 this year to a redemption of the paper currency. But it is rather hard that we should be accused of saying what we did not say, and censured for not saying that which we have repeatedly and consistently said. The remaining part of the sentence is equally erroneous. The amount of bullion coined by the Mint has been set down in this argument at $40,000,000, and the amount exported at $16,000,000. The balance, $24,000,000, is said by the writer (as above) to be absorbed in greater part by the Treasury. Now the Treasury only professes to have $14,390,000 in bullion, and from this must certainly be deducted the difference between £2,400,000, the amount of the last loan, and £1,600,000, the proportion of it already disbursed. This would give nearly $4,000,000, and leave $14,000,000 for the circulation of the country. The amount is doubtless small, but this does not affect the erroneous nature of X. Y. Z's. conclusions.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It is said that we regard axioms of political economy as truths of universal applicability, and that we fail to see that what is good for England may be bad for Japan. In the instance in question we believe we were right in our *reductio ad absurdum* of last week. But, speaking generally, we have long come to the conclusion (whether rightly or wrongly) that axioms of potitical economy are certainly not of universal truth and applicability, and we are persuaded that the condition of a country and the character and powers of the race which inhabits it must be estimated before the terms of the equation can be fixed in which the politico-economical problem presented by that country can be fairly stated.

X. Y. Z. says that we ridiculed the *Herald's* correspondent for saying that this country does not produce the the gold and silver it sends away. We must be pardoned for saying that we did nothing of the sort. We ridiculed him for saying that the country was steadily growing poorer while he acknowledged that it had a large quantity of gold in it, which, by his own statement, it had never produced. We asked, whence then has it come? X. Y. Z., therefore, far from "silencing" us on this head, passes his sword through the air at our side, wholly mistaking our position. He does precisely the same thing in the following sentence, and betrays an extreme inaccuracy either of reading or of memory when referring to our remarks. Thersites tells how his salutation of "*Good-morrow*, Ajax," was met with the reply "*Thanks*, Agamemnon." X. Y. Z. would certainly have done better in a letter avowedly written as a reply, to pay more attention to the statements he took upon himself to refute. Here is the paragraph :—

> The *Mail*, in impugning the figures of your correspondent "A. B. C.," gives the expenses of the Government as between five or six millions of dollars for Formosa, then the interest $1,300,000 for foreign debt, besides $350,000 for embassies, and then finds that the remaining $1,000,000 not accounted for, were expenses incurred by students. It is to be wished that they were incurred for such a laudable object; but we have reasons to think otherwise. Besides the Formosan affair, its legations and students, &c., the Japanese Goverment is spending money in Europe for many other objects too.

Now what we said was that A. B. C. wholly failed to justify his charge that the Government had squandered over $11,000,000 in the manner which he specifically detailed. We said that, on his own showing, after taking $1,300,000 for the foreign debt, $250,000 for legations (not $330,000 for embassies—another serious inaccuracy, the more so that a separate charge of $100,000 was allowed for special embassies) and $6,000,000 for the Formosa Expendition, he failed to account for $4,000,000; and as he only had the expenses of the students in Europe unprovided for among the items he enumerated, these $4,000,000 could only be set down to this charge, which we showed was wholly absurd. Far from saying that this enormous sum was spent in this manner, we proved that it was *not* so spent, and that A. B. C's statement in this respect, as every other statement which he made, was idle and untenable. We did not say that a great deal of money was not spent which might be saved; but we said that A. B. C. utterly failed to prove his specific allegations, which were manifestly and demonstrably untrue. His calculation regarding the quantity of the precious metals Japan actually produces in any given eighty years, may or may not be accurate. It is wholly impossible to verify this, or to reckon the yield of one year as the average yield of all years. It is certain that in old times the Dutch carried off yearly large quantities of silver*, so that X. Y. Z's assertion that the country was hermetically sealed is wholly erroneous, and unless account is taken of the large sums of money poured into the country in the early days of the foreign trade of the past fifteen years, all statements on this subject are at best but plausible conjectures.

The last few paragraphs of the letter seem to us to demand a few words which may clear away some misunderstandings in regard to our criticisms which seem to exist in the mind of a writer who certainly does not show himself intentionally unfair, though he is as certainly reprehensibly careless.

It is manifest that the foreign journals in this country do not write from exactly the same stand-point as journals written in the language of a country where they are published with a view to influence the policy of its Government. What we have constantly in view here is to give to foreigners in Japan, and to readers at home, as fair a view as we can of what is taking place here, and as fair a criticism as is possible upon it. That this criticism has some influence upon the Government is very possible, and we must acknowledge to finding ourselves, more and more, year by year, writing in the hope of impressing the minds of the Japanese with foreign views applicable, or presumed to be applicable, to their condition. It is this, indeed, which constitutes the chief, if not the only, pleasure connected with journalism in this country, a pleasure which writing for foreigners alone could never give. There may be something, possibly there is much, of illusion in the thought, that, in a small but still appreciable degree, we are assisting the Japanese to solve the great problem on which they are at work. As to "an indiscriminate praise of everything done by this Government," we can conceive nothing more unjust if the expression is levelled at ourselves. It has been our endeavour to hold as even a balance of praise and blame upon the course of the Government as our knowledge, often extremely superficial, enables us to do. Purely party writing is so common at home and even here, and readers are so accustomed to it, that they cannot understand the attempt of a journal which tries to dispense praise or blame justly as the occasion may seem to demand. They call this blowing hot and cold, and are constantly disappointed to find their own adverse or favourable views opposed *in toto* in a journal the last read article in which was entirely to their mind. To all such party writing in this country we are greatly opposed. We think it does more harm than good, inasmuch as it must produce a sense of injustice in the Japanese mind. Perpetual blame and abuse defeat their own ends. Men grow callous to them. But when encouragement alternates with censure, and it is felt that there is at least an endeavour to be just, good may be done even by those whose access to all the facts is not always sufficient to enable them to discuss fully and exhaustively the problems under consideration. None, too, but those who are very regular and attentive readers of any given paper,—and no paper can expect to have many of these—can follow its judgments with sufficient care to assess them with anything like real accuracy. An indifferent reader will throw down in irritation an article which opposes his own conclusions, and remembers and blames that which disturbs him far more than he remembers and praises that of which he approves. All such accusations as "getting over the stumbling-block of awkward figures by an array of splendidly worded phrases," pass by us like the idle wind. We have neither the one art nor the other, and we can promise X. Y. Z. that if he will convince us of any errors

* Vide Dr. Geert's paper on Japanese Metallurgy read before the

ment to that effect. There may be a point here or there in his letter to which we have not replied, but none, we think, at all vital to the issue on which he has written, with an ability and moderation—if he will accept our compliment,—to which we are, unfortunately, but too little accustomed in this place.

THE NEW PRESS-LAWS.

WE should be sincerely sorry if the gentlemen connected with the Japanese Press misunderstood the grounds of the views we have recently expressed very decidedly upon the laws recently issued for their governance. We do not know that we are in any danger of being thus misunderstood; we have been told on good authority that the majority of the Editors of the native papers think that the laws are fairly liberal; and we are sure that nearly all foreigners capable of understanding the real bearings of the question at issue agree with us, though individual authorities, to whose opinion we attach great weight, oppose us. But we have lately devoted so much attention to this question, and think it so important, that we wish to record the reasons for our conclusions. If we are wrong in this matter we can the more easily be proved so by a refutation of our arguments.

In the first place, then, a free press is one of the latest fruits of the slow and orderly growth of freedom. When those in whose hands it is have breathed this atmosphere from their childhood, when all political and social relations have been based upon this freedom for ages, and all the economy of life has been conformed to it, there is a light but equal pressure, so to speak, round all men and all things, and a perfect adjustment of life to its surrounding conditions. But where this previous adjustment does not exist, disruption ensues. You are liable under these circumstances to something like the phenomena, referred to by Professor THOMSON a few weeks back, which are exhibited by the fish brought up from great depths of the ocean. The customary pressure being removed, the animal tissues give way and an explosion ensues. With us law and liberty are correlated. The Sovereign has no more power than the law gives him, and the freedom of the people is defined and controlled by the same power. Nothing controls the Sovereign in this country but opinion. There is no statute-basis for the foundations of society. It exists solely in virtue of an undefined prescription, and if this is undermined by opinions which act upon it as powerful solvents, it falls to pieces.

If the question is closely analysed it is manifest that an absolute form of Government and a free press cannot co-exist. The idea involves a contradiction in terms. You might as well talk of hot-cold or north-south, of a despotism under which the people are free, of a point which has magnitude, or of two straight lines enclosing a space. There are no such things; nor can there be a free press under a despotism. You cannot begin to build a house with the roof. You must lay foundations, and at least carry up your structure with beams and joists and uprights, even if you do fill in your walls subsequently, as is done in this country. A free press is the crown, not the foundation, of liberty.

Again: with what are we all so constantly reproaching the Japanese? The imitative desire of adopting unsuitable ready-made institutions, forgetful that these are with us the flowers and fruits of trees of slow growth and endless cultivation which cannot be gathered and stuck upon trees of an altogether different species. We are for slow reform and transformation, which, [illegible] guidance, we think are possible and may be permanent. But we dread conjuring tricks in the affairs of nations. A free press in this country would in a year or two be like a powerful steam engine set in motion in a drawing-room. In an hour there would not be a whole article of furniture left, and by the end of the day the room, if not the whole house, would be in ruins.

This nation is now awakening from a long sleep of implicit faith in a thousand superstitions, nearly all of which are destined to disappear; and many of its rulers, being men of mature age, and placed in office by the circumstances of a revolution which has brought them into power, have not had the time and opportunity to acquaint themselves with the forces and new beliefs which will eventually mould the mind and future polity of the nation, and which, believing in their efficacy, these men are now introducing here. At the same time the Government, as a body, far from being behind the people, or rather, perhaps, we should say, behind the best national thought of the age, is fully abreast, if not far ahead, of it. If it has sometimes been justly reproached with meddling too much, such meddling has arisen apparently from an impatience that the people will not advance at its own pace, and that if any soft place can be found where the spur would cause a twinge and a start it should be availed for this purpose. Looked at from an European stand-point, we all thought it an absurd thing that the whole nation should be ordered to cut off the *queue* in which the hair was formerly tied, and dress the head in the European fashion. But it cannot be doubted that this very regulation has helped to abolish that order of things which it is now sought to replace with a new order and economy. But is a nation to whom it was possible to issue such an order in a ripe state for a free press? Surely not. When our ancestors wore the points of their shoes half a yard or a yard long, and the Government curbed the extravagance by special laws directed to that end, would it have allowed the wisdom and justice of its order to be canvassed by a thousand writers each of whom would have disputed its authority? It is not so very long ago that JAMES the First tore up in their faces some presentment of the members of the House of Commons, declaring that they had no powers which they did not hold of his gracious will. It is no answer to say that he would not have done so had there been a free press, because the condition of our liberties was at that time such that the act was quite possible, while the existence of such a press was impossible. Yet our liberties have been worked out in spite of this. If any English Sovereign now followed his example, the Throne would be in commission in a week, and the very monarchy itself might not survive the event. But it might occur in this country to-morrow under favouring conditions, and things would go on precisely as before. Before *we* had a free press, the whole body of our liberties was formed, had grown up, and had acquired vigorous muscle and sinew. It had not indeed attained its full development. But the present limitations to the royal prerogative had been fixed. The king was restrained by law; the dispensing power was abolished; Parliament had its own constitution and its order; every man's house was his castle into which the King himself could not enter uninvited without the warrant of a magistrate who could only be removed by petition of Parliament, and who thus did not hold his office at the pleasure of the King. But here men have no rights and liberties save those which custom and opinion bestow on them, and to begin

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with full liberty of the press would make government impossible.

The nearest analogy for a despotism which can be found in a constitutional country is the method under which an army is governed. But just imagine what would become of an army if every regiment had a newspaper, and the power, authority, the orders, regulations and acts of the Commander-in-Chief were liable to daily attack and criticism. In four-and-twenty hours it would be a disorganised mass of incoherent atoms.

We are well aware that in reply to our arguments against the liberty for which some would contend, it may be urged that the most perfect press in the world, beyond cavil or comparison, is that of England, which is absolutely free. But, granting the fact, those who urge this argument must be prepared to face the condition of the press in America. Admitting its great improvement since the time when DICKINS wrote his "Notes," and making every allowance for honourable exceptions, which we do most unaffectedly and fully, we still incline to regard it as doing quite as much harm as good, possibly more harm than good, indispensable though it may be to the existence of modern free political life. It is all very well to call it a safety-valve. But the analogy is a false one. When the constituent elements of which this Empire is composed have been brought into something like the orderly relation of the various parts of a steam-engine, each of which is subordinated to the other, it will be time to talk about safety-valves. But they do not stand in any thing like this relation. They hold together by force not by contract; by the strong hand of the Government, which the press has a tendency to paralyze, and not by laws which define and enforce the relations of each to the other. In countries where the relations of the various parts of society are the products of law, this law begins to mould men from their childhood into certain shapes which have fixed relations to every thing around them. Here men are not products of law, but of arbitrary regulation which keeps them in order indeed, but does nothing more. The true analogy for newspapers here is not the safety-valve but a bottle of powerful acid, acting as a solvent to everything it touched. If a nation is fit for a free press, it is a blessed thing of altogether incomparable value and utility. But if not, it renders Government simply impossible. After a hundred years of our rule in India, fifty years of which has been of as wise, tolerant, enlightened and benevolent rule as the world has ever seen, the natives, who are at least equal to the Japanese in average mental calibre, have had a free press granted them, which works so badly that the gravest doubts are entertained in regard to the policy which granted it. But this fitness can only be produced by long preparatory processes, and to begin with a free press is to begin at the wrong end. It is an inversion of all natural order. We have always expressed astonishment that so much liberty of this nature was accorded here to the press; and we have always said that it should be accorded carefully. When the political philosophy of the West gets well into the mind of a large number of these people, some relaxation in the newspaper press laws may and must be made. But this philosophy must be learnt and understood, and this demands time.

The true mode of untying the present knot, for such it is, is to remove the censorate from the book-press, as we very fully pointed out two years ago—to grant so far the boon of "unlicensed printing"—but to retain the present newspaper-press laws. The national mind will be informed, persuaded and raised by the first process, and thus enabled later to bear without undue excitement the larger liberties it may be wise to extend to the daily press hereafter. It should not be forgotten that the condition of this country is and must yet be for many years one of danger, from the fact that it has broken too suddenly and rapidly with its past, and that the Government itself is one far more closely allied to the proletariat than to the aristocracy. Its leading spirits are new men, who ever look forward and are more inclined to hope for improvement from radical change than to trust to the quickened virtues of ancient institutions. There is no longer an ancient nobility upon which the insolence of inferiors may break before it reaches the Throne. The liberty reserved to the press in these laws is enough for the purposes for which, and the time when, they have been given. The press is essentially a democratic power, and there is not the slightest guarantee that it will continue to possess the virtues and the moderation which alone can make such a power a safe and beneficent one. Let the Japanese heed what a great English master of state-craft said. "To give moderate liberty, for griefs and disappointments to evaporate, (*so it be without too great insolency and bravery*) is a safe way. For he that turneth the humours back, and maketh the wound bleed inwards, endangereth malign ulcers and pernicious imposthumations." This 'issue' the press, under the present laws, may fairly represent, and be most useful and valuable in this capacity. Give it undue power, in the present condition of affairs, and it will serve only to breed those very humours which, rightly employed, it should carry off.

The Government has to consider not what is agreeable to the editors of newspapers, but what is good and wise for the country *in its present condition*; not what is good for England, but what is good for Japan; not what may be said down here about the liberty of the Press, but what would be the inevitable result of granting any full measure of that liberty to the people in their present state.

SPIRIT OF THE JAPANESE PRESS.

ON PEOPLE'S RIGHTS.

To every thing both a collective and a single name is assigned; thus "man" is a collective name which when analysed is found to represent a being of mind and body, just as the collective name "nation" comprises both government and people. In analysing the conditions of each two opposing principles are disclosed, and we propose to deal with these principles with some minuteness.

When a man employs his mind in the acquisition of knowledge he will, without doubt, gain universal respect, honour and wealth. This is the result to his mind. But he may also incur physical injury, and probably run the risk of shortening his life, which is undoubtedly prejudicial. On the other hand, should a man content himself with exercising his limbs he may succeed in developing the power of his muscles and in laying the foundations of a long life, but it will be assuredly at the expense of his mind, which will suffer from neglect and be incapable of reasoning correctly. This also is prejudicial. And thus it is with nations. When the authority of a government is extensive, and feared by the people, it commands their obedience to all its mandates, and this unquestionably is well for the government; while the people, on the other hand, being oppressed and unable to secure their just rights suffer in the same measure as their government prospers. But if the people be free, their disabilities removed, and they themselves permitted to elect their own officials and to increase or diminish the amount of their taxation, it is obvious that to this extent the power of their rulers is abridged, and the force of the governing body curtailed.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Thus, a low scale of taxation is to the advantage of the the tax-payer, and a high scale of taxation to the advantage of the government; and whether it be a good or an oppressive government it matters nothing, for every government delights in having a large revenue.

This may be compared with borrowing and lending. The borrower wishes to borrow at high and the lender to lend at a low rate of interest. No matter how virtuous men may be, no man will be found who will look for a borrower for his money at low interest, or a lender at a high rate of interest. And in buying and selling all men are found equally desirous of buying in the cheapest and selling in the dearest market available to them. Considered from this point of view a nation that should desire a good and capable government, administering its affairs justly while exacting only a light taxation, resembles a person who should endeavour to discover some one willing to lend his money or sell his goods below the current market price: such lenders and sellers are not easily met with. Hence it is that from ancient times good rulers and good systems of government have been few, while bad, and illiberal administrations have been numerous.

Now, if this be true, is it possible to have a good system of government without the exercise of popular pressure? And can a people rely upon a government to grant its rights and readjust its taxation spontaneously?

In all matters we find two opposing interests: that of the State, in which the public weal alone is consulted, and that of the citizen which regards the individual alone and takes no account of the trouble that may be occasioned to a community by its prosecution. Now, society is based upon a principle which requires that, while advancing our own welfare, we should do nothing to prejudice the welfare of our fellow-beings, and thus, in all fairness, the lender is bound to consider the interests of the borrower and the seller the interests of the buyer. By too exclusive regard to our private purposes, and by devoting too little regard to the interest of the state, it is not improbable than even the former may in time suffer.

The term nation comprehends the governing principle and the governed, and that which is prejudicial to those in authority cannot fail to injure in like manner the masses. So with a human being: a frame debilitated by disease or excesses reacts upon and weakens the power of the mind, while a shattered intellect affects the vigour of the body. Is it then wrong, as has been stated, that the pursuit of the public welfare is hurtful to the individual, or the profit of the individual a disadvantage to the state? Surely not. In what does the public interest consist? In the wealth, power, peace and honour of a nation, and to secure this all its efforts should be exerted. Should a government exact an unfair degree of taxation such arbitrary conduct cannot fail to lessen the national well-being, while, on the other hand, a people desirous of the largest share of prosperity in its institutions must be satisfied to contribute liberally to the necessities of the state. And a government conducted upon this principle of mutual consideration cannot fail to be productive of a great measure of prosperity.

In semi-civilised countries the power of the Government is very extensive, comprising as it does the ablest men of the nation. The masses are, on the other hand, weak, and thus while eight or nine-tenths of the power is in the hands of the government the people possess only a slight voice in the administration. To equalise these conditions, so as to give a perfect equipoise to the constituents of the nation, it is not sufficient that governors and governed alike should be satisfied to yield up one-half of their power. It would be necessary, rather, that the government should divide its power with the people.

A natural right of self-government may be assumed to be fundamentally and inherently the right of humanity, not a boon to be petitioned for and grudgingly allowed. Judged from recent events our government would seem to appreciate this truth fully, and if so we may fairly infer that it will not attempt to repress the natural growth of a sense of popular rights and a desire to see them acknowledged. But if the masses be careless about the exercise of their natural privileges, and in their indifference rely upon their government to take action for the extension of their influence, who can say how long they may have to wait? Is not this a fitting moment for the people to call attention to their undoubted claims?

The Press-Laws.

On the 28th of last month, eight years after our present Mikado ascended the Imperial throne, the laws for newspapers were altered, and the fact has been notified throughout the Kingdom; and such is the influence wielded by the newspaper press that when our future history is written this day will be appealed to as fixing a noteworthy era in our progress in civilization.

Towards the end of May rumours first obtained currency that a change was imminent in the regulations for the press. Some looked forward to a period of still greater freedom than that hitherto enjoyed, while the greater number gloomily anticipated greater stringency, and lamented the loss of that freedom of discussion to which the press had been accustomed. Now, can it be said that the new laws permit us our former freedom of language, or do they impede the full liberty of discussion? According to first of these alternatives the enlightenment of the people through the press will be possible, but from the latter point of view we must feel the laws to be oppressive. Those who are not wilfully blind may from a single perusal fully estimate their significance.

Our Government being upright and our ministers sagacious men, we have no reason to fear that these severe laws will be fully put in force. The regulations only refer to the leading points and from these it would seem that it might be difficult for a writer to criticise any action of the government without violating them. If this be the case the perplexities of the newspaper writer will be indeed onerous. He will be afraid to express himself on any subject and argument and power will alike be wanting in his writings. But as our Government is anxiously addressing itself to the work of civilization it is impossible that they can desire to restrict fair discussion by punishing as violators of the law such as may have ventured to canvass the questions of the day. There are certain of these regulations which, we regret to say, we have failed to apprehend, and we have in consequence memorialised the Government to the following effect:

"In article No. 17 of Notification No. 111 concerning the laws for the regulation of the newspaper press it is stated that those who *soshiri* * the laws should be fined a sum which shall not exceed 100 *yen*.

What are the laws here referred to?

Again, what is the meaning of obstructing the observance of the national laws?

Now as our government is composed of wise men, solicitous for the national welfare and honour, its legislation is naturally adapted to our national character and genius, and it may be supposed that all acts of our government have this in view. But is it to be understood that if a new law should seem to invite unfavourable criticism such criticism is *soshiri* of the law? Or drawing an illustration from the past, may we take for granted that the arguments used by us last year in discussing the institution of a House of Commons, or the separation of the Shinshu sect, in no way infringed the law just promulgated?

It is highly important that the conductors of newspapers should be fully informed on those points: Pray therefore afford us an ample and speedy explanation."

We do not yet know what reply the officials will vouchsafe; but a few brief lines to tell us whether the Government has abolished free discussion or not will suffice. In the meanwhile we shall do well to await the reply which the Government will not fail to make to our enquiries.

On Uniforms.

(Akebono Shimbun.)

It has been said that the uniforms worn by our officials should be composed either of our native silk or native cotton and not made from material which is grown and manufactured in foreign countries, and a letter expressing these views may have been observed in the *Nisshin Shinjisshi* a few days since. The subject has not only been attentively considered by our most prominent men but has largely engaged the notice of the Press. It is a

* Vide *Japan Weekly Mail* page 573.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

question upon which the thoughts of all earnest and patriotic men must be exercised, and we venture to add some views of our own to those which have already been placed before the Public by other writers.

It is no doubt reasonable and wise that we should if possible use such material as our own country produces, rather than send away our money to other lands for the purpose of procuring it. But this is only good as a general principle. For, should we push it to so extreme a point as to cause the present uniforms of European fashion to be made of our native cloth—however good and serviceable—we should be acting absurdly. Some, indeed, may allege that to send our money abroad for the purchase of foreign products affects our internal economy, and that we must therefore disregard appearances; or if it be ridiculous to wear clothes of foreign shape, but our of own material, we would do better to return to our former fashion of dress altogether. Now this is all very well, but, supposing the recommendation to be acted on, what result might we expect? I have read in some newspaper that at a meeting of Ministers held in Russia the Turkish Ambassador made his appearance in a dress different from that of his confrères and thus exposed himself to ill-suppressed ridicule. The paragraph adds that had the Japanese envoy been dressed in the old-fashioned native dress he, also, would doubtless have attracted ridicule, or at least criticism. Before this had happened, it will be remembered, Iwakura and other members of the Embassy to foreign countries had written from San Francisco to point out the advisability of altering our official dress and this was very generally notified.

Should we, as is recommended by some writers, cause our official dress to be formed from native materials the effect would, we conceive, be worse than a return to our old official costume. On the other hand the value of the materials for which we are indebted to other countries for this purpose is comparatively trifling.

I think there must be many other and better ways of protecting ourselves from a drain of money and for much better reasons; but I shall nevertheless be glad to see our large tracts of wild land covered with sheep. Then we shall be able to manufacture our own native-grown wool which will be better than planning how we shall exclude the importation of foreign growths. Wool, undoubtedly, will enable us to have much handsomer and more useful clothing than can be made from silk and cotton, but this is the least of the many advantages of employing our waste lands for the growth of this valuable and comfortable fibre.

The long-continued rain seems to be doing a deal of damage in the country. Rice has gone up three mace per picul here, and the water on the paddy-fields is now on a level with the creek. Traffic between Shanghai and the country is seriously interfered with, owing to the rains having swollen the creeks to such an extent that the majority of the boats are unable to pass underneath the bridges and great alarm is felt in Foochow respecting the fate about the second tea-crop—at least, we don't know whether it is necessarily *sad* news for those interested in tea—to the effect that at Sunghiong and Yung-lo-ting the picking of the second crop will not be more than half the usual quantity. The leaf too is blighted with worms; and the quality of the leaf that has been already picked is extremely poor. This report is borne out by the appearance of the two or three chops which have already come down. Prices are high, Tls. 25 to 26 having been paid, and Canton tea-hongs are buying very little. The disastrous consequences of the weather are also making themselves felt in Hupeh and Hunan, where the cotton crop is suffering grievously, and the yield of which districts is only half an average one, or, or 150,000 piculs less than usual.—*Celestial Empire.*

Monday's *Shun-pao* informed us that recruiting is going on at Nanking, to raise a force to be sent to Formosa which will take the place of those who have lately succumbed to the valour of the 'aborigines.' Several hundred are to be raised and shipped off at once.—*Celestial Empire.*

BRITISH CONSULAR TRADE REPORT FOR HIOGO AND OSAKA FOR 1874.

British Consulate.
Hiogo, 16th June, 1875.

(Continued from our last Number.)

Shipping and Navigation.—The number of Foreign vessels that entered the Ports of Hiogo and Osaka during the year 1874, amounted to 196, aggregating 239,972 tons, showing a decrease of 76 vessels, and 48,660 tons against 1873. 204 American, 139 British, 44 German, 4 French, and two Danish vessels entered and cleared during the past year. The American Pacific Mail Company's coast line supplied as before a large proportion of tonnage, amounting to 174,620 tons, out of the 182 649 tons under this flag. The principal portion of the oversea trade was carried on in British bottoms. Eighteen British vessels, two German, and one American loaded for the United Kingdom, and five British and one German for New York, during the year.

The most important feature in the trade is the local traffic between this Port and Yokohama, on the one side, and Shanghai on the other. The Pacific Mail Company had practically enjoyed a monopoly of this since 1868, but it is now being contested by two Japanese lines, supposed to be largely subsidized by the Government, and which have reduced freights to absurdly low rates.

Currency.—The intended removal of the Mint at Osaka from under European superintendence was notified during the latter part of the year, and has since been carried into effect by the retirement of the Director and the greater part of his foreign staff. The coinage will in future be under the absolute control of native officials, with the assistance of three or four foreigners who have been retained for the present. I am informed that the establishment works well under the control of the Japanese officials, and that the number of coins struck has augmented rather than diminished.

The number and value of coins struck from the 1st January, 1874, to 31st January, 1875, amounted to:—

Gold, 2,414,874 pieces, of five, two, and one *yen*, Value in dollars	$9,850,827
Silver, 29,563,977, of one *yen*, 50 *sen*, 20 *sen*, 10 *sen*, and five *sen*, Value in dollars	$4,205,813
Copper, 61,630,947 of two *sen*, one *sen*, one-half *sen*, and one *kin*, Value in dollars	$ 499,841
Total	$14,556,551

There is a marked falling off in the coinage of gold, which was to be expected, for not only has the rate of exchange ruled against the advantage of coining gold, but the total amount in circulation may be considered equal to about $1.50 per head of the entire population of the country, and it is scarcely probable any large increase will be necessary.

I observe in the Osaka Mint report for 1874 the following observations relative to the silver coinage.

On the 17th March last, the Government issued the authorization for the coinage of a new silver one *yen* piece, of improved design, the weight to be 416 grains Troy, and the fineness ·900, with the value clearly indicated thereon for the guidance of foreigners as well as Japanese. A considerable number of these coins have gone into circulation.

The Government of the Straits Settlements recognized the new coin as a legal tender, and it was also accepted at other places on the coast of China. But although the Japanese silver *yen* as then proposed was the precise equivalent of the Hongkong dollar, the application for the Japanese *yen* to be proclaimed in that colony as a legal tender was, at the instance of the Chamber of Commerce, refused. Strange to say, however, the Canton Government immediately proclaimed the coins for acceptance.

The new silver *yen* has been, so far, well received, but serious objections were raised as to the weight of 416 grains, whilst the Trade dollar of America weighed 420 grains.

The Government have it under consideration how fa

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

it may be desirable to assimilate the weight of the Japanese *yen* with the American Trade Dollar.

Cost of the Osaka Mint.—From the Commissioner's Accounts, it appears that the total cost of the Mint establishment, from the commencement of the works in 1868, to 31st July, 1874, amounts to $1.960,075.

This sum includes the original mint buildings, the additions and enlargements for coinage of copper, the bullion offices, residences of officials, and workmen's barracks, gas works, cokeovens, store and coal sheds, in fact all buildings and appliances of whatever kind, machinery imported and manufactured, stores from Europe and Japan, coals, etc., as well as all salaries, wages and all the contingent expenses. The appropriation of portions of the sum to capital account, and current expenditure presents the usual difficulties, large additions to the machinery having been constructed on the premises, which, with endless other appliances, are, in the accounts referred to included in current expenditure.

The following division is a fair approximation of the total under the two headings viz :—

Capital accounts.....	*Yens* 1,500,000.
Current expenditure, to 31st July, 1875.....	*Yens* 460,075.
Total.....	*Yens* 1,960,075.

For this time outlay of $1.500,000, the Government possesses a most efficiently appointed mint, complete in itself, and capable of producing 300,000, to 400,000 coins of mixed denominations, or 100,000 dollars, per diem.

Dimension of the Mint.—The following statement of the floor area of each division of the Mint will convey an idea of the extent of the establishment :—

Divisions of the Mint.	Superficial Feet.
Assay Department	1,638
Melting-rooms, gold, silver, and copper	8,308
Rolling Mills	10,568
Coining Department	10,355
Annealing furnaces, &c.....	5,360
Weighing Department	1,200
Die Department	2,124
Engines, and boiler space	5,150
Copper refinery	2,112
Fitting shop, foundry, smithy &c	14,350
Total area of Departments	61,165

The gross earnings or receipts of the Mint.

The gross receipts of the Mint from the commencement of the coinage in 1871 to July 31st, 1874, are as follows :—

Gold, Seignorage, premelting and assay fees.	*Yen.* 475,636
Silver, Seignorage, premelting and assay fees, and profit on subsidiary coins ...	1,543,141
Copper, Estimated gross profits on copper coinage	143,141
	Yen 2,158,777

Estimated Annual Expenditure.—The estimated expenditure for the ensuing year, including salaries, wages, stores, coals, &c., may be taken as follows :—

Directors Department.—Pay of European officials, 36 Japanese sub-officials, and cadets, and 331 operatives	*Yen.* 102,540
Probable value of stores, coals crucibles, stationary	51,000
Commissioners Department.—Pay of 16 officials, and 108 sub-officials, and servants	62,000
Total.....	*Yen* 215,540

The above-expenditure will now be considerably reduced by the removal of the European staff of officials.

Public Companies.—The Hiogo Gas Company completed the erection of its plant in September, upon a piece of ground leased from the Government, adjoining the foreign settlement. The Municipal Council made a contract with the Company for the lighting of the public lamps, which is being satisfactorily performed, and is a very great improvement on the former Kerosene oil lamps. Many private houses are also supplied.—Offers have been made by the Company to light the native town, Government offices and Railway Stations, but the central Government refuses to allow pipes to be laid under the streets, and the matter is therefore in abeyance. The Gas produced is of excellent quality, and supplied to private consumers at $4 per 1,000 feet.

The Japan Paper Making Company, Limited, is likewise an English undertaking, with a head office in London, formed for the purpose of converting rags and other materials in pulp or "half-stuff" for the use of paper makers in America and Europe. Japan rags have hitherto failed to remunerate the shippers owing to the high cost of freight and the quantity of extraneous matter with which they are mixed, and the theory of the Company is, that if freed from all foreign substances and compressed into a small space, a great saving in freight will be effected, and the product will be offered to purchasers in a more saleable form. The Company, after considerable opposition from the local authorities, has succeeded in procuring a site in the neighbourhood of the settlement, where it is now engaged in erecting works of large extent.

Mines.—Coal of good quality, as well as gold, silver, copper and other minerals, is known to exist in this neighbourhood. The mines in this district number, according to a return furnished me by the Local Government, fifty-nine mines. Out of this number only six mines are worked, and with the exception of two coal-mines, which are at present not worked, their yield is gold, silver and copper. At Ikouno in this neighbourhood a gold and copper mine is worked by Foreigners (Frenchmen) on account of the Japanese Government, and the value of the yield, I am informed, amounts to from twenty to twenty-five thousand dollars per month. As soon as the European machinery is in working order the yield of that mine will be considerably larger. It is to be regretted that as the Japanese Government will not permit the employment of foreign capital, these sources of wealth remain at present undeveloped.

Railways.—The railway from Kobe to Osaka (20¼ miles) was opened for passenger traffic on the 11th May, 1874, so that the line has not yet been a year in operation. Parcels and goods have been carried for shorter periods, and the receipts show a steady increase amounting by the latest published returns to about £50 per mile, per week. The competition by steamers, for passengers especially, with the Railway between Kobe and Osaka is rapidly declining according as the people of the country become more sensible of the advantages of time and punctuality. The line is worked with great credit to the Japanese and all concerned, and no accident causing injury to a single passenger has occurred since it was opened.

Most of the subordinate officials are Japanese. The engine-drivers, but not the firemen and foreman platelayers are foreigners. The works of the line, which include large river bridges, three short tunnels, and some heavy earthwork appear to have been constructed with care and soldity. They are reported to have stood the action of heaving floods last year without injury or interruption of the traffic.

From Osaka to Kiyoto (27 miles) the works begun last year are now in active progress, and it is believed that, notwithstanding the large number of rivers to be bridged over there is a fair prospect of the line being opened up to Kiyoto during the year, 1876.

With the object of connecting the Port of Tsuruga on the North Coast with Kobé and the Bay of Osaka, surveys have been made, and the proposed line of railway marked out round the Eastern side of Biwa Lake, from Kiyoto and Otsu to Shiotsu and Tsuruga. I am also informed that further surveys are in progress from the lake towards the interior with the view eventually to the joining of Kiyoto and Tokio by a central trunk line,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which will open up largely tracts of country now sorely in need of improved means of communication.

Traffic from May 11th to December 31st, 1874:—

Number of passengers, 505,733, Receipts for same	$ 135,440
Parcels and luggage,—number of Parcels, 15,771 Receipts for same	$ 3,115
Goods weight, piculs 1,981 Amount for same	$ 233
Total Receipts	$138,800

This Railway was opened for passenger traffic on the 11th May, 1874. and for goods on 1st December, same year.

Telegraphs.—A Telegraph Office was opened at Otsu, the head of Lake Biwa, at the beginning of this year. It is contemplated to connect Sakai, near Osaka, with the other portion of the Telegraph system. The line to Hakodate has been recently opened, and some very quick answers to telegrams forwarded from Kobe to that port have been received.

Other extensions are pending but have not yet taken definite shapes.

The charges have not been altered since last year when it was fixed at $1.50 to either Nagasaki or Yokohama. A charge of one and a-half cents for delivering messages to within a certain radius from the Telegraph office has recently been advertised by the Department, the sender having to prepay the charge. The lines are largely availed of both by natives and foreigners, the charges for Telegrams forwarded by Japanese being considerably disproportionate to foreign written messages. The earnings for the past year amounted to over 115,000 yens. The Japanese appear to be becoming much more skilful in the receiving and forwarding of messages. This is especially so as concerns native work.

Post Office.—During the first quarter of the present year there were despatched from the Hiogo Post Office 178,620 native letters, papers, etc., and about the same number were received. Letters, papers, &c., can be posted for any part of the world having postal communication. Stamps and envelope cards were sold during the past three months to the amount of $4,190.12. Postal cards worth one sen are considerably used by Japanese in their local communications. Money orders can be obtained up to 30 yen, available in Japan only. A fee of ten sen is charged on an order for 30 yen. Savings banks are about being established. The denominations of the postage stamps are of one sen, two sen, four sen, six sen, ten sen, twelve sen, fifteen sen, twenty sen, thirty sen, and forty-five sen.

Public Works.—Sanda Road—A new road has been constructed leading from Kobe to Sanda, the former residence of the Daimiyo Kuki Yamato no Kami, and almost the largest town in this neighbourhood. The road runs north-east over the hills, and ends at Sanda.

The construction of good roads all over the country would materially tend to augment the prosperity of the people, and would bring to choose of the inhabitants of Inland towns and villages many of the necessities of life and foreign importations at a far less amount than it is now possible to convey them on the backs of pack-horses along narrow pathways.

The Minato-gawa leads to the sea just between the Bay of Kobe and that of Hiogo. It is generally dry but in rainy weather drains off the water from the hills just above the valley through which the Sanda road runs. The road passes along the West bank of the river. The embankment of this river is built of massive stones of sufficient strength to resist the heavy rush of water which during the heavy rains flows down this river from the mountains. Fine old trees line each bank of this picturesque watercourse.

Barracks have been constructed at Sakamoto-mura, in the rear of the town of Kobe, which is garrisoned by about 200 horse-artillery, and has eight field pieces.

The new Custom-House was completed early in 1874.

A Lock Hospital has been successfully inaugurated by Staff-Surgeon Hill, R.N.

A small-pox Hospital has likewise been opened by the subscription of the foreign community at Kobe, and patients have already been received into it.

A large Post Office and a new Telegraph office have been built by the Japanese Government.

Department of Imperial Government Works—Seirakurio (Hiogo).

Through the courtesy of Mr. C. G. Wilson, A.J.C.E., Chief Engineer, I am enabled to give the following interesting report on these works.

The works under the superintendence of Mr. Wilson, belonging to this Department of the Imperial Government, are situated on the South West side of the harbor, and command an eligible and important position on the Bay, for engineering purposes at this Port, both in regard to the Harbor, and also to the terminus of the Imperial Government Railway. These works have been and are being gradually enlarged and improved by additions to the buildings and machinery therein. Also a patent slip has been constructed, and is now completed. It measures from end to end six hundred and fifteen feet, capable of receiving on frame a vessel of about one hundred and ninety feet with draught forward of thirteen feet at ordinary high tide.

In connexion with this, the superintendent has prepared designs for Government, of a seawall and masonry piers, to protect the slip and vessels from the disturbing action of the sea, the currents being here very strong when the winds are from the South-East, causing the surf to beat up with considerable violence. The sea wall will run in a line with the works facing the sea,—and the two breakwater masonry piers will extend out three hundred and twenty-eight feet, to a depth of thirty feet at high water, enclosing the slip on each side. One end will carry sheerlegs, capable of lifting fifty tons, the other will be supplied with a five-tons travelling crane to move thereon. Both piers will be laid out with rails, three feet six inch guage to shore end, carried through works and join by siding of about one hundred yards, the Railway terminus at Hiogo.

These masonry piers being nearly vertical, will form quay walls for vessels lying alongside for loading and discharging cargo, which may be turned to valuable account both for commercial purposes, and in times of war, for rapid shipment or debarkation of troops, military stores and other material.

The object of this Department of Public Works is to foster and establish means in this country for constructing and repairing every class of engineering works.

The production or work carried on during the past year is as follows:—Constructing slip, capstans, piling foundations &c. construction of mining apparatus for Mining Department, making of castings in iron and brass of many descriptions; constructing boilers and small steam engines; repairing marine engines and boilers. The number of hands employed has been limited this past year, amounting to two hundred and fifty workmen and coolies. This number will be very much increased and give employment to a large number of hands.

Saké.—The district between Osaka and Kobé is the most famous for *saké* throughout the whole of Japan. Itami Saké is best known, and is largely exported by junks to Yedo.

Saké is brewed from rice, and in its formation two kinds of rice malt are used. These are afterwards mixed with other rice, at different times, and a certain quantity of water being added (20 to 25 gallons to 23 lbs. rice), the whole is left till a sort of fermentation takes place in about nine or ten days. The liquid is boiled down according to the quality and quantity of the saké to be produced, and is then placed in tubs of immense size and kept well closed until required for use. The rice from which the saké has been manufactured is called "Ros", and is used as manure, and also after having been dried in the sun it is employed in making cakes much liked by the Japanese. Some of the rice employed in the brewing of saké comes from near Okashi, some fourteen miles west of Kobé, but the better kinds come from the province of Kaga. The making of saké here gives employment to large numbers of labourers from the neighbouring provinces of Tamba and Tango, who assemble in large numbers at a fair held annually at

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Nishinomiya at which places the owners of saké establishments engage their employees for the ensuing season. The season commences in the early part of January, though the preparations for the malt, cleansing of rice, &c, go on some time before that. The export annually takes place in the summer.

OSAKA.

Business at this port, both as regards Foreigners and Japanese, during 1874, was in every respect worse than in 1873, owing principally with the latter to the failure of several large Japanese Firms, particularly the Ohno Bank, many merchants having deposited money in this concern, which it is very doubtful if they will ever recover.

The Japanese trade with the Inland Sea by steamer has greatly increased since the opening of the Railway, all the boats formerly runing to Kobe with passengers, now taking cargo to and from various ports. In fact nearly all Japanese produce, with the exception of rice, which is still shipped in junk, comes by steamer. The large regular steamers to Yedo continue to take hence considerable quantities of sugar, paper, metals, oil, seaweed, &c., &c.

A new regulation has lately been made by which all Japanese steamers here have to enter and clear at the Custom House in the same manner as foreign vessels, and foreigners are offered greater facilities by the Custom authorities in shipping coastwise by them than by Foreign-owned vessels; not having to deposit duty being I think one of the greatest.

The changes for the better, above-mentioned, in the transit of Japanese produce does not unfortunately benefit foreigners at this port, and with the exception of occasional purchases of tobacco and vegetable wax, little or no business is done. The Chinese seem to increase in numbers, and do a considerable trade in produce for China such as isinglass, seaweed, awabi, &c, &c.

On the Foreign Settlement no change of note has taken place. The only new building is a boot manufactory.

A new bridge with iron piers and hand-rail has just been completed by the Osaka Authorities over the "Hiak kenbori Kawa," and a contract been entered into with a Yokohama firm to erect one over the Kidzu-gawa, to replace the old bridge to Kanei-bashi.

No mines have to my knowledge been recently opened in this neighbourhood, but many Japanese are very anxious to have the country opened, in order to get foreign assistance in working some already used, and deplore the shortsighted policy of the Government is not doing this.

I give a list (from Japanese statistics) of produce usually offered for sale here and at Kobé. Silk and tea are omitted, as the former is scarcely ever purchased by foreigners at this Port, and the latter is invariably taken to Kobé.

Tobacco.—Bungo and Hiogo produce about 5,000 bales, equal to 3,000 piculs yearly, of which about 2,000 piculs is purchased by foreigners.

Bichiu, a similar quality.

Tosa, about 2,000 to 3,000 piculs which is nearly all consumed by the natives, the color of the leaf not being liked by foreigners.

Owari, about 3,000 piculs, about 1,000 piculs finding foreign purchasers.

Vegetable Wax.—The annual produce is about 30,000 piculs, the greater portion of which is used by natives in making candles &c.

Camphor—Tosa. 10,000 tubs yearly; other districts, 15,000 to 20,000 tubs.

Copper.—Iwo 10,000 piculs yearly; other districts 15,000 piculs, about 10,000 piculs of which is generally exported.

Isinglass.—17,000 piculs yearly; about half being purchased by foreigners and Chinese.

Long Seaweed.—Shipments to China about 10,000 *kokus*, yearly: produce uncertain.

INDUSTRIES.

Paper manufactory.—This machinery is calculated to make one ton of paper per day, or six tons per week. The quality of the paper at present made is of a coarser kinds, such as would be used for packing and wrapping papers. Paper is also made suitable for new-papers. Rags only are used for the making of paper fit for printing newspapers, rags and straw for wrapping papers,—the proportions being about 50 per cent of each. It is contemplated to obtain additional machinery in order to produce a better and finer class of paper. This establishment in under foreign supervision.

Sugar refinery.—The object of this refinery is to refine raw Japanese sugar, which material is obtained from Satsuma. This machinery is estimated to refine four to five tons sugar daily. I am informed that the quantity of foreign matter and acidity in the native-grown sugar, owing to imperfection in its manufacture render a subsequent perfect granulation very uncertain, and until improved machinery for the production of sugar from the cane is adopted in the East, a refinery plant will scarcely be found to pay. A small steam plant for crushing the cane was imported at the same time as the machinery for the refinery, for use of the sugar growers in the interior, but I am informed that the Japanese have determined on setting aside this machinery untried, which cost them $6,000. This refinery when in complete working order will produce about two tons of loaves weekly.

Cotton spinning factory, by steam, at Sakai, near Osaka, newly imported from Europe, is now in good working order, but as yet produces but coarse thread. No. 13 to 24 chiefly, the cost of which, however, is equivalent to the same kind of cotton yarn imported from England. There are 24 looms, some of which have 75, whilst others have from 120 to 250 spindles.

Cotton Yarn and Cloth, and cotton knitting are now bleached to perfection after European fashion by Japanese, and with great advantage. Dying yarn and raw cloth, Turkey Red in imitation of foreign patterns, have been tried here, but as yet the color of Turkey Red has not attained the proper qualities of a solid dye.

Knitting machines are regularly bought up and made use of pretty considerably by the Japanese in the making of underclothing, shawls, scarfs, and stockings in cotton and wool of all colors. The natives work them very cleverly, and particularly so in Kiyoto. The most suitable of these knitting machines are Lambs' Patent, long model, and Bickfords' Patent, round model, both American.

Carpet weaving has been introduced and the Japanese make some handsome specimens of carpeting made of cotton and mixtures, of straw-fibre and coir-fibre, after European patterns, very solid and cheap.

Manufactories of Hats, cloth and straw, and of caps of cloth of any kind, of velvet or silk after foreign style have been started in Osaka with great success, and the trade becomes a very lucrative one for the enterprising Japanese. One manufacturer, for instance, makes 1,000 dozen of hats and caps monthly, and has besides large orders on hand. The caps made by Japanese are equal in shape and finish to the newest fashion and best make of foreign countries. The well known Prussian flat cap is worn in Osaka and neighbourhood by thousands of the natives and appears to be the favorite shape.

Clothing.—Of all description after foreign patterns, as well as shoes, are made here on a large scale and of excellent finish; indeed so well made are these articles on the spot, and sold at such moderate prices that foreign importation of this class of goods is scarcely saleable. The wearing of foreign clothes by Japanese is steadily on the increase.

Sewing Machines.—Are in great use, and the Japanese tailors know well how to handle them. The imported sewing machines are now very difficult to sell, partly owing to the extensive stock in the hands of the merchants, and also because the Japanese themselves are making sewing machines now, perhaps not exactly as perfect as foreign made machines, but they are made so much cheaper that most of the natives prefer to invest their money in a cheap imitation than in a solid and good imported article.

Glass Manufactory.—This establishment has been greatly improved, and the Japanese now make very fine glassware of all descriptions, except window-glass, and these articles are sold at a much lower price than those imported.

Chemicals and Drugs.—The Japanese in Osaka and Kiyoto have commenced to manufacture chemicals from

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

imported drugs, and although they show little proficiency in this industry, yet their attempts to imitate foreign-made chemicals have tended to keep down the market for this class of goods.

Firebricks.—Of common quality made of common sand and clay, and of superior quality, and of better make than the celebrated "Schamot" bricks, are now being manufactured in Osaka by a gentleman from Swansea, Wales, on a new system and of better quality, it is said, than any as yet imported.—This establishment, I am informed, is prepared to make in one cast 20,000 bricks, one laborer making 1,000 bricks a day.

Revolvers and guns are now made here and in Sakai after foreign patterns. They are made cheap, and tolerably well finished.

Bread beer, (an imitation of German light beer,) liqueurs, and confectionery are made in Osaka, Kiyoto and its neighbourhood by Japanese. They also make soda-water, lemonade and other aerated waters. These drinks are much consumed by the natives. The Japanese have attempted to make cigars, but in this they have not been so successful, owing to their not understanding the method of preparing the tobacco before it is manufactured into cigars. I have, however, seen cigarettes made by Japanese very neatly finished.

I will conclude these remarks on the trade, etc., of Osaka by stating that a short line of Railway has been opened to and from the Osaka terminus and Ajikawa River, and close to the Foreign Settlement, for the conveyance of passengers and goods. This arrangement will no doubt prove of great convenience to the foreign public.

I have the honour to be,
Sir,
Your most obedient
humble servant.
(Signed) A. A. ANNESLEY.

(To be Continued.)

ASIATIC SOCIETY OF JAPAN.

A numerously attended meeting of the Asiatic Society was held on Wednesday, 30th June 1875, at the Imperial College (Kai sei Gakkô) in Yedo. The Revd. S. R. Brown D. D., President of the Society, occupied the Chair.

A number of Japanese gentlemen were present and appeared to take much interest in the proceedings, and several ladies graced the meeting with their attendance.

The Chairman stated that the first business was to read the minutes of the last meeting; but the Corresponding Secretary explained that the minute book was in the custody of the Recording Secretary who resides in Yokohama and that the reading of the minutes must be postponed till the next meeting in Yokohama. Mr. Dallas was then requested to act as Recording Secretary for the meeting.

Mr. W. G. Aston then read a paper "On an ancient Japanese Classic," at the conclusion of which the Chairman remarked that the Society was much indebted to Mr. Aston for his paper, as being quite different to anything that had hitherto been laid before this Society. The light thus thrown on the manners and habits of Japanese nearly a thousand years ago was most valuable; but one point that had particularly struck his attention was the touching manner in which the writer of the diary referred to the loss of his daughter, while the dry humour running through so many of his comments shews that he was not a morose nor a melancholy man, but one who could turn even annoyances into pleasantry.

In reply to Mrs. Chaplin Ayrton Mr. Aston explained that the Go-hei are the strips of white paper to be seen in all the Shintô temples, and that they are usually taken to be an emblem of purity; but professed himself unable to satisfy Mr. Ayrton as to the meaning of the twist in the strips of paper.

Mr. Syle inquired whether there was any satisfactory evidence that the Go-hei were symbolical in the way mentioned, and also as representing, in their form, the appearance of lightning;—yet further, if there was any play on the word *kami*, as used to mean Deity. If so, then the Japanese had attained to a felicity of symbolism very remarkable, by expressing Purity, Fire and Deity, all combined in a simple form.

Mr. Aston remarked that as the Go-hei were originally made of cloth not paper, he thought it improbable that any emblematic meaning was to be found in the fact that the word for paper, *kami* is also the word for deity.

Sir Harry Parkes pointed out the value of Mr. Aston's paper as introducing us to a very important unexplored branch of study—the ancient literature of Japan—one that must be studied if the history of Japan and even if the present scheme of administration were to be understood. He begged Mr. Aston to give the meeting some account of this literature.

Mr. Aston explained the chief characteristics of the old language and literature as compared with those of modern times, and recommended strongly the study of the Japanese ancient classics which, he said, far surpassed in value anything which Japan has produced in later times.

Mr. W. E. Grigsby then read a paper "On the Legacy of Iyeyasu."

The President in expressing the pleasure that the two papers had given him, remarked on the contrast of the latter, which was of comparatively modern origin, with the sketch of ancient life which Mr. Aston had presented.

Mr. Aston thought that a warm welcome should be given to Mr. Grigsby's paper. It was the first instance that he was aware of, of a scholar having given this Society the benefit of his attainments in his own special subject as applied to the kindred subject among the Japanese. He considered that the production of this paper argued well for the future of this Society, and hoped that it might be the precursor of others.

Sir Harry Parkes was disposed to question the authenticity of the so-called Legacy of Iyeyas and its legislative value. He believed the Japanese, in earlier days before power was usurped by the military class, had done better things in the way of law-making.

Mr. Syle remarked that the problem was an exceedingly interesting one which was presented by the actual national character of the Japanese—so permeated with Chinese ideas (as shewn in the Legacy of Iyeyas,) and yet continuing so little affected by it that the general result has been a type of character very unlike the Chinese—in some points, strongly contrasted with it. There must have been some very strong original element to have resisted the foreign influence so resolutely; and it will be a matter of great satisfaction if such investigations as we have in both the papers just read should lead to the ascertainment of what that element was. Mr. Syle then proposed that the special thanks of the Society be given to Mr. Aston and Mr. Grigsby.

Sir Harry Parkes and Dr. Murray rose simultaneously to second the motion which was carried unanimously.

Mr. Syle announced that the Society was extending its relations in Europe, and that he had received from Italy, Austria and the United States, valuable exchanges for the Society's Journal. He also suggested that as the library of the Society was constantly increasing, additional facilities be given to members for obtaining access to it.

Mr. Grigsby supported the suggestion and gave an amusing account of his failure on a recent occasion to gain admittance to the library, even at an hour when it was supposed to be open.

Mr Syle moved that the Council be invited to consider the desirability of making the meetings at Tokiô monthly, and added that it might be a question whether it would not be well to have a Local Secretary.

Sir Harry Parkes thought this was much too important a matter to be left to the Council. The Annual General Meeting to receive accounts &c., would shortly be held, and he considered that this would present a suitable opportunity for the discussion of this question.

M. Aston suggested that the advertisement of the meetings should also state the heads of the questions to be brought forward.

Mr. Ayrton repeated the suggestion he made last year that notice of the meeting should be printed on post cards and sent to every member.

Sir Harry Parkes said that the Council had considered this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

suggestion, which was a very excellent one, but that besides the labour of having 150 post cards addressed there was the question of what it would cost to have them printed. The Society is neither numerous nor rich. The members of the German Society pay $10 entrance and $25 a year, while those of this Society pay no entrance fee and only $5 a year.

Dr. Murray thought that the time had arrived to increase the subscription. He considered it impossible and absurd to attempt to carry on this Society with a subscription of only $5. He therefore proposed that in future the subscription be fixed at $10.

Mr. Aston seconded this motion, which will be brought before the Annual Meeting already referred to.

Some discussion then took place about the date of the next Meeting, but it was decided not to change it from the fixed date, namely 14th July.

The Meeting then adjourned.

Law Report.

H. B. M.'s PROVINCIAL COURT.

Before His Honor C. W. GOODWIN, Esq., Assistant Judge.

July 10, 1875.

REGINA *ats* JAPANESE GOVERNMENT *vs.* G. BOOTH, AND T. FORD.

Charge: Damaging two jinrikishas, and assaulting the Japanese police at Hodongiya whilst in the execution of their duty, on the 19th June last.

Both the accused pleaded not guilty.

Tamoura Isematsu, a Kanagawa jinrikisha coolie, cautioned: On the 19th June last, at half past 3 o'clock in the afternoon, I was drawing my jinrikisha along the road (Tokaido) when a carriage came along from the direction of Yedo. As it was coming I saw it collide with another jinrikisha, the wheels of which got locked with those of the carriage. I went to the assistance of the other jinrikisha man, when one of the accused, who was in the carriage, struck me with a whip. The accused then whipped up their horse, and the carriage collided with my jinrikisha, which was broken by the collision. When I went to the assistance of the other jinrikisha I drew up my jinrikisha against a gate. The carriage then drove on, and I ran after it. At the police station at Hodogaya I reported the affair to the police. The police followed the carriage and caught it. I accompanied the police. The police arrested accused, together with the betto.

Accused had no questions to put to this witness.

Ozaka Tsako, a policeman, cautioned: I am one of four policemen who are in the police station at Hodongiya. About half-past 3 o'clock, on the 19th June last, I was on duty with the three other policemen when the last witness came running very quickly and said the carriage had broken his jinrikisha, and asked that it might be stopped. I went out of the station with another policeman, and the carriage just then pased. I made signs to the people in it to stop, when the taller of the accused (Booth) said "*Nanda, Nanda?*" and struck me with a whip. The carriage was then driven on at a very fast rate. Two of the policemen were off duty, and I told them to take a short cut across the country and pursue the carriage. These two men who made the short cut were in plain clothes. I and the remaining policeman followed the carriage in jinrikishas The two policemen in plain clothes got ahead of the carriage, and shortly afterwards I came up in my uniform. The accused then became quiet, and I took them and the horse to the police station. Accused gave no trouble in being taken to the police station.

Accused did not desire to ask this witness any questions.

Take Shiutaro, a policeman, cautioned: I was one of the policemen who were ordered to take a short cut and arrest the carriage. I was off duty and in plain clothes at the time. I saw the carriage coming when I regained the Tokaido. I motioned the accused, who were in it, to stop, but they did not do so, and I caught hold of the horse's head. Accused beat and struck me repeatedly with the whip. The horse went on, and I was dragged along the road about five *ken*. The horse trampled on me, and I received two injuries to my legs. My face was very swollen from the blows I received with the whip. The accused got out, and I was struggling with one of them for sometime. We were rolling about on the ground. The struggle lasted about ten minutes, and then the other policemen come up. I was boxed and kicked during the struggle.

Question by his Honour: Did you make known or show any authority when you attempted to stop the carriage?

Witness: I could not make the accused understand me, as I am unable to speak English. When the other policemen came up, the accused went quietly to the police station. During the struggle I had my plain clothes torn in two places.

Accused desired to ask no questions.

His Honour asked accused what they had to say in defence.

Booth then gave a long-winded version of the affair, to the effect that he and Ford, on the Saturday afternoon in question, left Yokohama at 3 o'clock in a trap for Katasi; when they got to a narrow part of the road, against a bridge, a jinrikisha stood in the way, and he shouted to the man to move on; at the same time he turned the horse's head to the right to clear the jinrikisha, which he would have managed to do, only the jinrikisha man suddenly dragged his conveyance right across the road, and the carriage collided with it. He stopped the carriage and looked at the jinrikisha, but he could not see that any damage had been done to it. He knew nothing about the other jinrikisha being damaged; it was not even touched. They drove on quickly, and saw a man running a head but took no notice of him, as it was quite a common thing to see coolies running along the road. This man went into a police station; a policeman came out and caught hold of the horse's head. He jumped out and was caught by the throat and thrown down, and his knees were cut. His friend, seeing him being badly used, pulled off two or three men from him. When he got up he saw his friend was down, and being badly beaten and ill-treated. He went to his assistance, and pulled off some men who were beating him badly. He then appealed to one of the police in uniform, and they were taken into the station, and from thence the police took the trap and horse to Yokohama, to the head station, where a preliminary inquiry was held by the Japanese officer in charge, who said that the jinrickishamen were in fault. The European sergeant released them, telling the Japanese officers he would be responsible for their appearance if called for.

His Honor said he must dismiss the case. The other jinrickishaman had not appeared to give evidence, and the one who had had said that he placed his jinrikisha up against a gate, and in a place of security. He did not believe this man's tale. If officers in plain clothes, and without producing any authority, attempted to stop a carriage, and detain it, it was to be expected that they would get into some kind of a row. When the officer in uniform appeared, accused had behaved quietly.

A. MICHEL *vs* A. HEARNE & Co.

This was a suit brought to recover $76 50, for 18 casks of soda sold and delivered to defendants.

Defendants disputed the claim.

It appeared from the evidence that defendants bought a cask of the soda from Mr. L. Davis for $4.50, and it was sold to a Japanese, who supplied a ship with it that left the same day. Mr. Davis told defendants that if they wanted more it could be had from plaintiff, Mr. A. Michel. Defendants went and bought the balance, 18 casks, at $4 25 a cask, and it was delivered. They sold six casks to a Japanese soap maker, who immediately brought it back, and said it was not the same as ordinary washing soda; and defendants then wanted to return it, but plaintiff refused to take it back, hence the present action. It appeared that it was a lot of 19 casks of sulphate of soda put into auction by Messrs. J. Hartley & Co, and described and sold as "soda crystals" to plaintiff, and that Hearne & Co. simply asked plaintiff for "soda,"—meaning that they wanted carbonate of soda, and he sold them it as such; neither parties being chemists discovered that it was "sulphate of soda." [Sulphate of soda is used for making bottles, and is quite useless for making soap or washing purposes, as it makes the water hard.]

His Honor reserved his decision till next week, but he at the same time expressed his opinion that the mistake arose through the ignorance and inexperience of defendants.

We are informed that the *Glenartney* has passed the Suez Canal; and judging from the date of the telegram (Monday) conclude that she must have arrived there on Sunday last; which would be thirty days from Woosung.—*Celestial Empire.*

A Reuter's telegram says the Burmese difficulty is settled. That is, we presume, the King has given up the Karennee frontier question and promised to behave better in future. Will it be too much to hope that something may now be done in the Yunnan affair?—*N.-C. Daily News.*

THE SILK HARVEST OF 1874.

(Pall Mall Gazette.)

THE Syndicate of the Lyons Union of Silk Merchants has just published a report on the silk harvest of 1874 available for European consumption. The countries included in the report are, in Europe—France, with its dependencies Corsica and Algeria, Spain, Italy, Turkey, and Greece: and in Asia—Turkey, Georgia, Persia, India, China and Japan. No attempt is made to estimate the total crops of India, China, and Japan, but only to ascertain the quantity exported to Europe.

Of European countries Italy is far the greatest silk producer; but the report being drawn up in Lyons, it is natural that most attention should be paid to the state of the industry in France. We find, then, that in the matter of production 1874 was as favourable to France as it was in regard to corn and wine, but the quality was inferior to 1873. A slightly smaller quantity of eggs was hatched than in 1873; but their yield was very much more productive. Of the eggs about 47 per cent. were of French origin, the remainder foreign, chiefly from Japan. The native eggs are chiefly produced in the Western Pyrenees, in the Var, the Lower Alps, Corsica, and Algeria. In these districts there is little or no production of silk, the industry being almost confined to the rearing of eggs. And it is curious that the eggs as produced are turned to account only in the extreme south, the more northern departments being supplied for the greatest part from abroad, and especially from Japan. The season opened most favourably, but the frosts of the first half of May did some damage both to the worms and the mulberry trees. However, the fine warm weather of the last fortnight of the month repaired much of the injury, and the result was that the quantity of cocoons produced rose to 11,071,694 kil., being an increase upon the previous year of 2,711,052 kil. The quantity of raw silk yielded was 731,000 kil., being an increase on the previous year of 182,000 kil., or over 24 per cent. The number of sériciculteurs was 198,043, of whom 133,086 were cultivators on a small scale, and 64,957 on a large. The large cultivators are most numerous in the three departments of the Gard, the Vaucluse, and the Drôme. The industry is almost confined to twenty-one departments, the Western Pyrenees the Dordogne, Corsica, and Algeria engaging in it only to produce eggs for sale.

The season in Italy was very similar to what it was in France, and the Italian crop, like the French, was abundant in quantity, but not equal to that of the previous year in quality. The total quantity of raw silk yielded was 2,860,000 kil. being nearly four times the outturn in France. The production of Spain amounted to no more than 140,600 kil., or about one-fifth of that of France. The production of Greece was 13,000 kil., or less than one-tenth of that of Spain; while the production of Turkey in Europe amounted to 369,000 kil., or nearly half the out-turn of France. If we add Turkey in Asia, the whole production of the Turkish empire was 539,700 kil., or over two-thirds of that of France. It will be seen from the above figures that the total production of raw silk in Europe last year amounted to 4,113,600 kils., of which Italy yielded not far short of three-fourths and France not much more than one-sixth, but France and Italy together yielded about seven-eighths. The production of Georgia and Persia combined reached 400,000 kil., somewhat more than that to Turkey in Europe, and more also than half the crop of France. The exportation from the port of Calcutta reached 425,000 kil., which did not greatly exceed one seventh of the Italian crop. But of course, the Indian crop must have exceeded the exports from Calcutta. The exports of raw silk from Japan amounted to only 550,000 kil., but a trifle more than the production of the Turkish empire. The exports from China, however, reached 3,680,000 kil., or not very far short of the entire production of Europe; and of these exports 3,290,000 kil. were from Shanghai, and 390,000 kil. from Canton. It appears, then, that the total exports from Asia amounted to 5,225,700 kil, or about one-fourth more than the total production of Europe, and of these exports China furnished somewhat more than three-fourths, and Japan little more than one-tenth. The total supply of Europe, whether raised by herself or imported from Asia, amounted to 8,339,300 kil, and of this supply Italy produced over one-third, or to be more exact, 34.3 per cent.; while China furnished a fraction over 44 per cent. But both together gave nearly 80 per cent. In other words, China and Italy supply four-fifths of the silk used in Europe.

THE NATIVE NEWSPAPERS IN INDIA.

(Pall Mall Gazette.)

Attention in England has been during the last day or two directed to a subject with which Anglo-Indians have long been only too familiar. The conduct of the native newspapers in India and the kind of writing which is to be met with almost daily in them has for some time past afforded matter for grave consideration to those who are best acquainted with India and its people; and the question is already being asked in many quarters whether the Indian Government is wise in permitting the wholesale dissemination of sedition among the Queen's Indian subject without any effort to check it. Lord Northbrook's decision in the Gaikwar's case has given an additional stimulus to writing of this sort. It may be remembered that we published some time back an extract from an Indian vernacular newspaper, in which the writer pretty plainly hinted his opinion that small blame would attach to the Gaikwar even if the attempt on the life of Colonel Phayre were brought home to him, and that the act alleged against Mulhar Rao was, after all, only the natural and proper way for a native Prince to deal with a troublesome British Resident. This was written while the trial was pending, but the comments which have appeared in the native press since its termination, though of less moral enormity are perhaps of greater political danger. The *Indu Prakash*, a Mahratta journal, has published an article which has been more than once quoted by English newspapers, and in which the writer boldly denounces as a fallacy the claim set up by the British Government to be the paramount Power in India. The British Power is merely, he contends, *prima inter pares*, and the native States which it protects are its equals. The Gaikwar of Baroda was thus an independent Sovereign and the pretension of the Viceroy to depose him is openly condemned. We can well understand the impression which, according to the *Daily News*, the publication of such articles as these leaves upon the minds of Anglo-Indians. "They are irritated, anxious for the future, and unable to understand why the Indian Government does not at once interfere and peremptorily forbid all discussion of the nature and extent of its authority, especially with reference to the claims of native States. Arguments like that of the *Indu Prakash* are, it is said, published in hundreds of native journals," and "thereupon the question is asked, What is the Government going to do?" Such questions, however, are much more easily asked than answered, and there are certain political junctures when an answer is more than usually difficult to find. It may well seem intolerable to some minds that a licence of treasonable writting which we have rigorously checked in Ireland should be permitted in India; and no doubt a distinction may, and indeed must in the last resort, be drawn by every Government between mere disaffected railing at its policy or character, and downright denial of its authority and claim to rule. But the question of occasion is of the highest importance in any interference with the expression of public opinion, and we cannot conceal from ourselves that there could be no worse occasion for such interference than the present.

The truth is that the Indian Government has by its own unfortunate acts precluded itself from adopting a new and more vigorous policy just at present, since the gains of doing so would be less than the immediate loss. The effects of Lord Northbrook's blunder are, in fact, continuing, and the Indian Government are even now reaping only its first fruits. They have given to a violent and seditious press a plausible ground of attack upon them, and to whatever excesses those attacks may be carried, it would only make matters worse if the Government, unless under pressure of immediate danger to the public peace, were to enter upon any active course of retaliation. Already they have given the native newspapers an excuse—not just, indeed, but unfortunately far too specious—for saying that the Indian Government formed the deliberate design of crushing an obnoxious native prince; that they attempted to wrest the forms of law to this end; and that, having failed in this, they had recourse to a pretext for ruining him, which involved a distinct breach of the Imperial faith. This is what the Indian Government have put it in the power of the native newspapers to assert, and they must bear as best they may the consequences of their own errors. To lay the strong hand upon native newspapers just at the moment when we have furnished them with what will appear such legitimate grounds for hostile remark would merely be making bad worse. It would be said that under pretence of repressing seditious writing we were attempting to silence damaging criticism, and that the liberty of expression which we profess to concede to Indian opinion was as unreal and illusory a privilege as the right to a fair trial on the English system which we professed to concede to the Gaikwar. The

UNIVERSITY OF CALIFORNIA

practical conclusion of the *Daily News* on the whole matter is one which, though not perhaps for the same reasons, we are forced to accept. It is undoubtedly better for us at present, at any rate, to "look boldly at our position as strangers and conquerors in India and to acknowledge that expressions of dissatisfaction are evil, which should not surprise us, but should be patiently borne with, until we have had time to reconcile the people to our rule." The situation is not a little humiliating, as that of a Government always is which has to bear with indignities because it is not able to resent them; but it is true enough that the "patient" attitude is the only one at present possible to us. It might be gratifying to the Viceroy to attempt to correct the effects of an act of weakness by an act of vigour; but it must be remembered that it is not much as an act of weakness that the Baroda blunder presents itself to the imagination of the natives of India. To them it has had too much the appearance of an act of unscrupulous policy such as they are familar with among their own princes, but have never in recent times had a pretence for imputing to their English rulers; it has impaired our reputation for strict justice in our dealings with native subjects and feudatories; and a reputation of that sort is not to be retrieved, but is only likely to be more deeply compromised by a sudden return to the methods of "strong government," of the autocratic kind

THE EMPEROR OF AUSTRIA IN VENICE.

(Spectator.)

There must be some great quality in the present Emperor of Austria, if it be only tenacity of a rather unusual kind. He has been the most luckless man in Europe, so luckless that the Hanoverian Minister who wrote "For Sceptre and Crown" hints that he half believed himself to be the evil destiny of his Empire, yet no man has ever been less humiliated by his lucklessness. Called to the throne while still a boy to save a House that seemed about to perish in the storm of 1848, he has three times been engaged in great campaigns, and three times disastrously defeated. His war with Hungary ended in a supplication to the Czar to pour in Russian troops, to do the work to which the native King had proved himself unequal The work was done, and done completely, but the mode of doing it, the appeal to foreign bayonets to put down a domestic trouble, discredited the Imperial House more than the Hungarian revolt had done. His war with Napoleon ended in the bloody rout of Magenta, the cession of Lombardy to Piedmont, the expulsion of all the Italian branches of his House from the Peninsula, and the formation of a free and united Italy, the power which the House of Hapsburg least desired to exist. His war with Hohenzollerns ended in his open expulsion from Germany—where his family had been first for four centuries—in the cession of his last Italian province, in the restoration of all her liberties to Hungary, and in the surrender of his own carefully cherished power. Twenty-six years of sovereignty twelve of autocratic power, have left Francis Joseph still in the prime of life, but with a third of the territories of his House stripped away; with the hereditary leadership of Germany transferred to his hereditary foe, with the last hope of regaining the throne of the Western Empire shattered, and with his own claim of Divine Right to rule laid compulsorily aside. Any one of his defeats would have discredited a reign. Any one of his losses would have marked an era in the annals of his dynasty. Any one of his humiliations, his supplication to Russia, his defeat in Napoleon's tent in 1860, his signature to the treaty which made him no German, would have impaired the reputation of a Charles V. And yet this week the Emperor of Austria glides into Venice a guest of Victor Emanuel, and one of the greatest monarchs of the world, and no man looks on him as less, or thinks of him as the failure of his House, or offers him that pity of the historian which marks an irreversible descent. Even in Italy this is no discrowned Bourbon, no beaten Guelph, no cast-down Napoleon, but a Monarch of the first class, whose whispers to his host may affect Europe, to whom a cause as wide as that of the Papacy may look hopefully for succour, who stands among Kings at least the equal of any man he may encounter in the list. It is a triumph for a nation that he is its guest; an event even for Venice, where events have been innumerable, that she gives him a reception; a subject of speculation for the proudest statesmen that he and the King of Italy can chat together in private over the future of the Papacy, and the designs of Bismarck, and the reversion of the hundred heritages of the still Sick Man. Italy resounds with acclamations because the Hapsburg drinks a health to her prosperity. No ruling man in yesterday's history, save Napoleon III, has lost so much, no one has suffered [illegible] no one would seem to have been so persecuted by fo[illegible] in Europe holds a prouder place with a more impre[illegible]

The position of the Emperor of Austria, after all his defeats, and all his failures, and all his concessions, is the more noteworthy, because it has not been justified, before the world at least, by any exceptional grandeur of intellect or any unusual loftiness of morale. No historian could call Francis Joseph a great soldier, a great statesman, or a great sovereign, without writing a volume to prove his words, which when he had written it would still be doubted; and no moralist will ever place the prefix "good" before Francis Joseph's name. He never won a battle. He never retrieved a rout. He never framed a Code. He never devised a policy. He never discerned a counsellor of the Bismarck or even of the Metternich class. He governed Hungary while still a lad most cruelly. He tortured Italy with taxation imposed for torture. He conceded nothing till he was compelled. He repaid Russia for her services with an ingratitude which the Romanoffs will never forget. He pardoned the desertion and the execution of the Archduke Maximilian, received his betrayer as an honoured guest, and negotiated with Juarez. He abandoned the Papacy, while still convinced, as the world supposes, that the Papacy is divine. And yet he stands there in Venice the honoured guest of the insurgents who spurned his rule, unscorned by a world so ready to heap scorn on the unsuccessful. What is the secret of of it all,—of the tolerance the world retains, as it were for this man alone, of the grandeur which adheres to a crown as often trodden in the dust?

We believe the secret is that the world recognises, often unconsciously, a certain majesty both in the throne and in its present occupant; that the Emperor has succeeded by patient dignity, by assuming his position to be immutable and above assault, in preserving it intact through all defeats and many humiliations. His Empire is still a great factor in the European system—a necessary factor, Mr. Gladstone once said—he still controls a very great army, and he still affects by every movement all the Continents States. He still, though not the fanatic he is popularly supposed to be, holds in some indefinable way an indescribable, but still very powerful position as the first lay Catholic in the world. He still, though only a "constitutional" Monarch, as constitutions go on the Continent, remains his own Premier, guides the machine, and gives to all officers in his Empire binding instructions. His prerogative has been limited, but not lowered. He still, if the circumstances required it, could step forward beyond the constitutional frontier as direct ruler,—could issue orders which, until his policy had failed, would be implicitly obeyed. He still carries out his own foreign policy, his own military policy, his own policy on all that dangerous group of new questions which we call the Ultramontane dispute. He is still the only man in Central Europe who at all counterbalances the Hohenzollern, and he still in all his acts and words retains that air of calm superiority to meaner mortals which befits the Cæsar of the West. He drinks to the prosperity of Italy, after declining to visit any Italian city from which a Hapsburg has been ousted either by battle or insurrection. He has made huge concessions, but always to necessity, always royally, always without higgling or pecuniary bargains. He has suffered three defeats, and has always acted after them as if defeats or victories were but transactions in the daily business of Hapsburg life. He in his own eyes is the fixed datum, all else but modifying conditions. His aim, whatever it be—and we fear it is no loftier one than the grandeur of his House—has always been a single one, fixity of purpose has been majesty even in his failures. He surrendered Lombardy as if it were an estate, gave away Venetia as if it were an Imperial Order, resigned Hungary to herself as if he had been but her trustee. This air of serene authority, which has always been characteristic of the Hapsburgs, is said in the present instance to be the result of strict self-discipline, a piece, in fact, of statecraft, but it is never laid aside; and if it is acting, it is acting so perfect that the idea of anything histrionic in the performance is wholly wanting. The Emperor was dragged to Hungary to be crowned, as it were, by moral chains, and must have felt himself a captive to his own subjects; yet as he rode up the Hill of Coronation at Presburg, and with drawn sword dared the four quarters of the world to dispute his title to the throne of Hungary, his bearing was that of an heir who has at last obtained an eagerly expected inheritance, and seemed to obliterate even the recollection of the life-long struggle. It is the same in Italy. There is no resentment for defeat in his pose in Venice, no menace of a future revenge, no under-current of sarcastic comment,—a great monarch is but visiting a slightly inferior neighbour, with whom it pleases him to be on the best of terms. That profound sense that etiquette is reality which induced him after Sadowa to embrace the King of Prussia, to compliment an inferior, as it were, on a great achievement,

Emperor of Austria with a permanent dignity which, artificial though it may be, has served to himself, to his House, and to his Empire as a shirt of mail. It is possible to be above insult, as well as below it, and to an Emperor of Austria the act of a Napoleon, even if that act is the betrayal of his brother, is, when policy demands, but an act like another, to pass away even from memory. If Italy is lost, Austria remains, and is great; if Germany departs, Austria still remains, and is great. Reduced to the limits of its ancient county, the House of Hapsburg would still bear itself and for years be treated by the world as a great and a legitimate power.

It is useless as yet to speculate on the political object which may underlie the courtesy of the Emperor, for no information has appeared, and the data for guessing are very few. That the Emperor desires to conciliate his kinsman is evident, and it is reasonable to suppose therefore that his object is to obtain his assistance in some Italian affair, and as the only Italian affair at this moment of international importance is the situation of the Papacy, it is probable that communications may be exchanged upon that subject. But of the character of those communications it is impossible to form an opinion, until we know whether or not the Hapsburgs have renewed the Holy Alliance. If they have,which is most improbable, for Austria and Russia can never sympathise in the East, the visit may bode ill for the freedom of the next Papal election. If they have not, which is most probable—for the Hapsburgs, whatever their freedom from fanaticism, can scarcely sympathise with the Falck laws—Victor Emanuel may derive from his great kinsman's presence new courage to resist the pressure he is feeling from Berlin. In either case the visit may be of importance, and in neither case will the world know its meaning during the lifetime of the Pope.

REUTER'S TELEGRAMS.

(Supplied to N.-C. Daily News.)

London, 26th June, 1875.

The Commons have negatived the motion of Mr. Stewart for the gradual relinquishment of Opium Cultivation. Hamilton showed that the stimulant was best suited to the habits and necessities of Eastern nations. It was maintained that the Government was not responsible for its use. The effects of opium smoking were said to be exaggerated. The proposed alteration would increase the evils tenfold and lead to increased taxation.

The details of the inundation at Garonne are heartrending. 215 corpses have been found.

There was immense destruction of property. 20,000 persons are left destitute. Marshal MacMahon has gone to Toulouse to afford succour.

London, 25th June, 1875.

The River Garonne at Toulouse has caused a disastrous inundation. 100 persons were drowned.

The Court of Appeal has convicted Count Arnim of unlawfully removing documents and sentenced him to 9 months' imprisonment.

London, 23rd June, 1875.

The German Government in a note cordially thanks Belgium for the investigation into the Duchesne affairs and for the supplementary legislation to which it gave rise.

The Public Powers Bill has been read a second time in the Assembly.

The Burmah difficulty is settled.

HONGKONG, 23rd June, 1875.

The steamer *Japan*, being towed to Wanchi to discharge cargo of coal, went on the rocks and the after-compartment filled with water; efforts are being made to float her.

It is reported that the steamer *Carisbrooke* is to be released, security being given of the value of the ship, pending reference to Peking.

Messrs. Russell & Co.'s offices were destroyed by fire on the night of the 22nd. The fire commenced in the stables belonging to Messrs. Melchers & Co., part of whose premises was also burnt.

St. Petersburg, 2nd June.

The Telegraphic Conference opens here to-day.

London, 3rd June.

The troopship *Serapis* is fitting out to convey the Prince of Wales to India.

The War Office announces alterations in the regulations in gaining commissions whereby successful candidates at be commissioned, but must enter Sandhurst for one year's instruction as cadets, after which time, if qualified, they will be gazetted. The first examination under this system takes place in December, 1876.

Shipping Intelligence.

ARRIVALS.

July 3, *Hertha*, German frigate, Capt. Knoor, 2,400, from Hongkong.

July 3, *Courier*, Russia steamer, Lemascheffsky, 495, from Nagasaki, Coal, to Walsh, Hall & Co

July 4, *Oxfordshire*, British steamer, Jones, 1,228, from Kobe, General, to E. Fischer & Co.

July 4, *Kanagawa Maru*, Japanese steamer, Moore, 1,325, from Shanghai and ports, General, to Mitsu Bishi Co.

July 4, *Galley of Lorne*, British steamer, Burgoyne, 1,389, from Hongkong and London, General, to E Fischer & Co.

July 6, *Catharina*, German schooner, Clausen, 275, from Hiogo, General, to Simon, Evers Co.

July 6, *Golden Age*, American steamer, Coy, 1,870, from Shanghai and Ports, Mails and General, to P. M. S. S. Co.

July 7, *Menzaleh*, French steamer, Pasqualini, 1,008 from Hongkong, Mails and General, to Messageries Maritimes.

July 7, *Volta*, French gun-boat, Captain Floucaud, 900, from a Cruise.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—Our market continues dull, and prices in most cases exhibit a further appreciable decline. Low qualities of yarns are quite unsaleable, but some transactions are reported to have taken place in good spinnings of 28/32 though at low rates. For *Grey Shirtings* there is some demand, though sales can only be effected at the full decline reported. No other descriptions of cotton goods demand mention.

Grey Shirtings:—			White Shirtings:—		
7 lbs.	38½ yds. 39 in. per pce.	$1.92½ to $2.10	60 to 64 reed 40 yds. 35 in. nom per pce.	2.25 to	2 45

„ small size	„	3.80 to 4.20			

EXPORTS.

Silk.—The total export for the season ended on the 30th ultimo, is 11,941 bales against an average of 14,470 for the three previous seasons. This decrease is to be accounted for by the bad yield of the cocoons of last year's crop and the low range of prices during the past season, which allowed native manufacturers to come in for a larger share in the consumption of the staple.

A few bales of new silk has reached this market and has found buyers at from $355 to $380 (say 14/ to 14/10 or frc. 39 to 41); they were mixed Joshiu Hanks, apparently reeled from *bivoltini* cocoons.

Settlements since 1st July are about 50 bales, including a few parcels of Oshiu which were bought at previously quoted rates. The unsold stock is estimated at 200 bales and is composed of old silks, for the most part of inferior quality.

The new crop seems as far as quantity is concerned to be no larger than last year; but the report that the cocoons are of better quality has, we are glad to say, received fresh confirmation.

Tea.—The almost univeral receipt by tea houses here of telegrams either restricting purchases or reducing limits has somewhat affected our market, and rates are easier though barely as much as requisite considering the rapidly declining quality of the leaf both in appearance and cup which is more than usually apparent this season.

Another feature to be mentioned is the short supply of really desirable parcels. It appears that the producers do not pay the required attention in picking and curing the leaf, alleging that the cost is too high to procure the necessary skilled labor. In this the Japanese would do well to take warning from China, as the first step which brought Japan teas into such popularity in the United States was the fraudulent admixture in China Oolongs of dust and lie tea. One certain fact is that this season's crop—especially if judged by recent arrivals—compares unfavorably with last season's.

Our prices close weak, stocks in Yokohama being full; and unless better advices reach us from America a still further decline may be expected.

Common	$20.00 to 23 00		Fine	$35 00 to	37.00
Good Common	24.00 to 26 00		Finest	38 00 to	40 00
Medium	27 00 to 30.00		Choice	50 00 very scarce	
Good Medium	31.00 to 34.00			[and quotation nominal.	

EXCHANGE AND BULLION.

Exchange.—The business of the past fortnight has been small both as regards Bank Bills and Private Paper, with steadily drooping rates. At the close some first-class credits have found buyers at 4/2⅛ 6 m/s., but the bulk of the Private Paper had been placed previously at higher rates.

Gold Yen are getting very scarce at higher quotations which are all but nominal.

Rates close as follows:—		On Hongkong Bank Bills on demand	¼ per cent. pre.
On London, Bank, 6 Months' sight	4s. 1⅛d.	„ „ Private Bills 10 ds. sight	⅜ „ dist.
„ „ Bank Bills on demand	4s 0½d.	„ San Francisco Bank Bills on demand	99
„ „ Private, 6 months	4s. 2⅛d. to. ¼	30 days' sight Private	102
„ Paris, Bank Bills 6 months	5.23	„ New York Bank Bills on demand	98½
„ „ Private	5 32	30d. s. Private	102
„ Shanghai Bank Bills on demand	72½	Gold Yen	408
„ „ Private Bills 10 days sight	72¾ nominal.	Kinsatz	415

ROWLAND'S ODONTO 2/9

WHITENS, PRESERVES, AND BEAUTIFIES THE TEETH, PREVENTING THEIR DECAY.
ASK ANY CHEMIST OR PERFUMER
FOR ROWLAND'S ODONTO.
AND TAKE NO OTHER.

ROWLANDS' MACASSAR OIL

Is the best and safest Restorer and Beautifier of the Human Hair. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandriff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 5d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. CAUTION—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipeint decay, and polishes and preserves the enamel, to which it imparts a PEARL LIKE WHITENESS. Price 2s 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling and purifying it eradicates all Cutaneous Eruptions and Discolourations. Price 4s 6d. per bottle. ROWLANDS' ESSENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Back, which colour remains so durable that neither washing or perspiration can remove it. Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES," A ROWLAND & SONS, Hatton Garden, London.

Yokohama July 3, 1875. 10ins.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 29.] YOKOHAMA, SATURDAY, JULY 17, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On the 11th instant, at No. 53, Bluff, the wife of EMILIO DE OJEDA, Esq., of a son.

At the Imperial College of Engineering, Tokei, on the 12th inst., the wife of HENRY DYER, Esq. of a son.

Notes of the Week.

The *Choya Shimbun*, publishes the following notification from the *Naimusho* to the *Tôkiô Fu*.

The following rules are for guidance in the treatment of foreigners who may have occasion to travel in the interior whether for health, or for examining our mines, or for other purposes. It has been observed that many innkeepers are unwilling to ask for, and many foreigners unwilling to exhibit, their passports. The regulations annexed must however be observed.

Innkeepers will bear in mind that on the arrival of a foreigner in their houses it is their duty to examine his passport and to write down particulars of name, nationality &c., so that there may be no mistake discovered on the examination of their books. Bearers of passports must be treated according to their rank. Notify this to all inns and post-houses with the addition of a form of passport.

(Signed.) OKUBO TOSHIMICHI.
Minister of Home Office.

July 2nd, 1875.

As the examination of the passports by *Kucho, Kocho*, or police would occasion considerable inconvenience it is only in certain indispensable cases that they are to be submitted to them.

RULES.

(For the guidance of foreign travellers)

1.—All foreigners must conform to the regulations of the district in which they are travelling.

2.—They must set out on their journey within thirty days from the date of their passports.

3.—In case the holder of a passport should be unexpectedly prevented from returning within the time allowed he must make this circumstance known to the representative of his country who will communicate it to the Foreign office.

4.—Passports are to be sent back to the *Gaimusho*, within five days after the return of the traveller. But in the case of distant towns, such as for instance Nagasaki and Hakodate, the passports will first be returned to the Representative of his country who will transmit them to the *Gaimusho* within thirty days.

5.—Passports must be exhibited to all innkeepers, and, on demand, (even though it should be on the road) to *Kucho, Kocho* or the local police. Should the passport not be displayed the traveller will be prevented from continuing his journey.

6.—Passports are not transferable.

7.—Holders of passports may not trade or enter into business engagements.

8.—Holders of passports are not permitted to lease houses in the interior from Japanese subjects with the view of remaining in them for any length of time.

9.—The holder of a passport is not permitted to use fire-arms, even though he should be furnished with a shooting license.

10.—Should a traveller be compelled to return prematurely or without completing his object he is not permitted to use the passport again, but must obtain a fresh one before resuming his journey.

11.—Should any passport holder contravene these regulations the same will be brought to the notice of his Representative by whom his compliance has been guaranteed.

We allot a considerable space this week to a translation of recent proceedings in the assembly of Provincial Notables, less from regard to the nature of the subject—though that is possessed of a certain interest—than with the view of informing our readers of the attitude of the native mind in such a position. The speeches appear to be characterised by directness and simplicity of expression and good sense, and if a considerable space of time has failed to show a correlative result we must allow for the novelty of the situation in which the members found themselves. It is worthy of remark that the proposal to maintain the roads to the shrines in their former condition was negatived as unpractical.

That there is some energy left in the muscular section of the community was fairly evidenced by the enthusiasm with which two boats' crews were found to enter the lists on Thursday last, despite the discouragement of the close and sultry weather. The object of the contention was to test the fleetness of the "Will o' the Wisp," a six-oared gig of high local reputation, as compared with outriggers of lighter build. In order to render the experiment more complete each boat was manned by a staunch crew, the outrigger (a new boat built by Messenger of Teddington) apparently enjoying the advantage in this respect. Its crew comprised Messrs. Jeyes (stroke), Davidson, Kilby, C. P. Hall (bow) and Devine (Cox.), Messrs. Hamilton (stroke) Dodds, Henderson, J. Dare, Melhuish, Thurburn (bow) and Glennie (Cox.) being allotted to the older boat. The course, which ended at the English Hatoba, was a short mile. A good start was made shortly after 6 p. m. and in about 100 yards the gig had obtained an advantage which she succeeded in improving until she had completely cleared her competitor. But in passing the Grand Hotel it was felt that she was clogged in some manner, and before the cause had been discovered and remedied she was overtaken and passed by the outrigger. The gig rapidly regained her lost ground, but too late to prevent the outrigger from winning which she did by about a length. The result of the race, it is contended, does not displace the "Will o' the Wisp" from her position.

We publish a letter from a Japanese on the subject of the word *yatoi*. Whatever the true force of the term may be it is obvious that it bears with it no such expression of dignity as the Chinese have been careful to confer upon their foreign servants: *e. g.* "Honoured Guest" "Learned Teacher" "Brave Leader" &c., while on the other hand the word *yatoi* is, to say the least of it, equivocal. There must surely be some middle term between the flowery honours of the Chinese and the doubtful compliment of the Japanese phraseology, the use of which would avoid the possibility of affronting a susceptible nature.

The Report of the Silk Association of America for the Season 1874-5, speaks thus of the quality of Japan Silk.

The quality of the Japan silk, or rather the reeling, has been much complained of everywhere, and does not, for the small export, for we do not hear of a short crop even in Japan. It is unfortunate that so little success has thus far crowned the endeavors of the Japanese to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

regain their lost prestige. But doubtless success will wait on continued effort, and the sky is often "darkest just before the dawn."

The report also notices the comparative poverty of the yield of the cocoons imported into Europe. While the crop of cocoons was 20 per cent. more than that of the previous year the harvest of silk, according M. Duplat, a high authority, exceeded it only by ten per cent.

The import of raw silk into the United States would seem to be on the increase as compared with the corresponding period of 1873-4, while the manufacturing branches are described as prospering and orders abundant. The report deals at some length with the prejudicial consequences of smuggling to which the high tariff lends so many inducements.

To such a point has this disarrangement of their business reached in the past year, that on every hand merchants are found complaining that the legitimate business of importing has been ruined by the ready sale in open market of the identical goods for which they supposed themselves to be sole agents, at prices far below what their own goods cost them, duty paid. To the credit of the Collector and other officers of the Government at this port be it said, that a systematic investigation has been instituted by them for the purpose of ascertaining the manner in which such fraudulent importations were carried on. While there had been at various times partial success in detecting frauds of comparatively small amounts, it was still felt that the great source of fraud had not been reached. Finally, in January last, a seizure of some $10,000 worth of silk goods was made, which has led, it is believed, to the development of the plan of operation, and the detection and arrest of some of the persons engaged in these frauds. The modus operandi forms a very interesting chapter in the history of frauds on the revenue.

This apparently irrepressible smuggling would suggest the advantage of a return to a lower tariff on manufactures, but the Silk Association is a staunch body of protectionists. Their "infant industry" is not likely to suffer except from over-nursing.

THE Church Services at the usual hours will be resumed tomorrow. The Revd. Mr. Fyson will officiate.

From the "Japan Mail Daily Advertiser."

We are informed by the Agent of the Great Northern Telegraph Company that the communication by the Amoy and Hongkong Cable is interrupted.

Owing to the severe floods in the Niigata *ken*, says the *Nichi Nichi Shimbun*, the price of rice, barley and all cereal crops has largely augmented in that district.

THE *Kaitakushi*, or colonisation department of Yezo, is making further efforts to bring about the settlement of that portion of the island to which its experiments have been hitherto directed. A large party of labourers has been despatched to the colonial head-quarters at Sapporo where they will be employed in farming operations.

THE native newspapers refer to a prevalent mania for suicide which they attribute to the heat of the weather.

THE usual monthly number of the Japan Punch published yesterday is scarcely equal to the average of merit of the artist's performances. It is clear, however, that suitable matter has been wanting and there is no making of bricks without straw.

THE anniversary meeting of the members of the Temperance Hall was held at the Hall on Monday night. A large number of sailors from the ships of war in harbour was present and vocal and instrumental music contributed to the evening's entertainment.

A Superior Court, we learn from the *Nisshin Shinjisshi*, was opened at Fukushima on the 2nd instant. Another will be opened at Nagasaki on the 28th.

FURTHER discussions on the subject of the popular assemblies (we learn from the *Choya Shimbun*) have taken place in the *Chikuhokuan Kwaigi*. The object of debate has been to determine whether the people shall be represented by the *Kuchos* and *Kuchos*, owing their appointments to the Government, or by members of their own body elected by themselves. On learning that the question had been decided in favour of the former the deputations from the Kens, who had accompanied the Governors, met together at the *Kofuku Anzen* Hall in Yedo and there determined to petition the Government against this resolution, expressing a strong conviction that the representatives should be elected by the people. The petition was signed by 24 persons of 12 different kens.

H. E. General Rasloff Danish Envoy to the Court of Japan was honoured with an interview by H. M. The Mikado on Monday last.

The *Nichi Nichi Shimbun* referring to the recent resolution of the *Chikuhokuan Kwaigi* remarks that general disappointment is felt by the *ken* deputies that the interests of the people should have received such slender support from the members of the Assembly. The procedure in reference to the *kucho* and *kocho* is now under discussion and seems to interest the deputies but little as comparatively few of them attend the debates.

The amateurs of the dwarfed trees and shrubs, for which Japanese horticulturists are so famous, are informed that an exhibition of these opened at Okuyama in Asakusa, Yedo on the 9th of this month and will continue until the 19th instant.

The *Akebono Shimbun* says that during the heavy rainfall on the 11th instant the water rose more than two feet in some parts of Honjo, Yedo causing much inconvenience and loss to the poorer class of people who inhabit that district.

Terrible floods have occurred in the North Eastern districts. At Utsunomiya, on the road to Nikko, 100 houses were swept away by an inundation on the 11th instant, and a great loss of life is reported.

The *Nichi Nichi Shimbun*, gives the following account of the opening of the Native Christian Church on the 10th instant.

"The Christian Church newly erected in Water street Yokohama was opened on the 10th inst., at 2 o'clock, p.m. This church has been erected by the American Missionary Ballagh, and has been called the "Church for Japanese public meeting." It is intended to accommodate 500 or 600 persons. The style of architecture is that of a European church. The preachers present on this occasion were Mr. Ballagh, Mr. Miller, Mr. Verbeck, Mr. Thomson, Mr. Loomis, Mr. Brown, Mr. Cochran, Mr. Davison, Mr. Green, Mr. Okuno, Mr. Ogawa, etc. These gentlemen took their places in turns in praying and reading divine service. There was a prayer for the continuance to all ages of the Imperial throne and that the Japanese people might learn to believe the Scriptures, to repent of their sins, and to serve the Lord with new heart, and for the gradual spread of this religion throughout Japan.

Last of all a translation into Japanese was read of a prayer sent by a Chinaman, member of a Christian congregation at Amoy, giving thanks to God that in his mercy the dispute which existed between China and Japan regarding Formosa was soon peacefully settled.

It is said there were about 900 Japanese present, and about 100 Europeans. The place was crowded within and without.'

The M. M. S. S. *Tanais*, with the European mails of 6th June, left Hongkong for this port at 6 p.m. on the 12th instant.

Warned by last years losses, says the *Nichi Nichi Shimbun*, the producers of silk-worm' eggs have formed themselves into companies for the purpose of regulating the supply for the present season. The heads of these companies have held a meeting at which it was resolved that the supply of cards for the eggs should be limited to 1,750,000, to be divided among the companies, one half being for exportation and the other half for home consumption. This quantity after some consideration was reduced to 1,500,000. The writer adds that this intelligence may be somewhat incorrect in detail, but he promises more exact news at an early date.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Yedo newspapers publish the following letter, presumed to have been written by one of the officers of a ship-of-war recently returned from Corea, to which they appear to attach unusual significance. "On the 25th May we arrived in the port of Fusan, Corea with the object of negotiating our treaty with that country, and in accordance with a request made to us anchored and awaited the reply. On the 12th June the "Second Teibo" arrived in port, and leaving her there we proceeded northwards to Hanshan province, Wai-san *Fu*, Jen-ya *Ken*, Tas-kow, Wan-kow, Kam-kan province and Rasaretz port until we had arrived near the River Hatloon (Amoor). We surveyed as we proceeded. With the intention of proceeding to Kiukee province we again entered the Fusan port. (Some portion of the letter is evidently deficient here). On the 29th June our Special Envoy, Moriyama, Karatz and others took leave and the latter at once left in the Hiakuji Maru and will doubtless soon reach the capital. Our ship sails for Nagasaki and on our arrival there we shall telegraph for orders. It is very likely that a war will be resolved upon. I should like to tell you more about Corea, but time presses and I must close my letter."

We direct attention to a series of three open-air concerts which will be held in the public gardens, commencing on Tuesday evening next. The band of the *Audacious* will play, and a few amateurs have kindly offered their help.

H. E. the Danish Ambassador and suite were entertained on Tuesday evening, the 13th instant, by H. I. Majesty's Ministers at the Palace of Hamagoten. The *Daijin* and *Sangi* were present.

Rear Admiral Ryder accompanied by a number of English naval officers had the honour to be presented to His Imperial Majesty on the 13th instant.

The annual display of fireworks in celebration of the opening of the Sumidagawa will, we are informed, take place on the evening of Tuesday next.

In reference to the recent floods, the *Hochi Shimbun* observes that in Koshiu and Shinshiu the water has now subsided considerably, although a large amount of damage has been done by the floods in several low-lying towns and villages of these provinces. Heavy floods are also reported from the Nagasaki and Shirakawa *Ken*.

It is rumoured, says the *Akebono Shimbun*, that the editors of certain newspapers—the *Nichi-Nichi*, *Choya*, *Hochi* and *Akebono Shimbun* are those named—will shortly be summoned before a Court of investigation, to answer, it is suggested, a charge of violating the newspaper laws.

An officer of the Naimusho was appointed on the 13th inst., to take charge of the wreck of the Messageries Maritimes Company's steamer *Nil*.

The control and superintendence of the various merchant vessels which are government property have passed, says the *Hochi Shimbun*, from the *Okurasho* to the *Naimusho* (Home Office). Among these vessels are many of the steamers now running under the flag of the Mitsubishi Company.

The following are the prices of sundry lots on the Bluff disposed of by auction, by Messrs. C. A. Fletcher & Co. on Wednesday:—

Lot No. 241, containing 1,001 tsubos, with two-storied dwelling house, measuring about 179 tsubos, was sold to Mr. W. W. Cargill, for $2.50 per tsubo. Total price paid, $2,502.50.

Lot No. 242, containing 537 tsubos, was sold to Mr. Thos. Hogg at $1.14 per tsubo. Total price paid, $612 18.

Lot No. 243, containing 920 tsubos, was purchased by Mr. M. Kirkwood for 60 cents per tsubo. Total price paid $552

Lot No. 244, containing 1,840 tsubos, with the large two-storied house measuring about 324 tsubos, was bought by Mr. Berger at $2.17 per tsubo. Total price $3,992.80.

Lot No.245, containing 687 tsubos, with a large stable, measuring 109 tsubos, was purchased by Mr. W. W. Cargill at $1.11 per tsubo. Total price paid, $764.79.

Total $8,424.27.

The P. M. S. S. *Alaska* sailed from Hongkong for this port on the 15th instant.

The official closing of the Chikuhokuan Kuaigi took place to-day.

The *Nichi Nichi Shimbun* looks forward to receiving some further intelligence respecting affairs in Corea, Hiratz an officer of the *Gaimusho*, having just returned thence

---

A rumour is current among the native population of Nagasaki, that Japan within a few months from the present time will be engaged in a struggle with Corea. There does not appear to be anything definitely known with regard to the matter; and from what we can learn, the impression that war is close at hand has arisen through the Government having sent some men-of-war to Corea.—*Nagasaki Express.*

We mentioned some time ago, that Li Hung-chang was said to have memorialised in favour of acquirements in foreign knowledge being admitted among the standard subjects of examination. The Chinese have a report that something of this sort is to be done; at any rate some prominence is to be given to foreign learning.—*N.-C. Daily News.*

The Chinese have a report that certain mines are to be opened in different parts of the Empire, and that Li Hung-chang, Ting Jih-chang and Tso Tsung-tang are associated to superintend the enterprise.—*N.-C. Daily News.*

We hear that Messrs. Grosvenor and Baber left for Hankow on Sunday morning, by the *Fusiyama*. Connecting their departure with the appointment of Li Hanching, we presume it is intended that they shall travel to Yunnan with him. This will at least guarantee their safety, and prevent the misconception that would have arisen from their travelling with Sung Pao-hwa. Still, we should have preferred to see the British Delegates enter Yunnan from India, independently, and with a fitting escort of British troops; and we can now only hope that the much required display will be made by the despatch of a separate mission from Rangoon, with all the requisite circumstance. It is said that Li will take with him one of the members of the old Burlingame Mission, and will start in about five weeks.—*N. C. Daily News.*

Some time ago Lee Hung Chang memorialised the Throne on behalf of the mandarins drowned in the *Fusing*, praying for the dedication of a special temple to the worship of their spirits. The memorial was published in the *Peking Gazette*, but the decree granting the request has not been promulgated, and the omission has caused surprise to many Chinese.—*China Mail.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

CONSULAR TRADE REPORT OF HIOGO AND OSAKA.

MR. CONSUL ANNESLEY must be complimented upon the exhaustive Report, with which he has accompanied the tabular statement of the trade of the great commercial centres of the south. It may, indeed, be objected that the minuteness of its details have swelled to an unusual volume a record which most readers would be satisfied to find treated compendiously, and that the field of investigation has been already so thoroughly cropped as to leave but a slender harvest for succeeding researches. But it must not be forgotten that trade in Japan generally has been irregular and unsteadfast, and that whether resulting from the uncertainty of the markets arising in the caprice of our customers, or that indisposition to study the native inclination for which English merchants especially are proverbial, the course of business has been wayward and irregular, defeating the calculations of the shrewdest, and a cause of profound dissatisfaction to those engaged in it for some time past. An impartial observation and record of the changing characteristics of trade, at all times of importance, is at present of supreme moment, when late intelligence from Europe points to extreme distrust, if not absolutely a crisis, in the Eastern branch of our cotton trade. The annual records compiled by our consuls have for years conveyed their warnings in vain. Yet they have presented a trustworthy, because disinterested, picture of inflation and overtrading, in which the practised insight of the skilled trader might have discerned the fruits of bolstered credits and general unsoundness. But the logic of figures and the protest of a ripe judgment are alike unavailing where the element of hope enters so largely into the business atmosphere, and the disappointment of to-day is held to be the natural harbinger of the success of the morrow.

The general trade of the port of Hiogo exhibits a considerable increase for the year ending 1874, the great proportion of this arising from the enlarged export of tea, which exceeded that of the preceding year by about 50 per cent in quantity and rather more than double in point of value. In the excess in imports Mr. ANNESLEY finds little exhilarating. The year has been commercially unhealthy, and stocks have been so far disproportioned to the conditions of consumption that in order to realise them it became necessary to force them on an unwilling market at a ruinous loss, or, in some cases, to re-ship to Europe at, it may be presumed, still greater disadvantage. The first effect of this lesson has been the wholesome contraction of trade and the probability that, with a more accurate knowledge of the capacity of the district, home shippers have learned to restrict their supplies within the limits of profitable sale. Mr. ANNESLEY remarks upon the diminution of direct shipments from Europe and the increased traffic with Shanghai to which the low freights and the drawback system of the Chinese Customs, of which we shall have something further to say, lend every facility. That yarn of Indian spinning should find its away to Hiogo and meet with approval there should stimulate native capitalists to a rivalry which they can have little cause to dread. Mr. ANNESLEY has the old story to tell us of the deterioration in quality of Manchester goods and the detriment which our reputation suffers from this. But Manchester will persist in making that which it finds it best to make, and so long as merchants can sell unsound goods in preference to fabrics of a more substantial character so long we may be sure the trade will continue. It is notorious that the Japanese shew a decided preference for their native-woven cloths and it is probable that the lighter European fabrics enter into consumption for purposes in which their less solid qualities are not remarked. Mr. ANNESLEY calls attention to the increased consumption of Mousselines and points out that this branch of imports is altogether in the hands of French and German manufacturers to the exclusion of the English. This we believe is due to no want of enterprise in the latter but to the higher delicacy obtained in the Continental dyes which the climate of England does not permit of. But in the heavier classes of woollen manufactures England is still *facile princeps*. The report also notices the disuse of the native vegetable oil and the growing use of kerosine in the southern districts. Many searches for petroleum have been set on foot, and its existence in certain spots would seem undoubted, but as yet no native oil has has been placed in the market. The other details of this portion of the report offer no special matter for comment.

It is to be presumed that in the export of tea the southern ports have obtained a solid advantage which other branches of business have failed to afford. The crop is notoriously profitable to the grower at the prices which have been paid, and the elastic condition of the market during 1874 permitted of high gains being realised by the Japanese and, we believe, by foreign shippers. The southern crop is reported to have been good though the later yield of the shrub, owing to excessive picking at an advanced stage of the season, threw much inferior leaf on the market. The production in the south will continue to increase as a vast area of land has been brought under cultivation and the large profits have stimulated production. The operations in rice in 1874 have resulted unfavourably to foreign speculators. Mr. ANNESLEY tells us that the prohibition of its export in August 1874 has done much to paralyse a trade which afforded large promise in the future. It is to be hoped that we have seen the last of these bans upon the export of rice. The farmer must have the security of the trade being free before he will venture to extend its growth beyond the normal requirements, and naturally shrinks from encountering the harassing labour of raising a crop which makes so distressing a demand upon his industry and endurance. The result, it must be conceded, is more inadequate to the labour involved than any known in husbandry, and we should be glad to think that in becoming a beefeater—a more or less accomplished circumstance—the Japanese will grow wheat for his bread and barley for his beer on the fields in which he now cultivates the pernicious miasma which none can long breathe with impunity.

Passing to the subject of the Mint, now under the superintendence of native officials who are assisted by a small foreign staff, it is pleasing to learn that under its new *régime* it has continued to work well. The number of silver and copper coins struck has been slightly augmented while the mintage of gold money has diminished to a marked extent. The course of exchanges has rendered its coinage unprofitable and it would seem to have been almost abandoned. In the development of the southern railway scheme a considerable progress has apparently been made during the past year and the line which is to connect Osaka and Kiôto is being actively constructed. It is hoped that it will be available for traffic in the course of next year. Surveys are being extended in the northwest and central districts with the view to the ultimate trunk line to the metropolis—a work of questionable necessity at present.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

By far the most interesting portion of Mr. Annesley's Report is that which treats of the rapid development of industrial undertakings in Ôsaka, and it is pleasant to contrast the self-reliant pluck with which these baby factories are launched upon their sea of troubles with the clamour for protection to "infant industry" which the American statesman is assailed with and which a prohibitory duty alone can appease. With the mere shadow of a protective tariff, the Japanese manufacturer enters the lists with his foreign competitors and shows no lack of courage or skill. There would seem indeed to be few branches of industry which these enterprising people have not tried their prentice hands upon; factories for paper, sugar-refining, cotton spinning and weaving, hosiery, hats and caps, boots, glass, chemicals, bricks, guns and beer have sprung up in numbers, and in some instances, by superior cheapness and better adaptation to native tastes, their products have supplanted foreign importations and have won a preference in the native mind. In some respects the quality of the performance leaves little to be objected to, though a more rigid regard to actual fashions—the ruling taste at present being apparently retrospective,—and a somewhat less liberal allowance for the growth of the foot might possibly be hinted at by the fastidious as an improvement in the native-made clothing. This, however, may be expected in due time.

The Report refers to the growing relations between Hiogo and China ports, and to the tendency of certain branches of its import trade to fall into the hands of Chinese merchants, who, availing themselves of the nominal freights and the facilities afforded by the telegraph, keep that market supplied from the larger emporium of Shanghai. The demand for goods in Japan is frequently capricious and unexplainable, and there can be little doubt that a larger gain may be obtained by the small Chinese dealer, who is in a position to satisfy the spasmodic wants of the market, than the European merchant, whose stocks are loaded with the heavy charges of his business, can reasonably look forward to. But while the Chinese trader enjoys every facility for his business, the merchant in Japan possesses no such reciprocal advantage. Bonded warehouses it is true exist, but the system has broken down from causes too well known to require explanation. The conditions of trade have rendered it necessary that the merchant here and in China should be his own warehouseman; but while in China he is permitted to meet a sudden demand elsewhere by re-shipping under drawback, no such facilities to relieve a heavy stock are available in this country, and goods may only be moved to a better market at the sacrifice of the duty they have been charged with. We have little doubt that the time has now arrived when the government may fairly be asked to afford a concession that no duty-levying state to our knowledge denies. The Customs Department has outgrown the chaotic conditions of its infancy and is now assuming the shape and vigour that its foreign training and superintendence gave us every reason to hope for. Possessing a competent and trustworthy staff of officials, and guided by the reflected experience of European systems as much as by the training it has received in its own, it may at length concede to foreign and native merchants a privilege which it is alike unwise and ungenerous to withhold from them any longer.

RECORDS OF THE ASSEMBLY OF LOCAL OFFICIALS.

"Nichi Nichi Shimbun," June 30th, 1875.

June 27th, at 10.50 A.M.—His Majesty came to the Grand Hall to listen to the debate of the various Members. The President withdrew his seat towards the left, the *kanji* (ushers?) and Secretaries being placed in diagonal ranks on the right and left. The debate was opened at 11.50. A.M.

The President laid before the meeting the Draft Bill, on "Roads and Bridges," that was to form the subject of that day's debate, and explained its general purport. When he had concluded, a copy of it was handed to each member, and a Secretary was again caused to read it aloud.

Bill.

Clause I.—Those Roads to which allusion was made in the Notification issued by the Finance Department in the month of August, 1873, such as the Tôkaidô, the Nakasendô, and the Riku-u-dô,—were merely mentioned therein by name, and nothing more. Upon an examination, however, of the returns of the various *Fu* and *Ken* subsequent to that period, it appears that there are some roads that are described in one locality as belonging to the "first-class," while in another they are said to belong to the "second-class." The reason of such differences as the above arises from nought else than the fact of the places from which the roads start and the places to which they lead not being clearly laid down. On this account, therefore, it is necessary to do away with the above discrepancies and to establish afresh some regulations that will meet the case.

Clause II.—Now, roads are constructed for the purpose of furthering both Home and Foreign intercourse, and of effecting the transport of produce. Thus, then, between those roads which lead from the metropolis of the country to the various open ports, and so affect dealings with foreign nations, those, again, which lead to the various military stations and *Fu* and *Ken* offices, or connect the military stations, the *Fu*, and *Ken*, and so affect the protection of the people, and those, besides, which are constructed for the benefit of villages and marts,—a general distinction is made, and they are ranged under Three Heads of Roads, and the various lines of route are subdivided respectively under three Classes, as shown below:—

National Roads.

Class 1.—Those leading from Yedo to the various Open Ports.

Class 2.—Those leading from Yedo to the Ancestral Shrines of Isé, and to the various *Fu* and Military Stations.

Class 3.—Those leading from Yedo to the various *Ken* Offices, and those connecting with the various *Fu* and Military Stations.

Ken Roads.

Class 1.—Those connecting with the various *Ken*, and leading from the various Military Stations to their several outports.

Class 2.—Those leading from the Head Offices of the various *Fu* and *Ken* to their several Branch Offices.

Class 3.—Those leading from noted localities to the Head town of that neighbourhood, or leading to the seaports, convenient of access from such localities.

Village Roads.

Class 1.—Those passing through several localities in succession, or merely leading from one locality to another.

Class 2.—Those specially constructed, for the benefit of irrigation, embankments, pasturage, mines, manufactories &c., consequent upon measures determined by the people of such localities.

Class 3.—Those constructed for the benefit of Shintô shrines, Buddhist temples, and cultivation of rice-fields and arable-land.

In cases out of the above, when one road is also used for several different purposes, such a road is classed according to the most important of its uses. In the case of National Roads and *Ken* Roads, their width differs in

Original from UNIVERSITY OF CALIFORNIA

nature of the country, and thus it is impossible at once to make one general decision with regard to them and put it into actual operation. And yet, should there not be laid down beforehand some regulations for the whole, there exists the trouble of the hundred matters that arise out of the question of roads becoming destitute of their regular order. The following decision is consequently adopted as a general regulation; and again, in the case of those roads that may be constructed subsequently to the present time this width shall be preserved, for the convenience of the locality in which they may be.

National Roads—

Class 1.—7 *ken** in width.
„ 2.—6 „ in width.
„ 3.—5 „ in width.

Ken Roads—

From 4 to 5 *ken* in width.

In the matter of village roads; seeing that their chief object is to promote the convenience of the several localities, they have but little to do with this,—and so it is not necessary for one positive decision to be made in their case.

Clause III.—After the classification of the roads has been determined in accordance with the foregoing propositions, the bridges, seeing that they are the constructions that connect together the lines of road, should be adapted to such classification.

Clause IV.—Consequent upon the separate classification of the roads, there must be laid down, in conformity with that classification, the distinction of national, *ken*, or district expenses; and again, even in the case of each separate road, there must be fixed the regulations for the proportionate responsibility of the Central and the Local Governments, in the matter of the light or heavy nature of the engineering work. As, however, rules for *tolls* (*kei-i-so*?) have not yet been established in the country, these must be discussed in after time. Upon a consideration of the rule that has prevailed hitherto, it will be found that the construction of roads took place for the benefit of the castles, inclosures, mansions, and pleasure-grounds of the Heads of the old *han*, or again, for the shrines of tutelary deites, for cemeteries, or places of worship, and were therefore specially defrayed at the *han* expense,—and that since the creation of the *ken* some of these sums were charged to the nation. It is necessary that such matters as these should gradually be revised, according to existing circumstances.

The reading of the bill having come to an end, the President again observed that it was left to the option of the members whether the meeting for the second reading of this Draft Bill should be held in the afternoon of that same day, or whether it would be better to dissolve the Meeting and give consideration to the Bill.

Shibawara Kadzu (Prefect of Chiba *ken*) said that the session was but for a limited period, of which three or four days had already passed,—there must not be wilful loss of time. If there were any questions upon the original draft to be put to the responsible officer, it was best that they should be asked, and that the meeting for the second reading should be held in the afternoon.

Nakashima Nobuyuki (Kanagawa *ken*), also remarked that the original Bill merely had to do with establishing the classification of roads, and that as the debate regarding expenses was to take place at a subsequent date, it was best for the second meeting to be held in the afternoon.

Makimura Masanawo (Kioto *Fu*) observed that if the time during which questions were being asked regarding doubtful points in the Draft were to last out till the afternoon, the second reading could be postponed; but that if this did not come to pass the sitting should be held in the afternoon. To this all the Members agreed; and the President thereupon beckoned to the responsible officer, Ishi-i Sei-ichiro, acting head of the †*Dobokn-riyô*, and caused him to take the seat assigned to the officer charged to give explanations.

Watanabé Nobori (Ozaka *Fu*) asked,—Does the 3rd class of the National Roads mean connecting, from Yedo, with each separate *Fu*, *ken*, and military stations?

Answer.—They connect, from Yedo, with the various *ken* offices, and also connect one *Fu* and military station with another.

Shibawara Kadzu enquired,—In Class 3 of the National Roads mention is made of those leading from Yedo to the various *ken* offices: is a road leading to a single *ken* here considered in the same light as one leading to 10 *ken*?

A.—It is.

Again,—In going from Yedo to Nagasaki, we come, on the way to Shidzuoka and also to Hamamatsu;—does a road branching off from Hamamatsu to some other place also come under class 3? and further, is one that, without leading to any other road, goes to the single *ken* of Chiba, considered in the same light?

A.—It is.

Again.—What sort of places are indicated by the words "noted localities"? And, supposing that there be a place not possessing a branch office, which though it forms a small town in one province, still is not a leading town of such importance as to be heard of in other provinces,—under what heading would such be classed?

A.—It would be placed in Class 1, of the Village Roads. Supposing, however, that it was well known by name, and afforded facilities (for transport), it would come under Class 3, of the *Ken* roads.

Again,—Are these 3 kinds of roads the orlginal thoroughfares, difference being made in the names alone, without any intention of opening new roads?

A.—They are.

Yasuôka Yoshisuké (Shirakawa *ken*) asked:—What width is to be alloted to the bridges? Are they to be constructed in conformtiy with the regulations regarding the greater or less breadth of the roads, without drawing up separate rules for bridges?

A.—They are.

Again,—Mention is made of the proportionate responsibility of the Central and the Local Governments;—does this speak of engineering works, or does it point to general expenses?

A.—It alludes to both engineering and general expenses. The rules regarding expenses charged to the Government and to the people will be decided afterwards.

Nakashima Nobuyuki enquired;—With regard to Class 2, of Village Roads, there are some that certainly have not been provided by measures determined by the people of such localities,—and again, as in the case of roads to mines, there are some that have been made by the persons delegated to superintend the working of the mines;—how are these classed?

A.—In respect to those not constructed by the people of the neighbourhood, there must certainly be some one who undertakes the work.

Watanabé Nobori said;—Are the National Roads and *Ken* Roads to be defrayed from the Government and the peoples' expense respectively,—and the Village Roads charged to the people?

A.—That is provided for by the Regulations; it is not a matter upon which I am authorized to give a reply.

Sékiguchi Takayoshi (Yamagata *ken*) said;—I comprehend the purport of the explanation given in your replies. You mean that the present Bill merely establishes the distinction between the three kinds of roads, and fixes classes for them, but has nought to do with discussion as to the expenses of construction or repair?

A.—That is what is implied by words "in aftertime," in Class IV.

Again, then repairs that have hitherto been effected at the joint expense of the Government and of the people will follow the old arrangement and will not be subject to alteration?

The President observed, just so; the establishment of distinctions between the roads is for the purpose of determining their line of route should the latter not be fixed, it is impossible to make one general decision with regard to the expenses. Not a few representations have been made to the Government upon the subject of convenience of thoroughfare in the various *Ken*. When the present Bill has been passed, this will be made the standard, and the sources from which the expenses are to be furnished will be laid down.

Fujimura Shirô (Yamanashi *ken*) said; do the words "in the case of those roads that may be constructed sub-

* 1 *Ken* is equal to 6 feet Japanese or 71 inches English.
† The Public Works Office of the Home Department.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"sequently to the present time, this width shall be pre-"served, for the convenience of the locality" apply not merely to newly made roads, but also mean that in repairing old ones, too, this rule is to be followed in the case of the great roads?

A.—That is to be the fact.

Okamura Yoshimasa (Mitsunuma *Ken*) said; although the repairs to roads may in the first instance, come under the old arrangement, still in a case when a place such as a large town takes fire and everyone of the houses there is burned down, so that the greater or less breadth (of the road) can be arranged at option, in such a case will the new rules be observed or will the old arrangement be followed?

The President remarked; such a road can be judged according to circumstances. It would be better that the old arrangement should not be followed, but the new regulations observed. There would be no difficulty about a reconstruction subsequently.

Watanabé Kiyoshi (Fukuoka *Ken*) asked; by the "7 *ken* roadway" is the width of the road alone meant?

A.—Hitherto there have been allowances of space for rows of trees, but this is not what is meant. The actual roadway is what is indicated.

Again,—By the expression "Branch Offices" is allusion made to Police offices also?

A.—It is.

Apart from the above some other questions were put, and answers given, but as the queries are unimportant, they are here omitted. These explanatory replies were concluded in the forenoon, and so it was made known that the meeting for the second reading would be held in the afternoon. The bell was rung, and the assembly broke up.

The meeting for the second reading was opened at 1.35 p.m.

His Majesty again took His seat, and the President, members, and various officials occupied their customary places.

The President observed that the Draft Bill was laid before the meeting, beginning with Clause I, but the meetings prior to this had been apt to disregard section 7 of the Regulations for the Debate. This must be set right from the present time, and the regulations duly observed.

A Secretary accordingly read out the first Clause of the Bill.

The President requested all those who were in favour of the original Draft to stand up. Every one stood up, and showed themselves in favour of it.

A Secretary again read out the second Clause.

Shibawara Kadzu said:—The questions from the Throne have included under one heading matters relating to roads, embankments, and bridges, but still, the Roads and the embankments each require different kinds of engineering work, and they certainly should not be confused one with the other. It must be allowed that it is at present the better plan to defer the matter of embankments, and to proceed to discussion, giving the prior place to Roads and Bridges. As the distinction made between the three kinds of Roads meets the necessities of the case. I have no objection to offer thereto;—yet I cannot but dissent to some points in the subdivision of the classes, which I now proceed to state;—

AMENDED DRAFT.

National Roads.—Class 1.—Those leading from Yedo to the various Open Ports, the Ancestral Shrines of Isé, and the various *Fu* and Military Stations.

Class 2.—Those leading from one military station to another.

Ken Roads.—Class 1.—Those leading from Yedo to the various Ken Offices, connecting from the *ken* with the various military stations, and leading from the military stations to their several outposts.

Class 2.—Those leading from noted localities, &c., &c.—making class 3 of the original Draft become class 2.

Village Roads.—Class 1.—Those leading from the Head Offices of the various *fu* and *ken* to their Branch Offices, Police Stations &c., and to noted villages and towns. The remainder as stated in the Draft.

As regards the width of the national and minor roads, it appears to me to be unprofitable to make distinctions in their case at present, as no general decision has been arrived at concerning the arrangement of *tolls*, nor have any regulations respecting expenses been established. For this reason, it is needless to discuss this matter.

Tanaka Initsunori (Toyooka *ken*) remarked;—Shibawara's observations are quite to the point. Still, in consideration of our having to do with actual facts, it is impossible, from his single speech, thoroughly to comprehend each several matter, and so he should be caused to draw up a written document.

The President hereupon caused Shibawara Kadzu to prepare a written statement of his opinions. The latter wrote out a draft in pencil, which he presented to the President. This was then read out, being the amended draft above-mentioned.

Kanda Takahira (Hiôgo *ken*) observed;—It is not well to raise to Class 1 the road leading to the Ancestral Shrines of Isé. These shrines ought of course to be regarded with veneration; but still, the greater or less breadth of a road is a matter that is put into execution for the sake of the passage of carriages and horses going and coming, and for facility of transport, which would appear to be the reason for also placing in Class 1 those roads which lead to the Open Ports. On the Isé road, however, although the foot passengers are numerous, one rarely meets with instances of carriages and horses passing, or of transport of goods; and for this reason it should be included in Class 2.

Watanabé Kiyoshi spoke to the same effect as the observations of Kanda. He said that the fact of placing in Class 1 those roads leading from Yedo to the various open Ports was that they are for the benefit of transport of Japanese and Foreign Produce which is a matter of special importance at the present time. The ancestral shrines, although objects of veneration, still have to do merely with the interior of the country, and are not equal to the exceedingly urgent matter of relations with foreign countries. If facilities for the transport of produce were to lose their worth, then this would touch the prosperity or otherwise of the interior. He therefore thought the original draft was best.

Okazaki Matsuru remarked:—I think that Shibawara's proposition is best. Isé being the residence of our Divine Ancestress, is a place that is worthy of the greatest veneration on the part of our countrymen. From the Ruler and nobles above down to the common people below, there is no lack of persons going thither even from far-distant regions and the extremities of our land, and so the road is much frequented. Although Watanabé has singly argued that it has nought of profit or loss as regards foreign lands, still it is a road that is of great importance in our own country, and there are times when in a single day many tens of thousands pass along it, so that the carriages and horses are consequently numerous. It would therefore be well to raise it to the 1st class.

Yasuôka Yoshisuké spoke much to the same effect as Kanda and Watanabé.

Nakashima Nobuyuki observed;—Although the travellers on the Isé road be numerous, still it is inferior to the great importance of those leading to the Open Ports, and it should not be elevated to the 1st Class. Shibawara's remark about lowering Class 1 of *Ken* Roads is very reasonable, and I am of the same opinion myself.

Tanaka Mitsunori said:—With the exception of the point of raising the Isé Road to the 1st Class, the amended draft proposed by Shibawara is all very good. In Class 3 of the Village Roads there are mentioned "those "constructed for the benefit of Shintô Shrines and Budd-"hist Temples." Now, amongst those "Shintô Shrines" there are some to the memory of former Emperors, but there is no reason why these should, to show our idea of veneration, be elevated to the 1st Class.

Yamada Hidémasa remarked;—I, for my part, neither subscribe to what has been proposed by Shibawara, nor again do I assent to the original draft. It is certainly quite correct to set forth the three kinds of Roads, viz:—National, *Ken*, and Village, but nevertheless it is not well to establish eight classes of National Roads, their importance or otherwise is not a matter needing distinction. The coming and going of foot-passengers, and the trans-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

port by means of carriages or horses are in each case identical. The remaining 2 Classes, again, in like manner to this, contain none that should be regarded as either of importance or not. It would be best for one general decision to be made in regard to the toll regulation, and after that to make no separate classification in respect to the establishment of differences of national, *ken* and district expenses. The three kinds of roads, therefore, should stand in the original draft, but the nine classes contained in them should be abolished.

Yasuba Yasutomo said: I agree on the whole with what Yamada has stated. Although, with the desire to watch over the people by this or that distinction, it is of immense benefit to establish the three kinds of roads, still, in the matter of the three classes contained in each of them, their mere nomenclature is all that is brought into existence, and it is unnecessary to set on foot separate rules for their greater or less width.

Watanabe Nobori observed: In the construction of roads, the only point of importance is to afford facilities for the passage to and fro of travellers and to prevent confusion, while paying reverence to the ancestral shrines consists of treating with respect the festival regulations. How, then, can the width or narrowness of a road be discussed as being reverential or disrespectful? The Ise road should not be placed in the 1st class.

Fujimura Shiro said: The addition in Shibawara's amended draft, of the 2nd class of national roads to the 1st class is not right. I myself think that class 3 should be amended and made to read. "Those passing to and "from the various *Fu* and military stations and their out-"posts; and leading from the various *Ken* offices to the "various open ports." On the other hand, I agree with Shibawara in his suggestion for class 2 of the *Ken* roads to include those leading from Yedo to the various *Ken* offices.

Koga Sadawo (Miyôdô *Ken*) remarked: The Isé road should be raised to the 1st class. The ancestral shrines are places to which our 35,000,000 odd of countrymen throughout the whole of the Empire of Japan have from olden times and in continuous succession gone to worship. From ancient days down to the present time these numbers have neither increased nor yet fallen off. We cannot but give careful thought to the origin of the two *Harvest Festivals.** The elevation of the Isé road to the 1st class is not merely a matter of displaying a spirit of special respect, but should be effected for the sake of the people. Out of Shibawara's propositions this one point should be adopted, and the others rejected, the matter being left as stated in the original draft.

Morishita Kagénori was in favour of the Original Draft.

Satô Nobuhiro said:—National Roads are those constructed so as to commence from the Metropolis.—Although Shibawara's suggestions are of weight, yet they should not be followed, but the Original Draft observed. I do not, however, object to there being included, in class 1 of the Ken Roads, those connecting the various *Fu* and military stations.

Okamura Yoshimasa agreed with Kanda Takahira.

Sekiguchi Takayoshi observed;—seeing that National Roads afford thoroughfare to the passers-by, the breadth of the roadway is the important matter, without regard to the 3 classes. Their width should in each case be 7 *ken*. It would be well, as remarked by Yasuba, to leave out of the question for a short time the minor classes in the three kinds of roads.

Katô Soichi, Ishiguro Tsutomu, and Itô Kenkichi were all of this opinion.

Nakano Go-ichi said;—The minor classes under the three Heading of roads should be struck out, and an amendment made as follows:—

National Roads.—Those leading from Yedo to the various *Fu* and *Ken* Offices, Military Stations, and Open Ports, and those connecting the various *Fu* and *Ken* Offices and Military Stations, also, that leading from the Watarai *Ken* Office to the ancestral shrines of Isé.

Ken Roads.—Those leading from the Head Offices of the various *Fu* and *Ken* to their Branch Offices, and from the various military stations to their several outposts.

Village Roads.—All those not mentioned under the two headings of National and *Ken* Roads to be considered Village Roads.

The width of the National and *Ken* Roads to be fixed at not broader than 7 *ken* and not narrower than 4 *ken*,—to be constructed according to the nature of the locality.

Shinjô Atsunobu was also in favour of cancelling the 3 Classes under the 3 Headings of Roads.

Makimura Masanawo said;—In Class 3 of the National Roads there are mentioned "those connecting with the various *Fu* and Military Stations. If this means connecting *Fu* with *Fu*, and Military Station with Military Station, it would be well to alter the wording to mutually joining." As the Isé road is for the benefit of the people, its classification should not be argued from the ground of veneration.

Yamada Takétoshi observed;—If the minor classes under the three headings of roads be lost sight of even for awhile, it will eventually be impossible to establish them.

The President here directed all those who were in favour of the proposition to place the road to the Ancestral Shrines of Isé in the first class to stand up. Those who rose were only two in number.

Watanabé Nobori expressed a desire, based upon the original draft, that the words "connecting with" the various *Fu* and military stations—in class 3 of the National Roads—should be altered to "passing through from both sides."

The President enquired of the meeting what was thought of this proposition.

Makimura Masunawo said;—If it mean connecting *Fu* with *Fu*, and military station with military station, it would be best to alter it to "mutually joining."

Watanabé Nobori observed;—Does not Makimura's suggestion differ from what was stated by the officer charged with giving explanations? That officer would seem to have said "connecting the various *Fu* and military stations."

The President a second time called the officer appointed to give explanations, when the latter stated that it was as Inakimura had remarked.

Kanda Takahira argued that it should not be altered to "mutually joining," but to "continuously joining."

Watanabé Nobori stated that he did not object to either "passing through" or "continuously joining."

Makimura Masanawo said that it would be well to follow Kanda's suggestions. With this Watanabé Kiyoshi and Ikuta Sumisada coincided.

The President remarked;—In the present discussion upon the 1st section,—National Roads,—of Clause II, there are some in favour of the original draft, and others who wish the words "connecting with" to be altered to "mutually joining"—and again, to "continuously joining." Firstly, let those who hold with the original draft, but desire the alteration in the wording, stand up. Thirty-one persons here stood up. The members present at this day's meeting were fifty-nine in all, and consequently the alteration was decided upon by the majority.

Nakashima Nobuyuki said;—As regards the proposition of lowering Class 3 of the National Roads to Class 1 of the *Ken* Roads, I agree with the suggestions of Shibawara. As, however, it has just been decided to accept the original Draft but to alter the words "connecting with," it would be as well for this matter to be discussed and determined at a committee.

The President turned towards the members and enquired of them whether the foregoing observation should be followed or otherwise. Every one of the members stood up, showing himself in favour thereof.

The President here remarked that the rest of the debate would be deferred till the later meeting, and that that day's discussion was here ended. The bell was sounded, and everyone went out, at 4.52.

The Emperor, upon his going away, was saluted in front the gate by all the officials.

JUNE 21ST.—The debate was opened at 10, A.M. The Prefect of the Miyagi *Ken*,—Miyagi Tokisūké;—Ôyama Tsunayoshi, Prefect of the Kagoshima *Ken*;—Koiké Kosūké, *Gon-Sonji* of the Wakamatsu *Ken*;—and the *Gonrei* of the Miyôdô *Ken*, Koga Sadawo, had on account

* At the time of the Tenno's accession, and the "New Rice" Festival held every year, both celebrated at Isé.

of illness, respectively appointed Masuda Shigéyuki, Fukuyama Tatétaka, Takénaka Hiroshi, and Iwazaki Nagataké, to act in their stead.

Clause II, of the Draft Bill on Roads and Bridges, continued from yesterday.

Yasuöka Yoshisuké said that the original text of Clause II, should be altered, and made to read,—"Now, "roads are constructed for the purpose of furthering both "home and foreign intercourse, of effecting the transport "of produce, and of facilitating the miscellaneous necessi- "ties of the entire country,—and so between those which "lead from the metropolis to the various Open Ports,—to "the various military stations &c. &c." The President, however, observed, that it would be better to refer this for decision, to the special committee, at a subsequent date.

Question proposed,—Class 1 of *K n* Roads.

Those connecting with the various *Ken* and leading to the several Military Stations.

Watanabé Kiyoshi first took up the discussion, and said;—In view of this text, under what class of roads are to be placed those connecting from the various *ken* offices with the military stations. If it be intended to place them in this Class 1 of Ken Roads, such ought to be clearly stated. There should, therefore, be added the words "connecting from the various *ken* "with the several military stations," or else an alteration made to "connecting the various *k n* and military stations." Some members agreed with this suggestion; others said that the alteration should be made thus,—"Those connecting with the various *ken*, and also those "leading from the *ken* to the several military stations, &c., &c."; others said it should be made to read "connecting from the various *ken* with the several mili- "tary stations and other *ken*, and &c., &c."; others desired an alteration to "those leading to the various *ken* and "Judicial Courts"; while others, again, asked for the insertion of "those leading from the various *ken* to the various *Fu*,"—thus causing a great diversity of argument. The final point maintained was that a road between such and such a *ken* office and military station should be placed in this Class 1 of *ken* roads, and those, too, between such a *Fu* and such a *ken* should be treated in like manner, and consequently that in making the addition to the Original Draft, clear and distinct expressions should be inserted.

The members who dissented from this proposition explained that even though this clear and distinct insertion were not made, still, in view of the present existing circumstances, no inconvenience would arise;—and, moreover, that if,—to observe the explanations given by the responsible officer—a military station were at some future time placed in a locality far-removed from a *ken* office and actual inconvenience caused thereby, there was nothing to prevent this being discussed when that time should arrive.

The President, seeing that the argument was well nigh terminated, directed all those who held with Watanabé Kiyoshi's proposition and were in favour of the alteration, to stand up. Only fourteen members rose, and so the foregoing suggestion was, in consequence of the minority, cancelled.

Kotéda Yasusada first commenced discussion, and said that in the case of Class 1 of *Ken* Roads, what was stated in the Original Draft was best. To this a great many of the members agreed; but those, again, who dissented from this held that a clear and distinct addition should be made, for the sake of roads such as as "those connecting together the various *Ken* offices "and military stations, and those connecting together "such a *Fu* and such a *Ken*."

The President, waiting till the argument was nearly ended, gave directions for all those who agreed with Koteda Yasusada's observation, and were in favour of the original draft as it stood, to rise up. Nearly all rose,—those who did not do so being 9 in number, and the question being decided by the majority he said, "class 1 of the "*ken* roads is approved as it stands in the original draft."

The meeting broke up at 11.55 A.M.

The meeting for the 2nd reading took place at 1.40 P.M.

Continuation of the previous meeting on the subject of Clause II. of roads and bridges.

Discussion regarding Class 2 of *Ken* roads.

The President said: The 1st class of the Ken roads has been determined. Proceed, therefore, next to discuss the 2nd class. Matters, however, such as those of turns of phraseology, or characters will afterwards be referred to the special Committee, who will be caused to draw up a draft thereof, and consequently anyone who is desirous of mentioning such should address himself to the special Committee.

Fujii Chihiro said: The mention of the burial-places of the successive generations (of Emperors), and of the official shrines should be inserted in the text of the original draft. No argument is needed about the veneration shown by the whole of the people to the burial-places and official shrines; they are also visited by Envoys from the Court, and again, His Majesty, too, proceeds thither. They should not be considered in the same light as the roads to ordinary shrines which are placed merely under the village roads.

Fujimura Shiro observed: Roads to Shrines are placed under village roads, unless there be one general decision regarding village roads, the greater or less breadth of these depends upon convenience, and it is by no means necessary to elevate them to class 2 of the *ken* roads. In the case of those mentioned in the original text as leading from the *ken* to their branch offices, they should, if we go by their nomenclature, be placed under Class 2, but still, in point of fact, there is no objection to their being included under village roads. The branch offices are removed to other places according to convenience, and so they should be placed in Class 1 of village roads, and the original draft cancelled.

Okazaki Matsuru said;—I agree with Fujimura.

Watanabé Nobori remarked;—In the case of roads leading to Branch offices, it is of course necessary that they should pass through localities where the number of houses is great and the population is large. If we speak generally of their "leading to Branch offices," only useless expenditure is incurred, as it is impossible to form a conjecture as to Branch offices being abolished or founded. The original text should be altered to "those leading from "the various *Fu* and *ken* offices to large districts where "the number of houses is great."

Yasuöka Yoshisuké said;—The original draft is best.

Makimura Masanawo observed;—The original Draft should be preserved, but as, at the end, there is mention made of the width of the roads "being preserved for the convenience of the several localities," a note should be appended to the effect that those places in which there is no prospect of a Head or Branch office being kept up for a length of time are not included in the above.

Apart from this there were other propositions from the members, but they were much to the same effect, and varied little.

The President after hearing the various suggestions, said;—Let those who hold with what has been stated, in Fujii's observations about the various *ken* &c., &c.," with respect to the addition of the burial places of successive generations (of emperors) and to the official shrines, stand up. No one rose, and this point was consequently dropped, and fresh discussion was started about cancelling this clause and appending a note.

Shibawara Kadzu remarked;—The 2nd class of *ken* roads should be lowered to Class one of village roads. There is no regular rule regarding the abolition or foundation of branch offices, and there also exist old roads (to them.) If then, in accordance with this regulation, five or four *ken* be fixed upon, useless expense would be incurred should they come to be abolished.

Nakashima Nobuyuki said;—The Head or Branch offices of the *ken* are always placed in important localities; (the road) has nothing to do with the abolition or foundation of Head or Branch offices, and is not a subject of useless expenditure. I have no objection to offer to the original draft.

Kusumoto Masataka (Niigata *ken*) observed: If, through fear beforehand of the abolition or foundation of the offices, there be not made any determination as to the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

roads, there remains no date at which this can be fixed. This cannot now be left undecided.

Apart from this some said that the original draft should be observed, while others, again, held that the one clause should be struck out, so that no general decision was obtained. The President accordingly caused to stand up all those who held with the opinion that the original draft should be thrown over, and that Class 2 of the *Ken* roads should be lowered to Class 1 of the village roads. Only 12 rose, and being in the minority, this discussion was dropped.

The President then said; There are yet some who are in favour of the original Draft, and others who wish that a note should be added. What is to be done? Nakashima Nobuyuki held with the original draft, Yamada Hidenori stated his desire that it should be altered to "Those leading from the various *Fu* and *Ken* to towns "in which the number of houses is great," and Fujimura Shiro said that by "*Ken* roads," should be indicated those extending across from one *Ken* to another, while if they merely existed within one single *Ken*, it was proper for them to be spoken of as passing through such and such various districts;" in the case of military stations and their out-posts, there were some roads extending across to other *Ken*, but it was not so in the case of head and branch offices. Kanda Takahira remarked, "as regards the roads between head and branch offices, no "no great roads are even used. In the case of those be- "tween military stations and outports, great width is de- "sired for the sake of the passage of cavalry and artillery "but those between head and branch offices are not re- "quired for anything further than the passage of some "5 or 6 officials, or perchance that of prisoners under "guard, thus it would be sufficient to place them under "village roads." Apart from the above, further opinions were expressed by many of the members.

The President here caused to stand up all those who agreed with Nakashima Nobuyuki that the orignal draft was best. Twenty-six persons rose.

The President again invited discussion regarding the addition of a note. Makimura Mazanawo adhered to his previous argument, and was in favour of the note being added and the Original Draft preserved. Fujimura and Shibawara contended that the road ought to be lowered to village roads. Several others also expressed different opinions.

The President caused to rise those who held with Makimura. The number was 13,—and so, in consequence of the former majority of the 26, it was decided that the Original Draft should be retained.

Discussion upon class Third of the *Ken* Roads.

Kusumoto Masatake observed:—The mention made, in original text, of "noted" (localities), must mean places to which produce is brought from all sides, and places where the number of houses is very large. By (roads) leading from such places to head towns or passing through ports, there is effected convenience of transport. It would be well to keep to the Original Draft. Iwamura Takatoshi said,—"after 'noted localities' should be added "former "castle-towns:"—"these former castle-towns were the "source of density in the population and of accumulation of "merchandise." Isobé Takanobu remarked that the two characters "Head towns" should be altered to "the "various *Fu* and *Ken*." Even in the case of other than Head towns there was no lack of facilities for merchandise.

Yasuöku Yoshisūké said,—If the words "Head towns" do not refer merely to Yedo, Kiōto and Ozaka, but are used in regard to populous localities, the expression is in excess (of what is naturally required) and detracts from clear indication: this should be altered. The discussion here came to an end.

The President desired those who had no objection to offer to the original draft to stand up. The greater number rose, those who remained seated being only three persons, and it was accordingly decided that no alteration should be made in the original draft.

Discussion regarding Village Roads.

Watanabé Nobori declared that he had no objection to urge against the original draft, and as everyone agreed with him, it was accordingly determined that the Draft should not be changed.

Kusumoto Masataka said;—The careful discussion of each separate clause is unobjectionable, but still it would be well for the Special Committee to undertake the (arrangement of) details. Thus then, what follows after this need not form subject for debate; how would it be to refer it, together with the miscellaneous points, to the Special Committee?—Shibawara Kadzu said,—only the opening remarks to Clause II. should be referred to the Special Committee. Yasuöka Yoshisūké was in favour of holding careful discussion of each separate Clause. Those who were of Kusumoto's opinion were 6 in number, those holding with Shibawara were 26, and those of the same idea as Yasuöka, 19. The President consequently stated that Clause II was referred to the Special Committee.

Discussion upon Clause III.

Watanabé Kiyoshi said.—The Original Draft is in favour of making the width of the roads and of the bridges identical. Now although it is right that the roads should be made of considerable width, for the sake of the passage of oxen and horses, still the bridges should by no means be regarded in the same light. In the case of oxen and horses passing by, (one of the two) should withdraw to the right or left of the bridge. The idea of making them identical with the roads involves heavy expenditure which cannot be sustained. For instance, in the distance between Kokura and Nagasaki the bridges are very numerous, and if the width of each one be made equal to that of the road, would there not be occasioned empty and unprofitable expense? They should, therefore, be constructed according to the nature of the locality, and it is quite impossible to adhere to the Original Draft. Iwamoto Takatoshi remarked;—On the original text it is stated that the bridges shall depend upon the classification of the roads, from which, taking these national, *ken*, and village regulations,—it seems that they need not necessarily be of the same width as the roads. As, however, the officer appointed to give explanations has already replied that they are to be identical, it would be well to append to this Clause a note to the effect that the width is to depend upon convenience.

Shibawara Kadzu observed:—There is no hindrance to following the Original Draft. Even though this regulation be established, it is not a question of the fresh construction of bridges, the new rule merely coming into use in the event, of decay or destruction by some calamity. Nakashima Nobuyuki thought that the greater or less breadth of the bridges should depend on the wide or narrow nature of the roads. Yasuöka Yoshisūké said,—It seems that in the Draft Bill the width of the roads is not indicated;—mention is merely made of "depending upon the Classes under the three Heads of Roads." The matter should be referred to the Special Committee for alteration of the wording. If it be a question of connecting together the Roads, ferries should also be included. Watanabé Nobori observed;—The chief object of bridges is to give passage to men and horses, and in their case there is no question, as in that of the width or narrowness of roads, of the many points of profit or loss. The width should by no means be made identical. Apart from these, many other members took up the discussion.

The President firstly directed those to rise who held with the original draft. These were 37 in number. There were, however, some members who considered that the expression contained in the original draft—"in conformity with the classification of the Roads" meant that the width must be identical,—while others, again, considered that distinction was merely made of the classification of the three Heads of Roads, and that the width was not necessarily to be identical. The President consequently directed all those to rise who were in favour of Iwamura Takatoshi's suggestion that a note should be appended to the original draft to the effect that the width was to depend upon convenience of circumstances. Those who stood up and showed themselves in favour of it were very numerous, while those who remained seated were only seven persons. Takatoshi's suggestion was accordingly adopted.

The day's debate here terminated.

("Nichi Nichi Shimbun," of July 7th and 9th 1875).

On July 3rd, at 11 A.M. there took place the Meeting of the Committee in connection with the Reply to the Draft upon Roads and Bridges. The *Kanji* Kanda Takahira presided, and the matters determined upon are as follows :—

Reply to the draft of regulations for roads and bridges.

Clause I.—Those roads to which allusion was made in the notification issued by the Finance Department in the month of August 1873, such as the Tôkaidô, the Nakasendô, and the Riku-u-dô, were merely mentioned therein by name, and nothing more. Upon an examination, however, of the returns of the various *Fu* and *ken* subsequent to that period, it appears that there are some roads that are described in one locality as belonging to the "1st Class," while in another they are said to belong to the "2nd Class." The reason of such differences as the above arises from nought else than the fact of the places from which the roads start and the places to which they lead not being clearly laid down. On this account, therefore, it is necessary to do away with the above discrepancies and to establish afresh some regulations that will meet the case.

Clause II.—Now roads being constructed for the purpose of furthering both Home and Foreign intercourse, of effecting the transport of produce, and of bringing about the mutual connection of the entire country, their construction or abolition touches upon the prosperity or otherwise of the land, and so, between those which lead from the metropolis to the various Open Ports and so affect dealings with Foreign nations, those, again, which lead to the various Military Stations and *Fu* and *ken* Offices, or continuously join the Military Stations, the *Fu* and *ken*, and so affect the protection of the people, and those, besides, which are constructed for the benefit of villages and marts,—a general distinction is made and they are ranged under Three Heads of Roads, and the various lines of route are subdivided respectively under three classes, as shown below :—

National Roads.

Class 1.—Those leading from Yedo to the various Open Ports.

Class 2.—Those leading from Yedo to the Ancestral Shrines of Isé, and to the various *Fu* and Military Stations.

Class 3.—Those leading from Yedo to the various *Ken* offices, and those continously joining the various *Fu* and military stations.

Ken Roads.

Class 1.—Those connecting with the various *Ken*, and leading from the various Military Stations to their several outposts.

Class 2.—Those leading from the Head offices of the various *Fu* and *Ken* to their several offices.

Class 3.—Those leading from noted localities to the Head Town of that neighbourhood, or leading to the seaports convenient of access from such localities.

Village Roads.

Class 1.—Those passing through several localities in succession, or merely leading from one locality to another.

Class 2.—Those specially constructed, for the benefit of irrigation, embankments, pasturage, mines, manufactories, &c., consequent upon measures determined by the people of such localities.

Class 3.—Those constructed for the benefit of Shintô Shrines, Buddhist Temples, and cultivation of rice-fields and arable land.

In cases out of the above, when one road is also used for several different purposes, such a road is classed according to the most important of its uses. In the case of National Roads and *Ken* Roads, their width differs in the several localities in conformity with the physical nature of the country, and thus it is impossible at once to make one general decision with regard to them and put it into actual operation. And yet, should there not be laid down beforehand regulations for the whole, there exists the trouble of the hundred matters, that arise out of the question of roads, becoming destitute of their regular order. The following decision is consequently adopted as a general regulation ; and again, in the case of those roads that may be constructed subsequently to the present time, this width shall be preserved, for the convenience of the locality in which they may be.

National Roads.—

Class 1, ... 7 *ken* in width.
" 2,..... 6 " " "
" 3,..... 5 " " "

Ken Roads.—From 4 to 5 *ken* in width.

In the matter of Village Roads,—seeing that their grand object is to promote the convenience of the several localities, they have but little to do with this, and so it is not necessary for one positive decision to be made in their case.

Clause III.—After the classification of the roads has been determined in accordance with the foregoing propositions, the bridges, seeing that they are the constructions that connect together the lines of road, should be adapted to such classification. It is, however, positively necessary that such matters as their width should be in conformity with the breadth of the roads.

Clause IV.—Consequent upon the separate classification of the roads, there must be laid down, in conformity with that classification, the distinction of national, *Ken*, or district expenses ; and again, even in the case of each separate road there must be fixed the regulations for the proportionate responsibility of the central and the local Governments, in the matter of the light or heavy nature of the engineering work. Now, taking into consideration the fact that rules for the tolls of the country have not yet been set on foot, it is impossible at once to make binding regulations with respect to the furnishing of expenses for this ; but still, as, upon considering the matter with regard to actual circumstances, we cannot again, but determine the sources from which such expenses are to be furnished, temporary laws are established as follows :—

National Roads, at National expense, *Ken* roads, half at the national and half at the *ken* expense, village roads, at the District expense.

Upon a consideration of the rule that has prevailed hitherto in the various local districts, it will be found that the construction of roads took place for the benefit of the castles, inclosures, mansions, and pleasure-grounds of the old heads of *Han*, or, again, for the shrines of tutelary deities, for cemeteries, or places of worship, and were therefore specially defrayed at the *Han* expense, and that since the creation of the *Ken* some of these sums were charged to the Nation. It is necessary that such matters as these should be revised, according to existing circumstances.

July 5th.—Koga Sadawo, *Gonrei* of the Miyódô *Ken*, and Satô Nobuhiro, Prefect of the Hamada *Ken*, being absent, had empowered Iwazaki Nagataké and Yano Mitsunori to act for them, respectively.

A General Committee Meeting took place, the Head *Kanji*, Kanda Takahira, being at the head of the board, and the following measures were determined and laid before the President.

Appendix to the Reply to the Draft concerning Roads and Bridges.

Clause I.—The National Roads are, by reason of their being the public property of the entire country, placed under the immediate management of the Home Department. The regulations for keeping them in good preservation, and for their cleansing are to be looked after in a suitable manner by the Local Government along the line of route. Their fresh construction, alteration, or repair is undertaken by the *Dobokuriyô*, (The Public Works Office of the Home Department.) while the engineering work is committed to the charge of the Local Governments. Their expenses shall be furnished from the National Treasury.

Note.—In the case of any item of repairs, in which the disbursements for engineering work is less than 500 *yen*, the local Government is to arrange the matter and afterwards make a statement thereof.

Clause 2.—The *ken* roads being the public property of the various *ken*, are under the general superintendence of the Home Department. Their engineering work is undertaken by the local Governments, but still all matters concerning their fresh construction or alteration must be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

reported to the Home Department Of their total expenses one-half is to be levied on the *ken*, and the other half furnished from the National Treasury.

Clause 3.—Although the above clause is laid down, still expenses for petty repairs, or for good preservation and cleansing, &c., are to be levied in a suitable manner, by the local Governments, upon the *ken*. In case, however, of their being damaged by continuous rains, or by floods, &c, the expenses are to be arranged in accordance with the foregoing clause.

Clause 4.—The Village Roads being the public property of the various districts, are under the general superintendence of the local governments. Their engineering work and expenses are undertaken by their respective district, and ordinary matters concerning their good preservation and cleansing, &c. are to be arranged suitably after due deliberation amongst the District Superintendents and Mayors.

NOTE.—It is left to the option of the Local Government whether, by the decision of the people, the whole *ken* may undertake the matter and effect the levying of the expenses.

Clause 5.—In the case of roads such as those constructed for purposes of pasturage, mines, manufactories &c. both the engineering and other expenses are to be undertaken by the proprietors. Matters, however, that relate to fresh construction or alteration &c., are to be reported to the District Superintendent and Mayor of the locality, and put into operation after the permission of the Local Government Office has been obtained.

Clause 6.—Bridges and ferry boats are the things that mutually connect those spots where the line of road is broken by water, and so are to be arranged in conformity with the regulations for roads In the case, however, of those which, even though they be *ken* or village roads, affect the public convenience through being intersected by large rivers or impeded by precipices, and need an extraordinary amount of engineering work, a report is to be made, in view of the actual circumstances, to the Home Department, when a certain proportion of the expenses shall be supplied from the National Treasury.

Clause 7.—In the case of bridges or ferry boats appertaining to national or *ken* roads, both the engineering work and other expenses are to be arranged in accordance with Clauses 1 and 2, but should it be desired, by the careful thought of the people, to effect their construction at private expense and so render aid to the national expenses, assent is to be given to such petitions. The cost of the preservation of such in after years is of course to be assimilated to the above, but supposing that (the persons) should be unable to furnish them, arrangements shall be made in conformity with the regulations for roads.

Clause 8.—In cases such as those of causing (artificial) rivers to intersect a National or *ken* Road, or of digging drains, for the benefit of villages or fields, gardens &c., the bridges added to such National or *ken* Road must be undertaken by the villages, or proprietors of the fields and gardens deriving profit therefrom.

Clause 9.—As the (roads leading to the towns forming the 3 *Fu* and 3 Ports cannot be classed under the three Heads of Roads, a special exception is made in their case.

Clause 10 —The width of the National Roads is fixed at 7 *Ken* for the 1st class, 6 for the 2nd, and 5 for the 3rd. The *Ken* Roads are to be from 4 to 5 *Ken* in breadth.

Note.—As this clause establishes the idea to be observed in future, the fact of its being put into operation may come to pass quickly or otherwise according to the physical nature of the several localities.

Clause 11.—In the width of the roads there is not included the space for the drains or for rows of trees to the right and left of the actual roadway.

Clause 12.—With respect to the width of the space for the drains or rows of trees, a proper examination of the nature of the place must be made, and a report sent in to the Home Department.

Clause 13.—The bridges are to be in accordance with the classification of the roads, but still it is not absolutely necessary that matters such as their width &c. should follow that of the roads. All that is needed in their case is to keep as far as possible an open space at the ends, to prevent injury arising from collision between carriages and horses

Clause 14.— Should it be deemed necessary at some future time to alter the class of the Three Heads of Road, a report is to be made to the Home Department, without regard to the nature of the 3 classes, upon an estimation of the actual circumstances.

SPIRIT OF THE JAPANESE PRESS.

OUR RESOURCES.

(Choya Shimbun.)

Japan our country is naturally dear to us and there is nothing which can interest us more than her prosperity and welfare. The question of her resources and wealth is one that has largely occupied our attention. We have been anxiously investigating our national circumstances and have after some enquiry arrived at this conclusion.

We shall assume the population of Japan to number 35 millions and the coined money as 40,000,000 *yen* (this may be a little more) together with 100,000,000 of paper money, or together 140,000,000 *yen*. If we divide this sum among our population each individual will receive 4 *yen*. Let us suppose that each family contains five members and let us take for illustration sake 10,000 families: this sum would give to each of these 20 *yen*. Now these 10,000 representative families may be divided into many classes which we should be disposed to place in this order.

1.—very wealthy possessing 10,000 yen.

First Class.

2	families with	8,000	yen	each
3	„ „	5,000	„	„
5	„ „	3,000	„	„
20	„ „	1,000	„	„

Second Class.

40	„ „	500	yen	each
80	families with	400	yen	each
350	„ „	300	„	„
500	„ „	50	„	„

3rd Class.

1000	„ „	20 „ „
3000	„	with neither money nor debt
5000	„	in debt, without money

Thus those who possess no money and those who are in debt by far exceed all others. Oh the poverty of our country!

It is said that although San Francisco is a young place the relation of its wealth to its population gives an average of 1,000 *yen* per head. Is it not grievous that we should possess but 1/250th, of this. We earnestly entreat one fellow countrymen to become industrious; to increase our production of works of utility and art, so that our country may grow in wealth. And should it be necessary for our national welfare that we should write and publish that which will be held by the Government as punishable, we are willing to brave imprisonment and fine so that we make so much known to our countrymen

REPLY.

(Nichi Nichi Shimbun.)

The writer of the preceding in the *Choya Shimbun* has fallen into the error of supposing that money is the only wealth of a country and that this is accordingly, only to be estimated by the coin in circulation. We do not think this is wholly so. Some hundred years ago a writer named Adam Smith lived in England, and prior to his writing on the subject of political economy it was very generally believed in Europe that the wealth of a country consisted in the money it contained, and they then had what they called the *mercantile system (sic in orig.)* But at the present day few are of this opinion. Money is of course a precious thing but that which provides us with food and clothing, the industrial arts, are also precious and these form to a large extent the wealth of a nation. We should be far from contending that we are a wealthy people. But as there are none of us who cannot

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

gain food and as our habits are industrious we do not deem our position so bad even though we should have but 4 *yen* per head to our population.

In the discrepancy between our coined and paper money we must admit that we feel some cause for apprehension We have, it is true, 40,000,000 *yen* of coined money but if we deduct from this 20,000,000 *yen* which we have exported, there remain only 20,000,000 *yen* and as our paper currency is 100 millions *yen* its value must gradually fall to a very low point. This would be a terrible calamity. I am therefore of opinion that there remain nothing to us but to reduce the pensions of the *Kidzoku*, to discharge useless officials, and in course of time to redeem our paper currency.

Our second grievance is the decay of our manufactures Of late many of the staple articles formerly manufactured in Japan have been imported from other countries, and our manufacturing interests are sorely injured by this. We think it would be well that the Government should prohibit this by the institution of higher duties, so that our native manufacturers should be protected against the foreigner. Again the wealthy *Kadzoku*, *Shidzoku*, and *Heimin* should combine their capital and with united industry establish manufactures in every *ken*. That we do not possess extensive steam-power matters but little. A proper division of labour is however essential. Thus in the production of cotton there will be six different operations; that of cultivating the shrub and picking, the cleaning, spinning, dyeing, weaving and shaping into garments and such labour should be divided among ten persons, or in proportion to the various subdivisions of the work. The celebrated Mill, an Englishman, wrote thus: "I have seen small manufactories employing ten hands. Some were stretching iron wire, some straightening it, others cutting it into lengths, others again sharpening it, while some fitted heads to it. Here it was polished while another set of hands rolled it in paper. In this manner 20 pounds sterling worth of iron was manufactured daily, and in order to earn one pound 4,000 needles had to be made; thus ten persons made in one day 48,000 needles among them. But for this subdivision of labour one man could not have made twenty needles, perhaps, indeed, not even one."

This is a powerful illustration of the value of subdivided labour.

COREA.

(Nichi Nichi Shimbun.)

[The following has reference to a Japanese naval officer's letter which we publish elsewhere We have somewhat compressed it]

We cannot believe the letter which we have published to be altogether trustworthy, for although we do not doubt that it possesses a foundation of fact it appears to us to be much exaggerated. How can it be presumed that war is imminent because certain envoys have returned? But while expressing our strong belief that the writer of the letter has somewhat strained the natural inference to be drawn from the events he may have witnessed we may assume the probability of the consequences he anticipates.

Should we (We should say to the Government), should we engage in war in the actual circumstances of our country we should be rushing into destruction. There are in this country some who are disaffected to the Government, and in the ranks of the *shidzoku* there may be men who would gladly fan the flame of civil war. Fortunately for us we were spared the general outbreak of seditious insurrection during the rebellion in Saga and the Formosan expedition. But Corea is an extensive country, and should war break out between us it will most probably obtain support from China, and such a war will not be concluded so soon as the Saga and Formosan affairs. It is alleged that we possess a powerful army and navy and that there could be no difficulty in conquering so weak a power. Even without this means of carrying war into an enemy's country we could not be expected passively to endure insult. How much less then with our powerful army and navy, when we have the means of chastising insolence The answer is that though even we should conquer our enemy our victory would be an empty it triumph. And in whatever light we may regard it we are satisfied that the best thing we can do is to remain at peace. The people have a distaste for war and the Government undoubtedly will decide in favour of peace. This is the impulse of our patriotic heart.

Such would be the tenor of our address to our rulers were the inferences drawn by the writer of the letter trustworthy. But we distrust them as before said, and we urge our readers and the Public to pay no heed to the disturbing rumours that may be brought to them on the subject of Corea.

A FREE PRESS.

Choya Shimbun.

Among the hundreds of people who meet together to discuss the questions of the day some eight or nine-tenths contend that perfect freedom of the press should be permitted. It would be monstrous to assert that that conclusions of the majority of people are absurd and as the Government has by recent acts denied us this freedon it must be inferred that it has at present in contemplation some profound policy which cannot be understood by a people so short-sighted as we are. We shall nevertheless venture to place our views on this subject before the Public and leave them to the judgment of the wise and learned.

The law for the governance of the book-press has already been promulgated by the authorities and has been duly notified to the people throughout the Empire. It provides that all new original or translated works must undergo examination by the Censorate before their publication can be allowed. But compared with the detailed regulations for the newspaper press its conditions are sketchy and ill-defined.

On the 28th, of last month the Government altered the existing newspaper law, at the same time publishing for general information the new law of libel. The revised law is certainly much more severe, while the book censorate remains of its former incomplete and sketchy character. Now in our opinion the book-press law should be made quite as rigorous as that under which newspapers are published. The examination of the work prior to publication and the loss of time of author and bookseller in trying to obtain leave to publish might thus be dispensed with, and if *zangen* or *soshiri* be inserted in it the offence may be punished in the manner laid down in the law of libel. Seditious incitement or *soshiri* comitted against the Government are provided for by articles 13 and 14 of the newspaper law and the use of an assumed, or concealment of the true, name is met by articles 6 and 8 of the same regulations.

By so recasting the book-press laws as to bring them under the same scheme as those appointed for the governance of the newspaper press much valuable time might, I conceive, be saved from the long and tedious prelude to publication which the author has now before him. It is therefore much to be wished that the Government should amalgamate press and newspaper laws under a single code, and cause this to be notified throughout the Empire.

There may probably be cases in which an author may have misgivings as to the legality of his book, and may desire to have it submitted to the book censorate before publishing. This privilege must of course be allowed to him, and if the work be found of a permissible character it may be printed as at present or in the other event prohibited. The Government would be spared the exercise of a tedious duty and the literary class would be largely benefited.

I am not quite certain whether in the event of an assimilation of the two existing laws an author could demand an examination previous to the publication of his book, and on this point I must submit to the judgment of others more learned than I am. But I trust that the Government may be pleased to act according to my views if they find them unobjectionable.

Commercial Schools.

(Choya Shimbun).

A gentleman thoroughly versed in imparting instruction in the elements of a commercial education it is said, is coming to this country from America to teach our young people book-keeping &c., and Messrs. Mori, Fukugawa and others are much interested in the success of the new undertaking. Takagi Tesaku who has long been under the tuition of the gentleman referred to has lately returned from America. He has opened a commercial school at Shinjukui chô in Yedo, but this is only a provisional school pending the establishment of a more important institution

* * * * * * *

Though a scheme of this sort be truly excellent if energetically carried out we fail to see the necessity for engaging a teacher from America for the purpose of instructing our people in book-keeping, &c. Boys who attend commercial schools in Europe are taught writing, arithmetic and book-keeping, and having perfected themselves in this are sent to some house of business where they have an opportunity of gaining practical proficiency in their acquirements. When a house of business is in need of the services of a clerk it communicates with the head of the commercial school, who first endeavours to find a suitable person among his own scholars. The youth selected is sent to the office of the firm and is at once able to gain a small salary. By and by, as he acquires experience, he may be appointed a manager or agent of the firm, and should he become possessed of the necessary means may at length become a merchant on his own account. However well versed a youth may be in the theory of book-keeping he will find something to learn, as each house has its own particular system of dealing with accounts; but having been well grounded it is not likely that this will give much trouble. Now though we in Japan should become very skilful in the European arithmetic and method of keeping books, and though the rules for our guidance in the latter should be so translated as to render them universally intelligible, it is highly improbable that employment for our young proficients could be obtained except from the National Banks or Maru Ya, since, with these exceptions, there are but few Japanese who have occasion for the services of a book-keeper. We are far from contending that commercial schools are useless or that the foreign mode of book-keeping is undesirable; but it must be borne in mind that until a complete revolution occurs in our mode of keeping accounts there can be little if any occupation for accountants skilled in the foreign method. The ignorant and superficial imagine that a few years study in a commercial school will be sufficient to protect them from losses in business, and that armed with this experience they will be able to command a profitable trade. It is for the purpose of warning them against this false impression that I have written my thoughts.

The Same.

A Reply.

A few days since a writer in the *Choya Shimbun* contended that the contemplated commercial schools would prove useless institutions, since, apart from a few banks and commercial houses, there were none who could employ the many young men they would turn out. We think this reasoning is inconclusive. The art of business is especially desirable in the education of *bunbos*. But besides these there is necessarily a great demand for competent accountants in the *Okurashô* (Treasury) and other government offices, besides the *Ken* and *Fu*. There are some government offices which require as many as a hundred accountants, while the smallest office could employ seven or eight. Exclusive of the employment which might be obtained from merchants it is probable that a thousand clerks could be easily placed. I therefore recommend all who may be desirous of acquainting themselves thoroughly with the first principles of business to go to school without paying heed to those who attempt to place objections before them.

The Same.

Another Reply.

It has been frequently said that as the Japanese are now so largely engaged in relations with foreigners they stand in need of practical acquaintance with the best mode of conducting their business transactions with care and judgment. But I do not for my part believe that there can be two different ways of money-making, one for Japanese and one for foreigners, although their manner of keeping accounts be so much more complicated than ours, and that they have the advantage of the telegraph to acquaint them with the condition of markets in Europe and America. Profit can only be made in one way. There must be among the foreign merchants some who resemble our Ki Bun* who displayed so much cleverness in acquiring a fortune. We may of course style him a shrewd man of business, though after all he was but a speculator upon an extensive scale, closely resembling our rice-brokers of to-day who usually end in the Bankruptcy Court. I will relate the following in illustration.

Between May and June 1869 the weather in England was unusually severe and rain fell heavily. The corn-merchants made large speculative purchases on the faith of a bad harvest, and in doing so naturally raised the market rates: they looked forward to the realisation of large profits. Now their calculations as to the harvest in England proved to be well-founded for the corn-crop was a poor one. But the American harvest on the contrary was bountiful. Wheat was cheap and was exported to England in such large quantities that the market there fell, and the speculators, who had held their purchases for a further rise in price, were unable to meet their acceptances and were driven into bankruptcy.

We Japanese are not singular in wishing to make a profit for ourselves; the foreigners are just like us. When a man is exclusively occupied with his own business interests he would not care for his brother; how much less, then, would he trouble himself about a foreigner?

Depend upon it that the foreign merchants in the open ports do not occupy themselves in thinking of our interests: they find sufficient to do in attending to their own. And for this reason I should recommend the merchants who may have business relations with them to beware of their cleverness and shrewdness in making a bargain.

ASIATIC SOCIETY OF JAPAN.

The third Annual Meeting of this Society was held at the Grand Hotel on Wednesday evening the 14th July 1875 at half past eight o'clock.

The chair was taken by Sir Harry S. Parkes.

The Minutes of the last two General Meetings having been read and confirmed, the Annual Report of the Council was then presented as follows:

Report of the Council of the Asiatic Society of Japan, for the Year ending July, 1875.

The Council have much satisfaction in reporting that the advantages have never been more marked or the progress of the Society more encouraging them during the past twelve months.

In evidence of this they refer to the fact that it has been found expedient to issue an extra number of the Society's Journal, containing Transactions, &c., up to the end of 1874. The contents of this, and of the supplementary number, which is about to to be issued are as follows:—

Itinerary of Two Routes between Yedo and Niigata by Capt. Descharmes.

A Description of the Coast between Oshima and Toba Harbour, and an account of an excursion among the Forests and Mountain Ranges of the Province of Yamato by Capt. St. John, R.N.

On some Japanese Legends; by C. W. Goadwin, Esq.

Observations on the climate of Nagasaki in 1872 by Dr. Geerts.

* Kinokuniya Bunzaemon, a skilful speculator who flourished about the year 1699 A.D.

Original from UNIVERSITY OF CALIFORNIA

Notes of a Journey from Awamori to Niigata, and a visit to the mines of Sado—by J. H. Gubbins, Esq.

Notes collected in the Okitama ken, with an Itinerary of the Roads leading to it, by C. H. Dallas, Esq.

On an Ancient Japanese Classic by W. G. Aston, Esq

On the Legacy of Iyeyasu by Prof. W. E. Grigsby.

On the evening preceding the Transit of Venus a valuable Lecture was delivered to a large and interested audience, by Professor W. E. Ayrton of the Imperial College of Engineering, at Yedo; and on the occasion of the visit of the *Challenger* to Yokohama, Professor Wyville Thomson favored us with a Lecture, in which he gave a resumé of the results, as far as ascertained, of the deep-sea sounding and dredging in which he had been engaged. Such Lectures are of great value, and deserve the best acknowledgments of the Society.

Another token of progress is seen in the fact that it has become desirable to hold Regular Meetings alternately at Yokohama and at Yedo, a request being made from the latter place that the sessions of the Society be held there as often as once a month; which suggestion the Council take this opportunity of bringing before the Annual Meeting for its consideration.

The pressing want of the present moment is a good, large Room—conveniently situated, and free of charge—in which all the Society's Meetings might be held, its business transacted, and its Museum and Library made accessible to members and strangers.

The Treasurers Report, herewith submitted, shews a balance in hand of $317.32.

The number of new members elected during the past year is 51 making the present number about 200.

The number of Exchanges effected with other Societies has much increased, and copies of the Journal have been sent by request to Trübners in London and also to New York, for sale.

The additions to the Library and Museum during the past year have been few—a fact much to be regretted. Some improvement, however, in this respect may be expected if the Society shall adopt the suggestion, which the Council now lays before the meeting, of increasing the Annual Subscriptions to $10.

The following is the Treasurer's Report.

RECEIPTS AND EXPENDITURE,

1st July to 31st December, 1874.

Dr.

To Balance in hand 1st July	$586.22
„ Subscriptions collected from 21 members at $5...	105.
„ Subscriptions to Library	5.
„ Amount received for sale of transactions ...	15.
„ Sundry receipts	1.43
	$712.65

Dr.

By Printing, Stationary, Advertising, &c. ...	$482.16
„ Books purchased	10.
„ Librarian's wages	20.
„ Grand Hotel rent of room, &c.	43.75
„ Cost of Cabinet for insects	12.
„ Diagrams, Professor Ayrton's lecture ...	32.42
„ Sundries	9.
„ Balance	103.32
	$712.65

31st January to 30th June, 1875.

Dr.

To Balance on hand, 1st January	$103.32
„ Subscriptions collected from 160 members at $5...	800.
„ Amount received for sale of transactions ...	6.
	$909.32

Cr.

By Printing, Stationery, Advertising, &c. ...	$214.
„ Books purchased	111.94
„ Librarian's wages	20.
„ Cost of forwarding transactions to London...	21.69
„ Rent of room at No. 28, 7 months at $20 a month	140.
„ Furnishing rooms at No. 28...	49.31
„ Grand Hotel, refreshments &c.	20.
„ Fire Insurance $40.0 to 20th April, 1876 ...	8.
„ Sundries	7.06
„ Balance	317.32
	$909.32

To Balance deposited in Chartered Mercantile Bank of India, London, and China ... $317,32

JOHN THURBURN,
Hon. Treasurer.

The following resolutions were then passed:

1.—Resolved that the Report of the Council be accepted, and the thanks of the Society tendered to the retiring officers.

Proposed by Professor Summers, seconded by Principal Dyer.

2.—Resolved that a Committee of ordinary members be appointed to take into consideration the present state of the finances of the Society and to consult with the Council concerning the same—the said Committee to consist of Mr. Cargill, Dr. Purcell, Principal Dyer and Mr. Thomson.

Proposed by Professor Grigsby, seconded by Dr. Wheeler.

3.—Resolved that the subject of holding semi-monthly meetings at Yokohama and Yedo alternately be referred to the same Committee.

Proposed by Mr. Aston, seconded by Mr. Wilkin.

4.—Resolved that the mode of electing the Council be considered by the above Committee and reported on at the next General Meeting.

Proposed by Mr. Wilkin, seconded by Mr. Thomson.

The Committee appointed to nominate the officers for the ensuing year recommended the following, who were unanimously elected.

President.—S. R. Brown, D.D.

Vice-Presidents.—Sir Harry S. Parkes, K.C.B., C. W. Goodwin, Esq.

Councillors.—C. De Geerts, Esq., J. C. Hepburn, Esq., M.D., A. J. Wilkin, Esq., W. G. Howell, Esq., Edwin Wheeler, Esr., M.D, David Murray, Esq., Ph. D., Rev. E. W. Syle, W. G. Aston, Esq.

Cor. Sec.—W. E. Ayrton, Esq.

Rec Sec.—John Y. Henderson, Esq., Yokohama; Professor James Summers, Tokio.

Treasurer.—J. Thurburn, Esq.

A vote of thanks to the Chairman having been carried unanimously the meeting separated.

Correspondence.

THE TERM *YATOI.*

TO THE EDITOR OF THE JAPAN WEEKLY MAIL.

SIR.—In your issue of the 10th instant I notice that you refer to the use of the word "*yatoi.*" Now I will tell you what I know about it. In the days of the Tokugawa dynasty of Tycoons the word came into use on a large scale in regard to the teachers of the Kaiseijo (now known as the Kaisei Gakkô) and was used to indicate men of scientific education, (both Japanese and foreign), being seldom applied to the ordinary officers. Terashima, now Minister of Foreign Affairs, was once a teacher in the Kaiseijo. The word is neither honorific nor is it impolite. There is a word—*hiyô*—which is used in the sense of employé of a low class; thus, for coolies &c—your correspondent probably thinks *yatoi* and *hiyô* are the same.

I am Sir,
Your obedient servant,
A JAPANESE.

Law & Police.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General.

July 12, 1875.

EYTON *vs.* COPELAND.

This was a claim for the sum of $300, being the price for 20 hhds. of beer sold by plaintiff to defendant on 12th March last with interest on said sum from 1st April last.

Mr M. Kirkwood appeared for plaintiff, and Mr Lichfield for defendant.

After a short opening statement, Mr Kirkwood called

J. L. O. Eyton, sworn:—I am the plaintiff in this case, and was manager of Mr Hegt's brewery. In March last there were 26 or 27 hhds. of beer in the brewery: part wds sold to our customers, and 20 hhds. to Mr Copeland. This beer was made of the best English hops and malt. The brewery was disposed of shortly afterwards. I had a 30 gallon cask of this beer. It was in first-rate condition. I met Mr Copeland about the 6th or 7th March, and he said that Mr Harryman had spoken to him about buying the remainder of the beer. I said I had no objection to sell it, if he would take the whole lot; but I would leave the selling of the beer to Mr. Harryman Mr. Copeland asked me if it was good beer. I replied that it would be better for him to go to the brewery and judge for himself. The beer was made from the very best materials, viz., English malt and hops. That was the subject of our conversation. These are the bill of lading and invoice for the malt and hops. [Papers produced] We paid $417 for the malt. I sold the remainder of the b er to our usual customers, and have received no complaints. It has been paid for. I received a receipt from Mr. Copeland for the beer. [Receipt handed in]. I sent in an account on 7th April for the beer and some hops, which I had sold to defendant. In reply to this, Mr. Copeland wrote that he would pay for the hops; but asking for time to pay for the beer, and offering to pay on the 10th July. [Letter handed in]. I sent in a separate bill for the hops. Some days after I received a note from Mr. Copeland, asking me to come down to the brewery. I went down, and was taken to an outhouse or shed, and shown the beer, and defendant said, "There is your beer; it is all spoiled Some one has been trying to do me a great injury." He said he did not know what had been put in the beer, but he strongly suspected it was urine. He said he would have the beer analysed, and prosecute the party he suspected. He then asked me if I would request Mr. Harryman to come up and see the the beer. That was all that passed. I never went there with Mr. Harryman. On that occasion there was nothing said about returning or not paying for the beer. The next I heard about it was on receipt of a letter on the 8th May, saying that the beer must be returned, as it would never be fit for use. [Letter produced.] I wrote him a letter on the same day, declining to take back the beer and asking for the promissory note. On Monday morning the 10th May, when I came down to the office, the boy told me that Mr. Copeland had brought the beer back during church hours on Sunday, and had put it in the compound, and left it: and the boy handed me a note [produced,] stating that he returned the beer, and would not pay for it. I then wrote him a letter, telling him that it lay there at his risk and expense. Only 18 hhds. were returned.

Cross-examind by Mr. Lichfield: It was only a general credit which was given. I have been manager of Hegt's brewery since it started, some five years ago. I have known beer go bad before, but not after the brewing is finished. The brewing was finished, and the beer was fit for delivery, when it was sold to Mr Copeland. I do not know if beer is fit for delivery before fermentation has ceased. This beer was brewed in February, but it was not all brewed at the same date. I know from hearsay that the beer which I had was of the same brewing as this. The plant at the brewery can brew 10 hhds. at a time. The beer was racked off into fresh hhds. after it was sold.

Re-examined: I have tasted beer from about a dozen of these casks, and the cask which I had was the same.

F. Harryman, sworn: I was brewer at Mr. Hegt's brewery in February and March. There were about twenty-six or twenty-eight hhds. there in the beginning of March; none was brewed subseqnently. The beer was brewed from English hops and malt. I met Mr. Copeland one day, and he came up with me to the brewery. He looked at 5 or 6 hhds., and tasted the beer. He said it was very good, and in good condition. Some of the casks had finished fermenting and were re-racked and bunged up. The others had finished working, but were not yet re-racked, Mr. Copeland tasted both descriptions of beer, and then left the brewery. Outside he said, "I will take all of that beer that is left, at the price agreed upon, $15 per hhd," He asked me to rack it for him, and send it down to his brewery. I told Mr. Copeland that the beer had been worked on the English system, and that in his place I should put some hops in it, bung it up, and put in a vent plug, removing it several times during the day to allow the gas to escape. The next day I had the beer worked. I tasted beer from several of the casks, and others who were there tasted it. It was all good. The remainder of the 26 hhds. were sold to the customers. I sent a 36 gallon cask to Mr. Eyton. There were four different brewings of this ale, but it was all very similar. I called in at Mr. Copeland's brewery about a month afterwards. I found the beer muddy, and working, and I said that I could not account for it. Mr. Copeland said that some one had been trying to do him an injury, and he thought had put urine in the beer. He said nothing about non-paying or refusing the A brewer should inspect new beer at least every day, in some stages oftener. I do not think that a brewer could have bad beer on his premises for a month without knowing it. I found all the bungs out of the casks.

Cross-examined.—It is usual to inspect beer in store every day. Beer rarely goes bad after the fermentation. The time of fermentation depends, generally about eight days. Beer does not generally ferment after it has been re-racked. Beer would not work from imperfect wood in the casks, it would go sour. I have been nearly eleven years in the brewing trade, nine years in England and two here. I was not at Alsopps when the beer went bad one year. I saw Mr Copeland in the settlement before he inspected the beer. I spoke to him about taking the beer from us as we were closing the brewery, and it would be a good opportunity for him. He said if the beer was good he would take it. I told him to come up and see it. I told him that the beer was good. When he inspected the beer he said that it was as good beer as he had seen. The beer was afterwards re racked by me. I delivered the beer to Copeland the day after it was re-racked. Mr Eyton was supplied with beer from the fermenting casks that had not been racked. When I saw the beer the bungs were out of all the barrels. When I saw it it was dirty and working and I thought that new beer had been put with it and had caused it to referment. It is not customary for brewers to have beer returned on their hands when bought by sample, but if an order is sent for beer and it proves to be bad, it is liable to be returned.

Re-examined.—At home beer is generally returned at the end of a fortnight, but there is no custom. If found bad, the beer should be returned at once. The casks in which this beer was placed were all sound sweet casks.

E. Wiegand sworn.—I am a brewer, I have been one for 27 years. I remember Mr. Copeland being in Mr. Heght's brewery last March. There were about 27 or 28 hhds. lying there. I saw the beer racked off by Mr. Harryman, I was present, I saw the casks in which the beer was placed. They were sweet and good and were well scalded out. I tasted beer from about 20 casks there. The beer was good I drank some of the remains of the beer that was left. It was good. The beer was fit to rack and send away when I saw it. If I had bought this beer I should have racked it and put some hops in it and then had it bunged it up and put in a cool place, I should examine it every two or three days, I should find out in a few days if beer on my premises was bad. Beer would not ferment again after a month's time unless something was done to it. I saw the beer lying in Mr. Copeland's premises alongside the premises. The bungs were out. I should think the stables might affect the beer. Mr. Copeland did not say anything to me about the beer. The barrels were about a foot from the ground.

Cross-examined.—The barrels were on a wooden stand. I saw a row of hhds. lying there and I knew the barrels. I did not count them. I did not see any of Mr. Copeland's beer in that shed. When I saw them the bungs were out. I have taken Hegt's brewery. I took over the plant and everything just as it was; my lease is from the 2st March. I took possession on the 2nd March. After I took possession I went down in the cellar with Mr. Copeland and Mr. Harryman to inspect the beer. I would have bought the beer but it was in my way, because I wanted to make alterations in and repair the cellar. I told Mr. Copeland I was obliged to him for moving it out of my way. When I took possession all the plant in use was in a good state, but the unused plant was bad.

This was plaintiff's case.

Mr. Lichfield then called

W. Copeland, sworn: I am a brewer, and occupy the Spring Valley Brewery. I have had five years experience in brewing and during

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that time have been very successful: I bought the beer from Mr. Eyton on Mr. Harryman's word that the beer should be good and sound. About the 6th March, Mr. Harryman came to me and said that there were about 30 hhds. of good beer in the brewery, which it would be a splendid chance for me to buy as Mr. Wiegand would not take it over. A few days afterwards he came to me again about the beer. I had not seen Mr Eyton. On the 9th I went up with Mr. Eyton to look at the beer. The second time when I saw Mr Harryman, he asked me to come and look at the beer. I went with him to the brewery the next day. He then told me that the beer would keep two years. We then sampled the beer, but it was not in a fit state as it was still working. I looked at the beer and told Mr Harryman if he would guarantee it good beer I would take the lot. He guaranteed that it was good. On that I agreed to take it and asked Mr Harryman to send it down. The beer was delivered on the 14th. I had no idea when the beer was going to be sent to me. When it came I put some in the godown, some in the cellar, and some in the shed. It was not all put in the same place. There were hundreds of casks of beer of my own brewery in these different places, none of which had gone bad. The beer was placed on skids and forty eight hours after the beer was delivered, on going into the cellar, I found that two of the bungs had flown out, and afterwards I noticed that the heads began to bulge. After that I left the bungs in for some days but finding there was so much yeast in the beer I had all the bungs taken out. The beer in all three places showed the same symptoms and at the same time. I had done nothing to the beer I merely thought it was too green, I did not think it would go bad. I do not know that any body tampered with the beer. I first wrote to Hegt's people about it on the 9th or 10th April about three weeks after I received it.

During this time I was waiting for it to finish working but it got daily worse, and I sent it back to Mr. Eyton's go-down, I only sent back 18 hhds. I had used half of one of the other casks to fill up the hhds as the beer worked and the other one and a half casks I had mixed with my own beer and it turned 8.00 galls sour. I sent out some of this to my customers but had to take it all back again and was not paid for it. I have not treated the beer at all.

Cross-examined.—I have not treated the beer at all, I always cleaned the bungs and put them back again when they flew out. I have always men working in the brewery. When I went to the brewery I only tasted two glasses, that was green. I did not see any beer racked off. All beer must be racked off before it is sent out I told Mr Harryman to rack it off I have brewed beer here on English principles. I first learnt to brew in Yokohama. I was not at my brewery when the beer was delivered but it was there when I came home in the afternoon. The beer lay in my yard till the morning, when I rolled it up on the skids. I have had bungs come out before, and I always let them lay out. I put these in because Mr Harryman told me it was the custom in England. I did not discover the beer was bad until the 9th April. I had not tasted it until then. When Mr. Eyton came I told him that the beer was spoiled, but I did not tell him either that I would return it or that I would not pay for it. When Mr. Harryman came up he could not account for it and I told him that if it was not better I should not keep it. I used the half hhd. for filling up the other casks from the 9th March. I had the beer analysed. Mr. North told me that it was acid and going sour, but that he could not find anything in it. Mr. Harryman told me how to treat the beer, but I did not treat it at all. Up to the 8th May, I did not repudiate the beer. It was only analysed shortly before I sent the beer back. When I say 'shortly' I mean about a fortnight.

The two Counsel then addressed the court on behalf of their respective clients.

Judgment was reserved.

July 14, 1875.

The following decision was this morning rendered in the above case:—

This is an action brought to recover $300, the value of twenty hogsheads beer purchased of plaintiff by defendant, and delivered on the 14th March last.

There is no dispute as to the fact of the purchase, the delivery, and the price agreed upon; but it is shown by the evidence that in a short time after the beer was received by the defendant it began fermentation anew, and finally turned sour and became useless. This fact, however, was first communicated by defendant to plaintiff about a month after receipt of the beer, and after plaintiff had twice presented his account and been promised payment; and it was not until the 8th May, nearly two months after the purchase, that defendant claimed a right to return the beer. The defendant states that the agent of the plaintiff, on seeing the beer, guaranteed it to be in excellent condition, and that it would keep for two years. This is denied by said agent, who says he represented the beer to be in good condition, but gave no sort of guarantee as to its keeping properties.

The evidence shows that the beer was carefully examined and tasted before the purchase by the defendant himself a brewer, and by the witness Wiegand, also a brewer, and was by both pronounced to be in excellent condition.

It would appear from this that the condition of the beer was good when sold, but that neither the plaintiff nor defendant were able to judge whether the same would continue good and sound for a reasonable time, as neither are now able to say, what was the cause of its souring.

This being the case, it was clearly the privilege of the defendant to demand, at the time of purchase, an express warranty of the keeping qualities of the beer to protect himself against the possibility of its spoiling. Failing in this he took it upon his own risk, unless he can show fraud on the part of the plaintiff, and of which there is no pretext.

The judgment of the Court therefore, is that the plaintiff recover of the defendant the sum of three hundred ($300) dollars being the contract price of the beer, with one per cent, per month from the 29th day of June, the date of the commencement of this action, and costs of suit.

THOS. B. VAN BUREN,
U. S. Consul General.

H. B. M.'S CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq., Consul.

July 17. 1875.

James Taylor, James Smith, and Archibald Greenshields, three seamen of H. M.'s S. *Audacious*, were charged with resisting and committing a violent assault on the police.

Prisoners, when asked to plead, said they had a great deal to say.

His Honor said he would hear their statement in due course.

Sergeant Percival, sworn: Yesterday, about 1 p.m., I received an order from the *Audacious* to arrest 11 men, and I and a constable went down town and found two of them; then we went to the Spring Valley Brewery Gardens, knowing that four of the men were there. As soon as I spoke to them about going on board, they said they would be taken by no man. They had the four sticks I now produce. The fourth man did not resist; he only tried to get away, and I sent him on board. I tried to arrest one of the prisoners, and they all then set on to me. I received a number of blows with the sticks,—one on the mouth, and the others on my body, My left arm was broken Greenshields threw a large stone at Mansbridge, the constable. My arm became very painful, so I took a jinrikisha and went back. Constable Mansbridge then got the assistance of the Japanese police and arrested the prisoners, and brought them to the police station, where they were put in cells in irons about 3 o'clock. Whilst in the cells they tore up a platform for sleeping on. Dr. Eldridge has pronounced my arm broken. It is to be set to-day.

To Greenshields: You deliberately threw the stone at Constable Mansbridge. You all struck me.

J. Mansbridge, sworn: Yesterday, about 12 o'clock, the sergeant told me to go out with him, and catch some of the seamen of the *Audacious*, who had broken their liberty. Went down town and arrested two of them in a public house. We went from there to the Spring Valley Brewery, and saw the three prisoners and another seaman named Barton. Barton we sent on board. I told prisoners they would have to go on board their ship. They refused, and picked up the sticks produced. They came out of a summer house and struck the sergeant several blows. I received a blow from one of them, but I could not say from whom. I told the sergeant to go away, and I would get the Japanese police to help. Prisoners then came out of the brewery, made a noise, and struck the sergeant again, when his arm was broken. I arrested them in the end at the top of the camp. Greenshields threw the stone at me. I took the prisoners to the Bluff police station to get more handcuffs as I had only two pairs with me. They said they could not walk, so I got jinrikishas and took them to the head police station, where they broke up the floor of the cells, and made noise. I think they had had some liquor.

Prisoners had no questions to ask, and His Honor remanded them till Monday morning, at 10 o'clock.

Helm, Hauson, Isk and servant, Inouye and servant, Ishetsi and servant, Kobayashi and servant, Watanabi, Floyd and servant, Kuki, Tad Sing, Nakamura, Takachi, Three Japanese officers, Mr. and Mrs. Knipping, child and servant, Mr. and Mrs. Date, Mr. and Mrs. Hirose, Mr. and Mrs Hosokawa, Mr. and Mrs. Sunoni 2 children and 2 servants, Mr. and Mrs. Midzuno and servant, Messrs. Saga and servant, E. E. Mason and servant, B. H. Chamberlain and servant, Fukudia and servant Murata and servant, P. S. Dowson, Ojimé, Fukada, Murata, J. Braga, Araki and servant, Masuke, and 314 Japanese in the steerage.

Per American steamer *Golden Age*, for Shanghai and ports.—Rev. W. M. Cooper, Mr. and Mrs. Illies, Mrs. Middleton, Messrs. Wilmoski, Fileston, Seward, Burchard, Loveat, and 22 Japanese, in the cabin; 210 in the steerage.

CARGOES.

Per *Bombay* from Hongkong:

Sugar	4,207 bags.
Sundries	963 packages.

Per *Nevada* from Shanghai and ports.—Treasure $2,200.00.

Per *Volga* for Hongkong.—

Silk for Marseilles	9 bales.
„ London	7 „
Total	16 bales.

Per *Tokio Maru* for Shanghai and ports.—Treasure, 10,600 *yen*.

REPORTS.

The *Jessie M'Donald* reports having spoken the *Oleander* and *Satsuma* in Van-Dieman strait: both vessels from London for this port

During the passage of the *Satsuma* from London to this port, on the first day of April at about 11.30 a.m., while the chief mate was engaged in repairing a piece of chain belonging to the head gear, he fell off the jib boom into the water, and although a good swimmer, and the weather fine, with only a light air of wind at the time he was unfortunately drowned.

One of the crew threw the end of the foresheet to him, and on its not reaching him a sail maker's bench was thrown over board, which he got hold of, in the mean time the captain having put the helm down to bring the vessel round, a boat was got out, but by the time it was in the water, the man was nowhere to be seen, the bench was picked up however.

From the report of the crew, he could not have been stunned, having spoken to the man who thew the rope to him; and the supposition is that he must have been attacked by a shark, a large one having been seen about the vessel that day.

The *Satsuma* at the time was near the Island of Tristan D'Acunha in the Atlantic. The deceased was named Thomas Harris, a native of Poplar, aged 32, and has left a widow and child residing in that place.

H I. R. M.'s *Askold*, bearing the flag of Admiral Bremmer, left the harbour this morning for Nagasaki, where the Admiral will haul down his flag, and hand over the command to his successor. On passing the German frigate *Hertha*, the *Askold* was saluted with thirteen guns. The salute was returned by the *Askold*.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

ROWLAND'S ODONTO 2/9

WHITENS, PRESERVES, AND BEAUTIFIES THE TEETH, PREVENTING THEIR DECAY.

ASK ANY CHEMIST OR PERFUMER FOR ROWLAND'S ODONTO. AND TAKE NO OTHER.

ROWLANDS' MACASSAR OIL

Is the best and safest Restorer and Beautifier of the Human Hair. It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandriff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 5d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. CAUTION—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipeint decay, and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS. Price 2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling and purifying it eradicates all Cutaneous Eruptions and Discolourations. Price 4s 6d. per bottle. ROWLANDS' ESENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Back, which colour remains so durable that neither washing or perspiration can remove it Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES."

„ No. 4 Kook-fah	„	5.90 to 6.50	Kerosine Oil	per case	2.80 to 2.95

EXPORTS.

Silk.—Last year arrivals from 1st to 16th July were 225 bales; this year they barely amount to 75, a few of which only are new silk.

So insignificant are transactions since the 1st instant, that comments on quality, and price of the new staple must be postponed till the season opens in good earnest. Everything seems to point to a late opening this year.

The greatest uncertainty still prevails as to the probable supply of silkworm's eggs for this season.

Tea.—Our market has been rather brisk for the past week, settlements amounting to 4,300 piculs. Rates were rather stiffer after the departure of last mail but to-day close quiet.

The arrivals since the 10th instant, amount to some 7,500 piculs, and stocks on hand are now about 12,000 piculs.

The general character of teas shewn is rather inferior, and far from equalling average quality offering at the same date last season.

The *T. A. Goddard* has obtained a full cargo for New York direct, and will have fair despatch. Current rate of freight £3. per 40 cubic feet.

Common	$20.00 to 23.00	Fine	$35.00 to 37.00
Good Common	24.00 to 26.00	Finest	38.00 to 40.00
Medium	27.00 to 30.00	Choice	50.00 very scarce
Good Medium	31.00 to 34.00		[and quotation nominal.

EXCHANGE AND BULLION.

Exchange.—Sterling rates shew a further sharp decline, with only a moderate business doing in either Bank Bills or Private Paper.

Gold Yen are again quoted higher, but hardly any transactions are reported.

Rates close as follows:—

On London, Bank, 6 Months' sight	4s. 1 1-16d. to ⅛	On Hongkong Bank Bills on demand	⅛ per cent. pre.
„ „ Bank Bills on demand	4s 0 15-16d. to ⅛	„ „ Private Bills 10 ds. sight	⅛ „ dist.
„ „ Private, 6 months	4s. 1 1-16d.	„ San Francisco Bank Bills on demand	98½
„ Paris, Bank Bills 6 months	5.20	30 days' sight Private	102
„ „ Private	5.30	„ New York Bank Bills on demand	98
„ Shanghai Bank Bills on demand	73	30d. s. Private	102
„ „ Private Bills 10 days sight	73½ nominal.	Gold Yen	206
		Kinsatz	416½

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d, 10d., 1s., 1s, 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s, 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 1s, 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s, 15s, and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 30.] YOKOHAMA, SATURDAY, JULY 24, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 21st July, at 3 a.m., at No. 159A., Mrs. S. C. PASS, of a daughter.

Notes of the Week.

The following better has been addressed by the Prime Minister to the assembly of nobles recently convoked.

Last year you bound yourselves by a common vow to establish your Assembly, to take deeply to heart the kindness of the Imperial instructions to you, and to discharge to the utmost of your ability your duties as nobles. This was truly a matter for congratulation, and if the nobles had striven zealously to realize the practical results of such a resolution, it would have been indeed fortunate for our country.

Since that date, however, the meetings have been but scantily attended, and I have not learnt that any definite plan has been formed for accomplishing these results. Some, while agreeing with the objects of the Assembly, have gone elsewhere, others who agree equally with them, stand by almost like mere spectators. It does not seem as if any notice were taken by them as to whether the Assembly was in a state of prosperity or decay—or whether it was being established or abandoned. If such indolence and negligence continues, what is after all the good of your Assembly? Saneyoshi's former rejoicing is turned into sorrow. He is prevented by the pressure of his important duties from attending the Assembly frequently himself but he cannot forget it by day or by night. He hopes that the members will commit to writing and communicate to him their plans for discharging the functions of the Assembly together with their views as to the means of increasing its activity for the future. He will aid you in your endeavours. Do ye all give due consideration to these words.

All the evidence points to the suspicion not that the Assembly has in any way been uncompliant to the views of the Government, but that its members have not the necessary force of character to discharge their duties with any real advantage to the country. No one who reflects upon the part played by the great nobles at the revolution of 1868 can fail to make a low estimate of their average personal power, and their present conduct confirms this view. What the country really wants is a man of genius, born in the purple, and who will do for Japan something like what Alfred did for England, Peter for Russia and Frederick for Prussia.

WE have the best reason for thinking that the report that this country is likely to be involved in war with Corea is without solid foundation, so that the newspaper articles and paragraphs which have appeared on the subject are merely misleading. Certainly there is no ground for regarding war as imminent, though the relations between the two countries may not be of a satisfactory nature. We may be quite certain that after recent experiences of the expense entailed even by so small an Expedition as that of last year to Formosa, Japan will not undertake one which would cost her ten times as much, unless it is actually forced upon her by circumstances which forbid any other course, and it is most ardently to be hoped that no such circumstances will arise.

WE should be the last to withhold our tribute of admiration from Mr. Akiyama Tsnetaro for resigning his position as supervisor of the Press, rather than carry out the laws recently promulgated for its regulation. But his act is of course not the slightest evidence one way or the other in regard to the wisdom of those laws. It is wholly impossible that a question so complicated as that of the relations of the Press to society should have received that study from any Japanese, be he who he may, which can make his opinion upon it of much value. It is even observable that no foreign writer on the subject who has denounced these laws has given the smallest shadow of a reason for doing so. Englishmen, whose struggles for liberty during six centuries have given them a free press as the crown of those liberties, imagine that because it is a precious thing for them, it would be a wise thing for all nations in whatever conditions. The words "Free Press" constitute a formula by means of which they solve a number of their own national problems, and they imagine that if put into the hands of others it will perform the same offices. In our opinion, and for reasons we have fully given, we hold this to be a complete delusion. To suppose that any one who has the responsibility of acting upon this question will be deluded by the mere cry of "Free Press," excellent formula though it may be for ourselves, is absurd, especially when this cry is absolutely unsupported by one relevant argument from history. Englishmen prize, and rightly prize, their liberties above all their possessions, and would delightedly see the same boon conferred upon, or won by, the rest of the world. But some of them at least also know by experience, or the teachings of history, that liberties conferred upon those who do not know how to use them are mere translated forms of fire, sword and rapine. It may even be doubted whether liberties given are ever of service to nations on whom they are bestowed. They must be won, and the education for the just use of them comes with the process of winning. Of course it is easy to raise an applauding shout by crying "Free Press, Free Press;" but it is far better that liberties should be delayed until there is some guarantee that they will be rightly used, than that the most sacred of all causes should be associated with excesses which not only bring it into disgrace, but delay its ultimate triumph.

IT is said that the Satsuma officials have sent in a Memorial to the Throne expressive of grave dissatisfaction with the present condition of affairs, and complaining specially of the formation of the *Genroin*, a body which they regard as useless and unnecessary.

IT is impossible that the public should be satisfied with—possibly we shall better express the general condition of feeling in regard to the case by saying, feel comfortable under,—the result of the trial of King, recently convicted of

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

a criminal assault upon a Japanese girl. The letter of the prisoner's Counsel published on Thursday evening demands careful attention, and confirms the strong opinion expressed in our article of the 19th June, that in view of the presence here of a trained judge, the constitution of the Court by which King was tried is of as unsatisfactory a nature as can possibly be conceived. Mr. Dickins forcibly points out that the Vice-Consul, before whom the preliminary examination took place, and who drew up the indictment, sat as Judge upon the case, and says that "the depositions of the two principal witnesses—the complainant and her mother—consisted as much, or nearly as much, of answers to questions put by the magistrate (a majority of which seem to have been leading questions) as of answers to the interrogatories of the prosecuting counsel." He proceeds to show that the cross-examination of Japanese witnesses is "little more than a farce," owing to the various hindrances by which it is beset; and reviews the grounds on which it is impossible to put ordinary Japanese evidence on the same footing as ordinarily intelligent and respectable European evidence. One conclusion may certainly be drawn from his letter, viz, that under such circumstances a case like that of King can only be dealt with satisfactorily by a trained and competent judicial authority, and we cannot cease to regret it was not so dealt with. With the morality of King's intentions or acts we have nothing to do. The whole question is, did he, according to English law, commit the crime of which he was convicted? The answer given by the court which tried his case may or may not be the right one; but we hold that the constitution of that Court, though formal enough under the order in Council, was not such as to earn a respect for its decision, whichever way that decision might go.

A vigorous protest against the recent press-laws will be found among our translations. The Government has not been clever in its management of this whole question, though this can hardly be wondered at, seeing that it was dealing with an altogether new force. It first made a number of rather loose laws under which the Press worked up to the date of the promulgation of the late code. It would have been better had the late code come first. Then a great mistake was made by excluding the Press from the meeting of the Assembly of provincial governors, as we pointed out at the time; and the Government brought out the new code just at the time when the Press was irritated by this exclusion. Now nothing can be worse than for the Government to regard the Press as an enemy, or to make an enemy of it. However necessary the late laws may have been in view of the abuse of liberty which the Press exhibited, and which would of course have increased rapidly until serious mischief might have been done, if the Government is wise it will regard the Press as a friendly force in the guise of an enemy, and act accordingly. The error of doing otherwise has been shewn all over the world, and in England as much as elsewhere, though we have happily outlived this period. But the fact should steadily be borne in mind that the wise or unwise management of this question will bear corresponding fruits, and that the disposition and tendency of the Government should be to give as much, not as little, liberty as possible, and this must be given gradually. Had it been possible to argue for greater present liberty, with the least approach to a conscientious conviction that it could be safely granted, we should have been second to none in urging its concession. But we are entirely convinced of the mischievous and fatal tendency of any such gift *at this moment*, and firmly believe that an unregulated press would bring this Empire to ruin in five years.

Captain Douglas, late Director of the Imperial Naval College in Yedo, was honoured with an interview by H. M. The Mikado on the 22nd instant. His Majesty addressed Captain Douglas as follows:—

Some time ago in consequence of a request made to your Government we invited you to take the position of Director of our Naval College. Since then you have discharged diligently the duties devolving upon you, and it is due to you that the studies of the cadets have reached their present state of progress. We have great pleasure in heartily commending this result, being as it is the basis of the development of our Navy.

You have announced that you wish to resign this office, and return to your country. We therefore offer you a few of the productions of Japan as an acknowledgment of your services and we wish you every happiness in your future career.

Captain C. W. Jones, a retired Commander of the Royal Navy succeeds to the post vacated by Captain Douglas.

With the letter which we publish this week on the questionable taste of using the word *yatoi*, we shall permit the subject to relapse into the limbo from which a correspondent withdrew it. It is to be hoped that the object with which it has been ventilated may not be altogether fruitless in result.

The *Pall Mall Gazette*, we observe, devotes an article to the popular religion of this country, based upon Mr. Satow's essay on the "Revival of Pure Shintô" which appeared in this journal last year, to which it awards high praise.

The *Adventure*, with the Battalion of Royal Marines from Yokohama, arrived at the Cape on the 28th April. Sir Garnet Wolseley has, it seems, decided to send on the Battalion to England.

We publish this week the tables intended to accompany the Consular Trade Report of Hiogo. The Ôsaka tables will appear next week.

From the "Japan Mail Daily Advertiser."

THE *Chikuhokuan Kuaigi*, which has now been for some weeks sitting, was closed by H. I. Majesty on Saturday, the 17th instant, with the ceremonies which attended its inauguration. His Majesty addressed the following speech to the members of the Assembly:—

We are glad that your deliberations have been conducted conscientiously.

We shall in due course, and after consulting with the *Genro-in*, consider the recommendations which you have drawn up for our information and approval, and will take action thereon.

Return, now, to your respective offices and discharge your duty to the State industriously.

The extreme heat of the weather is found to affect the jinrikisha men severely. Two men fell down dead, apparently from sunstroke, on Saturday last in Yedo and a death from the same cause is reported to have occurred at Homoko. In the latter case the indifference usually shewn to the dead was strikingly displayed; the body was permitted to remain for some time at the road-side, during which the little clothing the dead man had possessed was taken away.

A daring attack was made on Saturday night, on a small cottage on the river bank at Kawasaki, occupied by Mr. Balaam, bridge-keeper in the Government railway service. A party of thieves, six in number, armed with swords, presented themselves at the window and demanded admittance, but Mr. Balaam prepared his house for a siege, and while carefully guarding himself awaited an opportunity to put his assailants to flight. His revolver was out of order, but he fortunately possessed a musket which enabled him at length, and after enduring a siege of some hours, to rout the robbers. The report of the fire arms would not seem to have been heard by the neighbours. Mr. Balaam has not sustained any injury.

ALL those persons who were tried some four or five years ago for the murder of Hirosawa, a *Sangi* have been acquitted. One of the party confessed to the crime on the application of

torture, but his innocence having been since established he also has been set at large.

We read in the *Hochi Shimbun* that some twenty-five of the deputies, who accompanied the Governors of their respective *ken*, remain in Yedo for the purpose of learning the decision of the *Genro-in* to their memorial respecting the mode of representation.

A report from Ichinoseki, a town in the province Rikuzen, states that on the boundary of the provinces of Sendai and Mogami a terrible catastrophe has just occurred. A violent disruption of earth and rock took place at the foot of the Kamurogadake mountain, whence issued a torrent of water destroying all the people who were using the hot springs at the time. Thirty corpses and one horse have since been dug out. The village of Hiyate in the vicinity, the *Nichi Nichi Shimbun* adds, was also carried away. The loss of life was great but cannot yet be accurately determined.

An alarm of fire was raised at shortly after four o'clock a.m. on the 18th inst. on smoke being observed to issue from the premises of Messrs. Batavus & Co., ship-chandlers, &c., No. 31, Water Street. It was some little time before the engines arrived and a proper supply of water was available for their use, and in the meantime the fire, fed by the combustible material stored within the building had obtained such hold as to defy all attempts to extinguish it. Shortly before five the roof fell through and the flames were got under. The front portion, or store, contained ships' stores, paint, oils, &c. nearly all of which have been destroyed or rendered valueless. The rear of the building was occupied by Mr. Batavus. The fire would seem to have broken out in the upper portion of the store, although its origin cannot be determined, and Mr. Batavus is disposed to trace it to some oiled clothing. He states that he returned home at an early hour this morning but that he observed nothing unusual. We are sorry to learn that his loss is insufficiently covered by insurance.

A correspondent of the *Choya Shimbun* relates the following trait of the independent spirit of a certain Akiyama, an officer of the *Mombusho*. He was employed, it would seem, to examine the new publications, but exhibited in this office a strong desire to see the press freed from all restrictions. On the promulgation of the new press-laws he resigned his post, feeling, concludes the correspondent, that he could not conscientiously execute them upon recalcitrant journalists.

A temple of note named Yengioji at Hakata in Fukuoka *ken* was burned on Sunday the 18th instant.

The *Choya Shimbun* says that on the 18th instant, Nakashima of Kanagawa *Ken*, Shibahara of Chiba *Ken*, Fujimura of Yamanashi *Ken*, Watanabe of Osaka *Fu*, Kusumoto of Niigata *Ken*, Nakano of Yamaguchi *Ken*, and Watanabe of Fukuoka *Ken*, members of the *Chikuhokan Kuaigi* received orders from the government to remain at Tokio for some time.

It is not so long since we had to point out the ill-usage that our language meets with at the hands of the Custom House people. The following may be read upon a new notice board at the French Hatoba and requires the help of the French translation to render it intelligible.

"No body allowed to passon a jinrikisha carriage sedan or horse-rack except cart.

"Custom House."

Il est defendu De Passer en voiture en Ginrikicha Chaise a Porteur et a Cheval. Les Chariots De Bagage Seuls sont Permis De Passer.

Douane.

The first of the series of promenade concerts held on the 20th inst. at the Public Gardens afforded much gratification to its audience, the heat of the day having given place to an agreeable southerly breeze which admitted of the thorough enjoyment of performed a selection of instrumental music with spirit, and some glees and part songs were sung with such pleasing effect as to secure more than one demand for repetition. The success of the first of the series bodes well for those which are to follow.

The tenour of the following notice may probably be guessed. It may be found posted upon a dyke, which is now under repair, between Satte and Kurihashi.

"About cockeding *(sic)* a new bank. A circuitous road."

The festival of the *Kawa-biraki*, or opening of the river Sumida in Yedo, which was celebrated on the evening of the 20th instant was more brilliant and more largely attended than any of its predecessors for many years past. The festival marks the beginning of the *do yu*, a period of 21 days corresponding with our dog days, and celebrates the ancient custom of the heat-worn citizens of exchanging their dull and sultry streets for the cool airs and gay enlivenments of the metropolitan river. The custom has been observed during the memory of man, and though for the past two or three years the weather had shown itself unpropitious and thus diminished the number of visitors, the crowds which thronged the river and its banks on Tuesday night testified to the hold which the festival has obtained upon the national mind and to the undiminished attractions of its accompaniments. Nothing, truly, could be brighter than the scene presented near the Riogoku Bashi as the hour for discharging the fireworks drew near. On either bank crowds of merry-makers thronged the tea and dwelling houses, lighted with thousands of gay-coloured lanterns, which line the margin of the stream, while the river was alive, and in the vicinity of the bridge was almost impassable, with the closely-packed mass of boats which had come together. The water blazed with light, and gay laughter, intermixed with the tinkling strains of the *samisen*, might be heard on all sides. For many years no such scene has been presented as that of Tuesday night, and the order and good humour of the people must have impressed the many foreigners who were present at no unimportant characteristic of its spectators. The fireworks demand no special notice. They consisted of the usual array of catherine wheels, rockets, roman candles and set pieces displayed from the Riogoku Bashi. This began at about nine o'clock and at half-past ten the amusement had ended. Then ensued a débâcle of the boats which were skulled homewards to their several destinations, the spectators on the banks sought their *jinrikishas*, and the river slowly resumed its accustomed silence, broken only by the laughter of some persistent revellers who carried far into the night their pleasant celebration of the *Kawa-biraki* of 1875.

THE CESSION OF SAGHALIEN.

THAT a certain sense of relief is found in the settlement of a question which has irritating features, and which has long been an open one, is the only ground on which the Japanese can be congratulated on the cession of the Island of Saghalien to Russia. It is true that in securing the Kurile Islands in exchange, they obtain a certain compensation; and that if the national pride is somewhat wounded by the loss of the larger territory, it is soothed by a *quicquid pro quo*. But there is something unpleasant about the incessant encroachment of a neighbour who possesses, in that perfection which only comes with long practice, the art of swallowing up everything in his proximity, either under the plea of manifest destiny, or the veiled demands of obvious interests. At the risk of being charged with flippancy in the consideration of so grave a question, we may illustrate the recent transaction by the following anecdote. A little boy at a fair was wondering at the huge bulk of an elephant, whose intelligence was greatly praised by his keeper. To test this the youth was told to place a coin in the trunk of the animal, and had the satisfaction of seeing it immediately deposited in a box placed at hand for the purpose. Delighted and satisfied with the exhibition, the boy requested that the elephant should now return him the coin, when the keeper replied that that part of the creature's education had not been pursued. By the treaty made in 1867 between Russia and Japan it was mutually agreed that the Japanese should go as far north in the Island as they pleased, on the condition that the Russians had the same liberty to go southwards. The concession to the Japanese was of no earthly value. There was nothing to go northward for. Every fresh mile thitherwards took them farther from their base, while the country to which it led them was more and more barren and inhospitable. To the Russians it was precisely the reverse. True, it took them from their own base at Nicolaiefsk. But it led them towards an open southern port, a more genial climate, a less grudging soil—possibly towards stores of coal of exceeding usefulness to a power with a squadron in these waters. The results could easily have been foretold. The Japanese were gradually edged out of the Island. It is not difficult for the joint occupant of a house, who has an obvious interest in forgetting the provisions of his lease, to make the relations between himself and his fellow-occupant so unbearable, that the latter retires in disgust and places the affair in the hands of his lawyer. The offending party is left in possession, and can easily weary out his victim with those delays which enable him eventually to arrange matters on his own terms, especially when there is that disparity of muscles and means between them which exists in the case of Japan and Russia. Yet, it must be confessed, that if Japan has lost Saghalien, she owes it to the treaty of 1867, and to her inexperience of the inevitable result of a joint occupation of such a territory with a power so bent as is Russia upon territorial aggrandizement. It is true that Russia found a thousand excuses for refusing a boundary line in the Island, and must from the first have regarded joint occupancy as sole possession temporarily delayed. But it is not the less true that when once all limitations to the Russians to settle in any part of the Island they pleased were abandoned, the extrusion of the Japanese was simply a question of time.

As regards the importance of the Island to Japan, little can be said except that it was something, though not much, of a barrier against an encroaching neighbour. That it possesses coal is sufficiently well known; but it may be doubted whether it possesses other mineral resources of any value. To Russia, however, it is relatively far more important, as it practically gives her the command of Japanese waters. It is true that in Colonel VENINKOF's "Military Survey of the Russian Boundaries in Asia," published in 1873, it is stated that Saghalien is not of the slightest strategical importance to Russia, because owing to the depth of the channed it does not defend the mouths of the Amoor, because it has not a single safe port, because its defence is impossible, and because, on account of its climate, it cannot produce grain enough to support the garrison and convicts. But a power which needs a convenient *pied à terre* in Japanese waters, and finds one with an abundance of coal in the neighbourhood, will employ its convicts in building a breakwater behind which it can find shelter for a few men-of-war should occasion demand their presence. As to the Kuriles, which have now become the property of Japan, they are valuable alone as seal and sea-otter hunting grounds. They possess no harbours and can hardly be cultivated, though their climate may perhaps be no more rigorous than that of Saghalien. Admiral ENOMOTO has received some praise for his treaty, and as he has induced the Russian Government to give up all the Kuriles, instead of only a part of them, as was at first proposed, he appears to deserve it. As to any promises in regard to the future, or guarantees in the shape of treaty stipulations, we can only presume that it has not been thought expedient or desirable to ask for them. The exchange of territory probably embraces all the points of the treaty, though we could have hoped that some provision might have been made in the case of possible emergencies connected with China or Corea.

REVIEW.*

DR. BROWN is one of our oldest Japanese scholars, and his "Colloquial Japanese" published twelve years ago is still gratefully remembered by many as the best, and indeed almost the only help of the kind which was for a long time procurable. Dr. Brown has now come before the public with another work of a similar character, viz. "The Mastery System applied to Japanese." His plan has been to take twelve moderately long Japanese sentences which he has divided into sections of convenient size. Under each of these sections is found a number of sentences containing in various connections parts of the phrase placed at the head of them. It will be seen that, by this system, the materials of the twelve sentences which form the basis of Dr. Brown's book are placed before the student in a great variety of forms, and by the time he has gone through it, it will have been his own fault if he has not mastered them thoroughly so as to be able to use them freely in conversation.

This system seems a good and practical one, but we cannot acquiesce in the pretensions put forward for it in the preface, nor is it possible to approve of all the directions which Dr. Brown gives to students. The mastery system professes to be as nearly as possible "that of a child learning to talk, or of a child that has learned to to speak placed among a people whose language is entirely new and strange to it." It is admitted that this system must be modified to suit it to adults, and the extent to which it is found necessary to do so may be judged from Dr. Brown's first sentence, "Will you do me the favor of calling with me on our brother's friend in New St. to-morrow." But the objection to the mastery system is not that it adapts the child's system to the wants of adults, although it does so to such a degree as to render its origin almost unrecognisable, but that it does not allow sufficient-

* Prendergast's Mastery System, adapted to the study of Japanese or English, by S. R. Brown, D. D.

Digitized by Google UNIVERSITY OF CALIFORNIA

ly for the difference between the mind of a child and that of a full-grown educated man. We refer chiefly to the entire prohibition of grammar during the time this system is being pursued. The prejudice against grammar no doubt had its origin in a reaction against the old system, now happily becoming obsolete, of making boys learn by rote page after page of grammatical rules before they knew anything about the language itself. But we cannot help regarding its entire exclusion as equally injurious to the student's progress. It is quite true that at first very little grammar is necessary, especially for children, and in the case of the ignorant Japanese youths for whom Dr. Brown's book was primarily intended, the want of it may not do much harm. The majority, however, of the foreigners who take it up will be adults who have already received a grounding in the principles of grammar of their own, and probably also of other languages, and in their case it is a mere waste of time to allow them to find out by 'rule of thumb' that (to take examples from Dr. Brown's first sentence) *wo* is the sign of the objective case, that *ka* asks a question, or that *te* is a participial ending. As most people know from experience, the mind of the child or boy detests grammar and grammatical analysis, but that of the educated adult rebels equally against learning by rote phrases which it does not thoroughly understand, and it is the weak point of the "Mastery System" that no sufficient allowance is made for this distinction. We believe that few if any full-grown men will have the patience to go through Dr. Brown's book without either having known a little grammar beforehand, or getting some grammatical explanations as they go along.

Considered, however, without reference to the system which it is intended to illustrate, there can be no doubt that this will prove a useful manual for European students of Japanese, and as a text-book for Japanese learning English, for whose use it was primarily intended, we can recommend it very heartily. The sentences are well-chosen, and contain a large part of the words and phrases likely to occur in ordinary conversation. We must still refer the student who wishes to drink of the well of Japanese colloquial, pure and undefiled, to Mr. Satow's 'Kuai wa Hen,' but the mastery system may be found more convenient for those whose ambition is more limited, and whose aim is rather to acquire some facility in speaking than to attain to a correct and grammatical acquaintance with the Japanese spoken language.

A Japanese friend describes the Japanese sentences in the Mastery System as "*rippana honyaku bun*" or "unmistakeable translation style" and although we do not go quite so far as this, it must be admitted that a good many of the phrases, especially towards the beginning of the work, lay themselves open to this criticism. This feature in Dr. Brown's manual is explained and in part justified by the circumstance that it was written in the first place for a class of Japanese pupils, to whom it would of course be an advantage to have the English phrases as literally rendered in their own language as possible. To a European, however, who is learning Japanese, it is rather annoying to discover that he has been obliged to master, along with a great deal that is valuable, a certain number of locutions which owe their existence to the necessity felt by Dr. Brown of giving his Japanese pupils literal renderings of the English phrases, and which are not used by the Japanese themselves. It is this wish to be literal which has given us such phrases as "*otoko to onna no kyōdai*" at p. 178, which is no more Japanese than "Honor thy male and female parents" is English. For the same reason there are too many *anatas*, *watakushis* and plural particles; and the word *kyō-dai* is constantly employed where a Japanese would certainly use one of the words for 'elder brother,' 'elder sister,' 'younger brother,' 'younger sister.'

Of actual errors in grammar or translation there are not very many. We have noted a few things which strike us as not quite satisfactory.

In the first sentence, no distinction is made between "*Sore wo nas'tte kudasaru ka* and *Sore wo nas'tte kudasaimashō ka*." The former means, as translated by Dr. Brown, 'Will you do me the favor, but the latter favor," or if used in the second person "I wonder whether you will do me the favor."

Yuku, to go, does not represent the colloquial pronunciation. It should be *iku*.

Handai is rather an unfortunate word for 'dining-table.' It has been coined for the purpose from *han* 'a meal' and '*dai*' 'a stand,' but as *handai* is already a familiar word to Japanese in the sense of a 'fishmonger's wooden tray' it is inadvisable to use it for a dining-table as well. '*Dai*' alone is quite sufficient.

Tateba (p. 198) is correct for 'station', but Japanese always use the English word in the case of a railway station.

Rokujin zen go (p. 127) is 'sixty or thereabouts,' not 'not far from sixty' as translated by Dr. Brown.

The phrase *Annaka kara Niigata made kesshte yoi michi wa arimasen* (p. 128) is incorrectly rendered "The road from Annaka to Niigata is by no means a good one." It should be "There is positively no good road from Annaka to Niigata."

The phrase *Kane wo motte isō des* (p. 130) would hardly be used in the first person by Japanese. It means 'apparently has money' or 'seems likely to have money,' phrases which one would not use of money actually in one's own pocket.

Goku tattoi at page 176 does not means 'the highest,' only 'very high.'

Nagagutsu (p. 46) is 'riding-boots' or other long-boots, not ordinary wearing boots.

There are a number of errors which a more careful revision of the manuscript might have prevented, such as at p. 150 where *go kiō-dai hayaoki deska* is translated 'your brother is an early riser' instead of 'is your brother an early riser,' and at page 170 where the English phrase "my time of rising depends on circumstances" is represented by a Japanese sentence which means "my time of rising depends upon the snipes!"

The number of typographical errors is considerable, but with Japanese printers this must be hard to guard against.

After all, the defects which we have noticed do not very seriously impair the value of Dr. Brown's useful manual even for European students, and in so far as it is used for the purpose to which it was primarily adapted, viz, as a class-book for Japanese youths, they can hardly be said to be of any consequence whatever. We have no doubt the "Mastery System" will meet with the favorable reception from the public to which its practical character and other merits fairly entitle it.

SPIRIT OF THE JAPANESE PRESS.

On Popular Rights.

(Hōchi Shimbun.)

There are among our learned men those who declare that, since our late civil war, the governmental administration of the country has made vast strides while the people are lamentably wanting in a sense of appreciation of the advantages which they are now permitted to enjoy. For instance the *heimin*, freed from their former disabilities, are now allowed to ride on horseback and to use their family names, and should they have occasion to resort to a court of law are much better treated than in former times. Besides this, the relations in which they stood with reference to the *kudzoku* and *shidzoku* have been entirely readjusted and they are now politically free-men. And yet, if we may judge from the utter absence of vigour in the large mass of our population, these striking reforms have been unattended with any vivifying influence. The true foundation of national strength lies in the people, and it is therefore the duty of any governing body to reflect in its action the tendency of the popular will, guiding it in its natural course not obstructing its inclination. But our nation differs from others in this, that it is the government which leads the van of progress, while the people, elsewere the mainspring of movement, are here content to follow wherever it points the way.

If we search the pages of history we shall find that the largest advances in civilisation have resulted from some important struggle between the government and the

Digitized by Google UNIVERSITY OF CALIFORNIA

vours to enforce a distasteful policy; the people object to it, protest, entreat and at length fly to arms. Who can say what may ensue? A civil war is assuredly not to be commended, but at least it evidences the possession of a high patriotic spirit, a spirit which our people have never shown in reference to the oppressions exercised by their Government. But where the spirit of emulation, which determines each man to endeavour to excel his neighbour, is wanting, there is no such thing possible as an advance in civilisation. And our first thought should be to develop in the minds of our countrymen the desire to rival the best deeds of others, without which our national character will be weak and our advance in civilisation but the shadow of a name.

While, therefore, our national life remains without vigour it will be in vain to call together popular Assemblies, or to change the mode of administration, for although officers shall meet together and make laws, yet, as such laws reflect but the will of the Government they cannot be expected to benefit the people. And, moreover, the foundations of the government have not yet been permanently laid, and the people have manifested no vigour of purpose. Should a government so formed be suddenly changed great calamaties must be expected to follow. We must thoroughly review the great revolution in France in the last century.

Such are the views held by our leading men, who rank above the middle class in intelligence and learning. But we must confess that in these views we do not altogether acquiesce. The object in discussing the point is to explain the respective influences of government and people, and to show that unless the latter themselves vigorously demand their rights their true advance in civilisation is impossible. And this argument largely derives its force from the illustrations supplied by history that every great movement has had its spring in the popular will. But, in order to proceed to demonstration, it is in the first place essential that the condition and characteristics of government and people should be accurately understood, and we shall therefore venture to give the following as the views which we ourselves entertain upon the subject.

The word 'people' is used to distinguish all those who form no part of the governing body of the nation, or, to speak more precisely, all Japanese who are not officials are designated "the people." The word therefore comprehends not only the poor and ignorant, but also all those who are not officials; the wise and the weak, the wealthy and the poor, the merchant and the farmer constitute that body which we know as the people. A government officer who resigns or who is discharged again becomes one of the people, and the members of this latter body exceed by far in point of number those of the governing body. Although we speak of the language of the lower classes we must bear in mind that this does not reflect their own unassisted convictions but the minds of the eminent men whom they follow. All scientific men who have investigated and adopted the laws of motion and gravity since the days of Newton or who have followed in the footsteps of the great improver of the steam engine, Watt, are undoubtedly the followers of these great men, but we venture to assert, that ninety-nine among a hundred of the employers of motive power possess little more than the slenderest acquaintance with the laws which cause their spindles to rotate and their wheels to whirl in untiring motion. And so it is in matters of administration. No important question touching popular interests originates in a low stratum of the population. It is in the minds of the wise and learned, whose experience and education have fitted them to balance the arguments on all sides, that great reforms are first developed and matured, and the people have followed their lead. The nomenclature of the House of Commons in England would lead us to infer that its members were drawn from a humble class of the people, but all our travellers know that it is composed of gentlemen of a class beyond the average middle-class in position and attainments. Viewed from this stand-point it is obvious that the greatest benefits bestowed by legislatures upon the people have not originated with the lower but with the upper class, and it may be doubted whether among the former there be men [illegible] ient judgment and capacity to originate any [illegible] ust reform, upon popular rights, the partisans of the latter party exert their influence to oppose it and on the other hand to extend the privileges of the people. A concession is made here, and a compromise there, and by this means a substantial advance in civilisation is effected.

Among the conclusions of the learned men which we have already cited is this: struggles between a government and a people largely accelerate the progress of a nation, but when this struggle is protracted and pushed to extremities no one can tell how soon war may break out. This is illustrated by the struggle for popular rights in England in the 13th century, which gave the English their "Magna Charta;" the civil war in the 17th century in the same country; and the great revolution in the 18th century in France, in both of which last great movements the monarchs of England and France, were beheaded.

Now, the causes which lead to the violent social disruptions which disorganise the government of a country are not everywhere the same in form though in spirit they do not differ, and the development of this spirit in our own country, though differing largely from the effects exhibited in France and England, indicated its direction in the revolution which occurred here some eight years ago. Divested of its extraneous purposes this revolution was a struggle between the Government and the people, resulting in the overthrow of the former and the enlargement of the rights of the latter, and the present Government is thus the creation of the people. The movement differed in its form from that observed in the revolutions in England and France, when the people took the reins of government into their own hands. The officers of our Government, who are now powerful and hold important offices, were known as *ronin* in the days of the Tokugawa. But they were thoroughly Japanese at heart, and having overthrown the former dynasty are of the liberal party. Thus the people rose against their oppressive government, and having failed to obtain satisfaction by peaceful means resorted to arms in which they were victorious. And yet the learned authorities we have named assert that our people possess no vigour. What are we to infer from this?

It is not indeed that the meaning is obscure but that they have no eyes to see it. These learned men can only see that which is straight before them, but cannot understand the remoter causes which are in operation to produce the effects they witness. If a dish of rice cakes were set before them when they were hungry they would complain that it was not a proper meal because chopsticks were wanting. The outer indications of a movement may be clearly enough manifested to us, while its true and inner springs may be unknown to and unperceived by the wisest. There is much in all such movements that is as mechanical as the proceedings of a journeyman carpenter, who, following the lines traced by his foreman, cuts the circular holes round and the quadrangular holes square without knowing why he does so, or to what end he is labouring. But when the house is completed he perceives the object with which such and such holes have been made, and the purpose is then clear to him.

Although tranquillity or revolutions result from the will of a people, there are occasions when the actors in these great movements are ignorant of their real object and pursuing their course blindly are greatly astonished when they learn its consequences. In the late revolution there were some who raised the cry *sanno* (loyalty to the Emperor) while others said *joi* (exclude the foreigner). These of course were merely side issues. The chief object of the demonstration was to resist the tyranny of the Government and to give the people freedom. We feel sure that were all the *Kugé* to be to-day in the *Kunaisho*, and were they to exercise the oppressive rule of the former Government, our officials would not acquiesce in or overlook such tyranny and thus a second revolution might well ensue. And it is not only the officers who would fight in the cause of freedom: the love of liberty has now spread throughout the land and the people would rise on all sides to vindicate their jeopardised rights.

The Press Laws.

(Akebono Shimbun.)

On the 18th June the Government of this country issued a new code of seven laws for the guidance of the newspaper Press. In the short period that has elapsed since its enactment it has given rise to much discussion, the tendency of such discussion being to blame the action of the Government in the matter. Although the various consultations on the subject are said to have been conducted in private, it is no secret that many months before the change had been absolutely determined on rumours of the coming event were in general circulation. I, for my part, have for long felt much apprehension on the subject, and I am aware that the conditions of the new law—its prejudicial and beneficial effect—have been the subject of comment in all quarters. But the remarks thus elicited were passed unheeded. It is hardly for so humble a person as I am to declare the intention with which these important changes were instituted. They should be styled 'laws for punishing the newspapers,' inasmuch as the sole object of the new law would seem to be that of punishing. Each of its clauses ends with a penal condition, and in many respects it reminds me of the law for revenue stamps. I have good reason for believing that the hostility exhibited to the press arises from the following cause.

About twenty years since many valorous men prepared themselves to league against the former Government of this country, and raising the cries *kinno* (homage to the Emperor) or *joi* (turn out the foreigner) they succeeded in inflaming the spirit of the populace. The Government was at length compelled to interfere and punished the ringleaders by imprisonment, or in certain cases decapitation, and, as this had the effect of enraging the people still more, they rose in rebellion and ultimately overthrew the Government. Now the issue at this moment of the new press laws would seem to indicate a fear on the part of the Government lest it also should be overthrown.

Since, two years ago, the ex-*sangi* expressed their views as to the establishment of a House of Representatives the necessity of making a concession to popular rights has been freely canvassed. But the present Government, having shown itself unwilling to give way, and the people being sunk in their slavish ignorance, the newspapers became the interpreters of the general desire; among them there has been no exception. And although the Government has not thought fit to grant the people their rights, they for their part understand that it has claims upon them and the nature of those claims. But our government being absolute has assumed an analogy between those who have made a stir for people's rights and the rebels who raised the cries of *kinno* and *joi* in times past. Hence it has visited the newspapers with severity as the usual mouthpieces of popular feeling, and hence again the newspapers have been compelled so to clothe their language as to speak of the affairs of Japan as if they referred to some foreign land. Their discontended feeling is plainly visible.

If we shrink from the responsibility of doing our duty through the Press we shall gain the character of ignorant and craven hearts. To implant the seeds of independence and to foster their growth in the minds of our countrymen is a work of time, but I can at least urge the concession of the people's rights. In order to do this we must have a free press in which we may be able to plead our cause.

Should the Government decide that I am in this respect violating the press laws, as I am unable by reason of my poverty to defray the fine I must go to prison. But I will use the opportunity which my trial will afford me to protest against the injustice of those laws and earnestly to demand their abolition. And should I, by my own personal sacrifice, be thus able to free the Press of my country from its disabilities, I shall endure without a murmur such penalties as the law in its displeasure may lay upon me.

MITZUROKU.

[Note, by the Editor of the *Akebono Shimbun.*

We are not acquainted with the writer of this spirited paper, which we place among our leading articles because it so thoroughly agrees with our own views. We may add that a few words are altered here and there. We hold ourselves responsible for the communication.]

The Chikuhokuan Kuaigi.

(Akebono Shimbun.)

The session of the *Chikuhokuan Kuaigi* is now closed, and it is probable that with the exception of its name and its forms it will leave behind it no vestiges by which it may be remembered. A *sangi* of both reputation and ability has presided over the deliberations, which the Governors of the various *ken* and three *fu* appointed for the purpose have participated in. The discussions have been based upon the subjects furnished by the Government, and have embraced a review of the beneficial and prejudicial aspects of reform in the direction suggested. Finally, its ceremonial, and the laws appointed to regulate the debates, are highly deserving of praise and are worthy of an important House of Assembly.

It is not that its members betray ignorance or that their reasoning is inconclusive that we assert that the *Chikuhokuan Kuaigi* will leave behind it little by which it may remembered. It is rather that the questions submitted to the representatives are unworthy of their consideration, and that hence they are prevented from expressing themselves as fully as they could have wished.

Although some time has elapsed since the opening of the Assembly, we have been prohibited from attending its deliberations for the purpose of taking notes of its proceedings. But, thanks to the reports which we have been able to gather from the deputies who accompanied the Governors, we have gleaned some intelligence of what has passed in the House of Assembly. We had thought before the meeting that among the questions appointed for discussion the most prominent would be those of roads, river-banks and bridges, because the expenditure upon the construction of these would necessarily be great. We felt at the same time that there would be a considerable difficulty experienced in giving effect to the recommendations of the Assembly upon these subjects.

In August 1873 a notification was first issued by the Okurasho which, however, lead then to no practical results. Among the subjects set down for discussion on this first occasion was the question of roads, and our disappointment may be imagined on finding, in the reports of proceedings of the 26th June, that the foregoing notification was cancelled, and that it was proposed to form three classes of roads viz: national, *ken* and village roads, each of these to be again subdivided into three minor classes, their cost being defrayed in a manner to be hereafter determined. Believing that the question of cost would be decided when the question of the river-banks was settled we were silent. We now observe that it has been resolved that the Home Department shall deal with cases in which the dangerous condition of the banks threatens destruction, but that where the actual damage has already taken place, the repairs would in such event be at the charge of the people of the district, the Government in certain cases lending assistance for this purpose.

Are not roads, bridges and river-banks matters of the greatest importance to our country? Rules for defraying the cost of their maintenance may be all very well; the chief matter is that they shall be practical in character. Now is it not strange that regulations should in the present case have been determined upon while the cost of the work is unknown?

The members of the Assembly are men of experience and discretion, and no doubt possessed of sound views with regard to the subject, but being limited to the five heads of questions submitted to them they have simply been able to signify whether the propositions of the Government are eligible or otherwise.

It would now appear that although the object of the Government in convoking this Assembly has been with the view of forwarding the prosperity of the country, it has been content to acquaint its members with the forms and laws which are to govern the proceedings of a House of Assembly. If this be not the case, why are the questions proposed by the Government laid before the meeting in such an unpractical form? Hence, then, the declaration with which we started as to the uselessness of this consultative body. But as the meeting of the representatives of sixty various *ken* and of three *fu* has tended to bring

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

about a better knowledge of their mutual relations, it can scarcely be said that the Assembly of the *Chikuhokuan Kuaigi* has been unattended with results which may yet prove of benefit to the country.

OFFICIAL SUMMARY OF EVENTS FOR JUNE 1875.

2nd June.—Kido Takayuki, Sanghi, was appointed President of the Assembly of Local Officials.

Higashi Honganji, Asakusa, Tokio, was appointed as the temporary place of meeting for the Assembly.

Only one or two officers of *Ins* and *Shios* have been permitted to attend the debates.

5th.—The general rules and modes of proceeding for the compilation of the topographical books of the Empire were framed, and the *Shi, Fus* and *Kens* were ordered to examine their topographical questions agreeably to these rules and report the results to the *Chiririo* (Topographical Board).

8th.—In the list of officials of the Educational Department, the rank of officials on the Inspection-board was changed as follows—

Senior Inspector General... ...	3rd	class.
Vice Senior „	4th	„
Junior „	5th	„
Senior Inspector	7th	„
Vice „	8th	„
Junior „	9th	„
Senior Clerk	11th	„
Vice Senior Clerk	12th	„
Junior Clerk	13th	„

The laws relating to debtors of money and grain, and the sureties for the same, have been amended. The substance of the improved laws is as follows :—

When the debtors being subject to the writ of extent there still remains some amount unpaid, a surety or sureties and a witness or witnesses should be ordered to make payment ; and if there is still some sum remaining unpaid, the debtor and sureties and witnesses, and even their successors should be ordered to make payment so soon as they have re-established their fortunes. When the debtor has absconded or died without a successor, the sureties and witnesses should be ordered to make payment ; and if there is some amount still unpaid, their successors should be ordered to make full payment so soon as they have re-established their fortunes.

14th.—The laws, rules and details for the Deliberative Assembly were amended.

The following is a copy of His Majesty's Edict.

In accordance with the oaths We took upon ascending Our Imperial Throne, We now summon to their deliberations the representatives of Our subjects.

It is Our wish that they should amply discuss and determine upon such new measures as may be thought necessary for the welfare of the people, and thus facilitate the administration of our domestic concerns, and farther, that Government and Governed may be of one mind, and that the voice of the latter may thus find access to Ourselves.

It is hoped that all men may feel a due sense of the duties they owe to the State, and that the chief magistrates of cities and provinces will maturely consider and weigh well such projects as may be submitted to them for promoting the welfare and advancemant of Our Empire. The deliberations of the Assembly shall be guided by the rules made for its constitution and such bye-laws as are now made known.

It was proclaimed that as the Assembly of local officers would begin its session on the twentieth the Emperor would open it at eleven o'clock in the morning.

On the same day, the members of the Assembly were honoured with an audience of the Emperor.

25th.—In the third article of the postal treaty between Japan and the United States of America, (notified June, the seventh year of Meiji,) the fourth and fifth sections have been changed. The substance is now as follows :—For every newspaper the weight of which does not exceed four ounces four cents or four sens, and all kinds of printed papers and specimens and samples of every merchandize, four cents or four sens per two ounces or fraction of that weight should be charged at the post offices of the sending places, as the charge for sending it to its destination.

This treaty will come into operation from the first July, the eighth year of Meiji, and the fourth and fifth sections in the third article of the postal treaty should be discontinued from the same day.

28th.—The libel laws were made. The ordinances for newspapers, dated October the sixth year of Meiji, were discontinued and new ones were issued.

The business connected with the public health, and the censorship which the educational department has hitherto superintended were transferred to the Home Department.

In the department of public works boards of repairs were established.

AN ANCIENT JAPANESE CLASSIC.

(The *Tosa Nikki*, or Tosa Diary.)

By W. G. Aston, Esq.

Read before the Asiatic Society of Japan, at Yedo, on the 30th June, 1875.

The ancient literature of Japan contains few works of a popular character. Almost without exception, everything which has come down to us from the period when the Japanese language was in its greatest purity and perfection was written by and for a learned circle composed chiefly of the Household of the Mikado and the officials of his government.

The *Tosa Nikki* is not an exception to this rule. The author was a Court noble named Tsurayuki, who traced his descent in a direct line from one of the Mikados, and whose history is little more than the record of the successive offices he held at Kioto and in the provinces. One of his appointments was to the prefecture of Tosa, and it was on his journey back to Kioto after having completed the four years which were then the fixed term for such offices, that he wrote the Diary which is the subject of the present paper. Tsurayuki is also known as a poet of considerable eminence, and as the author of the famous preface to the Kokinshiu, extolled by Japanese critics as the most perfect specimen of composition extant in the native style.

The first entry in the Diary bears date the 21st day of the 12th month, and we learn from other sources that the year was the fourth year of Shohei. This would be, according to the European reckoning, some time in the months of January or February A.D. 935 or now 940 years ago. Tsurayuki begins by telling his readers that diaries being commonly written by men, this is an attempt to write a woman's diary. Hence he always speaks of himself in the third person, under the vague designation of 'a certain man.' But in Tsurayuki's day something more than this was implied by the phrase 'a woman's diary.' The learned were at this time devoted to the study of Chinese, and rarely composed in any other language, whilst the cultivation of the Japanese language was in a great measure abandoned to women. It is honorable to the women of Japan that they nobly discharged the task which devolved upon them of maintaining the credit of their native literature. I believe no parallel is to be found in the history of European letters, to the remarkable fact that a very large proportion of the best writings of the best age of Japanese literature were the work of women. The Genji Monogatari, the acknowledged standard of the language for the period to which it belongs and the parent of the Japanese novel, was written by a woman, as were also the *Ise Monogatari*, the *Makura Zoshi*, and much of the poetry of the time. There is even reason to suppose that the traditions collected in the Kojiki, the Bible of the Shintô religion, were taken down from the mouth of a woman with the exception of the last-mentioned work which was committed to writing before the invention of Kana. The Chinese character was very sparingly used in books written by women, and the use of Chinese vocables was also extremely limited. It is evident, therefore, that when Tanayuki spoke of writing a 'woman's diary' he meant a diary composed in the style usually employed by the women of that period.

The first day's entry also records Tsurayuki's departure from the Government House of Tosa, and his arrival at

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the port from which he was to set sail. He was accompanied here by large numbers of people who came to take leave of him. Most brought with them parting presents, usually of eatables or *saké*. The result was that in Tsurayuki's words, "Strange to say, here we were all fresh by the shore of the salt sea." He did not actually set sail till the 27th, the intervening six days being chiefly taken up in disposing of the presents, and in a visit to the newly appointed Prefect, with whom he spent a day and night in drinking and verse-making, after which he took a final leave. Tsurayuki's successor in office shook hands with him at the bottom of the steps leading up to the house, and they bade each other farewell with many cordial, but tipsy expressions of good-will on both sides. On the following day, however, we find Tsurayuki in a different frame of mind. He tells us that during his stay in Tosa a girl had died who was born in Kioto, and that amid all the bustle and confusion of leaving port, her friends could think of nothing but her. Some one, he says, composed this verse of poetry on the occasion.

"With the joyful thought, Home to Kioto, there min-
"gles the bitter reflection that there is one who never
"will return." We are informed by another writer that Tsurayuki here deplores the loss of his own daughter a little girl of nine years of age.

But the jollifications had not yet come to an end. The new Prefect's brother made his appearance at a projecting cape on their way to the first stopping place, and they were accordingly obliged to land on the beach, where there was more drinking and composing of verses: of these verses Tsurayuki seems to have had no great opinion. He says that it required the united efforts of two of the party to make one bad verse, and he compares them to two fishermen labouring along with a heavy net on their shoulders. Their jollity was interrupted by the master of the junk who summoned them on board. There was a fair wind he said, and the tide served; and Tsurayuki maliciously adds that there was no more *saké* to drink. They accordingly embarked, and proceeded on their voyage.

On the 29th, they had got no further than Ominato, a harbour only a few miles distant from their starting-point. Here they were detained for ten days waiting for a fair wind. Presents of eatables and drinkables still came in, but more sparingly, and Tsusayuki records regretfully the fate of a bottle of *saké*, which he had stuck in the roof of the cabin, but which was displaced by the rolling of the junk and fell overboard. One of these presents was a pheasant, which according to the old Japanese custom was attached to a flowering branch of plum. Some brought verses with their gifts. Here is a specimen.

"Louder than the clamour of the white surges on your onward path will be the cry of me weeping that I am left behind."

Tsuruyuki remarks that if that were really so, he must have a very loud voice. On the 9th of the second month, they at last sailed from Ominato. As they passed Matsubara, they admired a large grove of ancient firs which grew by the sea-shore. Tsuruyuki mentions the pleasure with which they watched the storks flying about among their tops, and gives us this verse composed on the occasion.

"Casting my glance over the sea; on each fir-tree top
"a stork has his dwelling. They have been comrades for
"a thousand years."

It became dark before they reached their next stopping-place, for like most Japanese vessels even at the present day, the idea of pursuing their voyage all night long does not seem to have occurred to them. Besides, to judge from its having gone up the Osaka river as far as Yamazaki, their junk must have been a very small one, and the diary shows that it depended more on oars than on sails. Here is Tsurayuki's description of nightfall.

"Whilst we rowed along gazing on this scene, the
"mountains and the sea became all dark, the night deep-
"ened, and east and west could not be seen, so we en-
"trusted all thought of the weather to the mind of the
"master of our ship, even the men who were not accustom-
"ed to the sea became very sad, still more the women,
"who rested their heads on the bottom of the ship and
"did nothing but weep. The sailors, however, seemed to
"think nothing of it, and sung the following boat-song."

Tsurayuki "gives a few lines of it," and then proceeds. There was a great deal more of this kind of stuff, but I do not write it down. Listening to the laughter at these verses, our hearts became somewhat calmed in spite of the raging of the sea. It was quite dark when we at length reached our anchorage for the night."

Three more days leisurely travelling brought them to Murotsu, a port just to the west of the eastern of the two horns which the island of Shikoku sends out to the southward. The morning after their arrival here, a slight but constant rain prevented them from starting, and the passengers took the opportunity to go on shore for a little. In the entry for this day, Tsurayuki mentions a curious superstition. He tells us that since the day on which they first embarked no one wore scarlet or other rich colours or good silks lest they should incur the anger of the gods of the sea. The next day the rain continued. It was a Buddhist fast-day, and Tsuruyuki kept it faithfully till noon, but as suitable food for fast-days was not obtainable on board, he bought with rice (not having any copper cash) a *tai* which one of the sailors had caught the day before. This was the beginning of a trade between him and the sailors, *saké* and rice being exchanged for fish. There was no change in the weather till the 17th, the fifth day from their arrival at Murotsu. On that day they started early in the morning with the moon, then a few days past the full, shining over a waveless sea which reflected the sky so perfectly, that, as Tsuruyuki said, the heaven above and the ocean beneath could not be distinguished. He composed the following stanza on this occasion.

"What is this that strikes against my oar as the boat
"is rowed along over the moon of the sea-depths? Is
"it the bush of the man in the moon?"

The fine weather, however, did not continue. The dark clouds which gathered overhead alarmed the master of the junk, and they put back to Murotsu under a pelting shower, and very miserable. Three more wretched days they were obliged to remain here, endeavouring with indifferent success to while away the time by writing Chinese and Japanese verses, and every morning counting the days that had been already spent on the voyage. On the 21st they again proceeded on their way. A large number of other junks sailed at the same time, a pretty sight which was greatly admired by Tsurayuki. "It was spring," he remarks, "but it seemed as if over the sea
"the leaves of autumn were been scattered." The weather was now fine, and they entered what we call the Kii Channel. Here they were disturbed by a fresh cause of anxiety. It seems that Tsurayuki during his term of office in Tosa had had occasion to deal rather severely with the priates of these parts, and it was thought likely that they would now try to have their revenge. One of the commentators attempts to save Tsurayuki's reputation for courge by reminding us that this diary is written in the character of a woman. The course of the narrative, however, shows that their alarm was quite genuine, and indeed, to all appearance, well-grounded. Two days later we find them praying to the *Kami* and *Hotoke* to save them from the pirates. On the following days there were constant alarms, and on the 26th they heard that the pirates were actually in pursuit of them, so they left their anchorage at midnight, and put to sea. There was a place on their way where it was usual to make offerings to the God of the sea. Tsurayuki made the captain offer *nusa*.* They were offered by being cast into the air, and allowing the wind to carry them to the sea. The *nusa* fell in an easterly direction, and the junks course was turned to the same quarter. To the great joy of all on board, they had now a favorable wind, sail was set, and they made a good day's run. The next two days they were again stormbound, but on the 29th, they proceeded on their voyage. On the 30th they crossed the entrance to the Naruto passage, and the same night, by dint of hard rowing they reached the strait of Idzumi. They had now reached the Gokinai, or five provinces round Kiôtô and here there was no longer any fear of pirates. They first day of the second month they

* The scrips of white paper seen in Shinto Shrines, and also called *Gohei*.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

made little way, and on the second we have the following entry. "The rain and wind ceased not; a whole day and a whole night we prayed to the *Kami* and *Hotoke*." On the next day the weather was equally bad, and the captain would not put to sea from a fear of bad weather which proved quite groundless. There were a great many beautiful shells on the beach at this place, and Tsurayuki composed these lines in allusion to a shell which is called in Japanese the *wasure-gai* or shell of forgetfulness.

"I would descend from my ship to gather the shell "of forgetfulness of one for whom I am filled with "sorrowful longing. Do ye, oh ye advancing surges "drive it forward to the strand,"

He afterwards says that the true wish of his heart was not to forget her whom he had lost, but only to give such respite to his sorrow that it might afterwards gain greater strength.

The record of the 5th, contains a passage which has some philological interest as giving a specimen of the spoken language at this period. Tsurayuki noticed that a chance order of the captain to his sailors was really a line of poetry of the regular number of 31 syllables. The order was as follows :—

Mifune yori | ohose-tabu nari | asagita no | ide-konu saki ni | tsuna de haya hike.

"Thus it is ordered from the August ship; (i. e. "by Tsurayuki, the owner) before the morning north-wind "comes forth, make haste and haul the ship along "with a tow-rope." The only form here which is distinctively colloquial is *de* for *ni te*, while *mifune* and *tabu nari* are now written forms, and would not be used in the spoken language. There are one or two other examples of the colloquial language in the *Tosa nikki*, and although too few to be decisive, they point to the conclusion that the spoken idiom of the time differed but little from the language employed in literature, a curious colloquial form of *zu*, as in the phrase "*mata makarazu*" 'I will come again' The same form of the future is still preserved in some of the local dialects.

I translate part of the entry for the 5th, the day before they arrived within the Osaka river. They were now opposite Sumiyoshi.

Meanwhile a sudden gale sprung up, and in spite of all our efforts we fell gradually to leeward, and were in great danger of being sent to the bottom. "This god of Sumiyoshi," said the Captain, "is like other gods. What he desires is not any of the fashionable articles of the day. Give him *nusa* as an offering." The Captain's advice was taken, and *nusa* were offered, but as the wind, instead of ceasing, only blew harder and harder, and the danger from the storm and sea became more and more imminent, the captain again said. "Because the august heart of the God is not moved for *nusa*, neither does the august ship move. Offer to him something in which he will take greater pleasure." In compliance with this advice, I thought what it would be best to offer. "Of eyes I have a pair—then let me give to the god my mirror, of which I have only one." The mirror was accordingly flung into the sea, to my very great regret. But no sooner had I done so, than the sea itself became as smooth as a mirror."

The next day, they entered the Osaka river. All the passengers, men, women and children, were overjoyed at reaching this point of their voyage, and clasped their foreheads with their hands in ecstasies of delight.

There is no mention of any city or town of Osaka in the Diary, for the simple reason that it did not then exist. Naniwa, which has been used in later times as a poetical synonyme for Osaka is properly the river-mouth, as its etymology shows, *naniwa* meaning 'dangerous waves.' The bar of the Osaka river had the same evil reputation in ancient times that it has unhappily deserved too well in our own day. Several days were now spent in dragging their vessel laboriously against the strong current of the river. A fast day occurred on their way up it, which Tsurayuki had this time the satisfaction of keeping properly by abstaining entirely from fish. On the 12th, they reached Yamazaki, from which place a carriage (*i.e.* one of the bullock-carts in which *kuges* rode) was sent for to Kioto, and on the evening of the 16th they left Yamazaki for the capital. Tsurayuki was greatly delighted to recognize the old familiar landmarks as he rode along. He mentions the children's playthings and sweetmeats in the shops as looking exactly as when he went away, and wonders whether he will find as little change in the hearts of his friends. He had purposely left Gamasaki in the evening in order that it might be night when he reached his own dwelling. I translate his account of the state in which he found it.

"The moon was shining brightly when I reached my house and entered the gate so that its condition was plainly to be seen. It was decayed and ruined beyond all description—worse even than I had been told. The heart of the man in whose chaige I left it was in an equally dilapidated condition. The fence between the two houses had been broken down so that both seemed but one, and he appeared to have fulfilled his charge by looking in through the gaps. And yet I had supplied him by every opportunity with the means of keeping it in repair. To-night, however, I would not allow him to be told this in an angry tone, but in spite of my vexation offered him an acknowledgment for his trouble. There was in one place something like a pond where water had collected in a hollow, by the side of which grew a fir-tree. It had lost half its branches, and looked as if a thousand years had passed during the five or six years of my absence. Younger trees had grown up round it, and the whole place was in a most neglected condition, so that everyone said that it was pitiful to see. Among other sad thoughts that rose spontaneously to my mind was the memory—ah! how sorrowful!—of one who was born in this house, but who did not return here along with me. My fellow-passengers were chatting merrily with their children in their arms, but I meanwhile, still unable to contain my grief, privately repeated these lines to one who knew my heart."

I shall not give the verses, but proceed to the last sentence of the diary which is as follows :—

"I cannot write down all my many regrets and memories; be it for good or for evil, here I will fling away my pen."

The *Tosa Nikki* is a striking example of the truth of Buffon's dictum that "style is everything." It contains no exciting adventures or romantic situation, there are in it no wise maxims or novel information; its only merit is that it describes in simple yet elegant language the ordinary life of a traveller in Japan at the time when it was written. But these qualities have gained it a high rank amongst Japanese classics, and have ensured its being handed down to our own day as a most esteemed model for composition in the native Japanese style.

I may observe in conclusion that the Japanese of the *Tosa Nikki* is on the whole tolerably easy, and it may be recommended as a good book with which to begin the study of the ancient literature of Japan.

Correspondence.

"YATOI."

To the Editor of the "Japan Weekly Mail."

Dear Sir,—Your Correspondent "A Japanese" endeavours to distinguish between the words *yatoi* and *hiyó*. The fact is both are sounds for the same Chinese character—ヤトヒ 雇 or ヤトヒ 傭 *yatoi* is the *yomi* or *kun*—*i.e.* native pronunciation, and *hiyo* is the *koye* or *on*—*i.e.* Chinese sound.

I doubt the fact of Terashima when a poor student, being a *yatoi* of the Tokugawa regime, having any bearing on the case—and I *do not* doubt that the teachers of the Kai Sei Jo were so termed, the old officials being much addicted to take advantage of the *then* ignorance of the foreign employees.

Yours truly,

KO SHIN KEN.

高振嫌

P.S.—What does "A Japanese" say to his countrymen calling one another *On Koku Jin* 御國人 "Honorable Country's man" and foreigners being invariably spoken of and to as *I jin* 夷人 or 異人. The first is literally "Barbarian" and the second (see *Kotonari*, Hepburn p. 232) synonomous with unusual, outlandish, strange, &c., &c.

Law Report.

H. B. M.'s PROVINCIAL COURT.

Before His Honor C. W. Goodwin, Esq., Assistant Judge.

July 21, 1875.

A. Michel *vs.* A. Hearne & Co,

Judgment in this case was delivered to-day as follows:—

In this case the plaintiff claims $76 50, as the contract price of eighteen barrels of soda crystals bought by the defendants of him, and of which delivery was taken.

The defendants discovered immediately after delivery that the substance bought was not that usually known in commerce as soda or soda crystals, but sulphate of soda, known by the name of Glauber's salts. The defendants had previously bought a cask of the same substance under the name of soda from Mr. Davis, who told them that more of the same kind could be had from Mr. Michel. The defendant, Mr. Hearne, went to the plaintiff Michel and asked about soda. Michel told him he could supply him with some exactly the same as what he had already bought of Davis. Hearne inspected the article, and and highly approved of its appearance, and contracted to buy the whole 18 casks. After delivery it was quickly discovered that the crystals were not what was expected. The plaintiff contends that the purchaser had ample opportunity of inspecting and judging of the nature of the article bought, and says that he gave no other warranty or description of it than that it was exactly the same as what had already been bought from Davis, which was the fact. The defendants contend that they asked for soda, and were entitled to have the article usually known by that name supplied to them, and not one which, though known by chemists as a preparation of soda, is in reality something of totally different properties, and known in commerce by another name.

The principle established by decided cases is that if a person contracts for an article under a well understood name, he is entitled to have that, and no other delivered to him, even though he has had ample opportunity to inspect, and has approved the sample. The real question here is, did the plaintiff contract to sell the article known as the soda of commerce? If he did so, the fact of the defendant having seen and approved of the sample, which he mistakenly supposed to be soda, and thought to be remarkably fine of its kind, will not entitle the plaintiff to recover.

The plaintiff himself says that the defendant Hearne came to him and asked him for soda, and Hearne states that they subsequently said that they (that is Michel and Davis) had bought it for soda and sold it for soda. The plaintiff's own witness, Davis, who partly conducted the transaction, undoubtedly led the defendants to believe that he was selling them the soda of commerce, and that they could get the same from Michel. Looking at the evidence altogether, I cannot but believe that the plaintiff understood that the defendants wanted the soda of commerce, and that they supposed themselves to be buying such from him. Under these circumstances, the verdict must be for the defendants.

J. Clataud. *vs.* D. Welsh.

This was a claim for $15.14, being balance of account for goods sold and delivered by plaintiff to defendant.

M. Gros appeared for plaintiff.

Defendant admitted the claim, but said he was without means and without employment. He was promised a situation next month, and would pay in instalments.

His Honor ordered him to pay the amount claimed, and costs, in two instalments,—one in August. and one in September next.

J. Clataud *vs.* J. H. Smith.

This was a claim for $49.72.

M. Gros appeared for plaintiff.

Defendant pleaded non-indebtedness.

His Honor adjourned the case till 11 o'clock Saturday morning next.

H. B. M.'S PROVINCIAL COURT.

Before C. W. Goodwin, Esq, Judge.

July 24th, 1875.

J. Clataud *vs.* J. H. Smith.

This was a claim for $49.72, for goods sold and delivered.

Defendant pleaded non-indebtedness.

J. Clataud, sworn: The account produced is correct. [Witness here handed in his books] Defendant has never paid anything on account. The bill has been presented several times, and he always said he had no money, and that Capt Wynn would pay it.

lost all his books and papers in the fire at Yedo. The debt was transferred to Capt. Wynn with plaintiff's consent; this was about a year and a half ago.

His Honor: You received the goods, and there is no reason why you should not pay for them.

Defendant: Capt. Wynn agreed to pay the bill. He owes me money.

Plaintiff: Capt. Wynn never paid the account.

His Honor: If Capt. Wynn has not paid, you are still liable. Here is a letter of Wynn's, in which he says he has no funds of yours in hand, and disclaims the whole thing. You have incurred these debts, and must pay.

Defendant: But the responsibility was transferred to Capt. Wynn, as plaintiff well knows.

Plaintiff: I deny it.

Defendant: When the debt was incurred I was agent of Lane, Crawford & Co., in Yedo. I was in partnership with Wynn at one time.

His Honour: If Wynn has not paid the account, the responsibility still rests on you. The fact of Wynn's being a partner of yours does not alter the case.

Plaintiff: The bill was presented over and over again. I never accepted Wynn's responsibility.

His Honour said defendant's account of the transaction was no real answer. He must pay this bill.

Defendant then briefly explained his position, which, he said, would not allow him to pay it. He was already paying $50 a month to Lane, Crawford & Co., to wipe out an old debt. He was at present manager of the Eastern Club, and was receiving $100 per month as salary.

His Honour said he would make an order for the debt and costs, to be paid in four monthly instalments.

GERMAN CONSULAR COURT.

Before E. Zappe, Esq., Consul.

Saturday, 24th July, 1875.

W. Holmholtz sued H. Lotz for having used slanderous language. Lotz did not dispute the charge, but pleaded irritability of temper whenever he saw Holmholtz, or remembers, he says, the bad advice he alleges plaintiff gave him when he was proprietor of the German Hotel.

Defendant said he was sorry for the expressions he had used, but declined to retract.

Sentenced to pay $10 and the costs, and in default, 8 days' imprisonment.

SAGHALIN.

(London and China Express.)

A letter from St. Petersburg to the *North German Gazette* explains at great length the value to Russia of the newly-acquired dependency, Saghalien, and gives some particulars of the island. It is, it appears, 892 versts long (that is, about 600 miles) and 136 versts broad (that is, about ninety miles). At one place it is only twenty-five versts (about fifteen miles) broad. Its population is no more than about 15,000 souls, of whom 3,000 are Russians, but only fifty are Europeans or Americans. There is a Russian garison of 600 at Dhui, which is the principal settlement in the island, and also some artillery. The object of maintaining this garrison, at any rate during summer, is not apparent, for the deported persons detained at Saghalien could not escape if they tried. The sea all around is far too dangerous. At the time of the Crimean War the garrison was removed to the Siberian continent. In winter the sea is frozen over for the space of four months, and then the passage to Siberia is effected by sledges drawn by dogs. Russia appears always to have had a hankering for Saghalien, long before its value as a colony was known. Indeed, it disputes the priority of occupation with the Japanese. In 1807 the Russian Lieutenant Choostoff formally took possession of it as a Russian dependency, but in 1813 the Russian Government declared that occupation invalid *(non avenue)*. Since then Japan has gradually acquired possession of the southern half whereas the northern has always been indisputably under Russian Government. There has been a good deal of friction between Russians and Japanese concerning the possession of the island, but, valuable or almost invaluable as it is to Russia, it would be useless to Japan, owing to the difference of climate. The Japanese cannot

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

like home. Saghalien, though at present extremely poor—there is but one merchant's firm settled in the island doing any business to speak of—is valuable by means of its rich coal mines. It has inexhaustible treasures of sea coal almost equalling the best Newcastle, and also of anthracite, which is a very useful fuel. This fact alone would invest the island with importance as a site for a Russian naval station. But over and beyond this Saghalien holds a most enviable tactical position. It commands and protects the mouth of the river Amoor, a channel of communication with a great future, and also the sea of Ochotsk. It is a therefore all-important for Russia to have possession of it. Saghalien itself has no good harbours, but the sea of Ochotsk has the best that could be found on the earth, and Saghalien protects them. Russia possesses no such second opportunity for giving a secure and advantageous basis to its naval power. Otherwise Saghalien is not favoured by nature. Corn will ripen only in a few sheltered valleys; otherwise the climate is too severe, and much will have to be imported from the mainland. The same climatic influences hinder the breeding of cattle. But coal has, as observed, been found at numerous places. It is not known what *quid pro quo* the Czar has given for the possession of the valuable island, but it is not believed that Japan would have ceded its rights for nothing.

The *Daily Telegraph* says:—What inducement operated with the Japanese Government to surrender their moiety of the great Siberian island is not stated; but the Mikado, or whoever transacted the affair, must have known of the coalmines which render it so important; and Saghalien forms a part of the Japanese Archipelago, so that there must have been, one would imagine, a "consideration." The great difficulty with the Russian Navy has always been the want of suitable timber—the larch and fir woods which have been employed in building upon the Baltic and White Seas wear out very quickly in the fresh water—and we have not heard that Saghalien possesses iron. But the forests on the Amoor are immense, although the trees are small, and we shall see this acquisition followed by a thick increase in the navy of Siberia. Before the time of Peter the Great Russia did not own a single port except Archangel, and possessed only one small vessel of war; now she has six seperate fleets—those of the Baltic, the Black Sea, the White Sea, the Amoor, the Aral, and the Caspian. Her latest settlement will give her the opportunity for a new development upon the wide waters of the Pacific, of which she is sure to make use; but it is with reference to Central Asia, China and Japan that Saghalien is chiefly important. The Celestial Kingdom is certain to become more and more prominent in Asiatic politics; its huge population is seething with the impulse of emigration like a hive of swarming bees; its Government is at once unsettled and arrogant; and China means, be it remembered, a fourth part of the whole human race. To and fro across the Pacific will pass the greatest commerce of future years when the Southern islands are all brought into civilisation, and the young Empires of Australasia open active relations with the Old World shores of India and East. Saghalien will be useful in those days if Russia has not become to big to hold together as a separate country, and if the Government at St. Petersburg knows how to utilise the advantages which nature conceals behind the mists and snows of the Siberian coast. There is no reason why we should envy the Czar the chilly acquisition which he has made; Russia civilises after a fashion, and breaks up the fallow of Asiatic heathenism—better, perhaps, than a finer implement. But there is much reason why our Foreign-office and its *employés* should watch and understand the course of these distant events, and they would be particularly well employed if they bore in mind the importance of the coal supply in connection with the future of trade and influence in these Pacific Seas.

Telegrams (dated 15th July) have been received, announcing the arrival of the *Glenartney* in London. About 6,000 packages have been sold, not, we believe, at very favourable rates. Dealers were buying very cautiously.—*N.-C. Daily News.*

Our Tientsin correspondent gives a rather hot list of attacks upon foreigners in the North, lately; and we hear from other sources that an inflammatory placard has been lately posted on the walls of the Tartar City. Whether the unfriendly spirit which the Chinese are exhibiting, means anything definite, or whether it is purely accidental, remains to be seen. It is at any rate sufficiently like earnest to need very sharp curbing.—*N.-C. Daily News.*

Shipping Intelligence.

ARRIVALS.

July 19, *Traviata*, German barque, Breckwalde, 340, from Takow, Sugar, to Chinese.

July 19, *Tanais* French steamer, Reynier, 1,010, from Hongkong, Mails and General, to M. M. Co.

July 19, *Niigata Maru*, Japanese steamer, Walker, from Shanghai, General, to M. B. Co.

July 21, *Kearsarge*, American corvette, Lewis, 1,500, from Hakodate.

July 21, *James Paton*, Brit. barque, Cotter, 395, from Nagasaki, Coal, to P. M. S. S. Co.

July 22, *Costa Rica*, American steamer, Connor, 1917, from Shanghai and ports, Mails and General, to P. M. S. S. Co.

July 22, *Argyle*, British steamer, Scott, 1271, from London, via Hongkong. July 15, General, to Jardine, Matheson & Co.

July 22, *Alaska*, American steamer, Howard, 4,010, from Hongkong July 15, Mails and General, to P. M. S. S. Co.

July 22, *Vesadnek*, Russia gun-boat, Capt. Nevasellsky, 700 from Kobe, July 20.

July 23, *City of Tokio*, American steamer, Maury, 5,010, from San Francisco, Mails and General, to P. M. S. S. Co.

July 23, *Erl King*, British steamer, Pearse, 1,707, from Shanghai, July 18, General, to Wilkin and Robison.

July 24, *Sunda*, British steamer, Babot, 1,682, from Hongkong, July 18, Mails and General, to P. & O. Co.

DEPARTURES.

July 18, *City of Peking*, American steamer, Morse, 5,500, for San Francisco, despatched by P. M. S. S. Co.

July 18, *Gayley of Lorne*, British steamer, Burgoyne, 1,389, for Hiogo, General, despatched by E. Fischer & Co.

July 21, *Bombay*, British steamer, Davies, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

July 21, *Audacious*, H. M. Ironclad, Captain Cullom, Rear Admiral Ryder, for Hakodadi and the North.

July 22, *John M'Kean*, British schooner, Jordan, 194, for San Francisco, Tea, despatched by Walsh, Hall & Co.

July 23, *Ariel*, British barque, Fullarton, 357, for Nagasaki, July 23, Ballast, despatched by Captain.

July 23, *Peter*, German brig, Holm, 241, for Chefoo, July 23, Ballast, despatched by Captain.

July 24, *Mora* British barque, Angel, 620, for New York, Tea, despatched by Heinemann & Co.

July 24, *City of Tokio*, American steamer, Maury, 5,010, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

July 24, *Costa Rica*, American steamer, Connor, 1,917, for Shanghai, Mails and General, despatched by P. M. S. S. Co.

July 24, *Niigata Maru*, Japanese steamer, Walkar, 1,685, for Shanghai, Mails and General, despatched by M. B. S. S. Co.

PASSENGERS.

Per French steamer *Tanais*, from Hongkong:—Messrs. De Cristofo is, Beretta, Meier, Menière, Lampre, Neo Simi you, O'Rura, and Audiffret.

Per *Niigata Maru* from Shanghai.—Messrs. Gurichet, Uchida, Matsumoto and child, Mansfield, Hely d'Oissel, Murata, Shuruton, Capt. Roper, Kobuyashi, Cramer and servant, Nagashima, Hay and servant, Sando, Jackson Omina, Kirby, Kline, Faber and servant, Wignal, 6 Japanese, and 1 Chinese, and 226 Japanese in the steerage. For Hakodate: Mrs. Muirhead Mr. and Mrs. Galt and family.

Per American steamer *City of Peking*.—Rev. G. Miller and wife, Mrs. Mitchell, Lady Howard de Walden, Hon. Miss Ellis. Hon. E. Ellis, Mrs. Lovill and children, Mr. and Mrs Whitney, Dr. Page, Messrs. Lord, Gerard, Hoffmeyer, Boyd, Spalding, Percy, S. Fischer, A. Phillips, Monteith, Furnichi, Frossard, Lieut. Blake, and 11 Japanese.

Per British steamer *Bombay*, for Hongkong.—Messrs. Stratford, T. P. Poate, H. Poate, and 10 Seamen, 1 European, and 4 Chinese, on deck.

Per *Costa Rica* from Shanghai and ports.—For Yokohama: Mr. and Mrs. P. A. Goddard, Mrs P. Evans and child, Mr. and Mrs. Castella, T. G. Smith, J. B. du Mares, T. B. Glover, F. S. Jacobs, J. D. Carroll, Dr. Thorncraft, J. Tayler, J. Winton, Mrs. Byrne and child, Mrs. E. Wheeley and child, Miss M. E. Green, E. A. Ludwick, H. Peacock, A. Hall, R. J. Benjamin, M. Antonoquio, H. E. Reynell, J. Green, J. Eaton, and 16 Japanese in the cabin, 204 in the steerage. For San Francisco: Mr. and Mrs. E. R. Hardman and infant, M. A. Smith, and E. T. Edwards.

Per *Argyle* from London, via Hongkong.—Mr. Foote.

Per *Alaska* from Hongkong.—For Yokohama: Captain R. W. Stone, 80th Regt. For San Francisco: Mr. J. Somerville, and 4 Europeans, 15 Japanese sailors and 783 Chinese in the steerage.

Per *City of Tokio* from San Francisco.—For Yokohama: Miss F. F. Brown, Paymaster C. A. Slurm, U.S.N., W. R. Butcher, U.S.N., Comdr. J. P. Fyffe, U.S.N, P. P. Anasoff and wife, Mrs. Morony, Dr. Geo. Von Scherff, T. Simonet, P. A. Ramee and wife, P. P. S. Lawrence, U.S.N., E. Ullman, Baron Rosen, William Hutchins. For Shanghai.—Saml. Brown, J. A. Campbell, G. Newell, E. Schweblin, J. Griffing. For Hongkong.—J. Fenessey, Miss A. Kinney, and 197 Chinese in the steerage.

Per *Niigata Maru* for Shanghai and ports.—Mr. Matswo, Mr. & Mrs. Fudzita, Mr. Calder, a Japanese gentleman, Mr. Hondo, Mr

Siwada, Mr. Thos. Howlett, Mr. A Macarthur and servant, Mr. White and servant. Mr. Minowara, Mr. A. C. Maclay, Mr. Asaki. Mr. Takano, Mr. Yamaguchi, Mr. Yamada Mr. Nakagawa, Mr. Yoshida, Mr. Thomason and servant, and 198 Japanese, and 10 Chinese in the steerage.

Per *Costa Rica* for Shanghai and ports.—Mrs Hart, Mrs Glover and servant, J. Davison and wife, Dr. Trifler, S. Brown, H. S. Munroe, S. Hart, Mr. Gibson, Mr. J. Hart, Loewenstein Mr Longford, Miss Mayfield, W. B Davis, Mr. Hubner, Clarke, Tat Sin, Mr. Gould, Winton, Capt. Fyffe, U S.N., Mr. Williams, Faber, Ulmann, 32 Japanese in Cabin and 713 in the steerage.

Per British steamer *Sunda*, from Hongkong.—Mrs. Rickerby and Herr Van der Osten.

Per British steamer *Erl King*, from Shanghai.—Messrs. Carter, Gray, and Carozzi.

CARGOES.

Per British steamer *Bombay*, for Hongkong:—

Silk..... 69 bales.

Per *City of Tokio* from San Francisco.—Treasure, $285,509.08.

Per *Niigata Maru* for Shanghai and ports.—Treasure, yen 4,000.

Per British steamer *Sunda*, from Hongkong:—

General goods ... ... 1197 packages.
Sugar ... ... 8,200 bags.
Ex *Cathaya*, ... 180 packages.

Per *Costa Rica* for Shanghai and ports.—Treasure, $700.000.

REPORTS.

The French steamer *Tanais* reports: experienced strong wind from the N.E. to N W with a heavy sea between Formosa and Van Dieman Strait.

The *Kearsarge* reports left in harbour at Hakodate the French gun-boat *Volta* and 2 Japanese vessels.

The *James Paton* reports strong S. E. winds first part of the voyage, latter part wind S. westerly. Left in port two American barques *James C. Stone* and *Armenia*.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—The market continues inanimate, prices rule irregularly and dealers are still indisposed, or more probably unable, to purchase to any extent. Some transactions are reported in 8¼ and 9 lbs. *Shirtings* and in *Velvets*, but in all cases very low prices have been accepted by sellers. Business in *Yarns* and in other classes of Cotton manufactures has been unimportant.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.95 to $2.10	60 to 64 reed 40 yds. 35 in. nom	per pce.	2.20 to 2.40

„ No. 4 Kook-fah...	„ ...	5.90 to 6.50		Kerosine Oil...	...per case ...	2.80 to 2.90

EXPORTS.

Silk.—The prices hitherto paid for new silk viz, $355 to $380 apparently give an opening rate of about $400, say 15/3 or fr. 42, for No. 2½ Hanks against $485 to $500, say 18/7 to 19/1 or fr. 51 to 53, last year at the same date. We say "apparently" because supplies of new silk since the beginning of this season being only 50 bales transactions have been too limited to allow any particular grade to be accurately quoted. Some of the parcels received during the last week were tolerably clean silk; but further comments on quality should be postponed until the season opens in good earnest, which every thing tends to show will take place much later than last year.

Settlements since the 12th instant, are 60 bales of old, and 40 of new Hanks, leaving a stock of 200 bales of old silk.

The shipments of the fortnight are 85 bales, making a total export since 1st inst. of 148 bales against 248 last year for the corresponding period.

The average value of the total export of silk during the past season we calculate to be $485, say 18/6 or fr. 51, against $585 say 22/9 or fr. 64 for the season 1873-1874.

Tea.—We have another week of brisk business to report, settlements since the departure of last American mail amounting to about 5,500 piculs.

Stocks are increasing and prices declining. To-day's prices close much as under, but some irregular settlements have been made through the anxiety of sellers.

The steamer *Galiey of Lorne* via Suez has been laid on for New York, and two other steamers have also been advertised "if sufficient inducement offer" for the same destination; the *Lothair*, sailing clipper has been laid on via the Cape; rate of freight, nominally, £2.15 per 40 cubic feet for sailing craft.

Common	...$20.00 to 22.00	Fine	...$34.00 to 38.00
Good Common	... 23.00 to 24.00	Finest	nominal.
Medium	... 25.00 to 29.00	Choice	do.
Good Medium	... 30.00 to 33.00		scarce.

EXCHANGE AND BULLION.

Exchange.—The past week has been characterised by daily drooping rates with sharp competition for the few Private Bills offering.

Gold Yen have found buyers at a further advance for export as well as for local requirements.

Rates close as follows:—

On London, Bank, 6 Months' sight...	4s. 0¾d. to 4s. 1d.	On Hongkong Bank Bills on demand	¼ per cent. pre.
„ „ Bank Bills on demand...	3s. 11¾d. to 4s.	„ „ Private Bills 10 ds. sight	¾ „ dist.
„ „ Private, 6 months	4s. 1¼d.	„ San Francisco Bank Bills on demand	98
„ Paris, Bank Bills 6 months	5.16	30 days' sight Private....	101

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 31.] YOKOHAMA, SATURDAY, JULY 31, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATHS.

On the 23rd instant, at the Yokohama General Hospital, DANIEL TURNER, Esq., late U. S. Consul for Hiogo and Osaka, formerly of Philadelphia U. S. A.

On the 25th inst, at the General Hospital, Yokohama, CHARLES CAMPBELL FAIL, late of Shanghai, China, aged 42 years.

Notes of the Week.

THE Second Promenade Concert held in the Public Gardens last evening claims a short notice at our hands. The programme of the music set down for performance was as follows.

PART I.

March.
Quadrille, "La Fille de Madame Angot" ... Lecocq.
Vocal Quartette, "Beware" ... Hatton.
Solo Violin, 6me Air Varie ... Ch. de Beriot.
Waltz ... Gung'l.
Vocal Quartette, "May Day" ... Müller.
Solo, Cornet à piston ... Rossini.
Polka, "Vera" ... Shiraieff.
(Bandmaster H. I. M. S "Vsadnik.")

PART II.

Potpourri, "La Belle Helene" ... Offenbach.
Song.
Vocal Quartette, "The two Roses" ... Werner.
Solo Violin, Fantasie, "Il Trovatore" ... Singelee.
Waltz, "On the Banks of the Neva" ... Schubert.
Russian Hymn.

The chief feature of the entertainment was the violin solos played by an accomplished amateur whose previous performances were noticed in our issue of May 8th. De Beriot's charming 6me Air Varié, which he selected for his opening piece, though played with a vivid feeling to which we are little accustomed scarcely produced a corresponding effect. It is hardly fair, however, to expose a violinist—and especially one whose characteristic lies rather in the expression of the tender and graceful than of vigour or passion—to the detrimental test of an open-air concert, and we are bound to say that the performance suffered from this mistake, but in the subsequent *fantasia* on airs from "*Il Trovatore*"—a weak and colourless setting of the "gems" of that popular opera—the effect was improved by the artist placing himself under shelter. In place of repeating his brilliant rendering of the *fantasia* he gave a graceful romance by C. J. Toms with sympathetic delicacy and feeling, though with less force of execution than we might have hoped for; for this, however, the condition of the instrument, borrowed for the occasion and upon which our trying climate had made sad havoc, was largely responsible. The quartettes and choruses were sung with good effect by a party of amateurs, the band filling up the intervals creditably, and a pleasant evening was brought to a close with the Russian National Hymn.

The Gardens were well attended, and we trust that the aim of the amateur *impresario*, who has wisely availed himself of this pleasant mode of diminishing liabilities incurred for the public benefit, is in course of attainment.

It is said that the Chinese compradores of the settlement have raised a fund amounting to about $3,000 in all, which, together with a sum of $4,000 obtained in Honkong, they purpose to offer to the Deutsche Bank to induce it to forbear further proceedings against its late compradore Lum Hok Pan. His embezzlements, it was said, amounted to $28,000.

We are indebted to the agent of the P. & O. Company for the intelligence that the S. S. *Malacca* with mails viâ Brindisi to the 25th June, left Hongkong for this port on the 30th instant.

Messrs. Whitfield & Dowson have supplied the Imperial Post Office with a steam launch for the purpose of transporting the mail bags to and from the mail steamers and the shore.

THE week which closes has been distinguished by a temperature which the oldest inhabitant has, as usual, failed to find a parallel for. It is said that numberless cases of *coup de soleil* have occurred in Yedo, and that the hard-worked omnibus ponies drop down in the streets to die. Some interchange of compliments have marked the transactions of the Evening Press, and the sarcastic observer has had more than one opportunity of testing the accuracy of the cynical assertion that "language was given to man to conceal his thoughts."

(From the Japan Mail Daily Advertiser.)

THE following intelligence in reference to Corea has been received by the *Akebono Shimbun* from a private source. Moriyama, the special envoy of the Government, has not arrived at the capital. The Coreans appear desirous to postpone as long as possible his official reception, which he is naturally anxious to bring about with the least possible delay. Hirotz who has just returned, remained for some time with Moriyama but has visited this country for the purpose of making important communications. He will return to Corea shortly. The Coreans evince a decided disinclination to open intercourse with foreigners, but as a wholesome dread of Japan would seem to exist it is not improbable that skilful negotiations may ultimately lead to free intercourse, without the necessity of an appeal to arms.

A native newspaper announced the first case of aristocratic bankruptcy a few days since. We now read that a *kadzoku* (or *daimio* as the phrase was formerly) has voluntarily become a *heimin*, or commoner. The slight value of a title now-a-days makes such a sacrifice easy.

THE rumour of a massacre at Tientsin which obtained currency yesterday appears to be without foundation. It is true, however, that correspondence from the north of China alludes to the existence of an angry feeling towards foreigners, which will not improbably display itself in attempts upon life.

Original from UNIVERSITY OF CALIFORNIA

The M. M. S. S. *Volga*, with Marseilles Mail of the 20th ulto., left Hongkong on the 26th instant, at 6 P.M.

THE Home Office has published a notification to the effect that it will not be sufficient to submit the title of a book alone in order to obtain a license for its publication. A complete copy of the work in question must be sent in to the Censorate.

THE native newspapers give an alarming summary of the misfortunes caused by the recent heavy floods in the province of Echigo. Many hundreds of houses have been submerged, the granaries are destroyed, and the growing crops more or less injured by the violence of the inundation. The Government is called upon to take prompt action to relieve the suffering.

AT an early hour on the 27th instant, a review of a portion of the troops quartered in Yedo was held in the presence of the Danish Envoy, General Rasloff. He was subsequently entertained at Hamagoten.

Baron von Holleben, the representative of the German Empire, entertained the officers of H. I. M. ship *Hertha* at the German Consulate on the 27th instant, at dinner. The band of the *Hertha* played a selection of music very agreeably in the course of the evening.

THE heat of Osaka would seem to have exceeded that of Yokohama in the course of the past week. We hear that the glass has marked as much as 102 Fahrenheit in shade.

THE *Hochi Shimbun* says that a fire has occurred at Yamamachi in Nigawa *ken*, originating in the upsetting of a lamp. Before it could be extinguished 150 houses were destroyed.

THE *Nisshin Shinjishi*, of July 27, 1875, publishes the following:

To the Tôkiô Fu.—The penal clause regarding the supervision of drugs, notified on the 25th of December 1874, will be put into force from the 1st of October next. This must therefore be published throughout your jurisdiction.

The above is hereby made known.

July 23, 1875.

(Signed) ÔKUBO TOSHIMICHI,
Minister of the Home Department.

The above notification having been issued, the same is to be made known to all persons following the occupation of dealing in drugs, without exception.

July 24, 1875.

(Signed) ÔKUBO ICHIÔ,
Chiji of the Tôkiô Fu.

NOTIFICATION REFERRED TO ABOVE.

To the Tôkiô Fu.

Drugs are articles of great importance. Unless they be unadulterated and carefully prepared they are calculated to prove most deleterious to human life. Supervision must therefore be excrcised over their sale and purchase, and so, for the future, any persons who may deal in or be in possession of spurious and harmful kinds of the two kinds of medicine, Quinine and Iodide of Potash, shall be dealt with as laid down in the following penal clause.

The above is to be notified throughout your jurisdiction.

Note.—Apart from the drugs above-mentioned, others will also be named and made known in due order. The date upon which the penal clause herein laid down is to come into force will be made known afterwards by the Educational Department.

December 22, 1874.

(Signed) SANJÔ SANEYOSHI,
Prime Minister.

PENAL CLAUSE.

Any person dealing in spurious or worthless drugs shall be liable to a fine not exceeding 50 *yen*.

Note. In case of a second or further offence a fine of double the amount in the first case shall be levied, and the person shall also be prohiblted from dealing in drugs.

Regulations having been issued in the terms of the above, the same are to be made known throughout the various districts, without exception.

December 27, 1874.

(Signed) ÔKUBO ICHIÔ,
Chiji of the Tôkiô Fu.

THE Schooner *Iris* was sold by Mr. T. Wallace for $7,250. Mr. Macdonald was the purchaser.

We have to acknowledge the receipt of the Gospel of St. Luke, translated into Japanese for the American Bible Society. We hope later to add a few words upon the execution of the work.

AN interesting discovery in Hidaka of a collection of relics of the past is reported by the *Nichi Nichi Shimbun* in a recent issue. A labouring man who was breaking up new ground for cultivation discovered a "hill"—most probably a *tumulus*—which he surmised had been used in past times as a burial place. On digging further he brought to light a mirror, thirty swords of old-fashioned make, thirty large and twelve hundred small precious stones of various sorts. It is presumed that the burial place dates back to the time of Jimmu Tenno.

THE heavy rains which were reported on the west coast would seem to have fallen to a great extent on the island of Sado. On the 16th instant, says the *Hochi Shimbun*, an inundation occurred in the neighbourhood of Shimmachi which carried away many houses, some bridges and destroyed, in many instances, the growing crops of rice.

WE have been supplied with some specimens of a new issue of labels which indicate a somewhat alarming progress in a branch of Japanese art in which we should have been satisfied with a less notable advancement. The labels are in form and colour of those of Messrs. Bass & Co., and Messrs. Cameron and Saunders, their Agents, but some slight modifications of the original design, and the alteration of those names to that of the Japanese shopkeeper who bottles the deadly stuff, are presumed to be sufficient to evade any legal consequences, even if protective measures were available for the relief of the sufferers. If our informant be correct in his estimate of the contents, the English merchants will not be the only sufferers, the mixture being highly suggestive of cholera.

and enviable position of being able to borrow from itself, he takes what is required this year—$4000—from this fund, and the interest of course appears on both the debit and credit side of his account. The objection that a large reserve fund may, some time or other, be needed for some extraordinary expenditure rendered necessary by disaster, he meets by showing that the total cost of Municipal repairs after the typhoon of 1871 was $596; and he, therefore, announces his intention of continuing to draw from the accumulated fund what sums may hereafter be needed for permanent improvements, until it is reduced to a fair and reasonable figure. The immediate result of his operations this year is that he is also enabled to dispense almost entirely with the whole Police Tax; the ordinary expenditure, including the cost of police, being fully covered by the ground rents, and leaving him a small balance. He charges the land with one *bu* per lot for police tax, to indicate that the Council retains its power of exacting "any sum not exceeding one-third of a *bu* per *tsubo*" but treats the tax as what he claims the Ministers meant it to be—a rate-in-aid, only to be resorted to in case of necessity.

Granting Mr. RICKERBY's figures to be correct, as we must necessarily do, he certainly seems to have made out his case, and we congratulate the Kobé community on their acquisition of a Finance Minister who reduces taxation while he improves the settlement. Of course, he derives his power to do what he proposes from the care with which his predecessors have accumulated the fund from which he borrows: but as we agree with him that their policy has been throughout a mistaken one, only a small share of credit is due to them. What immediately interests ourselves in the matter is the clearly proved success of the experiment in Municipal Government made in Kobé, after so many others had been tried here, with failure for their invariable result. The Kobé system is certainly not perfect, and the power of the Municipality, especially as compared with that exercised by the Municipal Council of Shanghai, with such excellent effect, appears to be unnecessarily limited. But the presence of the Consuls in the Municipal Council is certainly likely to ensure any recommendations made by that body being carried into effect by the Consular Board, and, after all, the practical success of the scheme fully counterbalances its theoretical defects. The Foreign Representatives have every reason to be satisfied with their work in Kobé, and we urge upon their serious consideration the advisability of substituting here,—in place of a system which has worked badly, and given satisfaction to none,—one which experience has proved to work well in a similar community, and which there has given satisfaction to all. It appears to us that our municipal reformers should cease to strive after the unattainable perfection for which they have fought so long, and endeavour to obtain the adoption here of a system with which one of the most radical of their number seems to be well content. Reference to the letter in which Mr. SIDNEY LOCOCK announced to the foreign community of Yokohama the establishment of the imperfect and inefficient system now in force, in this settlement, will show that the power of abolishing it was retained by those who inaugurated it. If the foreign community here were to request from their Representatives the adoption of the better Kobé system in its stead, we cannot see, we confess, how they could logically justify a refusal of the prayer.

SPIRIT OF THE JAPANESE PRESS.

ON POPULAR RIGHTS.

(Continued from the Hôchi Shimbun.)

The conduct of those men who some nine years since rose against the Government which they subsequently placed in the hands of the Mikado would seem to have a parallel in the valiant English barons who extorted Magna Charta from their unwilling Monarch, King John. We can imagine this to have been the language of the brave defenders of our country's liberties:

"We can no longer tolerate the weight of your despotic "power and must insist upon your yielding up your "authority to us. If you refuse, the influences which we "can evoke by raising the cry of *sonno* and *joi* shall be "summoned to enforce our demand. True, we are as yet "too weak ourselves to wield the power which we shall "wring from you, while you on your side must be loth "to part with the authority you have enjoyed through "centuries of rule. We shall therefore bring forward the "Mikado and let it be supposed that the power has "passed into his hands. This will answer the purpose "which each of us has in view."

Looking back at this great historical event we can imagine that in some such manner the English obtained their charter of liberty. But while the events are in course of action it is less easy to seize their design. One is dazzled by the glare and the tumult, and it is doubtful if even the actors in such scenes are thoroughly conscious of the tendency of the movement they are engaged in. But when days and years have passed, and we calmly consider the events which history records, then are we able to understand the real tendency and meaning of these popular outbreaks. How few of us who have lived through the late tumultuous times and have witnessed the vast moral revolution which has followed them could have conceived their drift and importance beforehand.

* * * * * * * * * *

The movement which led to the obtaining of Magna Charta took place in England in the year 1215 A.D.; the movement in this country occurred only nine years ago. The former was presided over by the nobility; ours by *ronin*, assisted by the action of the *samurai* of the *Han*. In the former no question of foreign policy was involved; the cry of the leaders of the latter was *joi* (expel the foreigner). The Barons of England claimed redress directly from their monarch; our *rônin*, on the other hand, menaced their Government with shouts of *sonno*. With such differences existing our learned men would seem to have failed to perceive the analogy. But it is not always the case that the outside appearance indicates the object enclosed, and this we must bear thoroughly in mind. Rice is not our only article of food. Magna Charta resembles the dishes that are brought to the table, while our late revolution may be compared to our rice cakes. They are not alike, and yet it cannot be be gainsaid that both are food.

Without paying due heed to this our learned men are found asserting that though the ruling Government of this country be arbitrary and despotic it is impossible to correct this because there is no real vigour underlying the people. We must wait, say they, until this vigour is developed. But the most unfortunate of their dogmas is that which maintains the impossibility of developing the spirit of a people otherwise than through the tyranny of their oppressors. The present government, they contend, is too indulgent. Let it become more powerful and more oppressive and the vigorous national spirit which enables a people to rise against a hateful rule will soon manifest itself. They would wish to see Japan under a ruler like Peter of Russia, or Frederick the Great of Prussia; 'Give us,' they exclaim, 'a more despotic government.' We can scarcely believe that this is their honest wish, but if it be so it is much to be regretted for their sakes that the despotism of old times no longer exists.

Some among them speak of the people as if they consisted only of agricultural labourers and *jinrikisha* men. The word people can scarcely be said to limit its meaning to these operatives: it comprises learned men, doctors ex-officials and others who do not belong to the lower

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

classes. If our learned men find the ranks of the people deficient in men of intelligence and character they would do well to petition the Government to discharge some of the unnecessary officials. The chief trouble of Japan lies in the swarms of officials, and learned men desirous of becoming officials, who now prey upon her. Let all who are not wanted for the business of the State be dismissed and there will be no longer any occasion to blame the people for their deficient understanding. True, such men cannot be considered the best our country can produce, but they will at least possess greater acuteness than labourers or *jinrikisha* men. The learned, however, who, were they to do their duty, should place themselves in the van of popular progress and claim for their fellows their natural rights are now either officials or striving to become so. Far from joining in the struggle with the people they contemplate their position with indifference, or reproach them with the want of spirit of which themselves have shown them no example.

The attempt to set off the power of the farmers and *jinrikisha* men against that of the Government is something as if one should place a lantern at one end (of a pole) and a huge hanging bell at the other. And as for waiting for the development of a vigorous spirit, it is as if one should plant a pine-shoot in the ground and wait for it until it has grown to the dimensions of a mast. The pine-shoot will one day grow to be a mast, but its growth will take time. Ye learned men, will you await the coming of this day? We ourselves are, we confess, somewhat impatient of temper and cannot do so. The learned may allege that the seed was of a peculiar description and that the tree will reach maturity in three years. But for our part we cannot believe it. The great Newton could never have sprung from an African negress nor could Adam Smith have owned an Aino ancestry. The development of mental vigour, the learned must remember, is the result of generation after generation of slow and painful improvement and not to be accomplished by a sudden leap. Do these men intend to cultivate Newtons and Adam Smiths in the far-away mountains among our farmers, or believe that a country cannot be happy without these eminent characters? This, we confess, is far from our thought.

England is the leading country of the civilised world, and yet how deficient in knowledge are her lower classes notwithstanding their great industry! They have no time to meddle with politics or the administration of the government, and accordingly all such matters are directed and discussed by members of the upper and middle classes. Our learned men may possibly assert that it is too early also for England to have a House of Commons! It seems absurd that men who bear the character of persons of learning should exhibit such shortsightedness.

Viewed superficially, the present Government of this country appears to be as despotic and oppressive as the administration of the Tycoon, and the people seem as ignorant and slavish as they were then. But a deeper inquiry into our condition will shew that this conclusion is erroneous. The oppressions of the present rule do not resemble those of the Government to which it succeeded, but are only the remains of the system. The real despotism was crushed out by the very men who now hold the reins of Government, but as its forms linger in their minds, impressed there by the custom of centuries, some traces may still be perceived in their usages. It is just like a *kitzunetzuki*,* with whom I will compare the position. It is known that every *kitzunetzuki* is a lover of *aburage*† and this has always appeared unaccountable. Now a *kitzunetzuki* is known to suffer from some malady of the nerves or of the brain. All Japanese know that foxes relish *aburage*, and the *kitzunetzuki*, albeit he is crazy, remembers the foxes' partiality and eats the condiment in imitation of them although he himself dislikes it. People who observe this, believing it to be the work of Master Reynard, find nothing extraordinary in his conduct, and are much perplexed if they should chance to meet with a *kitzunetzuki* who has a distaste for bean cheese. All this comes of an old habit and early impressions. The despotism of the present administration is just like the *aburage* of a *kitzunetzuki*, a reflection of our customs hundreds of years old; and it is precisely thus on the part of the populace, who, believing that the normal disposition of a government is to oppress, would scarcely admit that to be a government which was unaccompanied by an exhibition of arbitrary authority.

It has so happened that those who at present hold the reins of government have in their turn been charged with the exercise of those oppressions which they formerly rose against. And again, among the lowest class of officials there are those who believe arbitrary demeanour to be a sort of official uniform, and exhibit their haughty manners when quite unnecessary, and the lower classes believe this to be appropriate. This all bears out our simile. It is like the *Kitsunetsuki* who imitates the fox, while the people look on without exhibiting any astonishment.

Guided by these views our learned men have asserted that our Government is arbitrary and oppressive. But in truth it is not so. It is but as the fading lights which are reflected upon the Ship of State as she sails away from the shoals of Oppression and Tyranny to the deep ocean of Liberty which is to be her future home.

* A person supposed to be bewitched by a fox.

A Wagakusha.

(Nisshin Shinjisshi.)

Our *wagakusha* (native archæologists), unmindful apparently of the change which our country is now undergoing profess great admiration for all that is ancient and time-honoured and in their gross ignorance reproach foreigners with narrow-mindedness, alleging that they cannot possibly know the peace and repose of mind which the way of their gods leads to. Now although these *wagakusha* are no better than their fellows, they are so proud that they seem to arrogate to themselves the privilege of alone being acquainted with our native deities. Their haughty pride causes them to look down with contempt upon other people, who on the other hand believe them to be a very silly and ridiculous class. It cannot be said that they limit their evil influence to leading the people astray by their stories of the native gods. This is not the worst: they detest the foreigner as an enemy. Their hair resembles a pig's tail and their garments are 'fearfully and wonderfully made' and yet, forgetful of the absurd figure they present, they cannot control themselves in their ridicule of those who have adopted the foreign style of wearing the hair, and upbraid them in terms of contempt as the 'disgrace of the nation.' What foolish creatures!

The specialty of the *wagakusha* is our ancient mythology, of which in truth they have but an indifferent knowledge. They believe that to eat the flesh of animals is an offence against the gods and that those who taste meat are sinners. It is difficult to understand that beings endowed with sense can argue in this foolish fashion. All that can be said of them is that they are moderately well acquainted with the native cosmogony and our ancient history, that they are versed in our old idiom, and that they can compose poetry. But with these exceptions they are ignorant men, below the level of modern education, and—apart some few who are officials and the priests of the *Kiobushô*—are more or less disaffected to the present Government.

The following has been related to us: A *wagakusha* who is skilled in turning a verse of poetry travelled through the provinces in the hope of earning his daily rice by the exercise of his profession, but finding little encouragement for men of his art his body dwindled to a thread-paper and he was almost starved. Reduced as he was, he protested loudly against the foreign "barbarians," and vowed, that were foreign ships to approach our shores our violated deities would raise a tempest to drive them away. "No treaties," he contended, "should be made with foreign countries, and it was unwise in us to trade with them." "But," asked some one, "suppose a foreign power to insist upon our entering into relations with it, threatening war as an alternative, what course is then open to us?" He answered that the "difficulty was easily met. Let the foreign savages settle on the sea-coast while the aborigines retire to the mountains. They would soon tire of their predicament and would hasten away." This is truly a refreshing notion!

Original from UNIVERSITY OF CALIFORNIA

Now, though we may not have among us many who are so foolish as this *wagakusha*, there are not a few who closely resemble him, and the class is very obstructive of the advance of our thirty-five millions of fellow countrymen. Advice to them is hopeless: they are incurable, and there is no means of getting rid of them. Though I sincerely sympathise with them I fail to see what can be done for their relief, and write this in the hope that it may attract the attention of others who may have formed an opinion on the subject.

The same.
(Yoyoshadan.)

It has been frequently said that were we to alter our language and alphabet to that of some foreign country we should greatly facilitate our intercourse with strangers. But our language was given to us by the two gods Takami Musubi no Mikoto and Kami Musubi no Mikoto, who also created the heaven and the earth, and cannot therefore be changed by the power of man. The letters of the alphabet, however, which are not the work of the gods, came to us from China. But it was obviously by the Gods' help that these letters were so brought, and doubtless because they foresaw the convenience which they would prove to us. It would therefore be a sin against our gods were we to set aside our ancient language in order to adopt that of another country.

For what purpose are children taught to read and to study? In order, of course, that they may acquire habits of reasoning, and that on attaining manhood they may be able to apply their learning in dealing with the affairs of life. A work has recently been issued styled the "*Shoyaku Kiojisho*" designed to assist in the education of children, and the following is a specimen of its mode of teaching:—

Q. What blossom is this?

A. That is a plum blossom. (The language being plain and simple.)

The object of instruction must be so to habituate children to the use of this dialect that on their growing up they shall employ it. But I cannot believe that such language will be used in writing even ten years hence, and I therefore deem the instruction of children in it a labour lost.

Now according to the laws of literature the loftiest form of language must be employed in writing, and it is useless to teach such trite phrases as "is it so?" "it is so" to children. They will naturally find these out for themselves.

KUROKAWA.*

The Genrôin.
("*Choya Shimbun*" *of July 29th*, 1875.)

Every one knows that the reason for the establishment of the *Genrôin*, as stated in The Tennô's letter of April 14th last, was to "extend the source of the constitution of Laws." The *Genrôin*, therefore, must have the power of making laws, and is thus equal to the *Sei-In*, not inferior to it, as was the case with the former *Sa In*. Some people, however, think that the status of the *Genrôin* is no better than that of *Sa In*, and that tho' its *name* exists, its *actual power* does not exist, and it is suspected that it is but a minor office of the *Sei In*. If so, the Tennô's words have not been duly obeyed, nor have the wishes of the people been granted, and the members of the *Genrôin* cannot escape the imputation of merely striving for high position and good salary. This, however, cannot be true, for when the *Genrôin* was established, only persons of ability were selected. We (the newspapers editors) can vouch for this, and the reports above quoted arise from wrong ideas.

We, however, are not allowed access to the Government Offices, and so can only judge these matters by a glance at the exterior without knowledge of what goes on within, and so cannot, of course, be positive with regard to any matter connected therewith. This is like forming an opinion of an ocean from examining a few drops of water. Nevertheless, we hazard an observation. As the Government has drawn up "Press Laws" the *Genrôin* must have held discussion thereon. Clause 16 of those Laws says that no petitions or memorials are to be published unless by permission of the Public Offices of the Government. A few days ago we wished to publish a memorial that had been sent in to the *Genrôin*, and accordingly applied for permission so to do. For twenty days no reply was given us, so after that we went daily to enquire, and were told that the *Genrôin* had applied to the *Sei In* for its sanction, and that we had better go thither and ascertain the circumstances. We did so, and were told it was not known whether the document in question had come, or not, from the *Genrôin*. A second and even third application met with no better success and to this day we have not only remained without the permission required, but are furthermore in ignorance as to which of the two Departments it is that should give us instructions in this matter. We are of course on the look-out for fresh news, but here we can learn nothing whatever, as none of the officials give us any help or information. Ten days ought to be sufficient time for a decision to be formed, but such has not been the case. If the *Genrôin* cannot give permission unless after reference to *Sei-In*, then it would be best, in any case, to go to the *Sei-In* direct, no matter to what Department a memorial or petition may have been addressed. If so, the "Press Law" ought to be altered so as to read "by permission of the *Sei-In* alone." We know not if we have offended the officials, or whether it is by any fault of ours that this delay has arisen. From only seeing what goes on externally, we should be half inclined to believe the reports stated above,—but that cannot be, the *Genrôin* is too enlightened to be looked on in the same light as we ignoble people. We are perfectly sure that the reports are unfounded.

On Religion.
"*Choya Shimbun*" *of July 27th*, 1875.

The question as to whether Religion in its different forms is advantageous or injurious to the progress of a country in civilization has been much discussed by the writers of our country. We have subsequently considered this matter and though it is late in the day to offer an opinion we beg to state our views on the subject.

With regard to the world at large, Religion in its different forms has its good and its evil, and therefore its practice must not be prohibited nor must its introduction be resisted. The aim of Christianity, of Mahometanism, of Buddhism, is alike to lessen evil intentions and thus to prevent the commission of crime. This is the good above referred to which Religion in its various forms exercises in the world.

Now with regard to the evil resulting from it, ignorant people are some times led away into error by some form of religion, and are caused thereby to dislike their sovereigns, to be angry with the Government set over them until forgetting their love for their country they even go so far as to form a design for its destruction by introducing for this purpose the people of a hostile district. (At the present time the followers of the Church of Rome in Germany are an instance of this.)

Whether the good effects of Religion in its various forms, or the ill effects arising from it, predominate, it is impossible to determine. But one thing is plain, viz, that in the conduct of religion the question of the various forms to be observed should be left entirely to the free will of the people, who should be allowed perfect liberty to follow and adhere to whatsoever particular belief they may prefer. If a government interferes in religious matters and permits one religion to be practised, while it interdicts another this action on their part at once causes disturbance and revolt in the country in which it happens. We should take warning by the religious disturbances caused in old times in our country by the followers of the Ikkô sect (of Buddhists), and by the Protestant troubles which took place in England.

Therefore looking at the foregoing we say, "Religion "in its various forms exercises both good and evil in the "world, but its * practice in a country must not be pro-"hibited nor must its introduction into a country be "opposed." Writers of Japan what think ye of our views?

(Signed) OTANI SHICHIRÔ,
living in Takanawa.

* One of the most famous of the *Wagakusha*.

* Namely the practice or introduction of any particular form of Religion.

A Correction.

The following letter has reference to a highly coloured mistranslation which has appeared elsewhere :—

To the Editor of the "Japan Weekly Mail."

Sir,—In the interests of the subscribers to the *Echo du Japon* I inclose you the following English rendering, for the correctness of which I can vouch, of a paragraph in the *Hôchi Shimbun*, a so-called translation of which appeared in the *Echo du Japon* of the —— instant.

As will be seen by a comparison of the translation now enclosed with that of the *Echo du Japon*, there is no similarity, even, between the latter and the Japanese origiual except in the expression "aux yeux bleus" which, however, is applied not to the Editor of the *Japan Gazette*, as the *Echo du Japon* would have us believe, but to foreigners generally.

Considering the difficulty of the Japanese written language, it is not perhaps surprizing that mistakes should from time to time occur, and for this reason incorrectness is to a certain extent pardonable; but it is hardly fair that the public should have to accept the nonsense which the *Echo du Japon* is continually publishing in this form,—and of which the piece I have selected is a fair specimen—as the expression of the opinion of the Japanese Press, while it is equally unjust towards the latter that their articles should be thus cruelly distorted.

Apologizing for thus intruding on your space,

I remain, &c.,

Pro Bono Publico.

July 30, 1875.

(*Hôchi Shimbun, of July* 29, 1875.)

In the *Japan Gazette*, of the 27th instant there appears the following false statement.

"Looking at the aspect of affairs of late in Japan it "appears as if war with Corea could not be avoided. "The *Hôchi Shimbun*, in treating of the Corean question "states that the Government is about to appoint one of "the members of the Cabinet to the post of Supreme "Director of military affairs connected with Corea, and "that accordingly Saigo Takamori, an Ex-*Sangi*,—and "*Shidzoku* of the Kagoshima *Ken* is the officer to be "chosen."

* Our readers probably give some attention to their persual of our columns every day.

By attributing to our paper a falsehood entirely baseless and without foundation, and by publishing this in a journal which informs the country generally on matters of moment which may possibly be in some way connected with the tranquillity or peril of our country,—in thus giving us the credit of this fabrication,—does it (the *Gazette*) seek to fulfil duties? This is outrageous! Ye blue-eyed Foreigners,—with what eyes do you read our Paper?

If this error be not speedily rectified (by the "*Gazette*") we will denounce that Newspaper as a Paper which tells lies—in fact as a Journal of Lies.

(Signed.) Fujita Mokichi,
writer on the Staff of the
"Hôchi Shimbun."

We have not observed the following incident, which we take from the *Nichi Nichi Shimbun*, in the southern newspapers. We doubt its correctness.

A steamer bound from Osaka to Satsuma was observed to sink after proceeding about a mile on her course. Another vessel on her way to Kishiu came to the assistance of the wrecked steamer and took off thirty-six of passengers. One hundred and fourteen went down with her.

A SERMON.

(from the Japanese.)

The common Buddhist theory of the three states was but a pious device of the holy Shaka, in order by hook or crook to guide foolish man into the way of truth.

Now this 'pious device,' as we call it, was not entirely without a foundation of truth. There is a great deal that is true at the root of it, but at the same time it is not an actual fact. However, if I talk to you in this strain the thing is and yet is not and so forth—you will be puzzled doubtless as to my meaning. There *is* a meaning in what I say, and that is, that the principle of this pious device is put forward in the form of a comparison. Its origin is not without a reason; there is a great principle in it from the first, and for the present we will illustrate the case by the following short example. A child of two or three years of age crawls out to the edge of the verandah as if to clutch at something. Its parent seeing it (if it be in Yedo) says "see there, here comes a *momonjii*"—or if in the south—"here's a *gangozi*" or if again in the country "the *yagamò* will take you," and our pious device aforesaid has just such a signification. Of course there is probably no such thing as a goblin, but to a young child such warnings as "take care" or "you will fall and hurt yourself" &c would lose their importance, and, besides that, while one was saying this or that harm might befall the little one; so you see one is obliged to make use of some exaggeration of the kind, and, although in reality the thing is not, there is not altogether a want of reason in the device so concocted. For, see now, the child takes no heed and down he comes upon the stones and strikes his head—and the goblin is out. Every day we make use of such expressions to exemplify a meaning. A certain little fellow on getting up one morning said to his father "I say daddy, please let me see your feet a little"—"What an odd child" thought the father, and jerked out his two feet with a loud "*oi*." "Oh daddy," says the child shaking with laughter, "you who always say, 'you are not to tell lies' or 'you are not to deceive people' what a big story you've told"—"What is that you say?" says the father. "Why last night after I was in bed you came home late from somewhere and said to mother 'Well I *am* tired: when I left this morning I went first to Meguro, and from that to Kuhombutsi Yutenji, and then on to Hommonji at Ikegami. Then I came back, taking Daishigawara by the way, and my legs feet for all the world like a couple of wooden pins;' and when I come to look at these feet there is neither stick nor pin to be seen." And truly so it is. When we are tired our feet are just like wooden pins; when we eat anything of pungent taste our eyeballs start out; and when we do aught of a laborious nature our bones are broken and so on. And although in reality these things are not so, we use such words to point our meaning.

And the three states of the Buddhists bear such an interpretation. Just as we are here born into the world, so also was there a period previous to birth; and so then again when we are no more, there is the period after death; but the the facts are not as represented by the Buddhists nor as shewn in their pictures.

Then again, Buddhism further inculcates the doctrine of retribution in one state of existence for deeds done in a former one. Its object is to this end: Should the ignorant and silly in this world, not comprehending the will of Heaven, meet with misfortune or distress in any form, they allow their hearts to stray and as in the words of Möshi "the silly one writhes under poverty." They complain crying 'I can't endure this' and 'I cant stand that' contorting their bodies and conceiving mischief in their extremity. For the benefit of such as these there was conceived that great and wise doctrine of retribution for the past, viz—that the suffering one endures in the present world is but a punishment for evil deeds committed in a former state; and again, that happiness is but the reward of good actions of such former state; and so on, according as one is happy or miserable, in order that the fortunate may not be carried away by their fortune, or the miserable completely overpowered by their suffering; to soothe the burning heart of such as complain

THE PRESS-LAWS.

THERE must certainly be some period in the history of England, which, in spite of a thousand diversities, presents some important points of coincidence with the present history of Japan. It is extremely difficult to find it, and great preparation is required in any one who will search for it. He must have made himself a thoroughly philosophical student of history and have qualified himself as a demonstrator of comparative law. Starting with these advantages, we strongly think he would have the materials for an extremely interesting essay; in which, however, the points of diversity and their origin would be quite as interesting as the points of coincidence. The value of such an essay at this moment could hardly be overrated, inasmuch as we should all write and think with far more grounds for certainty about these new Press-laws which are so perplexing, than we possibly can at present. And by certainty, we of course mean such certainty only as a man should and can have upon a speculative question, not the certainty which comes from a man's personal conviction. Ludovick Muggleton, was profoundly convinced that the sun was a body about two hundred feet from the earth, and the deity a person six feet high, and a large body of simpletons accepted his teaching and have perpetuated it to this day. The Free-Press-for-Japan fanatics have arrived at equally certain convictions by processes about as rational, and we are in no humour to rank their belief as a whit more valuable than that of the English tailor of the seventeenth century. That there are solid and excellent arguments against these new laws we know as well as any one else, and the advantage of discussing them with those whose opinions differ from our own has convinced us how much there is to be said on the other side. But in every issue of conduct, whether of individuals or governments, there is always 'much to be said on the other side,' at least where no moral question is involved which points the way to a conclusion from which there is no escape. The argument in this case is not whether a free press is a good thing, but whether a free press is a good thing for the Japanese in their present condition. Beef and unrestricted freedom are both excellent things; but no one in his senses would give the first to an infant or the second to a child.

The fact is that, as Englishmen, we might almost say as Europeans, we are at such a distance from the period of our history when any such laws as those just passed in this country for the regulation of the press were necessary, that it is difficult to get the question into focus, so to speak. And we are apt, too, to speak as if government were an exact science instead of an art. In default of all serious argument in the local Press, we turn to the *Hiogo News*, where the question has been discussed at least with fairness and honesty, and what do we find? An article commencing thus:—

> The Japanese Government, weak because it does not enjoy the confidence of the people, dare not leave offences against society to the care of the calm majesty of the law, but says to the people, "you shall not have the power of saying what you like; we dare not leave you to be dealt with under the ordinary laws against society, for without offending against those, you would injure *us*." This is the case which the Government of Japan has placed before the world. It has virtually declined the discussion as to whether a free press is in the abstract desirable, and says that in the circumstances of Japan it is not desirable. The *Mail*, supporting the Government, says the same thing, but this is begging the question, not arguing it.* That a free press like that of England is a good thing will not be denied even by the *Mail*. To whom, then, and by whom is it not desirable, and why? What are the circumstances which render it undesirable? The Government says it is not desirable that the people over whom it rules should criticise it, and the circumstances are that it is not strong enough to stand against the adverse criticism of the people, and therefore the people are not to be allowed to criticise it. After this it is of no use at present to argue about abstract right—the question has narrowed itself down to one of expediency and power.

Now, omitting all reference to the "calm majesty of the law," (you might just as well talk of cloud-capp'd towers and gorgeous palaces) the Government is accused of "declining the discussion as to whether a free press is in the abstract desirable, and saying that in the circumstances of Japan it is not desirable." This is without exception the most amusing comment upon the course of action of an absolute Government we have ever met with. As we have said, the writer can't get his object into focus; or, like the blind man restored to sight, he sees "men as trees walking." With whom should the Government discuss the question? When an absolute Government makes a law it does so because, rightly or wrongly, it considers that law necessary, perhaps the law may be wise, perhaps foolish; but we never yet heard of a government of this nature reproached for not coming down to the market-place and discussing it with any knot of sages or coolies present. Of course everyone who reflects must be persuaded that before these laws were passed in council they were very earnestly considered by such lights as the members of the Council of State could throw on a new and very difficult subject, and we may be morally sure that there was a party for and a party against them. The chances are that the party for them desired to make them far more stringent, and the party against them much less so, and that they actually represent a compromise of the extreme opinions of both parties. Of course the subjects of a free state think it dreadful that ten or twelve men in a room, legislating for thirty millions of people, and being there Heaven only knows why, so far as the will of those thirty millions is concerned, should pass such a code of laws. But an absolute government is an absolute government; and to reproach it with not being a constitutional government, or with not discussing its laws with X. Y. or Z., these letters being held to represent bodies or persons external to the Council of State, is to reproach a black man for not being white, a tea-kettle for not being a steam-engine, or a Master of Trinity for issuing an order to the undergraduates to stop chorus-singing in the college quad after midnight. Those who recognize evolution as the law of all development cannot talk in this manner. Writing like this reminds one of the Laputan composition machine—nothing to do, but to put words in a box, turn a handle, and out they come in such order as they may chance to fall into. But this surely is not such writing as befits a serious question, and the impression made upon us by it is that the foreigners at Hiogo must be a most amiable and patient folk. Truth to tell, this string of remarks and questions addressed to its readers by the *Hiogo News* reminds us a little of Mr. CHADBAND's exhortations:—"Can we fly, my friends? No, we cannot fly. And why can we not fly, my friends? You will say, because we have no wings. But this is not the reason why we cannot fly, my friends. It is because we have not the wings of Trewth!"

Having passed the above sentences as sufficiently pungent to keep the MIKADO and the Council of State awake for several successive nights, and to denounce Japan throughout the solar system, we come to the following:—"After this it is of no use at present to argue about abstract right—*the question has narrowed itself down to one of expediency and power.*" (The italics are ours.) When a man begins to talk about abstract rights, we somehow class him immediately with people who call lawyers 'legal luminaries'; fire, the devouring element; and *jinrikisha* men, *daimios*. At all events we know

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

pewter and 'churchwardens.' Men have as many rights as they or their ancestors have won for themselves by their natural or adopted weapons; or, in societies where all have started on a like basis, as may have been granted them by common consent; neither more nor less. The abstract right to a free press is the most absolute nonsense, much as Mr. CHADBAND might parade it as a profound political truth were he to adopt that walk. No English writer could ever hold up his head again if he expressed himself thus on the question. The right to freedom of speech and liberty of opinion is an acquired right, won from our rulers after centuries of struggle by men who braved and suffered death and imprisonment and a thousand dangers to secure it. But no human being talks of it as an abstract right, and people who express themselves thus must not resent being told that they are talking pure nonsense. Of course men *have* talked so, as they have been guilty of a thousand other follies, and the buried literature of all times, especially of revolutionary times, contains the mummied remains of these fools. The *formulæ* which remain, set like stars in the firmament of political thought are very different. "The sun might as easily be spared from the universe, as free speech from the liberal institutions of society" said the greatest of the Greeks. "No greater calamity could come upon a people than the privation of free speech," said another second only to him. "This is true liberty, when free-born men, having to advise the public, may speak free," said a third. "For this is not the liberty which we can hope, that no grievance should arise in the commonwealth,—that let no man in the world expect: but when complaints are freely heard, deeply considered, and speedily reformed, then is the utmost bound of civil liberty attained that wise men look for," said one of the greatest and noblest of Englishmen. And again the same writer, "Give me the liberty to know, to utter, and to argue, freely according to conscience, above all liberties." A thousand such passages might be found by anyone who will take the trouble to look through the speeches of Erskine, Fox, the elder Pitt, Burke, Sheridan, Brougham, Macaulay, or any of the great English constitutional orators or writers. But of abstract right he will find never a word. Metaphysics in politics is like dead flies in the ointment of the apothecary.

And then the remainder of the sentence:—"the question has narrowed itself down to one of expediency and power." Of course people who begin talking about abstract rights come by a straight road into this slough. What is all government but the exercise of power based on expediency? What else can it ever be? Government is not an exact science as we said before. When people come into collision with their rulers, you cannot say that they come with a momentum equal to their weight multiplied into their speed, and that to withstand them you must present a force which is so many more pounds than this. When they are oppressed and irritated you cannot exhibit colchicum or some given specific as you can for gout. Government is an art, and the greatest masters of the art are those who have permitted the freest and most harmonious development of the minds and energies of the people, and produced concurrently the spirit of willing obedience to the laws. But this is done by exhibition or relaxation of power according to the expediency of the moment, such expediency having a moral basis according to the accepted code and traditions of the governed society. Of course, the art has, as have all arts, a foundation of classified knowledge, and so far partakes of a scientific character. [illegible] perfectly good law might be passed in France or Germany to-morrow which would drive the English people to madness, and if the rigors of an English Sunday were imposed on the French, the Bonapartists might be back in a week. A great many wise and good men think that our jury system is responsible for a vast amount of injustice, or, at all events, that more strict and certain justice would be done were the issues tried, both in civil and criminal cases, by a Judge or a bench of Judges. It is quite possible that many English ministers may have been convinced of this. But were the most popular Minister England ever had to propose the abolition of the system, the fabric of his power would vanish in an instant, and he would be burnt in effigy in every town and village in Great Britain within a week. Supposing that he lived and died in the above belief, and yet made no move to improve the administration of justice by such means, would he not be acting upon principles of expediency? Assuredly, yes. Would he be acting immorally? Assuredly, no. The *Habeas Corpus* Act is one of the dearest rights of Britons, and sometimes it is found expedient *i. e.* necessary, to suspend its operation in Ireland. Is the Government which does this an immoral Government? Yet what it does is to use its power according to the dictates of temporary expediency. The reproach, therefore, that the action of the Japanese Government "is narrowed down to expediency and power," is an exact pendant to the reproach that it refused to discuss the question of the advisability of the press-laws, and thus absolute nonsense.

Returning now by the road which the *Hiogo News* chose—quite logically, we admit—for the purpose of reaching this slough, we come back to the "abstract right" pitfall, upon which it is only necessary further to say that the Japanese have just as much right to trial by jury, to septennial parliaments, to the *Habeas Corpus* act, and to universal or any other suffrage, as they have to a free press; but not one atom more. We devoutly wish they had all these rights, but they have not, and it is absurd to lure them into danger by a false scent. Like other nations they will have to work and struggle for them and the more worthily they do this the more they will prove themselves fit for them. After the writer in the *News* has given what he assumes to be the theory of the Government in respect of the press, he says:—"On the principle that every Government has a right to protect its own existence, it may make any decree whatever, *but it does not follow that the nation would be wrong in refusing obedience to its decrees.*" This is, of course, the doctrine of the right of rebellion in its simplest form, and may serve to show the Japanese Government the dangers of a free press in a country governed as Japan now is. Of course no one pays the smallest attention to a sentence like this appearing in an English paper in Japan. But where would this country be in five years if this kind of doctrine were preached throughout its length and breadth, whenever some twenty men chose to preach it either for good or evil purpose? This alone shows the folly of all talk of a free Press under an absolute Government.

Let us illustrate this doctrine of rebellion by a passage in our own history, in order to show how responsible men treat it from a constitutional point of view. When the Treasonable Practices Bill was sent down from the House of Lords to the House of Commons in 1795, a fierce debate ensued upon it. Mr. Fox said that 'if ministers were determined, by means of the corrupt influence they possessed in the two Houses of Parliament, to pass the bills, in direct opposition to the declared sense of a great

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

majority of the nation; and should they be put in force with all their rigorous provisions, if his opinion were asked by the people, as to their obedience, he should tell them that it was no longer a question of moral obligation and duty, but of prudence.' This is about as strong language as ever was used in the House of Commons, and of course means that if the acquired rights of the English people, and the theory of their free constitution, were to be violated by a bill passed by means of corrupt influences by the ministry, the people would be justified in opposing the bill by force. But of course the strength of Mr. Fox's argument lay in the fact that we have acquired rights and a free constitution, and that the bill was sought to be passed by corrupt influences and against the expressed sense of a free people. He showed the circumstances which would justify forcible resistance of the Government, but the very essence of his argument is that their rights—not abstract rights, but acquired rights—were being violated. And here we are brought at once to the position we took up from the first on this question. The relations of the Japanese to their Government are relations of status and opinion only, not of contract, and until these relations have left the one form and assumed the other, a free press is equally impossible and absurd.

The next sentence in the article of the *News* is so extremely amusing that we must quote it *verbatim*.

> Under the stimulus of excitement the Japanese are brave to recklessness—nobody doubts that—but what those foreign nations which are now watching the development of Japan want to ascertain, is whether the people have thought themselves into a sincerity of conviction which will produce the tenacity of purpose necessary to win political liberty from a bureaucratic Government.

We take this to mean and we must be excused for being in some doubt about it,—that the curiosity of foreigners in regard to the political development of Japan ought to be gratified by an experiment which might possibly end in the death of the country. We have lately heard a good deal about vivisection, but this is a plea for it on a larger scale than has yet been urged.

We cannot of course undertake to go sentence by sentence through the article under consideration, but the writer talks of the desired "suppression of the press" by the Government, and on this we will give him our own views which he must assess at such value as he thinks proper. Our firm belief is that the Government have long had this question under consideration, and, seeing the enormous educational value of the press in Europe, were even over anxious to see it at work here with the smallest possible amount of restriction. Their known desire to adopt all European institutions which they can force into the service of the country, is our first reason for thinking this; and the extremely loose and light code thrown together for the regulation of the press at its first start confirms this impression. But the rain which is harmless enough when allowed to trickle away in individual drops or tiny streams, becomes dangerous when gathered into reservoirs, which, in their turn, are opened upon waterways too slightly constructed to bear the rush of the whole volume of the water. Great rifts appear in the channels, land-marks and bridges are washed away, foundations are unsettled, and the whole face of things is in danger of disfigurement and even of obliteration. To blame a Government for dreading such consequences as these is like blaming an engineer for dreading the violence of water, or the wear and tear arising from united speed and weight over a road too weak to endure them. The old institutions of this country were not made to bear such a strain, and they would break down under it. You might as prudently lay rails on an ordinary carriage-road and run a locomotive and train over it. Far better, while yet it is possible, to strengthen the foundations of things and so prepare for this future heavier traffic. The Government could foresee that what was taking place in Yedo would in a few years time take place, possibly under far less sense of responsibility and under even less good guidance, in every town in the Empire, and it naturally feared the mischief which would result from this. We may be fully persuaded that the Japanese Government desires to stand well with the western world, and to deserve and acquire a reputation for liberality of view and action so far as this is compatible with the safety of the Empire. We have little doubt that the issue of these Press-laws has caused it some regret in this respect, and that nothing but the presumed necessities of the case have dictated them. It is in some sense a step backwards, inasmuch as it defines boundaries before ill defined, and restricts liberties willingly granted under the impression that their use would be beneficial and not dangerous. But to blame a Government for walking warily in such a path is sheer injustice or ignorance. The simple fact is that it was going too fast on a road, not quite knowing whither that road would lead, and rather heedless of its dangers. With a strange inconsistency, foreigners, who are constantly reproaching the Japanese with going too fast, and with hasty action on theoretical grounds, now reproach them with timidity and illiberality for seeing and avoiding a great danger, and this seems to us unjust. We have not the slightest doubt that the government has taken this step with great regret and sense of disappointment.

Not the less, however, because we think the government right, would we hope that these laws may be leniently interpreted and administered. Let men move as freely within them as possible though the public writers cannot complain that they are deprived of liberties won by their fathers and guarded by themselves, they cannot deny that the license used by some of them has caused the present unpalateable definition of such liberties as they have enjoyed for the past two years. But, as we said last week, the Government must not make an enemy of the press; if it does so, the day of revenge will assuredly come sooner or later, for the press is in some sense the public voice, and this no Government can safely disregard. There is no need for panic, because there is need for caution. And here we must take leave to express our strong disappointment at the edict just issued from the Home Department by Mr. Okubo, which really is no necessary corollary of these Press-laws, and which will certainly create a most unfavourable impression abroad. At the end of an article already for too long, we cannot venture so far on the patience of our readers as to discuss this edict, cognate though it be to the subject under consideration. But we reprint elsewhere our plea, now over two years old, for the removal of this wholly illiberal censorate of the book-press, and earnestly ask for due and deliberate consideration of its argument. The proper education and political development of this nation are impossible so long as this censorate exists. The history of the world shows how much injury it has done elsewhere and will do here, and we think that the earnest and careful attention we have bestowed upon this whole question entitles our protest to special consideration and respect.

THE KOBE MUNICIPALITY.

NO one who has lately visited Kobe can have failed to remark the greatly superior advantages it appears to enjoy,—in comparison with our own older settlement—in the matter of Municipal Government. The drainage is as good as it can be, taking into account the position and character of the site; the streets are straight and wide, the side walks spacious and excellently paved, the roadways firm, smooth, and well-graded; fire-wells, twenty feet deep and six feet in diameter, and practically inexhaustible, are dotted about the settlement at convenient distances; the lighting is as ample as with us, and the gas is infinitely better; and, to judge from the rarity of burglaries, the police must be vigilant and efficient. Satirical "special correspondents" may account for these perfections by telling us that the roads are smooth, because there is no traffic on them; that there are no fires, because the inhabitants cannot afford coals or candles; and that the rarity of burglaries is due to the absence of anything to steal. But such criticism does not alter the fact that the settlement of Kobé is admirably laid out, and its government ably administered, and that, when it does become an active and flourishing business port, it will still remain a very desirable and healthy place of residence. This cannot be said of Yokohama, which has long ceased to be either; and it is worth while examining the causes which have made Kobé what it is; that, when prosperity does return to gladden our merchants' hearts, it may find us ready and able to make their homes more comfortable than they are at present.

When the ports of Osaka and Hiogo were opened in 1868, our Representatives, warned by the failures made here, established a form of municipal government which, though theoretically it put the control of the settlement into the hands of the Consular Board, has been so worked that, practically, it has been vested in those of the Land Renters' representatives, elected annually by themselves. This happy result has been brought about by the good sense and good feeling of the members of the Council. The Consuls have recognized the fact that the Land Renters had the right to spend their own money, and the elected members have contented themselves with looking after their own department of the municipal work, trusting any matter which bore a political complexion to the care of their Consular colleagues. When, lately, the Working Committee,—which by an unwritten agreement, has always been composed of the three elected members—were unanimous in recommending an increase in the number of street lights, one of the Consuls, who was of a different opinion, specially referred to this arrangement, and, in recording his adverse vote, distinctly stated that his opposition to their wishes was to be considered exceptional. And an important motion, reducing the taxation by 25 per cent. having, still more recently, been introduced by one of the Finance Committee, we observe that this, which claims to give the correct interpretation to a clause in the Ministers' Convention, is seconded by a Consul. There are purists, both here and in Kobé, who maintain that the *whole* Government should be in the hands of the tax payers, and some, we believe, so firm in the maintenance of their principles, as to refuse to listen to any other proposition; but so long as human nature remains imperfect, compromise will be necessary; and, certainly, in the case of the Kobé municipality, the compromise there made has had none but beneficial results. It is much to be regretted that no one in Yokohama has hitherto suggested a trial of the Kobé system here. Is it too late to make it?

The Convention of 1868, to which we have referred above, provided that the ground rent, fixed at the rate of one *bu* per *tsubo*, should be paid—not as here, to the Japanese Government,—but to a Municipal Council, in which the Governor of Hiogo and each of the Consuls should have a seat, *ex officio*, and three independent members should sit by virtue of election by the Land Renters. The vote and standing of each member of the Board is equal; there is nothing in the Convention to prevent a Consul being chosen as a representative of the Land Renters,—though this has not yet, we believe, occurred; nor is there any thing to prevent the presidency of the Council being held by an elected member, which is indeed, the case at the present time, the Vice-President occupying the chair vacated by the lamented death of the late Mr. TURNER, U. S. Consul, who was elected Chairman last January. The fund created by the ground rent, and thus placed in the hands of the Council was further augmented by a Police Tax of one-third of a *bu* per *tsubo*, which, the Convention stated, was the limit of the Police Tax which *might* be so collected, if necessary. The administration of these funds was theoretically vested in the whole Council, practically, —as we have seen—in the Working Committee of the three elected representatives of the tax-payers; the Japanese Government had no power over them whatever, beyond that of the single vote of the Governor of Hiogo. A pretension was once set up that his vote should be considered equal to that of the whole Consular body, but this of course met with the reception merited by its extravagant presumption.

With this income, the Kobé Municipality appears to to have grown over rich. A large capital sum, over and above its annual receipts from ground rents and police tax, was placed in its hands at starting, being a moiety of the surplus from the sales of land, over the upset price. A portion of this was well spent in laying out and metalling the streets, making drains and side walks, buying Fire Engines, water-carts, lamp-posts, and other municipal furniture; and the remainder appears to have been rather lavishly and injudiciously laid out, in the erection of a partially unnecessary Municipal Hall, and a wholly unnecessary jail. But the ordinary current expenditure seems never to have exceeded the ground rents, and the Police Tax, which has always been collected in addition, appears never to have been needed. For, at the commencement of this year, the accumulated Reserve Fund was found to amount to $16,380.—and this in spite of the policy having always been pursued of paying, out of income, for permanent improvement. Mr. RICKERBY, whose name has always been associated with the cry for Municipal Reform in this settlement, having recently been elected a member of the Municipal Council of Kobé, and placed upon the Working and Finance Committees, has just brought forward a motion which proposes a reversal of this policy and a return to what he calls the true principles of Municipal Finance. His budget lies before us, and we reproduce it in another column, as a compendious report of what is done in the southern port, and an example of what might be done here. He proposes to create a Municipal Debt, to which all *permanent* improvements shall in future be charged, providing for its extinction by a Sinking Fund of ten per cent. per annum; thus spreading the cost of new roads, buildings, gardens, &c. over such a period that those who hereafter enjoy them shall divide their cost with those who initiate. The accumulation of reserved funds having placed the Kobé municipality in the novel

July 29th, 1875.

Between Ito Hachibei, a Japanese subject, plaintiff, and John G. Walsh, R. W. Irwin, and S. Kirkland Lothrop, formerly carrying on business together and with others in copartnership, as general merchants at Number 2, Yokohama, under the firm of Walsh Hall & Company, defendants.

The petition of Ito Hachibei, the above-named plaintiff, sheweth as follows:—

1.—The Plaintiff is a Japanese subject and carries on business as a merchant at Tokiyo Yokohama, and elsewhere within the Empire of Japan.

2.—The Defendants are American Citizens resident within the jurisdiction of this Honorable Court, and from a date long anterior to 1871, up to the end of 1873 carried on business together and—as the Plaintiff is informed and believes—in conjunction with others whose names are unknown to the Plaintiff, as general merchants under the firm of Walsh, Hall and Company [hereinafter referred to as the said late firm] at number two, Yokohama aforesaid.

3.—About the end of 1873 or the commencement of 1874 the said late firm was dissolved but the business thereof was and still is continued at number Two, Yokohama aforesaid under the same name as heretofore by the Defendant John G. Walsh in conjunction with others whom it is not necessary to mention by name.

4.—During a period of 4 months or there abouts from August to December 1871, the Plaintiff speculated on joint account with the said late firm in purchases and sales of Japanese nibus upon the understanding and agreement previously come to between them that the Plaintiff should be interested to the extent of one-third part or share and the said late firm to the extent of two-third parts or shares in such nibu speculations, and that the said firm should advance to the Plaintiff the funds necessary to effect such purchases, the Plaintiff handing over to the said firm the proceeds of such sales as should be made in the course of the said joint operations in nibus. The said late firm accordingly made the necessary advances to the Plaintiff which the Plaintiff used in the purchase of nibus the proceeds of the sales of which he in due course handed to the said late firm. The said joint operations in nibus (particulars whereof are contained in the statement of account annexed hereto) resulted in a heavy loss as shown by the said Statement.

5.—Between the month of November 1871, and the end of the 4th year of Meiji (Japanese Calendar) or thereabouts the Plaintiff speculated on joint account with the said late firm in purchases and sales of Japanese rice, under an agreement similar to that mentioned in the preceding paragraph relative to the operations in nibus therein referred to. The said late firm in pursuance of the said agreement made the necessary advances to the Plaintiff for carrying out the said joint operations in rice which advances the Plaintiff accordingly used in the purchase of rice the proceeds of the sales whereof he in due course handed to the said late firm. The said joint operations in rice (particulars whereof are contained in the said statement of account) resulted in a heavy loss as shown by the said statement.

6.—The Plaintiff became jointly interested as aforesaid in the speculative operations in nibus and rice mentioned in the 4th and 5th paragraphs hereof at the invitation of the said late firm; and in consideration of the necessary funds being advanced by the said late firm and to guarantee to the same the payment of whatever might be found due to them (if anything) from the Plaintiff upon an account being taken of the profits and losses to be made or suffered in the course of such joint operations did previously to such operations being commenced and upon the request of the said late firm deposit with them certain valuable securities, the property of the Plaintiff, and representing a total value of *yen* 100,035—to wit:—

5 Notes or documents in the nature of deposit receipts for money deposited at Kishiu Kuma no Sansan Kashitsukejo.

499 ,, 3,675 ,, ,, Hi.

7.—The said statement of account shows in detail what sums were from time to time advanced by the said late firm to the Plaintiff in connection with the joint operations hereinbefore referred to, and what moneys were from time to time expended by him in the purchase, and received by him as proceeds of sales of nibus and rice respectively in the course of such operations, and what losses resulted therefrom.

8.—The Defendants as members of the said late firm have been frequently applied to by the Plaintiff for payment of their proportion, namely, two third parts, or shares of the total loss upon the said speculative operations in nibus and rice but the Defendants have constantly refused and still refuse to pay their said or any proportion of such loss.

9.—Various transactions other than the said transactions in nibus and rice have taken place between the Plaintiff and the said late firm since October 1871, in the course of which the Plaintiff and the said late firm have become mutually indebted to each other. The last six entries on the debit side of the first page of the said statement show the particulars of the said late firm's indebtedness to the Plaintiff, and the fourth and fifth entries on the credit side of the said statement show the particulars of the Plaintiff's indebtedness to the defendant in respect of the transactions referred to in this paragraph.

10.—The last two pages of the said statement contain an account of the interest claimed by the Plaintiff from the Defendants. Such interest has been calculated at the rate of 12 per centum per annum, and compound interest has been charged in pursuance of an understanding to that effect come to between the plaintiff and the said late firm.

11.—On or about the 1st day of the 10th month of the 4th year of Meiji, the Plaintiff borrowed from the said late firm the sum of forty thousand dollars giving a sort of promissory note for that amount. On or about the 4th day of the same month, the plaintiff repaid to the said late firm the said sum of forty thousand dollars and demanded that said promissory note should be returned to him The defendants, however, refused and despite frequent application by the Plaintiff to return the said note to him still refuse to return the same.

12,—The Plaintiff believes that the said late firm were on the 1st day of March last indebted to him principal and interest in the sum of $108,715,24 in respect of the matters hereinbefore set forth, being the balance brought out in the said statement of account in his favour at that date, which balance despite frequent application by the Plaintiff to the said late firm to pay the same the said late firm have constantly refused and do still refuse to pay in whole or in part. The Plaintiff is willing that in taking the accounts hereinafter prayed for, the said late firm should be credited with whatever sums may be found due to them in respect of the matters hereinbefore set forth additional to the sum credited to them in the said statement, and in the event of a debit balance being ultimately established against the Plaintiff he is willing and hereby offers to pay the same to the said late firm.

The Plaintiff therefore prays this Honorable Court,

1.—That the accounts between the parties to this suit may be taken by or under the direction of this Honorable Court according to law.

2.—That the parties Defendant may be declared jointly and severally liable as members of the said late firm and may be ordered forthwith to pay to the party Plaintiff the said sum of $108,714.24, or such other sum as upon taking the accounts hereinbefore prayed for may be found to be due to the Plaintiff together with interest and costs.

3.—That the parties Defendant may be ordered forthwith to deliver up to the party Plaintiff the securities and promissory note mentioned in the 6th and 11th paragraphs respectively of the petition.

4.—That the Plaintiff may have such further or other relief as the nature of the case may require.

I Frederick Victor Dickins, of Number 28, Yokohama, Counseller-at-law, make oath and say as follows:—

The Statements contained in the forgoing Petition are to the best of my information and belief true.

The amended answer of the above-named defendants to the petition of the above-named plaintiff.

In answer to the said petition, the defendants say as follows:—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

1. They admit being American citizens, and that from the year 1871 up to the end of 1873 they carried on business together and n conjunction with others as general merchants, under the firm of Walsh, Hall & Co., at No. 2, Yokohama.

2. They also admit that the said firm was dissolved at the end of 1873.

3. It is true that the defendants and the plaintiff speculated jointly in the purchase of Japanese nibus; but not for so long a period as four months or thereabouts from August to December, 1871. It is also true that the defendants' firm made certain advances to the plaintiff, with which they believe he purchased nibus, and that certain moneys believed to be the proceeds of the sales were handed to the said firm. They admit that the speculation turned out unprofitably, but they dispute the correctness of the statement annexed to the petition, and allege that all accounts between the plaintiff and defendants relative to thejoint speculation referred to were settled and adjusted in the end of the year 1871.

4. They deny having in the end of 1871, or at any other time, speculated on joint account with the plaintiff in the purchase and sale of Japanese rice.

5. They admit having obtained from the plaintiff certain securities as a protection against loss generally, from advances made to or sums due by the plaintiff; but they deny that these securities represent the value of 100,035 yen, as stated in the petition.

6. Numerous transactions other than the speculations in nibus, and the alleged speculations in rice, have taken place between the plaintiff and the defendants since October, 1871. These transactions are recorded in the annexed statement, which shows balances of $16,222.55, and $16,483 61 against the plaintiff and in favour of the defendants, as at 31st May last.

7. They deny that any agreement was made with the plaintiff entitling him to charge either interest or compound interest.

8.—The defendants did advance to the plaintiff the sum of $40,000 or thereabouts on or about the 1st day of October, 1871; but the plaintiff did not then give his promissory note for that amount, nor has he at any time since repaid the said amount.

9.—The defendants deny that they were on the 1st day of March last, or that they are now, indebted to the plaintiff in the sum of $108,715.24, or in any other sum; on the contrary, they are entitled to receive from the plaintiff the sums of $16,222.55, and $16,483,61, with interest from 31st May last till date of payment, as balances due on 31st May last upon the accounts (copies of which are appended hereto), between the plaintiff and defendants since the year 1871; and the defendants are ready and willing to deliver to the plaintiff all the securities described in the sixth paragraph of the petition, on receiving payment of the said balances and interest.

I, Gavin Parker Ness, barrister-at-law, Yokohama, make oath and say, that the statements contained in the foregoing answer are, to the best of my knowledge and belief, true.

A motion by defendant's counsel was heard this morning before His Honor, praying that the hearing of this case be put off.

Mr. F. V. Dickins appeared for plaintiff; Mr. G. P. Ness for defendants.

His Honor, after hearing counsel, and the filing of affidavits, ordered that the trial be postponed until the 1st day of September next, at 10 o'clock in the morning of that day; that the trial is then positively to take place, unless delay be asked on the part of the plaintiff; and that the defendants pay to the plaintiff his actual disbursements on account of witnesses during the delay, not to exceed the sum of $20.

A discreditable incident happened yesterday afternoon at the Mixed Court during the hearing of a suit brought by Mr. D. M. Henderson against a Chinaman, to recover the Tls 10,000 which were recently the subject of enquiry at the U. S. Consular Court. The defendant in the original suit, Mr. J. K. Thorndike, was present, and it is alleged, becoming irritated at something said by Mr. Henderson in his evidence, struck him a violent blow on the back of the neck with an umbrella. The incident occasioned some excitement, and Mr. Thorndike was required to leave the Court. He went away. and so far the matter ended, but we are told it is likely to be the subject of investigation in another Court.—*N.-C. D. News.*

THE FREEDOM OF THE PRESS.

(Japan Weekly Mail—September 6, 1873.*)*

In the present condition of the law in this country, all works on general subjects, intended for publication, have to receive the *imprimatur* of the Education Department; works on Religion are licenced by the Kiôbushô or Department of Religious Instruction; and works on Naval and Military matters by the Marine and War Departments. In the Educational Department the books are referred (in MS.) to a bureau called *Bunshô gakari*, which reports to the *Dai* and Shôjô and these again refer the report to the Minister of Education. A case lately occurred in which an author of a commentary on one of the ancient Japanese Records was actually forced to expunge certain views of his own of the meaning of the text, and to substitute views more in accordance with the opinion of the bureau. This Censorate is an old institution in Japan, and during the reign of the Tokugawa family no books on modern history or foreign countries were allowed to be printed, and such as were produced either by native or Chinese scholars were circulated in manuscript.

Now, we think it would be unjust to reflect harshly on the Japanese Government for the laws to which we refer, so far, at least, as they existed in the past. They were in harmony with that policy of isolation which closed the Empire to the rest of the world, a policy deliberately resolved on and firmly persevered in until the irresistible force of the steam engine shattered it. But we would earnestly beg the Government to consider how far it is wise or expedient that such laws should still remain on the statute book now that the Empire is opened to foreign commerce, and that its people are brought into extensive contact with foreigners who have won from their own Governments an untrammelled liberty of thought and of publication, and who, chiefly by this right, have advanced their condition and developed their national existence into those free and vigorous forms which constitute the radical contrast between the civilizations of Europe and those of Asia. We contend that the law, as it now stands, is, in itself, an active source of political danger, and in addition to this, that unless it is so modified as to be virtually transformed, or totally abolished, all the efforts of the party now seeking to secure the progress of this country, and to place this policy of progress on a sound and lasting basis, will be frustrated.

As regards the danger of maintaining the laws as they now stand, it is obvious that new channels of thought have been opened into the national mind of Japan which are producing day by day greater and greater changes in it, and that unless proper and legitimate provision is made for the expression and expansion of this thought, the rulers of the country will have no certain guide either as to the amount of pressure it is producing, or the direction of that pressure. Legislation will proceed in one direction and thought in another, the decrees of the rulers will be out of harmony with the views and wishes of the governed, and sooner or later this will produce disturbance. Let the Government consider how vast is the difference between the social and political condition of this country and that of the countries of the West which the Japanese are now freely visiting, and where many of them are receiving their education. It is wholly impossible that the rising generation should entertain the same views of their country and its institutions as their fathers did. The freer life which they see and enjoy abroad, the larger sphere of human existence with which they are elsewhere brought into contact, will inevitably and greatly modify their views of life and the relations which should exist between rulers and people. It is worse than useless to attempt to stifle these views. If they are permitted proper ground for expression they will be found serviceable to the progressive policy of the Government, and will gradually lay foundations in the national mind for that edifice which the Government is constructing. It should not be forgotten that this progressive policy is not the out- come of the will of the people, though we do not say it is opposed to that will. It is entirely the result of impressions made upon a few minds of the superiority of Western forms of civilization, and and a laudable desire to emulate and march abreast of them. The more, therefore, the free expression of those opinions which are the concomitant growth of those civilizations, is permitted in Japan, the more will the national mind understand and appreciate the policy of its rulers, and the less danger will there be of a want of unity between the two.

The very changes made by the Government are in themselves a powerful argument for permitting a free expression of the mind of the people. They show that beneficial changes are due to the acceptance of new ideas, and these changes have again the power of begetting fresh thoughts which are interminably reproductive.

Original from UNIVERSITY OF CALIFORNIA

Surely the Government which has made these changes will not be so jealous or so unwise as to resist the diffusion of that very thought from which they sprang. If history be consulted it conclusively shows that the great movements made by mankind to ensure its progress have had their origin in the works of men who, with the insight of knowledge and imagination combined, have seen the ills of the present and the brighter prospects of a future which could be ameliorated by reforming change. If the views and feelings of such men, who exist in all countries, are to be curbed and trammelled by an authority which is often ignorant and always timid, what hope can there be for that energy and vigour of thought which are the true sources and the only real guarantees of a nation's progress?

Consider for a moment the action of this system of submitting books to a licensing system. It places at the mercy of an official, perhaps himself unlettered and ignorant of all but routine duty, perhaps overburdened with work, almost inevitably prejudiced, and possibly partial, the best thoughts and deliberations of a man who has given his years, his industry, the ripeness of his abilities and all his "considerate diligence" to the work on which he hopes to found his reputation, and by which he proposes to benefit his country. Consider the melancholy and vexation such a man must undergo at finding his choicest and best weighed thoughts altered or even expunged by the hand of one whose judgement he cannot respect, but whose authority he is compelled to acknowledge. What chance, under such a system, has anything to pass the eye and escape the censure of the State critic, but that which is already commonly received as true? This critic will needs, from the very nature of his office and his desire to retain it, be extreme to mark any deviation from the commonly accepted doctrine of the day. Nothing will be permitted to pass with him which is likely to offend the susceptibilities of his masters, and "the precious life blood of a master spirit, imbalmed and treasured up on purpose to a life beyond life," is spilt by a hand whose only excuse is that it committed the deed in ignorance. It is the conflict and attrition of opinions out of which alone any truth and any conviction of truth can arise. If the Emperor Charles V failed in getting even a few watches to tick together, and learnt from this how vain was any attempt to regulate and settle the thoughts of men, may not the Japanese learn some wisdom from the story? Are the minds of men to be cut into little squares or triangles at the will of a Government; or allowed to expand with all the rich luxuriance and variety of Nature whose choicest and most incomparable work they are? What is the value of such an obedient unanimity, and what is likely to spring from it but a dull ease and cessation of all mental effort and energy? Truth, which is the result of the conflict of opinion, has been compared to a streaming fountain, the waters of which, if they flow not in perpetual progression, sicken into a muddy pool of conformity and tradition. The light which the Japanese have received from foreign nations is not intended merely to be looked at for its own sake, but to guide them to further search yet remote from them. How shall this be effected if every fresh evidence of new conviction and advancing knowledge is strangled at its birth? Let the mind of the nation have free and full play. It is quick, apprehensive, and impressionable. There is much desire to learn, and when this is so, there will of necessity be much writing and conflict of opinion. But this very conflict will produce power in those who wage it, and from it will come a true thirst after knowledge and a better understanding of what truth is. This Censorate will keep the mind of the nation in such bandages as the Chinese swathe on the feet of their women. But a wise statesman will give free play to energies which are intended to be exercised, and will run the risk of some excesses rather than destroy the vitality and vigour of those whom it is his duty to guide and control.

ARRIVALS.

July 25, *Takasago Maru*, Japanese steamer, Eckstrand, 1,120, from Shanghai and ports, July 10, Mails and General, to M. B. Co.

July 25, *Talisman*, French gun-boat, Captain Marcy St. Hilaire, 406 from Hongkong, July 18.

July 25, *Galley of Lorne*, British steamer, Bourgoyne, 1,389, from Hiogo, July 24, Tea, to E. Fischer & Co.

July 26, *Warden Appleby*, British brig, Postumas, 400, from Shanghai, July 15, Kerosine, to Mourilyan, Heimann & Co.

July 27, *Mercury*, British 3-m. schooner, Thomas, 361, from Newcastle, N.S.W., June 19, Coal, to Wilkin & Robison.

July 29, *Oregonian*, American steamer, Harris, 1,914, from Shanghai and ports, July 22, Mails and General, to P. M. S. S. Co.

July 30, *Yantic*, American corvette, M'Nair, 800, from Nagasaki, July 22.

July 30, *Benjamin Sewall*, American ship, Pennell, 1,433, from Liverpool, Coal, to P. & O. Co.

July 31, *Alreck*, Russian gun-vessel, Von Schantz, 1,069, from Nagasaki, July 27th.

DEPARTURES.

July 24, *Catharina*, German schooner, Clausen, 275, for Chefoo Ballast, despatched by Captain.

July 26, *Vigilant*, British Despatch, Captain Ryder, for Hakodadi, Despatches.

July 25, *Alaska*, American steamer, Howard, 4,010, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

July 25, *Abana*, British ship, Mathias, 1,278, for Callao, Ballast, despatched by Captain.

July 27, *Duke of Abercorn*, British ship, Dalrymple, 1,050, for Kobe, General, despatched by Kniffler & Co.

July 27, *Traviata*, German barque, Spraeksen, 270, for Chefoo Ballast, despatched by Chinese.

July 27, *Walton*, British barque, Shield, 541, for New York, Tea, despatched by Wilkin and Robison.

July 28, *Menzaleh*, French steamer, Pasqualini 1,008, for Hongkong, Mails and General, despatched by M. M. Co.

July 28, *Hertha*, German frigate, Captain Knorr, 2,400, for Nagasaki.

July 29, *Curacoa*, Netherlands frigate, Captain Vandervelde, 1,800, for Nagasaki.

July 31, *Nevada*, American steamer, Conner, 2 145, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

July 31, *Takasago Maru*, Japanese steamer, Dunn, 1,120, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

Per *Takasago Maru* from Shanghai and ports.—Mr. and Mrs. Wolf, Messrs. Wylie, Pauncefort, C. Wagner, R. B. Cuthbertson, J. C. Russell, Rosenthal, Moritz, Mr. and Mrs. Goto and child, Rickerby, Mr. and Mrs. Simoni, J. Gough, 23 Japanese, and 1 Chinese in the cabin, 1 European, and 138 Japanese in the steerage.

Per *Alaska*, for San Francisco.—Mr. and Mrs. Walton, Messrs. Blandy, W. T. Clark, J. Russell, Lieut. Commd. Craven, U.S.N., Mrs. Craven, E. Ludwick, Commd. Douglas, R.N., Mrs. Douglas and 3 children, and 2 in the steerage.

Per *Menzaleh* for Hongkong.—Messrs. H. G. Fourcade and son, Forton, H. F. Dunbar, Julius Hall, Gim Chi.

Per *Oregonian* from Shanghai and ports.—Messrs. J. M'Vean, G. Rogers, L. C. Massen, M. Buchard, A. Brun, O. Senn, E. Hansen, J. Braga, F. A. Potter, Miss De Stockinger, F. A. Wheeler, H. Laming, W. Cooper, and 16 Japanese in the cabin, 176 in the steerage.

Per *Nevada* for Shanghai and ports.—Mr. Anasoff and wife, Mrs. Wheeley, Mr. Von der Heyden, Mr. Griffing, Pritchard, Captain Hoskiar, Mrs. Byrne and 3 children, Two Misses Greene, Mrs. Pietrowski, E. C. Kirby, Mrs. Evans and child, Mr. Dreyer, Mr. Gorman, P. Roulez, G. Newell, Mr. De San, Mr. Von Scherff, Dr. Funk, and 37 Japanese in the cabin, 374 Japanese in the steerage.

Per *Takasago Maru* for Shanghai and ports.—Messrs. Woodruff, Russell, Caully, Joquel, H. Peacock, W. Peacock, Sakurai, Taki, Marishta, Fukugawa, Momota, Mori, Ongota, Sung Foo, Matsuwa, Shino, Mr. and Mrs. St. George, Mr. and Mrs. Rickerby, Messrs, Mansfield, Hay, Stransome, Mitchell, Iye, Koyama, Tamagata, Katayama, Shiraishi, Takumi, Minami, Captain Christensen, Asada, Fernie, J. Long, and 5 Chinese, 2 Europeans, and 247 Japanese in the steerage.

Yokohama, 6th July, 87

that they may not communicate the fire to the hearts of others.—Is not this then a benevolent teaching?

Godaigotenwo-sama once asked Musô kokushi what the substance of Buddhism was? To which Kokushi replied, "Buddhism is but a means of governing mankind." Well, take any religion you please, it can but teach that each should do his duty in his particular path of life faithfully and honestly, and regard the rest, be it good or bad fortune, with that spirit of "the will of heaven be done" to which we have before alluded.[1] Some years ago, there came and presented himself one day to a certain *daimio* a *samurai* who was in the habit of visiting there, and said "A short time ago chancing to meet a clever physionomist I had my fortune told, when I learnt that I had "calamity by sword" revealed in my features. Now, I feel very uncomfortable about this: what would you recommend me to do?" to which this *daimio*—who by the way was a very celebrated noble at that time—replied: "That is indeed a felicitous matter. The soldier of whom such a thing is said may indeed be congratulated. Strive, therefore, to walk in the way of the four virtues—faithfulness to your lord, filial piety, benevolence and patriotism, and it shall be well with you. For instance, Masashige kô had no doubt some such sign visible in his features, and so again had in all probability the forty-seven true hearts of Ako, each and all, some such peculiarity. For as Masashige took up arms for Godaigotenwo sama and ended his life in battle at Minato gawa in Sesshiu[2] so has he made his name famous throughout the land; and so also the forty-seven *ronin*, in fulfilling their lord's desire by slaying his enemy, are regarded as mirrors of loyalty from age to age. Therefore, when it shall be said of a true soldier that he has the mark of a "calamity by sword," great things will be expected of him, and let him in that case pursue closely the path of virtue."

Now, for instance, suppose that instead of dying gloriously as he did, Masashige had risen up in arms against his sovereign, or that those forty-seven men, prizing life too highly, had failed to fulfil their lord's dying request and had run away and hid themselves. Then as each, as we have said, was so marked by heaven to die by the sword in any case, they would assuredly have come to some shameful end and would have been scouted of men from generation to generation.

Now is not this an admirable teaching? And should we not all therefore, high and low, strive to conform in all things to the will of heaven? With regard to this I have a very harrowing story to tell you.

Some years ago there lived in Junkei-machi in Osaka a small shopkeeper of the name of Chiubei, who made a living out of the sale of old wares and nick-nacks. He had dwelt originally at Ajikawa on the outskirts of the city, and being a married man had found it hard work indeed to make both ends meet. But they were an honest, toiling couple; the husband daily plodding about the streets with his boxes slung on his shoulders and picking up old iron and waste paper here and there as he could, while the wife remained in doors, mending the soles of socks and taking in washing and such like. Thus they managed to exist from day to day until the woman gave birth to a son. The fond parents were overjoyed at this and called the boy Hatsunosuke,[3] And now the pair worked more than ever, day and night, for the child's sake, and Chiubei plodded along daily as before, picking up, here an old kitchen knife, there a pair of scissors, here a pipe, there a hammer, and all manner of small articles of the kind. Then he would sell them and buy others again, till at last his little stock of goods increased so that at last he left off peddling in old iron and waste paper and stocked his shop with such wares as sword-hilts, dirks, pen and ink holders, portable medicine boxes, and the like; and, by and by, he hired a back house in Junkeimachi and moved into it with his family. From this time he continued his daily peregrinations; but at night he would hire the space under the eaves of some house in the famous Junkeimachi and spread out his wares for sale. Now these open air shops had at that time the worst of reputations, for they carried on an unlawful traffic. The neighbourhood being in that of the well-known Shimmachi in Osaka, the streets were particularly active and bustling at night, and this, as a matter of course, attracted the pick-pockets and members of the thieving fraternity, who carried on a system of selling to one shop what they had stolen from a neighbouring one, or disposing at these shops of what they could abstract from the wallets of passers-by. These articles were regularly received by the shopkeepers; and moreover, as thieves fear to retain upon their persons for any length of time their ill-gotten gains, but hasten to these open air shops and there disgorge their spoils, making but small opposition to any price offered them, the stall-keepers made great capital out of this, buying up articles worth say 100 cash at 20 or 30, or those worth a *riyo* at ½ a *bu* or one *bu* and selling the same at their fair current price, so that they were able to make an unusually large profit; but in reality they were receivers of stolen property and actually worse than those who stole. Ah, how to be pitied are those who do not know the right path!

There was Chiubei, now, who had succeeded in raising himself in the world by toiling away as a peddler in old iron, and could not therefore be altogether a bad man. But the want of a proper appreciation of the path of virtue, and the selling of his heart for the love of pelf, carried him away, and he began to trade in the dishonest manner we have described. How necessary then it is for a man to know his inner self and the true path of virtue!

Well, Chiubei and his wife lived on in this way till in the course of time the wife fell ill and died, and Chiubei was compelled by force of circumstances to marry a second time.

At this time Hatsunosuke had attained the age of five or six years. Now this second wife turned out to be a bad-hearted woman, who, while her husband was about on his rounds through the city, beyond cooking the meals did nothing all day long but loll and idle about, and withal was so unkind to poor little Hatsunosuke that the neighbours one and all declared it was a pitiful thing.

Well, by and by, this second wife gave birth to a son who was named Toyojiro, and while she petted this infant as though the breeze of heaven were all too harsh to play around him, she inflicted on her stepchild Hatsunosuke the greatest cruelties—and the boy was then hardly seven or eight years old. In the depth of winter he had to wash Toyojiro's things, and to say nothing of running messages in the neighbourhood this woman would drive him off to places even a *ri* away. Of course being but a child it might happen now and again that he would be taken with something interesting or amusing by the way and come back late. Then would ensue such a storm; "What have you been about you little scapegrace? You can do nothing but eat any quantity of rice, you good-for-nothing rascal; just take care and mend your ways"—and with this she would drive the poor tired infant out into the cold, stark naked, or else burn a great hole in his back with the *mokuso*,* or perhaps pinch the poor little fellow, so that his body was nought but a mass of bruises all the year round.

Still Hatsunosuke being of a gentle yielding nature would at such a time offer no resistance but would beseech his stepmother with plaintive sobs to bear a little with him, that he had done very wrong, and that he would always come back quickly in future. Is it not a sad relation?

In the words of the song by Hakuinshô

"Would you seek out the form of the terrible demon?
His abode is the breast of the cruel heart."

Indeed this woman was a very devil, and Chiubei, who was out all day, knew nought of it all; and besides that when he was present she would assume a gentle affectionate tone of voice—with "deary, do this" and "deary, do that"—and would perhaps give him some of what she was eating herself, and so Chiubei would comfort himself with the idea that she was kind to the child. Are there not some dreadful people in the world? They are just like the 10th month of the year, which comes to us with a smile and smites us with its piercing

1. *I.e.* in a previous sermon.

cold when we are least expecting it:—and truly that is the action of a devil.

And so on from day to-day matters became worse for Hatsunosuke and the children kept springing up. By and bye, Chiubei's business prospering, he took a front house in Junkei-machi and opened a large shop. Now the wife became possessed with the determination that she would so manage matters that her own child Toyojiro should inherit his father's property. Her hatred towards her step-child increased, and to Chiubei she would contrive, by hook or by crook, to praise her own child, while on the other hand she would go so far as to lay to Hatsunosuke's door actions of which he had never been guilty, insomuch that anon even Chiubei became attached to Toyojiro and spoke of Hatsunosuke as a useless, idle vagabond, and as if he hated the sight of him. Then again this Toyojiro, too, following the example of his parents treated him more like any cat or dog than as his elder brother, and so on until the poor child had no standing room left. Then his father would tell him from time to time that he was nought but a good-for-nothing idler and a burden to the house, and the wife would all but express a wish that he might die, so they got but rid of him, till Hatsunosuke could no longer stay in the house. So he ran away one day and betook himself to a quarter of Ôsaka called Shima no uchi and entered a *Geishaya* in Saka machi, where he made himself useful in the way of carrying the girls' *samisens* when they went out anywhere,—and he grew apace until he arrived at man's estate.—Of a gentle disposition, wherever he went he was made a deal of, and the singing girls and jesters would come round him and teach him this trick and that, till at last in the space of three or four years he became a very fair jester himself. Meanwhile matters went well with Chiubei; and in the course of time he went down to his grave and his riches were duly inherited by Toyojiro in fulfilment of the mother's wish :—and now we come to the terrible part of our story.

There lived in that neighbourhood a worker in lacquer-ware called Isaburo, who some four years previous to this period had become friendly with Chiubei, their trades bringing them a good deal together, until he obtained that degree of intimacy with the family that he would walk in and out of the house at any hour he pleased. From that time forth he had been maintaining an improper intimacy with the mother; and now that Chiubei was dead he kept coming in and out, day and night, and lolling about the mats until by and bye they became as it were man and wife and he managed the affairs of the house generally. Now this Isaburo was a thoroughly bad fellow, one who spent his time in drinking heavily, gambling and dessipating any funds he was possessed of in the company of abandoned women, till finally he began to make away by stealth with the property of his parents and elder brothers, and at last, on their disowning him entirely, he took up his abode in a low quarter. And then, managing to billet himself upon this shop, he neglected his own business, and when he was not eating and drinking, made gambling and the like his special trade. And when now and again he had lost money in this nefarious way he would come down upon the unfortunate fancy-ware shop, borrowing now 2 *bus*, now 3 *bus*, and the widow at first feeling a pull at her heart-strings gave in to his extortion; but by and bye even her eyes were opened, and though he came now and again, sometimes wanting one *riyo* sometimes two *riyo*, she would have nothing to say to him, nor would she give him anything out of the shop. Then he would get angry and say—"For whom do you take me I should like to know? You don't seem to remember that I am the Isaburo who risked his life for love of you—and now forsooth you would cast me off, would you? If you have no money I have no objection to something out of the stock—say a comb or a hairpin now;—Just look sharp and let me have it,"—and so on for all the world like the villain in the play. But for all that she would not consent, so then he would sieze her by the hair, and bang her about on the floor, and so maltreat her that for the sake of peace she would at last come to terms and let him have a comb or some such article out of the shop. And as a matter of course this was a new means of dissipation. If he won at gambling his gains were spent in drink, or again if he lost, back he would come, crying out for more, till at last the wretched woman would lamentingly cry "Ah me 'tis a cruel thing. Would that he might never enter this house again; he is a grief and a burden to me"—but let her cry and lament now as she might, her heart had called this devil to her and he was not so easily to be driven away. Truly a sad business! From this we may easily see what a terrible thing it is to depart from the law of heaven.

When this widow first came to be Chiubei's wife the law of heaven to her as a step-mother was that she should consider the forlorn situation of a poor little innocent of six or seven as Hatsunosuke was, and lavish upon him every kindness. Instead of which she not only devised all manner of cruelties, but plotted so as to turn the heart of Chiubei against his eldest born Hatsunosuke, causing him to be driven out of the house so that her own child might succeed to the property; and besides all this she hoodwinked her husband and carried on a guilty intimacy with this Isaburo, so that now that she had settled her son this same Isaburo became to her as a devil sent from hell to torment her.

It is true that erring man may once delude heaven, but in the end he must be overthrown. As an example of this now look at this fan or this teacup. They being things of substance cannot be suspended in mid-air, but follow the laws of nature by falling to the earth. But now comes one who throws it up into the air, and according as this man is strong or the contrary the fan goes to a great height or very soon drops again; but take it either way it is bound to return to the earth again:—so that by so doing a man may be said for a time to oppose successfully the laws of heaven but in the end he must succumb; there is no preventing its return to earth. And, beside this, the higher the fan is thrown the greater the shock of its fall.

The case of Chiubei's widow was similar to this. She had for a long time successfully sinned against heaven as we have described, but now at last was heaven in the ascendant and she was reaping the fruits of her terrible conduct in all its bitterness. At this time Toyojiro was barely seventeen and not yet endowed with much wisdom. The widow, losing all patience would break out upon Isaburo, attempting to bring about a separation with him, but he being the wicked fellow he was such a thing was not to be accomplished. Every second or third day he would come back drunk, and when he had slept himself sober would straightway depart, bearing with him the means for a fresh debauch or gambling bout. Then the widow would take counsel with her son as to the best means of ridding herself of him—"how would this plan act" or "that plan succeed," "would that I were rid of him," and such like lamentations; but as she could not tell her son of the sin the had herself been guilty of she could bring nothing definite against him save that "he was a bad man, that, and that if some means were not taken to get rid of him they would soon be penniless. Would that he might die, or that something might happen to him so that they might only be relieved of his presence!"

And Toyojiro turned over all this in his child's heart, grieving at his mother's trouble, and thinking but of some method by which Isaburo might be got out of the way.

Now it was about the sixthmonth of the year that one night Toyojiro, having shut up the shop for the day, was standing cooling himself and Isaburo came reeling home as usua And Toyojiro went walking about in the neighbouring streets all that evening, and came home at midnight. Peeping in he could see, altho' the night-light had gone out, that a mosquito net was as usual suspended in the back room which Isaburo frequented. "To-night or never" thought he to himself, and stealing softly into the shop felt about among the swords for the most trenchant blade he could find, and then, making his way again softly to the back room, he cut down the netting and passed the sword with an unerring thrust through the breast of the sleeper, who expired without a groan. Passing to the next room he went to where his mother usually slept and said "Mother, I have come back" but received no response. He crept inside but found no one. Thinking this very odd, he procured a light and returned to the first net, when to his horror he discovered that the victim of his vengeance was not Isaburo

Digitized from the UNIVERSITY OF CALIFORNIA

but his own mother. Ah, me what terrible things happen sometimes!

Now the way this dreadful mistake came about was this. The guilty pair in Toyojiro's absence were sleeping under one net, and Isaburo during the night wishing to join his gambling friends left the woman in the house by herself. Then Toyojiro seeing that he had taken the life of his own parent (although by mistake) lost all control over himself and rolled on the floor in an indescribable agony of mind. But being an audacious fellow by nature, he at length rushed out into the street shrieking "thieves!" thieves!" and the neighbours came rushing in pell mell to see what had happened. Upon being questioned Toyojiro related how that he had gone out to walk about sunset, and that returning he found that his mother had been murdered, and he begged that the neighbours would convey the information to the authorities, which they did. So by and bye the Coroner came and made his enquiries. Nothing had been stolen, so the work of burglars it could not be. Upon enquiry, however, being made as to the general character of the deceased and as to her acquaintances, the neighbours told all that they had seen and heard and the result was that suspicion fell upon the lacquer-dealer Isaburo and he was arrested at once. But he persistently asserted his innocence and was therefore occasionally taken out of prison and examined under torture. On one of these occasions, being unable to bear the pain longer. he said "I am utterly innocent of the death of this woman, but there used to be in the house a son of Chiubei by his former wife called Hatsunosuke, against whom this second wife conceived a deep prejudice, being a bad woman, so that finally, and during Chiubei's life time, he was driven out of the house and is now wandering about Saka machi somewhere or another, and perhaps out of revenge he may have killed his step-mother." The authorities seeing some reason in this sent to the house in Saka machi, when they learnt that on the 5th day of the previous month Hatsunosuke had gone, together with some *geishas*, with a party of pilgrims to a gathering at the shrine of Kompirasama in Sanuki. So the hand of the law followed Hatsunosuke to Sanuki, and the facts were found to tally exactly with what had been said by the folks in Sakamachi, how that he had started full twenty days before the murder, and he was therefore left unmolested.

Now is not this a marvellous thing? Being of that happy disposition which leaves all things to the will of Heaven it would seem as though Providence had said to him. "Thou art in danger here; so go to Sanuki and there sojourn for a while."

Whereas Isaburo on the other hand, having failed to fasten the blame upon Hatunosuke, drew down upon himself the suspicion of the law to a still greater extent than before, and he suffered by torture accordingly.

And all this was the vengeance of heaven, in that he had from the first sinned against his parents and relations till they disowned him, and then ended by stealing another man's wife and ill-treating her.

Well, the end of it was that as his innocence could not be established he was kept a long time in prison, and eventually died there; and all efforts to discover the truth proving useless, no suspicion attaching for a moment to Toyojiro, the matter was dropped. Toyojiro wandered about from place to place in a solitary manner and having vacated his house lived by selling what effects he had left. And here we have a circumstance which comes home to us distinctly. Even such a wretch as he had a conscience given him of heaven. Altho' he had succeeded in deceiving his neighbours and the Government, yet he could not deceive the heart within him, so that wherever he went the thought that he had slain his own parent smote him, and let him go where he would, to Kiôto or to Nagasaki, the memory of his evil deed would haunt him so that he would lift-up his voice and cry "Ah what a fearful, what a sad thing I have done." And as this was never absent from his thoughts, he cared for nought he saw or heard; he thought it preferable that he should deliver himself up to the law, and thus appease the spirit of his dead mother.

So the third year after the fatal act he proceeded to Ósaka, gave himself up, and expiated his offence at the hands of the executioner; and I have been told that as he sat before the judges in the hall of justice, bound like a malefactor, he said "Now I am happy and my heart is at ease."

These facts which I have related are of recent occurrence. But only think now how just heaven is. The child Hatsunosuke, who was born to Chiubei by his first wife while carrying on an honorable trade, came to no harm throughout; whilst on the other hand the child of his second wife, called Toyojiro, who came to them after Chiubei had shifted his place of abode to Junkei machi, and while he was carrying on a dishonest business in the night bazaars, as a matter of course ended his career as a felon, and the wife who thought to carry everything her own way came to her end at the hands of her own child. Therefore, see now what a thing to stand in awe of is the will of heaven.

The following is the budget of the Kobe Municipality to which allusion is made elsewhere :—

Accumulated Funds on January 1st.

Cash in Bank		$426 06

A JAPANESE SONG.

When fast I flew to my sweet love,
A thousand miles seemed one:
Though stormy skies made night above,
Within me shone the Sun.

What matter if the way were wild,
And white the cold sea's crest,
If I might reach, where summer smiled,
The haven of her breast?

But now that far from her I go,
Light of my lonely dreams!
Since every step is sad and slow,
One mile a thousand seems!

Law & Police

H. B. M.'S PROVINCIAL COURT.

Before His Honor C. W. GOODWIN, Esq., Assistant Judge.

July 28th, 1875.

N. STIBOLT *vs.* R. PHILLIPS.

This was a claim to recover $25, money loaned on a promissory note to one Styles, and which defendant had guaranteed.

Plaintiff stated that he had endeavoured in vain to get the money from Styles, and as defendant refused to pay, after backing the bill, he sued him.

Defendant said that plaintiff had not done enough, or been diligent in trying to get Styles to pay.

Plaintiff said he had done his best, and written several letters to Styles, without any result.

Verdict for plaintiff for full amount, and costs of suit.

LANE CRAWFORD & Co. *vs.* A. J. WILKIN,

Mr. F. V. Dickins appeared for plaintiffs.

This was a claim for $39.50 for 88 square feet of lead weighing 4½ lbs. to the foot, supplied in December, 1872.

Defendant pleaded that more lead was charged for than had actually been used on the house. He was willing to pay for what lead was used.

Mr. Dickins, in opening his case, briefly stated the facts. In December, 1872, plaintiffs supplied Mr. J. Smedley with 88 square feet of lead, weighing 4½ lbs. to the square foot. The total weight was 395 lbs. The lead was supplied to Mr. Smedley, as he was then effecting some repairs to defendant's house, and amongst other things it required lead to stop some leaks. He would first call—

J. Smedley, sworn: I am an architect. In the month of December, 1872, I remember being employed by defendant to repair the roof of his Bluff residence. There were leaks, and I told defendant it would be impossible to stop them without lead. I was authorised to procure lead. It was had from Lane, Crawford & Co. [order produced]. The lead was used for the repairs. My foreman told me it was all used for the repairs. I think it is a very difficult thing to measure lead after it has been used.

To Defendant: You did not authorise me to procure any particular amount. You told me to get as much as I required. The lead was used in various places. I don't think I applied to you for further lead when this was finished. You gave me authority to get the lead. I believe that plaintiffs were the only people in town who had lead. I gave my foreman an order, and I am sure he got the lead. The foreman must have measured the lead. He would not have taken 66 feet for 88 feet. My foreman told me positively that all the lead was used.

Re-examined by Mr. Dickins: I recognise the bill you show me. It is a receipt. I endorsed it.

F. Townly, sworn: I am the plaintiff in this case. About Dec., 1872, I don't remember what lead we had in store. Lead was supplied to Mr. Smedley for defendant. I had no reason to believe that less than 88 feet were supplied. Early in 1873 I demanded payment [Account produced]. Defendant has never denied that he authorised Mr. Smedley to purchase the lead. The dispute was about how much lead there was on the house, and how much had been supplied.

To Mr. Wilkin: I have not brought my books. The lead is entered to Mr. Smedley. I believe I delivered some other lead at this time to Mr. Smedley for the Deutsche Bank. I received a compradore order for $18. I have not cashed it. It got torn up by accident. I receive a good many compradore orders during the course of business, but I never destroy them.

Mr Dickins said that was his case.

Defendant called—

N. Stibolt, sworn: I am an architect. I have recently inspected the roof of your bungalow. I carefully measured the sheet lead on it. I had no difficulty in measuring the lead. There are two chimnies with lead round them. There are three dormers with lead round them. There are 40½ square feet on the dormers. There are 68 square feet of lead on the roof altogether, including that round the chimneys. I should think that the lead does not weigh more than four pounds to the square foot.

Cross-examined by Mr Dickins: I have been an architect for 14 year. I have a diploma; it is in Denmark. I have built five houses in Yokohama. I have been in Yokohama three years. I don't know the numbers of all the houses. I built them from top to bottom. I did not examine the roof of defendant's house before last Friday. The weather has some effect upon lead. I measured and weighed the lead.

Re-examined by Mr. Wilkin: I am repairing houses continually.

To his Honour: I was ten years in Shanghai, and built houses there.

A. J. Wilkin sworn: Mr. Smedley was employed in December, 1872, to repair my house. He recommended lead to be used to make the chimneys and dormers tight. I asked him what the expense would be. He said about $40 for 88 feet of lead. I consented to spend that amount; afterwards he wrote and told me that the 88 feet were all expended, and that he wanted as much more. A native woman came and asked for more lead. I was surprised, and had some measurements taken. I found that the two chimneys would be ample. The chimneys had been done, and I found that 35 feet had been used. I went to plaintiffs and enquired what lead had been supplied. Two clerks of plaintiffs' searched the books, and said that no lead had been supplied to me either directly or indirectly.

Mr. Dickins objected to a conversation being given as evidence.

His Honor said that the plaintiff's books ought to have been brought.

Mr. Dickins said he did not think that that was necessary.

His Honor said he thought the case was against defendant. He had authorised Mr. Smedley to get the lead. It was another question what had become of the lead. Verdict for plaintiffs and costs, amounting to $25.

U. S. CONSULAR COURT.

Before General T. B. VAN BUREN, U. S. Consul-General.

July 26, 1875.

JOHN W. BROWN *vs.* CHARLES R. HARRIS.

This was a claim to recover $1,000 on a promissory note, due on the 3rd July, 1874 together with interest from that date.

Defendant did not appear.

J. D. Brown, sworn: I am plaintiff in above cause. The copy of the note which is set forth in petition was given to me by defendant for money loaned. [Note produced.] This is the note. I have frequently demanded payment, but no part of it has been paid, and the same is due with interest from the date of said note, to wit, the 3rd of July, 1874.

Judgment for the amount of the note—$1,000—and interest at the rate of one per cent. per month from 3rd July, 1874, and costs of suit.

„ No. 3 Ke-pak	„	6.80 to 7 40	Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah	„	5.90 to 6 50	Kerosine Oil	per case	2.70 to 2 75

EXPORTS.

Silk.—Deliveries since the 22nd inst., are 104 piculs, about one third of which is old silk. A portion of the Nihonmatsz *Filature* is reported to have been sold at $635.

Supplies of new silk are coming in very slowly. The assortments of new Hanks hitherto received have—with few exceptions—been classed as No. 3 to 2½ and paid from $360 to $400.

Arrivals since the beginning of the season are 250 bales against 560 last year for the same period.

Tea.—Settlements for the closing week have been large considering the general tenor of advices from New York. The total amount equals 6,225, piculs being mostly of lower grades. Medium and Good Medium, are chiefly in favour at $30.00 to $30.50 per picul.

Our total export this season will probably exceed that of last, but the quality is on the whole decidedly inferior. Choice Teas are scarce, and the bulk of the crop at present to hand shews much want of preparation in the interior.

Common	$20.00 to 22.00	Fine	$34.00 to 38.00
Good Common	23.00 to 24 00	Finest	nominal.
Medium	25 00 to 29.00	Choice	do.	scarce.
Good Medium	30.00 to 33.00			

EXCHANGE AND BULLION.

Exchange.—There has been a fairly large business doing in private paper during the past week, with some few transactions for forward delivery. At the close, however, business is rather restricted and rates are firmer.

Gold Yen continue to find buyers at higher rates.

Satz have also advanced very considerably.

Rates close as follows:—

On London, Bank, 6 Months' sight	4s. 1d. to 4s. 1⅛d.	On Hongkong Bank Bills on demand	¼ per cent. prc.
„ „ Bank Bills on demand	4s. 0d. to 4s. 0⅛d.	„ „ Private Bills 10 ds. sight	¼ „ dist.
„ „ Private, 6 months	4s. 1⅛d.	„ San Francisco Bank Bills on demand	98
„ Paris, Bank Bills 6 months	5.16	30 days' sight Private	101

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this House.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d, 10d., 1s., 1s, 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s., 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s., 15s, and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 32.] YOKOHAMA, SATURDAY, AUGUST 7, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The Government is utterly wrong in making its new Press-laws the means of exasperating the Press. The laws, however necessary—and we hold that they *were* necessary—should be reserved for real offences, calculated, if not intended, to lead to sedition or mischief. But it is monstrous to interpret and administer them in such a manner as to destroy the Press and deprive the nation of educational advantages which should and will flow from it even while working with its present restrictions, if allowed to work easily within those restrictions. In the present condition of the nation, as we have always urged, a free press is an anomaly inconsistent and incompatible with the existence of orderly government. But this is no earthly reason for instituting prosecutions against writing which is simply unpleasant, but in no sense mischievous. We would tell the Government frankly that if there is any real necessity for the prosecutions which it has instituted under the new laws, if any real danger can arise from such writing as that for which it has called the Editors of the *Akebono* and the *Nichi Nichi Shimbun* to account, it had better, at once, and with one stroke, shut all the newspapers bodily and forbid their existence in the Empire. This would be a perfectly intelligible course, though it is one which would cause us inexpressible grief and disappointment.

THE *Celestial Empire* devotes a paragraph, which has been reprinted here, to our views on the new Press-laws, and expresses surprise that we should have have written upon them as follows:—

"It seems to us a very remarkable thing that the Govern-
"ment should have conceded to the Press, so early in its his-
"tory, so large an amount of freedom."

In writing thus we referred to the freedom the Press had enjoyed up to the time of the issue of the new laws, *i.e.* during the past two years. We have always said that this country was not ripe for a free periodical Press, and that danger would come of it. The character of much of the writing in the newspapers therefore surprised us very much, and in using the words above quoted and commented on by the *Celestial Empire*, we referred wholly to the past. We should certainly not have used those words in connection with the late laws, although we consider those laws necessary. The fact is that our expression was a little careless: we ought to have said, 'It has always seemed to us' &c., and we cannot blame our Shanghai contemporary for a misapprehension caused by our own want of care.

The excessive heat of last week has given way to a delightful interlude of cool weather, the thermometer falling below 70°, and the luxury of a shiver being easily obtainable. The break has been most grateful, for there was a day or two on which the heat had something of torment in it. Of course we shall have two or three weeks of warm weather, some days of which may be very hot; but we seem to see the end of summer very close at hand, and after the end of this month there is nothing to dread but the inevitable typhoon—even if it do not catch us before September. The old typhoon formula among the China captains ran as follows:—

June, too soon;
July, you may:
August, you must;
September, remember;
October, all over.

It is neither meteorologically nor poetically very correct, as bad typhoons have occurred both in June and October; in the former month lower south, in the latter here. But it is sound in its warnings to be careful in August and September.

It is very gratifying to see that the Government is directing a great deal of attention to the making of new roads and the improvement of old ones. Its money could not be better spent. There is of course an immense deal to be done, and it will take many years to give the country a really good system of roads. But a beginning has been made during the past nine months, and some of the results are already apparent. Those which have lately come under own eyes may be cited. The Hakone pass has been attacked, and the road on the Odawara side is now being carried along the bottom of the valley, instead of on the side of the hill, so that its steep gradients, at least in this section of it, will be got rid of. Wheeled carriages were already plying upon it on Monday last, and they will soon be able to travel as far as the bridge over the river at the spot where the road branches off to Miyanoshita. The reduction of the whole of the Hakone pass to a carriage road ought certainly to be undertaken. There is no difficulty whatever in doing this, except the expense, which of course would be considerable. Old travellers along the pass would regret the loss of the noble trees which have witnessed so many processions and pageants; but sentiment in this case must give way to economy of time and labour. A gang of three hundred convicts, at work under one chief engineer and two or three inspectors, would finish the pass in a year, and Hakone could be reached in two hours from Odawara, instead of five hours as at present. The reduction of the heavy gradients on the other side of Hakone could be done at the same time.

The next improvement we noted is a new pass over the hills on the left side of the head of the Hakone lake, obviating all necessity for going over the long stretch which leads to the O-toomi-tungi pass and the pass itself, which is extremely steep and trying. The new pass is cut in zig-zags of very easy gradients, and those who have toiled up the O-toomi-tungi in

Digitized by Google ORIGINAL FROM UNIVERSITY OF CALIFORNIA

a broiling day in August, and along the tedious road which leads to it, will now be pleased to find a road which does not present a single difficulty.

A third path which we traversed between Gotemba and the head of the Hakone lake, is also a good piece of mountain engineering. It has been led with great skill, and saves the very long steep walk down the mountains on the Gotemba side which heretofore made the distance from Gotemba to the head of the lake so long and tedious.

But the question should be asked, Is all this new work being done in accordance with a well-devised grand system of roads? If not it will be found five years hence that a great deal has been done which need not have been done, and much that is necessary omitted.

The Tôkaidô itself is under repair in several places between this and Odawara, and is being raised with the earth taken from the sides of the road to improve the water-courses. And, indeed, these repairs are sadly needed. The road in many places is in a shameful condition—we would particularly instance the section of it between telegraph posts 670 and 665, and the section running through the town of Fujisawa, where its state reflects great discredit on the local authorities.

While on this subject, it seems fair to ask why the stream which ought to run through Shibashiri, and for which there is the usual provision of a channel down the middle of the street, is stopped. There is an abundance of water, running at right angles to the course, at the head of the street, and a very little skill would divert as much of it as is necessary into the now dry water-course of the town.

Many people who are very desirous of making the ascent of Fusiyama are deterred by the accounts they have heard of its excessive difficulty. But in moderately good weather it is a mere question of a few hours of steady walking; there are neither dangers nor difficulties. If a storm arises it is quite a different affair, and two or three days of imprisonment in one of the lava rest-houses on the mountain, with a poor supply of food and no books or writing materials, must be intolerable. In July and August, however, the chances are in favour of fine weather, and no one should leave Japan without making the ascent, and at least having a throw in the lottery of its sublime and indescribable glories. That we have not understated the difficulties of an ascent in fine weather, the following record of one recently made will clearly show.

"Started from tea-house at Shibashiri at 3.45 A.M., taking a pack-horse for the first five miles along the road leading to the foot of the mountain, where the ascent actually begins, though on a very gentle slope. Reached 1st resting-house—a temple where the *alpenstocks* are to be had (time obliterated on record.)

		H. M.

10th	„	12.40
Highest spot.	... ...	12.45

Actual time occupied in the ascent, 9 hours. A young mountaineer in fine condition could save an hour on this.

The time occupied in the descent was exactly two hours and a quarter, including a quarter of an hour lost from mistaking the path, and walking the five miles before mentioned. Arrived at the tea-house at Shibashiri at 6 p.m. exactly, having spent three hours on the summit. After a bath in the delicious cold water of Shibashiri, and dinner, Gotemba, about 3 *ri* (7½ miles), may easily be reached in the evening, and Hakone by noon of the third day. If the visitor sleeps on Fusiyama, instead of at Gotemba or Shibashiri, he can get back to Hakone within two days. It should be added that this ascent was made quite leisurely, and without a thought of doing it "against time." The descent is more easily made rapidly than slowly. The estimated number of Japanese pilgrims on the mountain on the 1st August was given as six hundred, but was certainly exaggerated. The tea-house at Gotemba, kept by Oomiya Shozaimon, and about a hundred yards off the main road, is particularly recommended. The house is beautifully clean, and the people most civil and accommodating.

There is in England a small sect styling itself "The Peculiar People,' one of the prominent doctrines of which is that the calling in of medical assistance in cases of sickness betrays a want of faith in the power of the Almighty, and directly contravenes the directions given by St. James as to the right course under such circumstances. The words of the Apostle are thus:—"Is any sick among you? let him call for the elders of the church, and let them pray over him, anointing him with oil in the name of the Lord: And the prayer of faith shall save the sick, and the Lord shall raise him up."

Acting upon this teaching, a member of the sect has recently been indicted at the Central Criminal Court in England for the manslaughter of his child, and the case was carefully tried by Mr. Justice Blackburn, who expressed his opinion that the law cast the duty upon the father, who had the custody of a helpless infant, to provide according to his ability all that was reasonably necessary for the child, including, if the child was ill, the advice of persons reasonably believed to have medical skill;" and he added (vide *Pall Mall Budget*, 18th June) that "he did not think it was a defence that the prisoner sincerely believed that he ought not to provide such," but in deference to an adverse opinion reported to have been expressed by Baron Pigott, he should reserve the point. The jury found all the facts left to them against the prisoner. They found, that is, that the prisoner neglected to procure medical aid for the helpless infant when it was reasonable to do so and he had the ability, and that death was caused by such neglect: in other words that he was guilty of manslaughter. They were further called upon to answer two other questions which Mr. Justice Blackburn said might be a defence, though he thought they were not, namely, did the prisoner *bona fide* though erroneously believe that medical advice was not required? and did he also believe that it was wrong to call in medical aid? These they answered in the affirmative, thus settling the facts upon which the points of law arise for the consideration of the court. The final result of the trial is not yet reported.

The Japanese Government has just issued a notification which shows that the views of the Peculiar People are not confined to England. It is as follows.

There are people who delude others with the superstitious notion that it useless to call in a doctor to a sick man, but that it is better to pray to the gods and to take a potion or philter supposed to be prescribed by the gods for his miraculous cure. This is all a wicked delusion, and as human life is of such great importance people should certainly call a physician at once when they are taken ill, so that all that lies in the power of man may be done to preserve life.

It is a great error to let any one die by neglect of the use of proper restoratives within our reach, therefore the *Kocho* of the various districts of this *fu* will instruct the people in regard to their duty in this respect. If any person, or persons, should persist in praying to the gods when they or their family are ill, and neglect to call in a doctor, the *Kocho* must take their names and report them at once to the Tokio *fu*.

The article in the *Pall Mall* thoughtfully shows that the road by which Mr. Justice Blackburn's common-sense legal conclusion will or may be reached, leads straight through the domain of pure theology; and that, if this conclusion should be reached, it will mean that a body of lay judges have taken upon themselves to affirm, as a truth so certain as to be judicially taken notice of, the contradictory of a proposition of the first importance to the believer in revealed religion, or, indeed, in any religion whatever. The conclusion of the article is as follows:—"It will be, we repeat, neither more not less than a deliberate declaration, made under the serious responsibility attaching to any decision in a criminal case, that the question which scientific men gravely proposed some time ago to subject to experimental test is to common intelligence not even an arguable question at all, and that

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

only one answer can be returned to it by reasonable men. It would be difficult in the history of thought on religious subjects, to overrate the importance of such a declaration as this, and yet it will probably attract little or no attention in a religious world too much interested in quarrelling over the shape of a finial to notice that the very ground-stone of the theological structure is being quietly removed."

Of the subjective effect of prayer no reasonable man can doubt; its objective effect is wholly another question. In a system governed by law, can prayer ever be more than the ascription and consecration of effort? Additional light does not bring us more warmth on this question.

We regret to observe that some delay is taking place in the ratification of the Peruvian treaty with China and that Dr. Elmore, Chargé d'Affaires, has been consequently detained in Tientsin.

The *London and China Express* publishes a list of the suspensions which have occurred within the past six months, which involve an amount of twenty-one and a-half millions sterling.

Owing to the illness of our translator, we are unable to give our usual translations from the Japanese newspapers this week.

From the "Japan Mail Daily Advertiser."

The *Nisshin Shinjisshi* notices the decreasing use of meat among the lower classes of Yedo. This we presume is only a temporary abstinence, due no doubt to 'hard times,' to the prevailing heat or to both these causes.

The *Straits Times* says a private telegram from Calcutta of the 10th July, states that Burmah affairs are still unsettled.

The Editor of the *Akebono Shimbun* was summoned to the district police office in Yedo, on the 31st ultimo. After an investigation, the substance of which is not known, he was placed in charge of the district officer.

Very heavy rains have, according to the native papers, prevailed at Hakodate, the thermometer registering an unusually low temperature for the season.

The Japanese authorities have ordered the late Chinese Compradore of the Comptoir d'Escompte to refund the sum of $7,867.10, being the amount paid to the orders of the late V. Cantelli for which the Court holds him to be responsible.

Certain speculators of the Hiroshima Ken began the storing of ice for summer use last winter for the first time, and are said to have found a market for their stocks.

A correspondent writes to an American journal from Wimbledon, that Major Murata, whose skill has been frequently witnessed on our Rifle Range, is the best shot at Wimbledon, making excellent practice at long range.

The insuperable difficulty of making the Lord Mayor of London an entity comprehensible to a Frenchman is pretty well known. The difficulty is apparently not unknown in America, if we may judge by the following extract from the telegrams of a New York journal:—The Lord Mayor of Dublin presided, and the *Lord Mayoress* distributed the prizes, which included badges for each member of the American team.

A Government notification has been issued ordering that copies of books, if to be published in Yedo, should be sent to the Home Office and the Judicial Department for inspection, and if to be published in the provinces to the respective Kenchos.

The schooner *Iris* has, we learn, been sold to Mr. F. Knoblauch, through whom she was purchased some four months since.

A co-editor of the *Akebono Shimbun* received a notice to attend at the *Shihôsho* on the 4th instant. We read this in the *Hôchi Shimbun*, another daily journal.

We observe that the English papers continue to refer to a [illegible] visit by the Sovereign of this country to London. It would be easy to believe in the probability of some such visit being in contemplation at no distant date, but we understand that the rumours—which are also current in Yedo—are for the moment premature and without foundation.

The following letter from Rome on the subject of the silkworm egg cards is published by the *Nichi Nichi Shimbun*:

The price of Japanese cartons in Italy is very low this year. Last year the importations into Italy and France numbered about 1,300,000, of these 700,000 were sold for an average price of 1½ francs each. The residue of 1,300,000, not finding purchasers, will have to be thrown away when they begin to hatch.

The cause of this lack of purchasers is that the Japanese cards have greatly increased in price and have also correspondingly depreciated in quality, while the second product of former importations of Japanese seed into Italy has proved very good. Upon examination under the microscope the disease that has for some years past prevailed in Italy is found to be fast disappearing. It is thought that the superiority of Japanese over Italian seed may soon cease to exist, and if this comes to be an established fact the importations from Japan will quickly decrease. Some say that 300,000 or 400,000 will be quite a sufficient quantity to import for both Italy and France this year.

In consequence of the severe inundations the price of rice in Midzusawa Ken has risen from five *yen*, at which it was sold prior to the floods, to eight *yen*, per *koku*.

An immense safe has been constructed in Birmingham by Mr. J. F. Elwell, which is intended for this country. It is 7 feet high 7 deep and 6 wide, surrounded by chambers 3½ inches deep filled with chemical steam-generating compound, calculated to preserve its contents unconsumed, even though it were enveloped in fire for 10 or 12 days. The thickness of the walls of the safe is nearly 6 inches. The back of the interior is fitted with 12 safes, the lock to each differing, and there is still sufficient space for 16 men to stand inside the room with the door shut. The outer door is secured by 24 bolts, thrown with a turn of the handle. It weighs seven tons, and has been shipped in pieces.

The *Nichi Nichi Shimbun* says that a *Heimin* of Sakata *Ken* named Mori presented a memorial to the *Genrô-in* some months ago. Discussions have been going on in that body for the past two or three days upon the first article of the memorial, which relates to the propriety of paying taxes in money or in kind.

The Great Northern Telegraph Co's report announces an increase of traffic of 38 per cent, chiefly owing to the extension of the Japanese traffic. The dividend paid has been 7 per cent.

We learn that a large printing establishment in the metropolis is busily engaged in turning out thousands of labels of Dr. Collis Browne's Chlorodyne.

The display of fireworks which was to have taken place yesterday on the Sumidagawa, Yedo, has been postponed until the evening of the 10th instant.

The *Nichi Nichi Shinbun* writes:—The editor of the *Akebono Shinbun* after being examined on the 4th inst. at the Tokio *Saibansho* was allowed to return to his office in charge of the street officer, under whose *surveillance* he remains. We have ascertained the matter upon which he was examined, but the press laws do not permit of our commenting upon it.

We read in the *Nishin Shinjishi* that the government being about to make changes in the land taxes throughout the country, officers are being despatched in every direction upon this business.

Shortly before one o'clock this morning a fire broke out in the Billiard Room of the Japan Hotel, now in the occupation of Mr. H. Moss. The large quantity of wood work in this and the adjoining buildings gave little promise of the possibility of arresting the fire within the small block of buildings which abuts upon Main Street, but it was hoped that with a prompt supply of water the flames might be confined to it. The su[illegible]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

gines were promptly on the spot, but the supply of water was so inadequate to the requirement that, before a good stream was available, the fire had mastered the block and was threatening the destruction of buildings on either side. The out-houses in the rear of the brick building No. 51, occupied by Messrs. Durand and Culty, next took fire and aided by a northerly wind which was blowing somewhat freshly the flames had gradually embraced two or three Chinese tenements which form the angle of a wider street in the rear. Here, fortunately a brick, plastered go-down opposed the further progress of the fire, and a full supply of water being available the flames were stopped before this building (occupied by Messrs. Ziegler & Co.,) had suffered any very material damage.

The heaviest loss is that of the Japan Hotel to which Mr. Moss has recently returned. We understand that his losses are covered by an insurance of $10,000. The adjoining shops were occupied by Mr. Dominique, a shoemaker, and some small Chinese tradesmen who, it is to be presumed, have saved the larger portion of, if not all, their wares. Fronting Main Street were a Chinese exchange shop and the saddlery depôt of Mr. Caillens. The latter, who we regret to learn was uninsured, has lost a portion of his stock-in-trade, but succeeded in making some salvage. The Chinese occupying the houses facing the Japan Hotel are also understood to be uninsured. It was at one time feared that the house and godown occupied by Mr. Bush, storekeeper, facing the row of shops, would also have yielded, but though on fire in more than one place the prompt attention of the firemen saved them from destruction.

At half-past two o'clock the fire was evidently subdued. A large force of volunteers assisted the local brigade, and the fire was witnessed by an unusual number of spectators.

The band of the *Vsadnic* will perform at the Promenade Concert to-night. The programme embraces several part songs and glees and two violin solos—a *fantasia* on "Faust" and De Beriot's 1er Concerto.

The Shanghai papers received by *Golden Age* are unusually barren of news. The telegrams have all been anticipated by previous publications.

The *Hiogo News* says an uneasy feeling exists as regards matters in China. H. B. M.'s gun-boat *Curlew* and the U. S. war-ship *Kearsarge* have both sailed in a westerly direction, presumably for that country.

Late telegrams from London to Shanghai represent new teas as selling at a loss of from five to ten per cent.

A notification from the Prime Minister announces that Mr. Blakiston, of Hakodate, having issued notes of hand payable on demand for circulation throughout the Empire without Government authorisation, the same are not permitted to pass current and may not be received or paid away as money.

The *Nichi Nichi Shimbun* writes on the 6th instant. The Acting-Editor of this journal was called to the first precinct Police Station yesterday, where he was asked if he edited the number of the 30th July. His reply being in the affirmative, he was informed that the number contained a letter from a certain Hayashi, to which the attention of the *Shihôshô* had been called. He was then dismissed in charge of the local magistrate.

The *Nichi Nichi Shimbun* states that the Editor of the *Akebono Shimbun* has been examined at the Tokio Saibansho since being placed under *surveillance*. His case is not yet disposed of.

The *Hochi Shimbun* says: On the 15th and 16th of the present month a festival, in honour of *Suijin* (the water god) will be held at the fish market near Nihon bashi, Yedo.

There will be the usual procession of people dressed in uniform, bearing and accompanying the *Mikoshi* (ark) with great pomp through the streets.

STUART ELDRIDGE, M.D.,
Surgeon in charge.

The undermanned condition in which some large ocean-going steamers have been lately running, has attracted the attention of the local marine insurance offices; and on Tuesday an intimation was given to a captain that unless he shipped five more hands for the homeward voyage, a policy could not be granted him. The additional hands were at once obtained.—*N.-C. Daily News.*

The prospects of tea in America being particularly good just now, the P. M. S. Co. hold out to shippers the inducement of rapid delivery by the P. M. str. *Tokio*, which will leave Hongkong about 16th August. The connecting steamer will leave Shanghai about the same date. It is expected that shipments will be delivered in New York in 38 to 42 days from date of sailing from Yokohama. "Space will be granted in the order of application, and without proportionate allotment." We have no doubt the P. M. S. Co. are quite right in their anticipation, and that applications for space will be many times in excess of the capacity of the steamer. As we said before, the prospects are so tempting.—*N. C. Daily News.*

WE are told that the steamer *Europe* is bringing down thirty donkeys, bought in the North by Japanese speculators, who hope, apparently, that some of the furore which has been lately expended on rabbits will be devoted to these animals.—*N.-C. Daily News.*

A curious rumour was current yesterday, that Mr. Hart had resigned the Inspector-Generalship of Customs, and that Chunghow had been appointed in his stead. We mention it as we have heard it talked of, without the least idea whether it is true or a rank *canard*.—*N.-C. Daily News.*

M. GIQUEL, whose arrival with five Chinese from Foochow we lately reported, is now on a visit to London, and has placed two at the Royal Naval College, Gosport, two at an engineering establishment at Havre, and one at an academy in Paris.—*London and China Express.*

THE PRESS-LAWS—NATURAL RIGHTS.

WERE the question which we have been discussing under this head one of a mere abstract nature, we should hardly succeed in justifying ourselves for the extent to which we have transpassed upon the patience of our readers in connection with it. But it is not so. It is a practical question of the highest moment, not only to the people of this country, but to all foreigners whose interests, present or prospective, are bound up with its welfare. It is a question of government, and therefore of order, of stability and progress. And though we shall not stoop to reply to imputations made upon the sincerity of our views, deeming, as we do, that the baseness of one who would write against his conscience on such a sacred subject, is exceeded only by that which falsely imputes to him any such act, we shall seek to prove not that we are merely generally right in our view of the question, but that our willingness to acknowledge any slight errors we may have made in our path, proves our desire that our whole argument should bear the closest analysis. To this end we would point out that in our article of last week—written under all the disadvantages of absence from town—we have rendered ourselves open to some misconstruction by too severely refusing the admission of the existence of abstract rights of any kind in questions of polity. Of course we still sternly refuse to admit their intrusion into this question. But we are quite willing to give those who differ from our general conclusions any such advantage as they think they may derive from our admission that a metaphysical or *à priori* theory of Government involves the idea of abstract rights of certain kinds. We maintain, however, that these rights are purely metaphysical entities, and that it is simply idle to import them into a discussion upon proposed modifications of an old and settled polity like that of this country. No careful reader of history can have failed to see that in all times of transition and revolution—and it must always be remembered that this country is now undergoing a revolution, not the less real, because it is silent—abstract doctrines have always been dangers against which the wisest statesmen have thrown up the strongest defences. Theoretical Government at such times is the very worst thing that has to be feared, and to proceed at this time on theory in this country is simple madness.

We shall now proceed to show from the writings of perhaps the greatest of all political philosophers, Burke, how entirely we are borne out in the general views we advocated last week. First in regard to the question of rights. Burke says:—

"The rights of men are in a sort of *middle*, incapable of definition, but not impossible to be discovered. The rights of men in governments are their advantages; and these are often in balances between differences of good: in compromises sometimes between good and evil, and sometimes between evil and evil. Political reason is a computing principle; adding, subtracting, multiplying, and dividing morally and not metaphysically, or mathematically, true moral denominations."

Our readers will see how directly this bears upon our argument, and especially on that part of it in which we urged that "no one knew better than ourselves how much there was to be said on the other side of the question," and pointed out that, in cases of this nature, true statesmanship consists in seeing both sides of the question in all its bearings, and deciding the issue according as the balance of advantage and disadvantage inclines one way or the other. It is not singular, though it may seem strange to say so, that in the feeble cavil which has been the sole response to our arguments in the local press, these principles, supported by the wisdom of Burke, are thus commented upon:—

The universal dissent of the foreign local press from his singular views, has wrung from him the admission that "there are solid and excellent arguments against the new laws,"—laws of which he has constituted himself the sole champion. He says he "knows full well" and he has "become convinced of how much may be said on the other side:" but then, with complacent and amusing inconsistency, he forthwith writes a couple of pages to support the Government in the action it has taken in depriving the press of its liberty.

We must decline to review reviews upon ourselves. But it is well let our readers judge for themselves of their value.

Then in regard to the relation of governments to abstract rights, Burke says:—

Government is not made in virtue of natural rights, which may and do exist in total independence of it; and exist in much greater clearness, and in a much greater degree of abstract perfection: but their abstract perfection is their practical defect. By having a right to everything they want everything. Government is a contrivance of human wisdom to provide for human *wants*. Men have a right that these wants should be provided for by this wisdom. Among these wants is to be reckoned the want, out of civil society, of a sufficient restraint upon their passions. Society requires not only that the passions of individuals should be subjected, but that even in the mass and body, as well as in the individuals, the inclinations of men should frequently be thwarted, their will controlled, and their passions brought into subjection. This can only be done *by a power out of themselves*; and not, in the exercise of its function, subject to that will and to those passions which it is its office to bridle and subdue. In this sense the restraints on men, as well as their liberties, are to be reckoned among their rights. But as the liberties and the restrictions vary with times and circumstances, and admit of infinite modifications, they cannot be settled upon any abstract rule; and nothing is so foolish as to discuss them upon that principle.

The moment you abate anything from the full rights of men, each to govern himself, and suffer any artificial, positive limitation upon those rights, from that moment the whole organization of government becomes a consideration of convenience. This it is which makes the constitution of a state, and the due distribution of its powers, a matter of the most delicate and complicated skill. It requires a deep knowledge of human nature and human necessities, and of the things which facilitate or obstruct the various ends, which are to be pursued by the mechanism of civil institutions. The state is to have recruits to its strength, and remedies to its distempers. What is the use of discussing a man's abstract right to food or medicine? The question is upon the method of procuring and administering them. In that deliberation I shall always advise to call in the aid of the farmer and the physician, rather than the professor of metaphysics.

The science of constructing a commonwealth, or renovating it, or reforming it, is, like every other experimental science, not to be taught *a priori*. Nor is it a short experience that can instruct us in that practical science; because the real effects of moral causes are not always immediate: but that which in the first instance is prejudicial may be excellent in its remoter operation: and its excellence may arise even from the ill effects it produces in the beginning. The reverse also happens: and very plausible schemes, with very pleasing commencements, have often some obscure and almost latent causes, things which appear at first view of little moment, on which a very great part of its prosperity or adversity may most essentially depend. The science of government being therefore so practical in itself, and intended for such practical purposes, a matter which requires experience, and even more experience than any person can gain in his whole life, however sagacious and observing he may be, it is with infinite caution that any man ought to venture upon pulling down an edifice, which has answered in any tolerable degree for ages the common purposes of society, or on building it up again, without having models and patterns of approved utility before his eyes.

These metaphysic rights entering into common life, like rays of light which pierce into a dense medium, are, by the laws of nature, refracted from their straight line. Indeed in the gross and complicated mass of human passions and concerns, the primitive rights of men undergo such a variety of refractions and reflections, that it becomes absurd to talk of them as if they continued in the simplicity of their original direction. The nature of man is intricate: the objects of society are of the greatest possible complexity: and therefore no simple disposition or direction of power can be suitable either to man's nature, or to the quality of his affairs. When I hear the simplicity of contrivance aimed at and boasted of in any new political constitutions, I am at no loss to decide that the artificers are grossly ignorant of their trade, or totally negligent of their duty. The simple governments are fundamentally defective, to say no worse of them. If you were to contemplate society in but one point of view, all those simple modes of polity are infinitely captivating. In effect each would answer its single end much more perfectly than the more complex is able to attain all its complex purposes. But it is better that the whole should be imperfectly and anomalously answered, than that, while some parts are provided for with great exactness, others might be totally neglected, or perhaps materially injured, by the over-care of a favourite member.

We had much more to say on this very important question, but we must defer it for a future occasion. The words of a disciple may well be spared when those of the master—so full, so rich and so profound—have settled, for all time, the question in debate.

No typhoon appears to have taken place at Canton, Amoy or on the Bangkok passage, while, unless every old resident is greatly mistaken, there has been one somewhere, and one too with an enormous sweep. The weather puzzles even nautical men, but we suspect that either Formosa or Manila will be able to give some account of what has occurred. Many suppose that a cyclone has swept northwards from the Bashee Channel, but we shall have to wait awhile before knowing for certain. Few now in Hongkong recollect such unusual weather in July.—*China Mail*

TOOLS AND GUIDES.

THE conditions under which foreigners serve the Japanese Government form a subject which we have, on more than one occasion, adverted to and which deserves serious consideration. In our own country the instructions received from a recognized chief are treated with the greatest respect, and orders are always carried out with punctilious attention. But, it must be remembered, that it is not at the same time the rule to give so slavish a submission to any decrees as would not conform with the highest principles of honour. There are but few men who will lend their aid to a nefarious design, or to serve a notoriously absurd project—even although it may be the desire of their employer—that they should do so. The pettifogging attorney exists who will resort to devices of the meanest description to further the interests of his client, who will carry out instructions of the most harsh and unjust nature because it is his client's will that he should do so, and who gives a slavish obedience to his employer in all things. But there are not very many men of this stamp, and their conduct is guided by nothing further than the lowest views of their own personal advantage. Their numbers, however, are always sufficiently large to make it easy, at any time, to find a set of men who for a monetary consideration will prostitute their enlightenment, intelligence and the superiority which their early training and education has given them, to become merely tools in the hands of those from whom money is to be extracted.

Mr. H. N. LAY, with his usual perspicacity, has, in a recent letter to the *Times*, said that "The vicious policy of suffering our people to become the tools instead of the guides of the Chinese Government will, I make bold to say, before long be made manifest to all."

While giving the Japanese Government every credit for its progressive spirit, and the honesty of its intentions, we still feel bound to say that it cannot yet entirely dispense with the guidance of foreigners. And Mr. LAY's remark therefore is to some extent applicable to it. The number of foreigners in its employment is proof of the truth of this. The manner in which the advice of these foreigners is treated, and the success attending the efforts of those who conscientiously work in its behalf, are therefore matters which directly affect the success of the Government policy. The foreign employees, placed in direct communication with the native officials at the head of a department or otherwise, should be, in the nature of things, guides. The fact of their being in that position is evidence of their being required to perform work which the natives find themselves to be unequal to. It is, therefore, surely not too much to say that such confidence should be placed in them as will enable the directions which they give, regarding the work falling within their special province, to be complied with.

Has this confidence, we would ask, in one single instance, been accorded to a foreigner? Is it not rather the case that he is obliged to receive directions from men whom he is in a position to guide, and who are quite unfit to form correct judgements on the matters before them. That the instructions so given are very often diametrically opposed to the convictions of the foreign expert is most certain, and his duty on receiving them becomes, to him, the great subject of importance and difficulty.

The "tool" will give implicit compliance, and will not hesitate to lend his aid in carrying out work which he knows to be in error, or, it may be, fraught with danger, so long as he increases his popularity with his employers and adds to his worldly prosperity. The conscientious "guide" will probably consider that a remonstrance is necessary. The Government officials have their own policy and they are resolved to carry this out. The proffered remonstrance will clash with it, and a disagreement occurs. At this moment, it is possible that the foreigner, by a cowardly compliance, may lend his aid to what may result in infinite harm to the best interests of the country, or, by a courageous and respectful firmness, may avert the evil. But the foreigner, bold enough to pursue this latter course, is soon made to feel that, in so doing, he is cutting the ground from below his own feet, he loses the confidence of his employers, his opinions are dreaded and not asked for, he is generally shelved and possibly got rid of at the first opportunity; and we may point out that this becomes a serious crisis in the careers of most men. Those who may have sacrificed their position and connection at home to take service under this Government, and who from a bold and conscientious discharge of their duty and with a certain knowledge of the correctness of the principles upon which they take their stand, now sacrifice their position here.

But while fully appreciating the theoretical value of Mr. LAY's remark, we confess our inability to suggest any practical method by which the evils he dreads can be at once avoided. He speaks of the vicious policy of *suffering* our people to become the tools—instead of the guides—of the Chinese Government. It is impossible to dictate to the employers of skill or labour the manner in which that is to be used, and equally futile would it be to attempt to lay down rules, for the guidance of those entering a service, as to the method in which they are to exert themselves. To forbid foreigners from entering the service of either the Chinese or Japanese Government would hardly be sound policy, and such a course would be further involved in various complications. The only remedy, open, is to appeal to the good sense and honour of those of our countrymen in the service of the Government and, at the same, time to trust in the growing intelligence and uprightness of the Government officials.

On the supposition that the Chief Director of the Mint had been asked and had given his consent to the depreciation of the currency, or that the Chief of the Railway department had permitted those flimsy erections to be put upon the lines which are in accordance with the general custom of building in the country—or that certain lawyers had assisted in advising, and drawing up restrictions which would retard the progress of the country, and be detrimental to her welfare—or that various Europeans skilled in the arts of war lent their assistance to filibustering expeditions which would be liable not only to bring serious hurt to the country, but would also lead to foreign complications, —there can be little question that their so doing would increase the estimation with which their employers regarded them, but would, at the same time, seriously affect the country's interests.

We would therefore, earnestly beg the Japanese Government to pay a more respectful attention to the opinions of these European employées whose advice may differ from their own conclusions, to put more faith in their honesty of purpose, and to remember that they are probably better able to judge on many questions involving general matters of science or political economy than the partially educated officials with whom they are associated. It is probably necessary to point out that it is very far from our purpose to advocate a rebellious attitude on the part of any European employees, or any thing approaching a want of acknowledgement of the authority of the proper officials. This would lead to lamentable confusion, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

tend to bring the whole service of the country into a state of chaos. Our remarks are directed solely to those cases where a thoroughly trained European is requested to act against his convictions, and is then obliged to choose between becoming the "tool" of ignorant officials, and, at whatever cost to himself, taking the more dignified position of a conscientious but respectful "guide."

SPIRIT OF THE JAPANESE PRESS.

IS THE RELIGION OF THE BIBLE AND OF JESUS CHRIST THE BEST RELIGION FOR JAPAN, OR NOT ?*

(Nisshin Shinjisshi.)

How is it that all civilized nations, and especially all their most enlightened and greatest and wisest men, hold the Bible in such a high honour? Some say the Bible and philosophy disagree with each other. But this is not the case. A true and deep philosophy and a true and deep study of the Bible will always lead to the same results, and to the same truth. Sir Isaac Newton, one of the greatest mathematicians and natural philosophers says: "We account the Scripture of God to be the most sublime philosophy." Many of the greatest astronomers were Christians, for instance, Copernicus, the discoverer of the revolution of the earth around the sun, who shortly before he died ordered the following words to be written upon his grave in Latin language:

Non parem Pauli gratiam requiro,
Veniam Petri neque posco, sed quam
In crucis ligno dederas latroni,
Sedulus oro.

"I humble ask of Thee, Christ, no other grace, than that which Thou mercifully hast granted, when Thou wast hanging on the cross, to the great criminal who was crucified with Thee!" The great German philosopher Leibnitz was a Christian. The great astronomer Mädler, who did a few months ago, was also a true sincere and humble Christian. Linnœus, the great Swedish naturalist, says about the Bible record of the creation: "It is proved by empiric science, that Moses has written his record about the creation of the world, not from his own mind, but by a higher inspiration of the creator of nature." Cuvier, one of the great French naturalists, says; "Moses has given us a record about the creation of the world, whose truth daily becomes more evident in an admirable manner. The latest geological observations agree perfectly in regard to the order in which organic beings successively have been created." The greatest of all chemists, Justus von Liebig, was also a Christian. The great French statesman Guizot, who died a few months ago, used the following words; I believe in God, and I pray to him, without trying to understand his eternal being. I see God present and acting in ruling the created world, in the internal life of the human souls, in the history of mankind, I see God above all, in the Old and New Testament of the Bible, which is a divine revelation; I believe in Jesus Christ who died on the cross for the salvation of the human race; I bow my knees before the mysteries of the Bible and of the Gospel, but I do not try to explain them. I humbly believe that it is my greatest honour to call myself a Christian." These are the words of one of the greatest statesman who studied the Bible more than 10, 20, or 30 years without being able to fathom its many depths. The French Emperor Napoleon Buonaparte confessed, when he lived in his banishment upon the island of St. Helena, that Christ was the greatest of all Kings and the most powerful of all Lords, and that Christ's Kingdom was higher and incomparably more glorious than all kingdoms and empires of the world, because it was a kingdom of love and because Jesus Christ was God.

Frederick the Great King of Prussia, had once laid before him the form of a public prayer, which was to be prayed in the Church in Prussia, and in that prayer he saw these words: "Bless, O God, His Majesty our King" Then Frederick the Great took a pen and struck out the word; "His Majesty" and wrote in their place; "Bless, O God, thy servant, our King" saying "Before God, I am no majesty; before God I am only a servant."

King Alphonso of Spain, although a mighty ruler, always glorified in being a Christian. He used to say: "I regard the three handsful of water, which were poured over my head when I was baptized, as a higher honor than my royal golden crown with all its precious stones and jewels." Such great and wise men are indeed a proof of the perfection of a religion. If the religion of Christ and of the Bible are good for the great ones in mankind, why should they not also be good for small men? And if you look at the teachings—the doctrines and the moral system of the Bible—where are teachings higher than these of the Bible? Where is a moral system better, and nobler and more elevated than that of the Bible? The western nations believe in it and have adopted it; the Christian family and life is the purest and noblest and best; there is no polygamy in Christian countries, such things are regarded as degrading and mean; our governments are Christian, our wisest statesmen and princes are servants of Christ. It is not an honor for Christianity, if great men and princes confess it, but it is an honor for kings and great men if they confess Christianity. Some say, Christianity is the best religion for western countries, but not for the whole world and especially not for Japan. Who told them that? Did Japan without Christianity reach a higher civilization than the western countries with Christianity? If Christianity is the best religion for western countries, why should it not also be the best religion for eastern countries? If the sun is the best light for western countries, why should it not also be the best light for eastern countries? There are a great many intelligent and able men at present, here in Japan, who propagate western civilization; but western civilization is Christian in its foundations and in its root. If the civilization of western i.e. Christian countries is good and beneficial for Japan, why should not Christianity itself be good for Japan? If western railroads, telegraphs, cannon, cloths, hats, boots, etc., and all the western sciences and arts are good, why should not that religion be good, whose spirit developed so perfectly and powerfully the intelligence of western nations to make so many inventions and to find out so many good and useful sciences?

Christianity is the religion of the highest and greatest freedom. One of the greatest modern philosophers, the German, Hegel, says: "The Christian religion is the religion of absolute freedom. This great thought, that freedom is the universal destiny of man, was first introduced to the world by the Christian religion, and can be realized only by a universal sway of Christian morality." Again; "It is in the Christian religion alone that the basis of a general and progressive freedom is found." Every Japanese who travels with open eyes in Europe or America can see it, that Christianity carries with it such a tremendous amount of freedom and justice in western nations, as no other religion in the world. The western nations have the best laws, the highest justice is practised, their political life is powerful by its freedom, their governments are strong and wise, all classes of those nations are intelligent—there is no superstition, no idolatry, and the Christian family life is pure and noble. If from the Bible and its spirit could be derived such good and wise laws and institutions, why should the government and the nation of Japan, guided by the same good spirit, not derive also from this country wise laws, freedom, justice, enlightenment and good morals, and thus strengthen both the power of the nation and the power of government? Let me close with some words of explanation and advice:

1.—If you will find out the truth of Christianity you can find it in every one of the better translations, although all of them contain faults. You can, by reading the Chinese translation understand Christianity and all the great leading principles of this great religion.

2.—Some people say: all believers in Christ are partial and we cannot expect impartiality from them. But they say we can expect impartiality from those who love natural religion. But if a man believes in natural religion with an upright and sincere heart, then natural religion will

* It is scarcely necessary to state that this Article is originally from a foreign pen.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

certainly lead him to that religion which is higher and greater than all natural religion, that is to the religion of revelation, of the Bible and of Jesus Christ.

And this is the only religion which makes human minds impartial. The opponents of Christianity are not impartial; its defenders and followers are so. And partiality for Christ is the highest impartiality.

3.—Belief in Christ also makes the human mind very liberal and broad-hearted. A Christian calls the defenders and opponents of Christianity alike his friends. And if any one studies deeper the religion of Christ he will find, that Christ taught us to love all men, also the opponents of the Bible; for it may be that the same men who are opponents to-day will be believers and followers of Christ to-morrow.

The apostle Paul, that greatest and boldest of all propagators of Christianity in Western countries, was once one of its greatest and most dangerous opponents. I therefore think it is not impossible that opponents like the author of Benmô* and others may perhaps become believers. And I wish they would. *Christianity is the best religion for Japan.* I wish the whole nation, the Government and the Emperor would embrace this good and great and noble religion.

All Christians in the whole world would rejoice. And it would be the highest honor for Japan. Some Japanese have asked the question, Which would be best form of Christianity for Japan? My answer is: the best form of Christianity for Japan would be pure Protestantism, the Christianity of the Bible, unadulterated by any human additions. This form of Christianity is free from the hierarchic power of priesthood and of popery, and from any mixture with political power. But those forms of Christianity which are connected with any hierarchic or any political power are not true and pure Christianity, and therefore, they are not good for Japan nor for any other country in the world, no matter whether it be an Eastern or a Western country.

The Press Laws.

(*Nichi Nichi Shimbun.*)

To the Editor of the "Nichi Nichi Shimbun."

Dear Sir,—How is your health at present? Please pardon my long silence. You, Editors of the newspapers, until the end of June last, enjoyed great freedom in the expression of your opinions and in warning the Government of danger. The public press therefore became a great benefit to the Empire and you told us that all the thirty-five millions of our brethren were plunged in slavery.

But you do not speak thus to us to-day. You have all become a set of spiritless dunces, because, on account of the lately enacted press laws, the points of your editorial pencils have become very blunt.

The spirit of Mr. Editor Sasanami of your paper who formerly measured swords with the *Kiobushô* is dead and gone. Although Mr. Editor Suyematsu ridiculed *Ahokuan Kuaigi* yet this was but a small matter (*Ahokuan* is a change rung upon the word *Chihokuan; Aho*-fool.) Ah! the ruin of literature is a great calamity indeed.

Mr. Editor do, please, if you can, revive the old spirit of free discussions in place of this dead blank. Hitherto while endeavouring to support freedom and right I have leant upon the press as upon a staff, but now the staff is broken and I am in great trouble. Consider also that the press was not established for the sole purpose of making money, but for the public good, and although the laws be severe, and the fines for their infringement high, still fear not.

Although you should give your life for the good of your country, still do not flinch, but go on boldly in the good cause.

Hayashi Junpei.

[The publication of this letter has brought the Editor of the journal into contact with the Authorities, as described by us elsewhere.]

* A work directed against revealed religion.

The *Kocho* and the *Chihokuan*.

(*Choya Shimbun.*)

The Government of Japan is the Mikado's Government and not the people's Government. The assembly of the *Chiho Kuan* from the various parts of the Empire was not representative of the people, but an assembly of Imperial Government officers. Therefore, although the local assemblies of each *Ken* were not elected by the people but were made up of the *Kucho* or *Kocho*, or local Government magistrates, still we can have nothing to complain of in it. Even if there were no restrictive press laws we have no desire to comment upon this.

The decision of the *Chiho Kuan* that the local assemblies of each *Ken* should consist only of the local village magistrates, or *Kocho*, is a very happy choice, upon which we may be allowed heartily to congratulate the Government. Nevertheless we being but one of the millions of our country believe it to be our sacred duty to give our best advice to save our Government from injury.

It is the public opinion in all parts of country, and has often received expression in the newspapers, that the *Kocho* are generally of the extreme conservative class, holding that nothing but that which bears the stamp of age is really good. The expression of this opinion has been so continually heard that it palls upon the ear and we are tired of its reiteration. If we attempt to enumerate the extreme conservatives of our country we shall find first and foremost in their ranks the old nobility (*Kuadzoku*); next the believers in the doctrines of Confucius (*Jusha,*) and last, the local magistrates or *Kocho* of the towns and villages. Thus the *Kocho* standing as it were between the government and the people, and in place of the people, being called upon to discuss all important questions of public good and national interest do they not incur great responsibilities?

The lack of unison between the mind of the Government and the people has in all ages and still is regarded by all thoughtful minds as a matter to be sincerely regretted. That which is convenient for the people not being convenient for the Government, or that which the Government wishes being to the distaste of the people, when this comes to be the actual state of things what will the *Kocho* do? Will they uphold the rights of the people in opposition to the Government, or will they disregard the interests of the people and obey the Government? Ah! are not the duties of the *Kocho* very onerous?

If the assemblies of the *Kocho* have been irrevocably decreed then would it not be well if some laws were enacted for their selection from among the people? The birth or lineage of the men selected for *Kocho* is a matter of no moment, so also is it a small matter whether they are men of wealth or not. Neither is it important that they should have any large experience in the ways of the world or flatterers of rank and office; but they should be men who have a good knowledge of the minds of people, and whether they should be appointed by the Government or elected by the people we cannot decide.

The *Kenrei* of all the *Ken* being men of wisdom and talent will best know how to manage all this. Our duty is simply to point out the importance of the duties that the *Kocho* have to perform, so that seeing the responsibilities of their position they may take care to act with caution.

It is satisfactory to learn that the commercial news from home is more reassuring than has recently been the case. The money market is easy, and all fear of any panic has passed away.—*China Mail.*

THE NEW REGULATIONS OF JAPANESE COURTS OF LAW.

NOTIFICATION No. 91.

From the "Nichi Nichi Shimbun," May 28th and 29th

It is hereby notified that the accompanying constitution and Regulations have now been ordained for the High Court of Justice (*Daishin in*) and the other Courts.

(Signed) SANJO SANEYOSHI,
Daijo Daijin.

CONSTITUTION OF THE HIGH COURT OF JUSTICE.

One Chief Official.

(Appointed from the ranks of Judges (Hanji) of the first class.)

1.—He is chief of the Judges of the Head Department and issues orders for the distribution of work to the chiefs of the Two Subsidiary Departments. He will occasionally preside in the various courts, and try important cases. He will also conduct the correspondence with the Judicial Department.

2.—He will preside at meetings of the members of the Court, and will decide by a majority of votes matters on which the Judges are not unanimous. In case of an equal number of votes on each side, he shall have a casting vote.

THE JUDGES. (*Hanji*)

1.—They will examine into appeals, both civil and criminal, and cancel erroneous judgments, and they will also have charge of trials for treason, important cases between Japanese and foreigners, and the trial of offences committed by Judges.

2.—They will examine the draft sentences of death.

3.—They will explain doubtful points of law.

CLERKS.

The clerks copy documents under the directions of the judges, and have charge of the records.

REGULATIONS OF THE HIGH COURT OF JUSTICE (DAISHI NIN).

1.—The High Court of Justice receives appeals both in civil and criminal cases, and cancels erroneous judgments given by all Courts from the Superior Courts downwards. It is its business to maintain a uniform system of law for the whole country.

2.—When it has cancelled an erroneous judgment, it may either refer the case for trial to another Court, or it may itself try the case if convenient.

3.—If when a case has in this way been referred to another Court for trial, the latter should not accord with the opinion of the High Court of Justice, the Judges of the High Court will assemble and decide the case.

4.—The High Court will cancel decisions in which the naval or marine Courts have exceeded their powers, and will refer such cases to the proper Court.

5.—All offence committed by Judges, with the exception of offences against the police regulations, will be tried by the High Court of Justice.

6.—The High Court will try all important cases whether civil or criminal in which both Japanese and foreigners are concerned.

7.—It will examine and sanction the sentences of death which are laid before it by the Superior Courts, and then send them back to them. If any are decided to be erroneous, the Judges will hold a meeting, and ascertain afresh the law applicable to the case, after which they will give their reply.

8.—In trials in the High Court of Justice, five or more judges must be present in Court; if less are present, no trial can take place.

9.—The High Court of Justice interprets difficult points of law.

10.—If the High Court of Justice sees a mode of remedying a defective law, it is competent for it to make a representation to the Emperor through the Minister of the Judicial Department.

11.—The High Court will prepare a Register of its decisions, where will be entered in regular order all cases cancelled by it on appeal, and all explanations of doubtful points of law, with the grounds of the decision annexed. This record will be sent to the Shihôshô and printed,

12.—The business of the High Court will be divided among the following two departments.

1. Civil Department.
2. Criminal Department.

CONSTITUTION OF THE SUPERIOR COURTS.

A Chief Judge.

(A Judge who holds his appointment directly from the Emperor will be chosen for this office.)

1.—The Chief Judge will distribute appeal cases among the chiefs of the Departments (civil and criminal) under him, and will if circumstances render it desirable, be himself present in Court and hear important cases. He will also conduct the correspondence with the Minister of Justice, and with the Chief Judge of the High Court of Justice.

2.—He will have charge of the arrangements for Circuit Courts within his jurisdiction.

JUDGES.

1.—They will receive and try appeals which come up from Courts within their jurisdiction.

2.—They will go on circuit to the *Fu* and *Ken* in their jurisdiction, when they will be charged with the decision of capital cases. (The Rules for Circuit Courts are given below.)

ASSISTANT JUDGES.

1.—They make preliminary examinations of such cases of appeal as may be placed in their hands by the Judges.

2.—They follow the Judges on circuit and form part of the Court.

CLERKS.

Their duties are the same as those of clerks of the High Court of Justice.

REGULATIONS OF THE SUPERIOR COURTS.

1.—Superior Courts are established in four places viz. Tokiô, Osaka, Nagasaki, and Fukushima, which will examine into cases of appeal from the decisions of the *Fu* and *Ken* Courts. (A Table showing the jurisdiction of each Court is given below.)

2.—The Superior Courts have authority to decide capital cases, and each Superior Court will send out on circuit within its jurisdiction a Judge and an assistant Judge in order to form their decisions.

3.—After a capital offence has been tried, the law applicable to it must be ascertained, and a draft judgment drawn up and submitted to the High Court of Justice, before receiving the approval of which the sentence cannot be executed.

4.—The Superior Courts examine the draft judgments of penal servitude for life which are laid before them for their sanction by the Courts of *Fu* and *Ken*.

5.—They judge offences committed by the barristers and notaries within their jurisdiction.

6.—In both civil and criminal cases, when a public Court is held, at least three Judges must be present.

7.—Although there may be dissatisfaction with the judgment of the Superior Court, there is no ordinary appeal from it: all that can be done is to make it the subject of an extraordinary appeal to the High Court of justice and obtain from the latter the cancelling of the decision.

RULES OF CIRCUIT COURTS.

1.—Each Superior Court will send Judges on Circuit to the *Fu* and *Ken* Courts under its jurisdiction to try capital cases beyond the competence of the latter.

2.—Except in extraordinary cases, the Circuit Courts will visit the provinces as a rule twice a year.

3.—The Chief Judge will carefully observe whether or not a Circuit is urgent or not, or adopt a system of rotation, and obtain permission from the Minister of Justice before despatching Judges on Circuit.

4.—Whenever upon the preliminary investigation being made by *Fu* and *Ken* Courts, and proof of the crime obtained, it appears that the law applicable to it provides for a sentence of death, a draft judgment should be pre-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The original has two words for appeal, *Kôso* and *jô-koku*, the former

5.—The Superior Court may according to the extent of the district under their jurisdiction, divide it into two or three circuits, sending on each two officers viz. a judge and an assistant judge.

6.—The judge of the *Fu* or *Ken* will take his seat on the bench along with the Circuit Judges, thus completing the fixed number of the Court i.e. three members.

7.—When the trial is complete, the Circuit Judges will forward a draft of the judgment to the High Court of Justice which, when sanctioned by it, will be sent down to and carried out by the *Fu* or *Ken* Court.

8.—The number of days spent by the Circuit Judges at each *Fu* and *Ken* cannot be determined beforehand. It will depend on the number of grave cases in each *Fu* and *Ken*.

CONSTITUTION OF FU AND KEN COURTS.

One Chief Judge (of from 5th to 7th grade.)

He communicates with the Minister of Justice, the Chief Judge of the High Court of Justice, and the Chief Judge of the Superior Court. In other respects his duties are the same as those of ordinary judges.

JUDGES.

They hear civil cases of first instance, and conduct trials of criminal cases where the punishment does not exeeed penal servitude.

ASSISTANT JUDGES.

They receive directions from the judges and supply their place when found convenient.

CLERKS.

Their duties are the same as those of the clerks of the Superior Courts.

REGULATIONS OF THE FU AND KEN COURTS.

1.—There shall be one Court in each *Fu* and *Ken*, which shall try all civil cases and such criminal cases as do not involve a more severe punishment than penal servitude. In *Ken*, however, where no court is established, one of the local officials will undertake the office of judge in addition to his other duties.

2.—All civil cases, great or small, brought before the Courts of *Fu* and *Ken*, are accounted cases of first instance. In all cases of first instance, an appeal lies to the Superior Courts.

3.—Unimportant civil and criminal cases in which both Japanese and foreigners are concerned may be decided forthwith. Important cases should on the one hand be heard (in these Courts,) and on the other hand reported to the Minister of Justice.

4.—In capital cases a draft sentence and the evidence should be drawn up and the accused detained until the arrival of the Circuit Judge.

5.—In cases of penal servitude for life, a draft judgment should be prepared, and forwarded for the sanction of the Superior Court, after receiving which it should be carried into effect.

GENERAL REGULATIONS FOR THE OFFICE OF JUDGE.

1.—Judges are appointed to the High Court of Justice and other Courts down to those of *Fu* and *Ken*. They will hold rank from first class judges to seventh class judges. Assistant judges will be appointed in Courts from the Superior Courts downwards. They will be divided into four ranks.

2.—Each Bench of the High Court of Jutice shall have five or more judges one of whom shall act as President. In the Superior Courts three shall form a quorum, one of whom shall act as President. If in the superior Courts the number of Judges is insufficient, an Assistant may take his seat on the Bench. Two Assistants, however, are not allowed to be substituted in this way.

3.—Summonses, examinations and adjournments shall be determined by the President as he judges proper.

4.—The authority to appoint a President of a Bench of Judges lies with the chief Judge of the Court.

5.—There shall be separate Court rooms for trying Civil and Criminal cases. If convenient the same Court room may be used for both, in which case the days and hours should be distinguished. It will depend on the convenience of each Court whether the Judges will be divided into two bodies one for Civil and the other for Criminal business, or whether the same Judges will attend to both. Even where a division of departments is made, in cases where there is not a quorum of judges in one division, the deficiency should be supplied from the other.

6.—When the trial is finished and judgment is about to be given, the judges will retire from the Court to consider it. They will decide by a majority. If the Court is of three persons, two form a majority, if of five persons three or more form a majority. If there is an equal division of votes (as for instance where three members of a Court all hold different views, or where there are five if two on each side hold the same opinion) the view of the President is to be followed.

7.—In both Civil and Criminal cases, the Chief Judge of the High Court of Justice and the Chief Judge of the Superior Courts may as occasion demands, take their place on the Bench as President of the Court. The ordinary President of the Court will in such case vacate the chair, and take his place along with ths ordinary judges.

8.—In the case of grave offences, or of offences of a character difficult to make clear a preliminary investigation is made. This preliminary investigation is made with closed doors in a different Court by the judge with the help of a clerk. When the preliminary investigation is completed, and a draft decision drawn up, it is then delivered to the public Court. The judges who have made the preliminary investigation do not take their seats on the Bench of the Public Court.

NOTIFICATION No. 92.

It is hereby notified that Superior Courts are established at Tokiô, Osaka, Nagasaki, and Fukushima, and that their jurisdictions are as stated below.

NOTIFICATION No. 93.

It is hereby notified that in connexion with the establishment of a High Court of Justice and Superior Courts, the annexed rules of procedure have been ordained for appeals and references to the High Court of Justice.

(Signed) SANJÔ SANEYOSHI,
May 24th, 1875. *Daijô daijin.*

CHAPTER I.

Appeals.

1.—When a person is dissatisfied with the original judgment of a *Fu* and *Ken* Court, and petitions the Superior Court for a fresh trial, this is called an appeal. *(Kô-so.)*

2.—Appeals (*Kô-so*) are allowed in civil cases only, not in criminal cases.

3.—Appeals are only allowed once not twice.

4.—If either or both parties to a cause are dissatisfied with the judgment delivered by a *Fu* or *Ken* Court, they will take seven days (counting from the day following the delivery of the judgment) to consider well its justice and will be allowed to present the appeal on the next day following. In case, however, the cause concerns mercantile affairs, and it is necessary to appeal at once, the appeal may be sent in even before the seven days have elapsed.

5.—No appeal can be received after three months (of thirty days) have elapsed since the judgment.

For *Fu* and *Ken* Courts however, which are more than eight *ri* from the Superior Court, one day over the three months will be allowed for every such eight *ri*.

6.—Appellants must report the appeal to the *Fu* and *Ken* Court of first instance.

It is, however, unnecessary to ask for a forwarding letter.

7.—A *Fu* or *Ken* Court receiving such a notice will stay execution of the judgment, and when required by the Superior Court, will supply it with the plaint, answer, evidence, the proposed judgment etc. of the *Fu* or *Ken* Court.

8.—The petition (of appeal) to the Superior Court must be drawn up according to the "Forms of Plaints and answers."

CHAPTER II.

General Rules for Appeals to the High Court of Justice.

9.—When application is made to the High Court of Justice to cancel the judgment of any Court on account of its being erroneous in point of law, this is called an appeal (*Jôkoku.*)

10,—Cases in which appeals (to the High Court) are allowable.

1. Where the case was beyond the competence of the lower Court to try.
2. Cases which have been irregularly tried.
3. Decisions contrary to law.

11.—The High Court of Justice receives *Jokoku* (appeals) but does not receive *Ko-so* (appeals). If a case which is properly a *Koso* (appeal to a Superior Court) is by error made a *Jokoku* (appeal to the Daishin in) it will be rejected, and no notice taken of it.

12.—An Appeal (*Jôkoku*) lies to the High Court of Justice in cases where Naval or Military authorities have in giving their decision overstepped the bounds of their authority.

13.—If a case appealed to the High Court of Justice has already been decided by it, a fresh complaint will not be heard.

CHAPTER III.

Appeals to the High Court in Civil Cases.

14.—Appeals *(Jokoku)* to the High Court of Justice are only allowable in cases where appeal has already been made to, and the case tried by a superior Court.

15.—The person who wishes to apppeal (*Jokoku*) must forward to the High Court of Justice within two months from the Date of Judgment two copies (original and copy) of his petition to appeal. He should at the same time give notice to the other party to the case. In the case of places more than 8 *ri* distant from the High Court, one day additional will be allowed for every 8 *ri*. No appeal can be received in which this limit is exceeded. The petition must contain the names and places of residence of the plaintiff and defendant, and the date on which the judgment was delivered. It must state clearly the grounds of appeal, and must be accompanied by a copy of the original judgment.

*16.—The petitioner must lodge with the High Court along with his appeal the sum of ten *yen*.

No appeal can be received if this amount is not lodged.

A. If the appeal is not received the money lodged is forfeited.

B. If the appeal is received, and the original judgment cancelled, the money lodged will be returned.

C. If the appeal is rejected after the plaintiff is examined and confronted with the defendant, and the original judgment is not cancelled, the money lodged will be forfeited, and the plaintiff will be made to indemnify the defendant for his expenses according to the rules for judicial expenses.

17.—An appellant must first give notice to the Court of First Instance, which will forward the papers in the case to the High Court within three days.

18.—Execution of a judgment is not stayed on account of an appeal to the High Court, but as soon as the decision of the original Court is cancelled the High Court will notify it to the latter (by post from the Secretariat of the High Court) and stay the execution. If the judgment has been already carried out, the execution of the former judgment shall be annulled, and the latter judgment carried out.

19.—The appellant is at liberty to present his appeal either in person, or by attorney.

20.—In the Civil Department of the High Court, when the full number of judges (not less than five) have taken their seats, in Court, the appellant or his attorney will be caused to read the petition in appeal, and his address will be heard. If the appeal is decided to be received, an order will be made that a decision will be given after trying the case by confronting plaintiff and defendant.

21.—If (upon hearing the appellant's petition and address) the judges decide that the appeal is an improper one, they will make an order stating the grounds on which it is refused to hear the appeal.

22.—Within two days after an order of the kind described in section 20, the High Court will issue a summons for the appearance of the defendant. The summons will be accompanied by a copy of the petition of appeal.

23.—Within thirty days from the receipt of the summons, the defendant must prepare and present his answer, either in person or by attorney. One days delay will however be allowed for every eight *ri* over eight *ri* which the defendant's residence is away from the High Court.

24.—When the defendant's answer has been received by the civil department, the chief of the department will select one judge and give him special charge of the case. This judge will collect the papers in the case, and prepare a history of it without delay. He will then fix a day for

* The operation of this clause has been suspended.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

confronting and examining the plaintiff and defendant, and will send to them three days before a summons to appear for that purpose.

25.—When both parties are confronted and examined in Court, the full number of judges will take their seats on the Bench the judge in special charge of the case will read his history of it. The plaintiff will then make his statement and next the defendant, and then the mutual explanations of both plaintiff and defendant will be heard. If the decision which ensues is in favor of the appeal, the judgment will be to the effect that inasmuch as the decision of the original Court is cancelled for such and such grounds, a new decision is to be received from such and such a Court.

26.—If the decision is against the appeal, the judgment will state on what grounds the appeal is rejected.

27.—If the decision of the Court to which a case is thus referred by the High Court in consequence of a judgment having been cancelled, is not in conformity with the views of the High Court, and it is therefore decided at a meeting of the members of the latter, then the Judge who shall be specially charged with the conduct of the case must be taken from the criminal Department of the High Court.

CHAPTER IV.

28.—An appeal *(Jo-koku)* lies to the High Court in all criminal cases with the exception of capital crimes and of police offences.

29.—Persons who may appeal in criminal cases.

a. Prisoners.

b. Kenji, (or where there are no Kenji, police officials.)

30.—Prisoners who wish to lodge an appeal must lay a petition of appeal before the clerk of the Court within three days after sentence has been passed (the sentence is not carried out for three days) and he must within ten days prepare a careful statement of his grounds for appealing and lay it before the clerk.

The clerk will communicate this to the local official charged with the execution of the judgment.

31.—If a Kenji wishes to appeal, he will inform the prisoner within 24 house after the sentence, and will in ten days prepare a careful statement of his grounds for doing so, which he will forward to the Minister of Justice.

The Kenji will give notice of the appeal to the local official charged with the execution of the sentence.

32.—The Kenji, or prisoner, loses the right of appeal by a delay beyond the fixed period.

33.—The official charged with the execution of the sentence will postpone the execution of the sentence on receiving notice of appeal from the Kenji or prisoner, and will await the decision of the appeal. In the meantime the prisoner shall be confined in a separate cell. Where there are no separate cells, the prisoner will be confined as may be found convenient.

34.—If the prisoner is unable to do so himself, he may send for a representative to come to the prison to draw up for him his statement of grounds of appeal. (The interior of the prison should be partitioned off and a conference room prepared so as to prevent the appellant being mixed up with the other prisoners.) The name of the appellant's representative should be signed along with his own to the statement of grounds of appeal. If the appellant cannot sign his name a note should be made to that effect. When a representative of a prisoner is sent for to the prisoner, the jailer will be notified of it, and he will inform the Secretariat of the Court.

35.—If on account of his tender age (15 or under) a prisoner is not cognizant of his right of appeal, his relatives (relatives of the five degrees are here meant) shall be allowed to act for him.

36.—When a statement of grounds of appeal is received by the Secretariat of the Court, they will forward it along with the documents in the case to the High Court of Justice within three days.

37.—When the appeal is made by a Kenji he will forward his statement of grounds of appeal together with the documents in the case to the Minister of Justice, who will send it to the Kenji of the High Court of Justice in order to be laid before that Court.

38.—The criminal Department of the High Court will cause the appeal to be examined by the *bi ji* (deliberative officers) and if it is decided that the appeal is improper or unreasonable, a decision stating the grounds (of rejecting it) will be sent to the Secretariat of the original Court which will communicate it to the appellant, and the sentence will then be carried out. If the appeal is decided to be reasonable, the judgment of the original Court is cancelled, and the case referred to another Court for trial, the High Court may, however, resolve to try the case itself, or it may discuss the law of the case, and communicate its views to the Secretariat of the original Court, and procure a decision in this way. The decision and grounds of decision are also to be sent.

39.—When the appeal proceeds from a Kenji, the decision is sent to the Kenji of the High Court, by whom it is forwarded for enforcement through the Minister of Justice to the Secretariat of the original Court.

NOTIFICATION No. 94.

It is hereby notified that the compendious Regulations for civil appeals (*Kó so*) published in notification No. 54 of May, 1874, are now cancelled.

(Signed) SANJO SANEYOSHI,
Daijô Daijin.

May 24th, 1875.

SHIHÔSHÔ NOTIFICATION.

No: 7-A.

In consequence of the appeals established by Notification (of Central Government) No: 93 Notification No: 4-A. of this Department is hereby cancelled.

(Signed) OGI TAKATO,
Minister of Justice.

May 30th, 1875.

SHIHÔSHÔ NOTIFICATION.

No: 8-A.

Notification No: 93 (of Central Government) has provided rules of Appeal to the Superior and High Court. The High Court and the Tôkiô Superior Court are already open, but the Ôsaka, Nagasaki and Fukushima Superior Courts are not yet in operation.* The number of days from the date of the above notification until a notification is issued announcing the opening of these Courts is not to be counted in reckoning the number of days allowed for sending in an appeal.

(Signed) ÔGI TAKATO,
Minister of Justice.

30th May 1875.

A BUDGET OF JAPANESE NOTES.

LEGENDS.

(Continued.)

When Kumaeso rose in rebellion against the Emperor Kei Ko Ten O, about A.D. 97, Ko-usu no mikoto, the Emperor's son, disguising himself as a woman, threw himself in his way, and he straightway fell in love with the supposed maiden. Ko-usu used his advantages so as to assassinate the Emperor's enemy and was rewarded by the grateful parent with the title Yamato-taki no mikoto (Prince and best of warriors). He was sent subsequently, about the year A.D. 110, to subdue the Yebisu,* who set fire to the herbage, hoping thus to destroy him. But he had in his possession the charmed falchion *Murakumo no ken*, which Sosano had cut from the tail of the serpent Yamada no Orochi, and in the use of which he had been instructed by Ten-sho-ko who had appeared to him, and, waving it over the flames which surrounded him, they were quickly extinguished; hence its subsequent name *Kusa naji ken*, or grass-mowing sword.

When Yamato-taki was crossing from the vicinity of Shinagawa to the opposite shore of the bay, a great tempest arose, and all were in great peril. His consort Tatchibana hime threw herself into the raging waves, as

* The Osaka and Nagasaki Superior Courts have since been opened.

* Barbarian. The term at that time was applied to the inhabitants north of Fujiyama.

a propitiatory offering to the gods of the seas and winds, and the storm soon after subsided and he landed in safety. Having speedily overcome the *Yebisu*, and being in the mountains to the eastward of the present site of Yedo, he looked back towards the sea, seen in the distance to the eastward, and recalling his faithful love, who had sacrificed herself for his sake, thus expressed his longing desire for the departed, *Waga tsuma Kôhishi.*†

On his return through the province of Omi, in passing the mountain ranges, he met Ibuki yama no Kami (spirit of Mount Ibuki) who assuming the form of a huge serpent threw himself in his path. Ko-usu fearlessly stepped over the reptile, but as he did so he became giddy, the scene swam before his eyes, the ground felt scorching to his feet, and he was fain to drink a deep draught of water from a neighbouring streamlet, which speedily revived him. The spot has ever since borne the name of *same-ga-i* (cooling spring). Yamao-taki died at Noma in Isé. After his decease his spirit assumed the form of a white bird and fled away to Yamato, where it has ever since been venerated under the name *Shira tori mio jin*, or the enlightened white bird (spirit).

About 361 years before the Christian æra, Owanamuchi no mikoto was worshipped in Idzumo as Kirio daimio jin. The temple of Oyashiro being burned down, Okimi Kabuki raised money to rebuild it, by collecting the first troupe of actors that had been assembled in Japan. At this shrine all the *Kami* meet together during the 10th month of each year in order to arrange the marriages for the succeeding twelve months. During the early part of the *séance* of this matrimonial commission, the business is conducted with strict propriety and due attention to detail by the *Ubusuna*‡ for the interests of their respective *ujiko*,§ but, gradually wearying of their task, they become inattentive to their duties, and from their negligence spring the woes unnumbered of ill-assorted unions.

In the days of Nin-toku Ten O (A. D. 367) Tamichi, a celebrated warrior who went to Yezo to subdue the Ainos, was slain there. His spirit assumed the outward shape of a huge snake, *Dai ja*, which swallowed up the people and breathed forth a fatal poison upon the land.

The country called Hida, south of Fusiyama, about A. D. 377, contained among its inhabitants a certain Sukuna who had two faces and four arms and legs, a wicked and powerful monster. Nin-toku Ten O ordered Take-fure-guma to subdue this creature, whom he eventually succeeded in slaying.

About A.D. 419 Inkio Ten O became enamoured of the sister of his consort Oshisaka onaka hime, known as Sotori hime, celebrated for her exceeding personal beauty and the radiance of her person, and built a bower for her use, to which he frequently retired to forget the cares of his court. Like many gay monarchs he soon wearied of her and became intermittent in his visits, to which, however, she patiently looked forward. Once, after a long period of neglect, she observed a spider descending slowly from the ceiling by his self-spun ladder, whereupon she improvised the following stanza:

Wa-ga seko ga
Ku be-ki yo-i nari
Sa-sa-ga ni-no
Ku-mo no fu-ru ma-i
Ka-ne-te shi-ru-shi-mo.

My own true love
To-night should come;
For, like a tiny crab,
This spider's movements
Heralds his approach.¶

She was celebrated as much for her wit and her talent in improvisation as for her loveliness and grace. From that time forth women, (and more especially concubines and courtesans), attribute good luck to the chance advent of spiders, and when this auspicious event occurs hasten to capture their little visitor and speedily to place it in a paper bag beyond the reach of harm.

Urashima Taro is a celebrity of the reign of Yuriaku Ten O who lived about A.D. 478. He went out to fish in his native country, Tambu, and netting a turtle took it home with him, when it assumed the shape of a lovely woman, who induced him to fly with her to her own country called Horai.‖ After enjoying a long period of unalloyed bliss in Horai jima he became home-sick and longed to revisit his native land. As a parting gift he received the *Tama te bako*, or jewel-casket, which secured him the possession of immortal youth and vigour so long as he abstained from opening it. On arriving at his home he found all his old friends departed and the scenes of his youth and manhood a solitude, and he wearied of life. At length his curiosity overcame his prudence and he removed the cover of his precious casket. He at once became old and feeble and shortly afterwards died.

In some works it is related that the box was a gift to his great-grandson. The legend would seem to convey some such moral as "Do not look a gift horse in the mouth." To this day the Japanese do not open boxes containing presents until some little time has elapsed.

There is a village in the province of Mutzu known as Adachi no hara, in which there are but few houses. One night a priest named Yuke, an *Ajari*, (a grade of priesthood), of the temple of Tokobo of Nachi in Kishiu, who was on his travels, was overtaken by darkness and was compelled to seek shelter in a mean hut of which an old woman was the only inmate. He begged for a night's lodging for himself and his companion, a young aspirant to the priesthood, and this was grudgingly allowed. In the course of the night it grew chilly and the hag withdrew to procure fuel. Availing himself of her absence the young priest began to examine the interior of the hut, and to his horror discovered a room fillled with human skulls and bones. He called to his companion, and they hastened to escape from the frightful scene. They were pursued across the plain by the howls and shrieks of demons and ghouls, but the priest addressed himself to Amida in the prayer *"Fudo no Sin Gon On Koro Koro Sendari-matogi So-wataya Untara Takan-man"* and the evil spirits speedily took to flight.

About the year 1121 Munehito, the 74th Emperor, whose posthumous title is Toba no In, entertained a mistress of exceeding loveliness named Tama-mono Maye, to whom he was devotedly attached. One night during the revels, as the lady and her attendants were amusing themselves, a sudden gust of wind extinguished the candles and the apartment was left in darkness, when, to their amazement, the courtiers beheld the favourite surrounded by a bright and luminous halo which seemed to fill the apartment. The circumstance was reported to Abe no yasunari, the Court astrologer, who expressed much concern thereat. Shortly afterwards the Emperor fell sick, and Abe forwarded a memorial to him alleging his suspicion that his illness was caused by his having been bewitched by his mistress, who was assuredly no common mortal. This was announced to the favourite, who summoned Abe to her presence and with more than human cunning completely overbore him in controversy. He was then ordered to confine himself within his residence with closed gates. His wife, however, had formerly been a lady of the *Kuambaku's* palace, and carried a petition there, praying that the astrologer might have a further hearing. This was at length granted, and Abe erected an altar within the palace, at which to pray to the gods for the restoration of his master to health, and he besought him to honour it with his presence. This request was, as he foresaw, refused, and he then begged that Tama-mono Maye should appear on the altar on the last of the twenty-one days of prayer. This she dared not refuse, and on stepping on the altar was transformed into the *Hakn men kiubi no kitzune* (or white-faced fox with nine tails) and disappeared riding on a cloud. An immediate search was ordered, but it was long before her retreat,

† Waga (my) tsuma (spouse) Kohishi (I long for). The word Adzuma which is still used to denote the North Eastern provinces is said to be derived from the above *ah tsuma* (oh, my spouse!)

‡ *Ubusuna*, Tutelary Gods.

§ *Ujiko*, Wards.

¶ No attempt can be made to render a literal translation of Japanese verse of this class into English metre. The above contains thirty-one syllables, and is called *Honka*.

‖ *Horai Shima*, said to be the same as *Riugu*, and supposed to be identical with the Loo Choo Islands, which, strange to say, appear to have been to the Japanese what the Holy Land was to the Crusaders of the Twelfth Century. The parallel might received further illustrations.

which proved to be Nasuno no hara in Shimotzuke, was discovered.

Miura no ske and Kadzusa no ske, two brave warriors, were charged with the task of destroying it, and having by long practise made themselves expert marksmen, they surrounded the plain with a large body of men and found and killed the demon, burying it on the spot. A large stone suddenly uprose, and such was its influence for evil that neither bird nor beast could approach it and survive, no mortal dared venture within many tens of yards radius, and a fence was placed round it to guard the unwary stranger from injury.

About fifty years afterwards, a priest of the Zen Shin Sect named Genno*, took with him a large iron hammer, and chipping the stone until some portions were broken off, the figure of a beautiful woman revealed itself and reproached him for his cruelty in striking her. But the priest was prepared to resist the spell of the fox, and he prayed earnestly for her soul that it might become *jobutzu.*† Since then the stone has been harmless.

THE LEGACY OF IYEYAS.

By W. E. Grigsby, Esq., B.A.

Of Baliol College, Oxford, and of the Inner Temple, London.

Professor of Law in the Imperial University of Yedo.

Read before the Asiatic Society of Japan, at Yedo, on 30th June, 1875.

Iyeyas, deified under the title of Gongen Sama, the founder of the Tokugawa dynasty, left, after a busy life spent first in attaining power and then in consolidating it, the treatise which forms the subject of this essay.* The translation used by me is that of Mr. Lowder, published at the beginning of last year. It has seemed to me that a few notes on it, with illustrations from the laws and customs of other nations, might be of some service in determining the place of Japan with respect to Comparative Law. The Legacy of Iyeyas is the most original monument which Japan has produced in the way of Legislation. Unlike the other Codes before the rise, and after the fall, of the Shoganate, it is purely native in its character, with scarcely any mixture of foreign elements. It contains the leading principles of the system which ruled Japan till a few years since, and it has given to the Japanese institutions, in spite of the debt they owe to China, a stamp peculiarly their own.

The subject seems to divide itself naturally into three parts:—The first is, the condition of society which is represented to us in these pages; the second, its nature and character considered as a code with illustrations from other systems of law; the third, its nature as a manual of suggestions bequeathed by Iyeyas to his successors. 1.—We shall first enquire into the state of society depicted by the Legacy of Iyeyas.† The following remarks are only a commentary and paraphrase on chapters 42 to 50 in this book. The basis of Japanese life then, as now, was the family. The Japanese family was a corporation, the most characteristic mark of which was its perpetuity. The *Paterfamilias*, head of the family, had a power similar, in nearly all respects, to the *Paterfamilias* at Rome. Like him, the Japanese Father had complete power over the persons and property of his children. He could do as he pleased with both, fettered only by that custom which is the great hindrance to despotism in all early communities. But if his rights were great, his liabilities were great also; he was responsible for all the ill-doings of any of his family. But the Japanese family was not what we understand by the word. It was often not natural but artificial. That is to say; persons whom we should exclude from the family were admitted into it; and those who would find a place in it were sometimes excluded from it. In other words, adoption on the one hand, and emancipation or the sending away of a son from the family on the other, were in constant practice. Adoption in Japan, differed from that in Rome. In Rome adoption was resorted to for the purpose merely of enlarging the family: in Japan it was solely employed to perpetuate the family. A man with no male heir was allowed to adopt a child from another family who filled there exactly the same position as the natural child would have done. In early times it was the rule that an adopted son must be of the same name as the adopting parent. If the adopting parent had a daughter, the adopted son married her, there being in this respect a difference from the practice in Rome, where the natural tie of brother and sister was held to be formed and marriage therefore was illegal. In both Rome and Japan, adoption followed the course of nature. Only an adult was allowed to adopt, but in Japan if the head of the family were himself an infant he could adopt. This practice was so much resorted to in Japan for two reasons. The earliest and most important was a religious one; adoption prevented the extinguishment of the ancestral sacrifices *(sacra gentilicia)* and the consequent disgrace which would have fallen on the family. The second reason will be considered when we speak of feudalism. The second method which rendered the family artificial was the practice of *Kiuri* and *Kando*, the sending away a son from the family, a custom analogous to emancipation in Rome, with this difference that in Rome emancipation seems to have been bestowed on a favourite son to release him from the bondage of the paternal power, while in Japan a son was only sent away if he were of an irredeemably bad character.

We next come to marriage. Marriage in Japan was not a contract between the parties or a religious institution, but a handing over of the bride to the family of the husband by her own family. Marriage was allowed, or rather enjoined, in the case of a man at the age of 16, of a woman at 13. A wife passed completely under the control of her husband, both as to her person and property, subject to reference to a council of family relations. So far we have considered the family in its internal aspect. But each family was connected with other families, as in early Rome and Greece, and thus about 50 great clans were formed, of which the four principal were the Gen, To, Pei and Kitsu. All the families of these clans were descended from a common ancestor or claimed to be so. There were certain sacrifices peculiar to each of the families. Certain dignities also were confined to certain families: thus the Shogunate was the properly of the "Gen" family, and we find that the Rules of Hojo and Nobunaga never assumed the title, though they wielded the power of Shogun, because they did not belong to the "Gen" clan. In the same way the office of Prime Minister was confined to the "To" or Fujiwara family. Up to this point, we find in Japan a condition of society analagous to that formerly existing in Italy and Greece from about 1,000 B. C. to the year 500 of the Christian Era. In both we have family as the unit of civilization. But that which is peculiar to Japan, and that which as such makes the study of Japanese institutions interesting to the student of comparative Law is that, with this primitive form of society remaining unchanged, we find a system which did not arise in Europe till about the 11th century A.D., the system of feudalism. Into the causes which gave rise to feudalism in Japan it is not the purpose of this essay to enquire. Suffice it to remind you, that here feudalism, or the holding of land on condition of military service, received perhaps its most elaborate developement, as it was unaffected by those causes which modified it in Western Europe—the Church and the Empire. The following seems to have been the condition of society in this respect at the time of Iyeyas. At the head the Shogun. Below him about 360 Daimios, each with a territory of greater or less extent which he farmed out to his *samurai* or vassals in return for military service: land so held was called *koku*. In the greater daimiates these vassals underlet their lands on the same conditions; in other words sub-feudation was common

* The large hammers used by carpenters are named *genno*, from this circumstance it is said.

† Spirit in eternal bless.

* Doubts have been cast on the authenticity of this document by those competent to form a judgment; but as it is conceded that, if not the actual composition of Iyeyas, it yet embodies his policy, and is of historical value, the question of its authorship is of slight importance: I shall assume it is what it purposes to be.

† Every legal system tells us much of the past life of the nation for which it was framed, since laws are a natural product and not an artificial creation.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

This military service was incumbent on every one who held lands; and so far was this theory carried that a vassal who was not able to perform the service by reason of age or sickness, abdicated in favour of his son. Since lands were only hely on condition of military service, if a vassal died and left no male children, the lands escheated to the lord. This naturally extended the practice of adoption, and thus in time it came to be considered that to prevent forfeiture of estate was the only reason for adoption, although doubtless the religious one was always the deepest: even see if a man died without leaving any children, natural or adopted, by a legal fiction the property was retained, since his death was concealed till permission was given by the lord for him to adopt a son; and only after this permission was given, his death was announced. Not only escheat, but forfeiture, as in England, was incurred, if the vassal proved faithless to his lord. Each Daimio lived with his retainers in a walled town; while the other three classes of society, the agriculturists, the artizans, and the merchants, lived outside—the farmer in different parts of the territory, the latter in the *Joka*, or space immediately below the wall. This is illustrated by the relative position of the patricians and plebians in the early Latin communities, in which the patricians lived on the *arx* or hill, and the plebeians on the low ground beneath it. For instance: the commons in Rome lived in the Suburra at the foot of the Capitoline Hill.

Again we find in Western Europe the exact contrast to this arrangement; for in it the barons and their retainers lived in the country, and the commons in the walled towns, protected by which, commercial interests grew and expanded. Each daimiate was isolated and provided all things necessary for it from within itself, thus realising the idea of independence which the Greek states strove in vain to accomplish. Thus the other three classes were necessarily found in each daimiate, and the members of these clans remained as a rule unchanged. Still there was never a caste system in Japan; there was no religions barrier between each class. The condition of things was the same as in ancient Egypt and was produced by the same instinctive tendency which we find always present in antiquity, to abide in the old ways as much as possible.

2.—Such is the condition of society in Japan as pictured to us in the "Legacy of Iyeyas." Family life formed the basis upon which, (as it seems to us incongruously) a superstructure of feudalism had been reared. A code of laws for such a community must necessarily omit much that we at the present time consider to be essential, and lay much stress on what we consider unimportant. But, on the other hand, it bears a striking resemblance to all the early codes, to the laws of Solon and Lycurgus, the 12 Tables; to the Mosaic, and the early Teutonic codes.

From an analysis of the "Legacy of Iyeyas" the following results have been obtained. The work consists of 100 chapters in no logical sequence. Sixteen chapters consist of moral maxims and reflections 55 are connected with polities and administrations 22 refer to legal matters and in 7 Iyeyas relates episodes in his own personal history. The Legacy of Iyeyas then resembles other early codes in the following particulars. First, is makes no sharp distinction between law and morality, between the duties of the citizen and the virtue of the man. The man who obeys the law is virtuous, he who disobeys it is vicious and low. It is the province of the Legislator to inculcate virtue; accordingly sixteen chapters of this short lecture are moral maxims quoted apparently from the sages Confucius and Mencius. Secondly, what is sermed substantive law is nearly omitted. Since human life within the daimiate was regulated by custom, not by agreement, there was hardly any intercourse between different daimiates, since the only property of any importance was land, and no will was allowed. All that we chiefly understand by law, all that embraces the main bulk of modern law,—the law of contracts, the law of personal property, of will, commercial and maritime law, find no place in this code. In this respect too, there is an exact parallel between this and other early codes. On the other hand great stress is laid on criminal law, including offences and the different punishments allotted to law relating to the status of persons and of classes, to etiquette and ceremonial, to tables of rank and precedence, to political administration and government. In these points, especially the latter, minute details are entered into, and this with a particularity which is striking when compared with the poverty of the code in respect to those matters which seem to us most important in a system of law. A third point of similarity between this and the other ancient codes is, the provision it makes for the exercise of private vengeance, of personal satisfaction for injuries done. As the power of government is comparatively weak, the individual does not, (as he does in more advanced societies) give up his right to take satisfaction in his own hands. Thus we find in this code that he whose father or lord has suffered from violence may revenge himself in a prescribed period, on giving suitable notice. We have a parallel to this in the elaborate provisions of the Mosaic code with respect to the avenging of blood. Another point of similarity is the stress this code lays on class distinctions. Society in early stages is unequal, and early codes by reducing these distinctions to writing render them more sharp and distinct. Such expressions as "A girded sword is the living soul of a samurai"—"The *samurai* are the masters of the four classes" must have increased the self-importance of those who read them, and added much to the already overweening pride of the military class in Japan. But there is one great difference between this and all other early codes, viz, its secrecy. It was in express terms forbidden to be promulgated; the perusal of it was only allowed to the "Gorojiu" or chief concillors of state. This is so unlike all our ideas of Law that it is difficult for us even to imagine a state of things in which people are judged by laws of which they are not only ignorant, but purposely kept in ignorance. The question at once arises how can people obey laws if they do not know their nature? But we have a parallel in the history of the Aryan race previous to the foundation of the codes so often mentioned. We find in Greece and Rome at the beginning of their history that the knowledge of the laws and their administration was confined to the aristocratic class, and that the first struggle of the commons was to force the knowledge from them, a struggle which ended in these codes being reduced to writing and promulgated. Had writing been unknown in Japan at this epoch, the parallel would have been complete; the only difference is, that in the one case the laws were unknown, because not written; in Japan, though written, they were yet to be unknown. The explanation of the matter is to be found in the fact that in early communities custom has absolute away. The magistrates are, as Iyeyas says, reflectors of the mode of Government, they do in reality what English judges do in theory—interpret, not make, the law. Any additions made to the old customs, (as in the case before us) were to reach the multitude, as it were, by filtering down to them through the magistrates, who alone would be conscious that they were new: to the multitude they would only be slight modifications of the customs they had always observed. And indeed regarded as a code of laws, this seems to have been the character of the work before us. Iyeyas only claims to be a transmitter, not a framer, of the law; his work is rather a compilation, than a creation, a selection from old, not a series of new laws.

3.—If then in so far as it is a code of laws the originality of the Legacy of Iyeyas does not appear, the question then remains in what respects the genius of Iyeyas has manifested itself? For there can be no doubt that the Shogunate after his time was a very different thing from that it was before it. The Legacy of Iyeyas is original in so far as it contains maxims of government in accordance with which the successors of Iyeyas were to rule. It is this aspect which modern historians have thrown into most prominence,—a circumstance which renders a detailed account of his policy unnecessary here. I shall only mention what I consider the leading principles. The position of the Shogun to the Mikado was to be one of reverential homage. The Shoguns were in no way to interfere with the Mikado's theoretical supremacy, but to strengthen it in every way. The same

Digitized by Google UNIVERSITY OF CALIFORNIA

and to the old court aristocracy. This was contrary to the policy of the former Shoguns, especially of the Ashikaga family, who seem to have treated the Mikado with rudeness or contempt. Secondly, as toward their superiors, so toward their inferiors were the Shoguns to behave with courtesy and consideration. All insult and tyranny was to be avoided, the weight of power was not to press harshly. This maxim is kindred to that one which is the keynote of the Politics of Aristotle, and the neglect of this, as shown in insolence to inferiors, was the rock on which the governments in nearly all ancient communities struck. This caution is perhaps the best proof of the consummate knowledge Iyeyas had of human nature and of his greatness as a master of statecraft. Another recommendation of Iyeyas was that the place of government of the lesser Daimios should be frequently changed. The motive alleged for this was for the prevention of misgovernment; but the real reason undoubtedly was that they might not acquire local influence, and so endanger the power of the Shoguns. This was similar in its purpose, though not in the means employed, to the policy adopted by William the Conqueror in portioning out the territories of his barons among several counties. In England, this plan was completely successful; in Japan it failed, because the Shoguns never dared to enforce this measure in the case of the greater daimios, who were the only ones to be dreaded. The best feature of the policy of the Shogunate was to be the endeavour to maintain peace in the Empire as far as possible. "To assist the people, says Iyeyas," is to give peace to the Empire." Japan harrassed for centuries by intestine feuds, was finally to be at rest under the strong government of the Tokugawa Shoguns; just as to the Roman world, wearied and with constant strife, the establishment of the Empire under Augustus gave for centuries peace. These are the leading principles handed down by Iyeyas to his successors. Feudalism and the Shogunate have fallen together; and the policy of Iyeyas, but a few years since of such importance to the politician, is now of interest to the student of history only.

Correspondence.

NATURALIZATION OF FOREIGNERS IN JAPAN.

To the Editor of the *Japan Weekly Mail.*

Sir,—In view of the present position of foreigners in Japan and the manner in which some appear to regard the stand taken by the latter, it may be well to invite discussion and exposition of the *status* which Japanese enjoy in other countries with which this Empire is related by "Treaty of amity and commerce." Although the telegraphic despatch which some time back appeared in the *New York Herald* to the effect that several foreigners, *(mostly Englishmen)* had applied to the *Fu* authorities for enrolment as Japanese subjects, renouncing their birthright for the mess of pottage the interior might afford them, was looked upon somewhat incredulously, I am able to state that it is perfectly accurate, the able correspondent of that paper being as well-informed on that as on other topics of which he has had early knowledge. But with the question under consideration, it is by no means improbable that the applicants will find their desire granted—and regret it. The word "Yatoi" may then be vested with meaning anew—just as "Alien" means not only "a foreigner," but one who has from misconduct estranged himself from kith and kin.

Why should this outcry exist anent the inability of Englishmen to hold land in Japan? Aliens cannot do it in England. The existing law only permits them to buy land; they cannot hold it—except in trust for their families as the sovereign may see fit. And this is the tenure on which a prominent foreign legal adviser of the Japanese Government now holds his real estate in Tokei.

In England, as well as in Japan, there have been times when it was a meritorious, rather than an indifferent circumstance, for the populace to insult foreigners. But they have not here on the whole in by gone days, suffered such a bad time as the English Jews, although differences in faith have, here as well as there, led to what American journals euphemistically term "unpleasantness." The first act regarding merchant-strangers in England was attributable to Henry III., who "ordeyned" that they should have leave to come and go and to trade on the like footing with English merchants. This was pretty liberal, anterior to Free Trade. But he wisely provided for the safety of his seafaring-traders, by the stipulation "and if they be of a land at war against us, and if such shall "be found in the land at the beginning of the war, they shall "be attached without harm of body or goods until it be "known to Us or our Chief Justice how the merchants of "our land be entreated."

Commerce extending abroad, and foreign traders coming to England, worked social transitions which will be found admirably set forth by Charles Knight in his "Popular History." The Protectionist instinct now being shown by Japanese was fully as strong in England in the time of Edward II, whose predecessor had afforded strangers power to recover on the lands of their debtors sums which were due to them, and whose personal favors to foreigners established a chronic jealousy in the national mind against those who were preferred to posts of honour and emolument in place of indigenous gentlemen and burghers, and grew rich on trades which the people considered peculiarly their own. Bearing one another's burdens was a necessity to aliens till the reign of Edward III, who released the individual from the consequence of the faults of his fellows, by enacting "that a merchant stranger "shall not be impleaded for another's trespass, except he be "a surety for him"; but "in case of that any of our liege "people, merchants or otherwise, be indamaged by any lords "of strange lands or their subjects, and the said lords (duly "required) fail of right to our people, we shall have the law "of marque as hath been used in time past, without fraud or "deceit." Under Richard II, Parliament determined that foreign merchants should be favoured to give them "greater courage to repair" to his realm; but it required them to spend half the money they received for their wares in English commodities; and, in case of war, gave them six weeks grace, after its proclamation against the state to which they belonged, to sell their goods and quit the country.

The rise of the foreign guilds in England is attributable to the regulations of Henry IV and V, which compelled foreign traders to sell their wares within three months after landing them; to lay out all their proceeds on English products, and to dwell with hosts appointed in the various towns wherewith they traded, who were answerable for their personal behaviour and commercial honesty. Street names in our metropolis still recall the times where the merchants of Nesle and Amiens were to be found in Naylor's Yard, the Bordelais in the Vintry, the Genoese in Mincheon Lane, the Flemings on Pountney Hill, and the men of Brabant around the church of St. Mary Mountenhaut. Not without golden ointment was relief afforded them from differential duties on coals and the home manufactured goods which they were forced to receive in exchange, and it was not till the scant justice an alien received at the hands of a native jury whose members were prejudiced with national antipathy had become outcrying, that Henry VI conceded in the eighth year of his reign the right of trial by a mixed jury—half aliens, half natives. Richard Crookback forbade them to make cloth within the realm, to retail their goods, to act as handicraftsmen or to have English servants. This his successor repealed, and Henry VIII re-enacted in his 21st year of rule, at the instance of the Star Chamber. Aliens were forbidden to keep more than two foreign servants, compelled to take the oath of allegiance, forbidden to open new shops, or to meet elsewhere than in their Common Hall. A further prohibition which forbade them to receive a lease of land has continued from this day down to the reign of Victoria, when it was enacted that friendly foreigners may have leases for periods not exceeding 21 years. George III, repealed the petty customs and differential duties to which they were subject, and George IV, repealed an act of Charles II, which forbade

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

foreigners to be factors or merchants in the English Colonies. Of course the reason for the inability to acquire leases was the same as influenced Inouyé and Iwasaiyé, when in granting Mr. Townsend Harris (July 29th, 1858) the right to lease ground in Treaty Ports, they reserved the erection of places of military strength.

Naturalization in England is easy—far more so than in the United States. James I. required an Alien who desired naturalization to take the sacrament and the oaths of allegiance and supremacy. George IV. repealed this, and his act was repealed by the existing act of Victoria.

An Alien now resident in England enjoys all the rights of a natural born subject; except

1.—He cannot vote at elections for Parliament.
2.—Nor be himself elected.
3.—Nor sit at the Privy Council.
4.—Nor sit on a jury, except to try an alien.
5.—Nor hold a benefice.
6.—Nor hold land, except it be in trust.

If he desire naturalization, he must petition one of the Secretaries of State, who, after enquiry, will grant a certificate, which is then enrolled in Chancery, and on taking the oath of allegiance, he is admitted to all rights except those of Parliament and Privy Council. His children are eligible for these. And even if he be not naturalized, his child, by a British wife, inherits real and personal estate.

Such is a brief retrospect of English law. Will any of your readers favour us with the laws existing in other countries of Europe. If I go to America, I must stay there for years before I can enjoy the rights of citizenship—and even then I cannot be elected President—as I might possibly desire to be. Why then do foreigners demand of this country to favour them more than they do it? Before Japan was saddled with "ex-territoriality jurisdiction" it was more liberal than ever England has been! You *can't* believe it? No?

The Treaty by Hizen no Kami and Kawaji Sayemon no Jo with count Poutiatine (7th February, 1855) contains the following, which clearly shows the intentions of the Imperial Government to permit free residence at that date; and his most gracious Majesty the Mikado has certainly not contracted the good-will extended to foreign nations by the Shiogun.

"Russian subjects living in Japan, and Japanese subjects living in Russia will be treated kindly and with leniency, and will be subject to *no restriction of liberty*; should they offend against the law, however, they will be arrested and punished according to the laws of their own country." Has not Père Nichol as *full liberty of this Empire*, and is not his success the envy of other missionaries?

Your obedient servant,

ケンソン

Tokio, August 4, 1875.

Law & Police.

H. B. M.'S CONSULAR COURT.

Before RUSSELL ROBERTSON, Esq,

August 6, 1875.

John Cameron, chief officer of the *Jessie McDonald*, was charged by the captain with being absent from the ship without leave at various times, refusing duty, and furthermore with using abusive language and being drunk on the evening of the 5th inst.

Accused pleaded not guilty.

John Scott, sworn: He was captain of the *Jessie McDonald*. On the morning of the 3rd of this month prisoner went on shore without leave, and returned on board at 5 o'clock same evening. At six o'clock he was under the influence of liquor, and was very abusive. On the morning of the 4th, and at other times he refused duty. He was absent without leave at other times besides the 3rd inst.

James Joas, master of the *Oleander*, deposed that on the morning of the 3rd inst. he was on board the *Jessie McDonald*; that the prisoner asked the captain if he could go on shore, and was refused. Prisoner then got abusive, and said he would go, and that he would hoist the police flag, and be taken on shore. The prisoner used abusive language towards him as well as to his own captain.

Capt. William Black said that on the 3rd inst. he was on board the *Jessie McDonald*. Had breakfast on board; so had last witness. As they,—last witness, the captain and himself,—were leaving in a boat to go on shore, prisoner asked for liberty to go on shore, and was refused. Prisoner became abusive to the last witness and his own captain, calling them names, etc.

Prisoner, in answer to his Honour, denied all the charges made against him. He had leave from the captain to go on shore on the morning of the 3rd inst.,—in fact, was ordered to do so. Did not refuse duty at the times charged, but was sick. Was not drunk on the evening of the 5th inst. He had not been allowed by the captain to bring his witnesses.

The captain called—

J. Slessor, ship's boy: On the morning of the 3rd inst. heard the captain and prisoner abusing one another. Did not think that prisoner was drunk on the 5th inst, in the evening.

Prisoner called—

Alex. Smith, second officer: Heard a row between the prisoner and captain on the morning of the 3rd inst. Was down below at the time. Did not think prisoner was drunk on the evening of the 5th inst.

His Honour said he should adjourn the case till to-morrow morning at 10 oclock, in order that prisoner's witnesses might be brought on shore.

Saturday, 7th August, 1875.

John Cameron, chief officer of the *Jessie McDonald*, was charged on remand with being absent from the ship without leave at various times, refusing duty, and furthermore, with using abusive language and being drunk on the evening of the 5th instant.

Accused pleaded not guilty.

Andrew Scott, carpenter of the ship, sworn: The captain told prisoner to be at the Shipping Office at 12 o'clock on the morning of the 3rd instant, to get his discharge. Did not see prisoner drunk on the evening of the 5th.

By the Captain: Do not know what time prisoner came on board on the evening of the 5th.

William Lawrence, apprentice, corroborated the statement of last witness.

His Honor said he should dismiss the charges of being absent without leave and of drunkenness. For the refusal of duty he would order prisoner to forfeit four days' pay. He would reprimand prisoner for the abusive language complained of. Prisoner would also have to pay the cost of the summons.

Directly this case was finished, and captain preferred a charge against prisoner of being absent without leave on the evening of the 5th instant.

His Honor dismissed the charge, but ordered the prisoner to pay costs of summons.

H. B. M.'S PROVINCIAL COURT,

Before His Honor C. W. GOODWIN, Esq., Assistant Judge.

Tuesday, 3rd August, 1875.

Lucas, a Malay, was charged with stealing an umbrella belonging to a Japanese policeman.

Prisoner pleaded not guilty.

Sergeant Perceval stated that prisoner was brought to the station at half-past six o'clock last night, and was charged with stealing an umbrella. Prisoner had an umbrella when brought to the station. It is the one produced in Court.

Kino, a Japanese girl, stated: She was employed in an oil shop near Nogè Hill. Yesterday some foreigners and a Chinaman came to the oil shop One asked for liquor; told him it was not a liquor shop. They went away. A guest who was up-stairs, on leaving asked for his umbrella. It could not be found. She followed the foreigners, and meeting a policeman told him. He told her to bring the owner of the umbrella. Did not recognise any foreigners in Court as being the men who came to her place.

A Japanese constable stated: He was yesterday off duty, and was up-stairs in the oil shop already mentioned, transacting some business. The prisoner came in, and left before the other foreigners did. The umbrella produced was his. He knew by some patches in it. When he was about to leave he could not find his umbrella.

Policemen No. 140 said he was on duty yesterday. The girl Kino informed him of the robbery. He followed the foreigners and found the umbrella in prisoner's hands.

Prisoner had nothing to say in defence; he denied the robbery. He was without employment, and lived in "China Town." Was born in Singapore. Had been a sailor before.

His Honour sentenced prisoner to three weeks' imprisonment, and said that at the end of that time something must be done about shipping him off.

A GEOGRAPHICAL DAY-DREAM.

(The Spectator.)

We all admire M. de Lesseps, and all hope that some one as energetic, though perhaps less fluent, will obtain an equal success in the attack on the Isthmus of Panama; but just think for a moment—there being no politics stirring, no scandal afloat, and no German victory quite imminent—what a world we could make of it if we could really interfere with geography, could, by any development of energy, or science, or human controlling volition over matter alter at all seriously the natural features of the earth! It is interesting, if useless, to dream sometimes, and the magnitude of the results which very slight geographical changes would effect—changes smaller, most of them than the rise of Santorin or the subsidence of the Rum of Cutch, or drying-up of the Baltic, or the unheaval of the great Steppe, or many another processes men of science believe to be going on—tempts day-dreamers to their enjoyment. Suppose a competent politician, who was also a philanthropist large-minded enough to weigh the permanent welfare of humanity against the loss of a few lives, to be invested with such power, and think what he might accomplish. Northern Asia, now the most inaccessible of all the temperate regions, a mighty tract almost useless to civilised man, a tract larger than Western Europe and possessed of all climates, would instantly be accessible, for the valley of Amour, subsiding from the source of the river to within three miles of its mouth for five hundred feet, would become a mighty lake, ten miles wide and two thousand miles long, giving admittance to the fleets of the world into the hearts of secluded Asia. The Brahmapootra would become an Amazon, cleaving open the unknown regions between Bengal and Western China, and, pouring not into the sea, but into a mighty fiord sixty miles wide which should replace the swampy, unhealthy Terai of the Himalayas, and turning India into an island, would terminate for ever the dangers of invasion from the North, and multiply twenty-fold the points of contact between the great Peninsula and European civilisation. Far away to the south, Central Australia, depressed for a few hundred feet, would return to the appearance it must once have borne, and the useless solidity of a continent too new for culture, with its rivers wasting themselves in sand from inability to run up-hill to the sea, be exchanged for a Mediterranean surrounded by a belt of splendid colonies, all accessible by water on both sides. Far to the North-West—we are speaking now as if from Calcutta—the junction of the Black Sea and Caspian, of which the Russian Czars and their German engineers are dreaming, would be effected on a scale—say, a channel thirty miles wide—which would bring Persia, South-Eastern Russia, and the Turkoman Steppes within easy sail to the Mediterranean, and therefore of all the influences of the modern world. The Volga, tripled in volume, would be open to ships instead of boats, and the maritime passes of Asia, the Bosphorus and the Dardanelles, widened to thirty miles by a subsidence of borders, would let out Russia freely to the outer world, terminate the hunger of St. Petersburg for Constantinople, shift the Russian centre of gravity to Perekop, and make of sixty millions of semi-Asiatics Europeans. Careless of all patriotism except the planetary one, our philanthropist would strike a second blow for Russia, and submerging Lapland, and restoring the Scandinavian Peninsula to its old position as an island, place the Eastern half of Europe in direct and constant relation with the Atlantic. It is water communication which now, in the popular belief, civilises nations, whether it be by insuring collision of ideas, or, as a recent German philosopher maintains in the teeth of facts, by arousing the energy of islanders, who, isolated on all sides by the sea, must strive strenuously or perish. He was thinking of Englishmen when he laid down that doctrine, and forgot, as European philosophers so constantly forget, that the Tasmanian enjoyed all the physical conditions to which our ancestors were subjected, and did not become energetic at all, but passed out of existence, useful, to human eyes, only because the grass grew richer above his grave. We need not, however, mind that in a day-dream.

Turning to Africa, the Northern Desert, the boundless Sahara would subside again till a smaller Mediterranean made the Coast-belt valuable, and Central Africa accessible; while another deep and broad fiord stretching from sea to sea in the twenty-eighth parallel of south latitude, would make of the South-African Dominon a huge island, fit for the abode of an English-speaking people, who so placed, might multiply as if they were in North America. Neither the tsetse fly, nor the fully-serving ox cross salt-water. In North America, again, where more deep lakes, as large as Lake Superior, with connecting rivers, [illegible] chain of internal navigation from the Atlantic to the North Pacific; while the subsidence of the Isthmus of Panama for its whole length would open what ought to be, and in some slow, imperfect way will one day be made, the highway of the world. Talk as we will, a straight line is always the shortest route. The sea would sweep in a deep, long bay from the South of the Mexican Gulf into the thick of the scraggy leg-of-mutton shaped continent of South America; while along the valley of the Amazon, with its vast swamps and scanty population of naked savages, known, if at all, to Marcoy alone, would rush an arm of the sea, a hundred miles in width, to the Pacific side, throwing open to man a garden in which, were not Nature so over-profuse, and therefore in effect so hostile, the human race might reach to undescribed heights of luxury and civilisation. Access is all that is required to enable man to act, but to little ants like us, who think an eighty-mile ditch a feat—just compare the Suez Canal with the Channel, which is a canal too, though made by a diviner engineer—who take generations to clear a tropical forest, and are beaten by the merest breathings of the moist tropical earth, access to the secluded lands where Nature creates in pure sport—or, as Charles Kingsley thought, in order to recreate her own eyes with her own work,—is, except by sea, too toilsome.

Let us turn to Europe. There the work of our philanthropist grows easier, yet more pressing, for it is the specialty of Europe that the minimum of effort there produces the maximum of result. Everything is comparatively minute there except the spirit of men. In Europe nothing in nature is an obstacle, because nothing in nature is grand. Man there controls the "lakes" because they are but widened river-beds—compare Lake Leman and Lake Superior—scales the mountains because, by the side of the Himalayas and the Andes, they are hillocks; joins nations together by the railway, which "crosses the European world"—no bigger than one Asiatic island—and cultivates to perfection countries which would in Asia be provinces, or in America forgotten States. Man develops in Europe because he has the possible before him; he invents ships because he has only to glide from island to island on a summer sea; or he tunnels Mont Cenis by an effort which would scarcely pierce the crust of the Eastern Himalaya. A subsidence of earth not two miles wide along the line of the Ebro would terminate half the difficulties of Spain, or along the line of Colbert's Canal double the wealth of France; while an upheaval of soil for a few miles east of Cantyre and Pembrokeshire would make of Ireland a British province, with a landlocked sea between the islands as beautiful and as useful as that most marvellous arrangement of Nature, the Inland Sea of Japan. A mountain range, across the fertile steppe which we call Poland, would relieve Western Europe of a nightmare, while Bohemia, to perfect the capacities of Europe, must, we fear, disappear into a lake.

It is a pleasant dream, and yet,—and yet our philanthropist, if he possessed all the power we have imagined, and could use it all sinlessly, would, if his brain were at all equal to his will, probably do nothing. It is for man that man must work, and there is not the most shadowy proof in the history of man that all this accessibility, for which politicians and philanthropists so sigh, for which mankind is making such efforts that it almost confuses mere means of locomotion with happier life, has benefited man one jot. Out of the most secluded region of the earth, from the eaves of the "Roof of the World," from the Northern slope of the Hindoo Koosh, away from all possible external stimulus, poured in the infancy of history the dominant race of man, the Aryan family, the one clan which has possessed in the highest degree the faculty of accumulation. The fairest and most accessible island of the world, Ceylon, contains its lowest race, the Veddahs, who live naked in the tree-tops, and have invented nothing, unless it be a bow. Mr. Buckle could not have found on earth a region where his conditions of civilisation exist in such perfection as that which surrounds the Inland Sea of Japan. The Amazon, the grandest gate possessed by any continent, yields only the Guarani. The Tasmanian, as well off geographically as Shakespeare, never discovered fire. All conditions of earthly progress meet at Baiæ, and we have but the Neapolitan lazzarone as their out-turn. The one unhealthy and dreary morsel of Italy, the Campagna, bred the people who mastered earth and established law, while the race which has now risen to the top of the world has been moaning for two centuries that it has neither navigable river nor convenient shore. Out of the secluded forest, the German; out of pathless Arabia, the Saracen; out of the humid, chilly land, where nothing is indigenous but the oak, the sloe, and the crab-apple, the Englishman. We owe to a leprous clan in an arid corner of the Mediter-

Digitized by Google

summer of Attica while their slaves worked for them, art and political sense; to the skin-clad inhabitant of the dreary forest of Central Europe personal freedom. Were all the changes we have dreamed accomplished, man would be only more active, certainly not happier, and probably no wiser. Pierce Asia with fl rds, and there is no proof that its people would advance, any more than they have done in lands like Burmah, where every man has water communication from his own door to Southampton, or like the Sandwich Isles, where, blessed with the climate of Paradise and a summer sea always playing at their feet, a race of lissom, light-hearted savages is perishing of vice. The Buckle theory is not true, or is true only to a degree scarcely appreciable in that philosophy which will one day study Man, instead of man as he appears in a minute corner of one hemisphere,—and with the Buckle theory disappears both the sense and the interest of the dream.

Shipping Intelligence.

ARRIVALS.

Aug. 1, *Kanagawa Maru*, Japanese steamer, Young, 1,325, from Shanghai and ports, July 25, Mails and General, to Mitsu Bishi Co

Aug. 1, *Volga*, French steamer, Nondedeu, 96 ', from Hongkong, July 26, Mails and General, to M. M. Co.

Aug. 3, *Oceanic*, Brisish steamer, Jennings, 2,700, from San Francisco, July 15, Mails and General, to O. & O. Co.

Aug. 4, *Gaucho*, British barque, Crighton, 337, from Nagasaki. July 24, Coals, to P. M. S. S. Co.

Aug. 4, *Ariadne*, Russian barque, Smith, 280, from Shanghai, Ballast.

Aug. 6, *Malacca*, British steamer, Bernard, 1,698, from Hongkong, July 30, Mails and General, to P. & O. Co.

Aug. 7, *Nation's Hope*, British ship, Livingstone, 666, from Sydney N. S. W., June 16, Coal, to P. M. S. S. Co.

Aug. 7, *Golden Age*, American steamer, Coy, 1,870, from Shanghai via Ports, July 31, Mails and General, to P. M. S. S. Co.

DEPARTURES.

July 31, *Argyll*, British steamer, Scott, 1,278, for Hiogo, General, despatched by Jardine, Matheson & Co.

July 31, *Kearsarge*, American corvette, 2,300, Captain M'Nair, for Nagasaki,

Aug. 4, *Sunda*, British steamer, Babot, 1,632, for Hongkong, Mails and General, despatched by P. & O. Co.

Aug. 4, *Erl King*, British steamer, Pearse, 1,745, for Hiogo, General, despatched by Wilkin and Robison.

Aug. 4, *Galley of Lorne*, British steamer, Burgoyne, 1,387, for New York, via Kobe, General, despatched by E. Fischer & Co.

Aug. 5, *Oceanic*, British steamer, Jennings, 3,700, for Hongkong, Mails and General, despatched by O. & O. Co.

Aug. 7, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

Aug. 7, *Kanagawa Maru*, Japanese steamer, Young 1,325, for Shanghai and ports, Mails and General despatched by M. B. Co.

PASSENGERS.

Per *Kanagawa Maru* from Shanghai and ports.—Mr. E. King, Revd. H. Hocking and wife, G. Williamson. From Nagasaki—Messrs. Mason and Stone. From Shimonoseki.—2 Japanese. From Kobe.—Messrs. A. Heard, Gibson, Heineman, Dowson, Eaton, Wills, 9 Japanese gentlemen and 1 lady, and 135 in the steerage,

Per *Volga* from Hongkong,—Messrs. Matzno, Abegg, Sadaika M. Pelikan, Russian Consul, and Madame Pelikan, M. Mathews, Mr. Wakagawa.

Per *Sunda* for Hongkong.—Captain Howard, Lieut. Johnson, Messrs. Beasley, Heardman, wife and child, Messrs. G. Balaam, G. King, A. F. Figgins, Gonsalves, and 8 on deck.

Per *Oceanic* from San Francisco.—Mr. and Mrs W. C. Whitney, M. C. Whitney, Mrs. W. W. Wadell, Messrs. J. Luther, W. H. Macomber. W. N. Whitney, H M. Perkins, E. Forbes, J. A. Bonestal, General Skatchskoff.

Per P. & O. steamer *Malacca* from Hongkong.—One Japanese servant and one Chinese.

Per *Golden Age* from Shanghai and ports.—Miss Smith, Col. Mrs. Loring, Capt. A. Kants, U.S.N., Mrs. J. Nölting, Mrs. Middleton and child, Mrs. C. R. Simpson and children, G. N. Lessman, John Paul, M. Bailey, John Forter, J. A. A. Drought, A. Higginson, J. P. MacMahon, J. L. Gould, L. Hart, H. Gribble, W. B. Davis, J. J. Keswick, W. B. Walters, A. E. Ollaroskey, H. Batten, S. J Stransome, H. Mackenzie, A. H. Groom, R. MacLogan, Mrs. Enoye and Son, E J. Calbeck, Twenty-six Japanese, and 175 in the steerage.

Per *Kanagawa Maru*, for Shanghai and ports.—Messrs. Ishebashi, Fukao, Hamaguchi, Seki, Isheki, Tani, Musco, Kamada, Kobori, Mukoi, Awayu, Imamura, Mura, Noguchi, Osaki Cluda, Lieut. Echultze, Messrs. Rosenthal, Moritz, Goldman, Gordon, Hamilton, Faulds, C. A. Skatschkoff, Williamson, Loughman, 4 European, 3 Chinese and 239 Japanese in the steerage.

CARGOES.

Per *Sunda* for Hongkong.—

Silk, for England	25 bales.
for France	16 „
	41 bales.

Per P. & O. steamer *Malacca* from Hongkong.—

Overland Cargo.

9 Boxes Dollars, value £2,067 3s. 4d.
and 163 Packages of general cargo.

Local fro n Hongkong.

Sugar	8,936 packages.
Soap	412 „
Wine	370 „
Gin	80 „
Brandy	46 „
Vermillion	28 „
Sundries	330 „
	10.202

Per *Kanagawa Maru* for Shanghai and ports.—Treasure, $10,000.

REPORTS.

The *Gaucho* reports: During first part of passage had high winds and calms; latter part fresh breeze from eastward

The *Ariadne* reports: Left Korsokowa on the 10th July, and was becalmed on the coast of Niphon; crossed the Kuro-siwa and tacked in 31°. N. Latitude 146 Longitude, with S.W. winds. First of August, had strong N.E. winds which continued to Sei Saki. Last night, easterly wind.

The P. & O. steamer *Malacca* reports left Hongkong July 30th at 1.18 p m., experienced light and variable winds, and fine weather to Yokosima, from thence to Oosima.

Moderate N.E by winds and cloudy weather, from Oosima strong breeze from E.N.E. with high sea and thick rainy weather, from thence to Sagami strong N E. winds.

On July 30th at 10 p.m, passed and exchanged night signals with a steamer steering to the westward, supposed to be Co's steamer *Bombay*.

August 4th at 3 30 p.m., passed a large four-masted steamer going west.

Arrived and moored at Yokohama, 6th August, at 6 a m.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—A more active demand for Shirtings and Yarns has been apparent during the past week, but without leading to any improvement in rates. We continue previous quotations.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.95 to $2.10	60 to 64 reed 40 yds. 35 in.	nom. per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„ nom.	2.20 to 2.40	Turkey Reds 24 yds. 30 in. 2¼—3 lb.	per lb.	0.75 to 0.97½
8 lbs. 4 to 8 lbs.	6 „	39 in.	„ „	2.20 to 2.45	Black Velvets		7.75 to 8.75
9 lbs.	„	44 in.	„	2.55 to 2.85	English Drills 15 lb. 40 yds, 30 in.		3.25 to 3.35

Yarn:—

No 16 to 24	nom.	per picul	28.50 to 35.00	No. 28 to 32	nom.	per picul	35.00 to 38.25
Reverse	nom.		nominal	„ 38 to 42	„	„	40.00 to 45.50

Woollens.—A certain demand for plain *Mousselines* continues at rates previously quoted. There is some enquiry for *Pilots* and *Presidents* at lower prices—45 cents and 75 cents respectively—but in all other Woollens the market is without animation.

Plain Orleans	40—42 yds.	32 in.	6.25 to 7.75	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.50 to 5.25	Multicolored „	30 yds.	30 in.	0.32 to 0.36
Italian Cloth	30 yds.	32 in.	0.25 to 0.36	Cloth, all wool plain or fancy	48 in. to 52	in.	1.00 to 1.30
Camlet Cords	29—30 yds.	32 in.	6.00 to 7.00	Presidents	54 in. to 56	in.	0.75 to 0.85
Camlets Asstd.	56—58 yds.	31 in.	18.50 to 19.00	Pilots	54 in. to 56	in.	0.45 to 0.55
Lastings Japan	22—30 yds.	32 in.	13.00 to 14.50	Union	54 in. to 56	in.	0.70 to 0.85
Plain Mousseline de Laine	30 yds.	30 in.	0.18 to 0.19¼	Blankets, scarlet & green 7 to 8 lbs.		per lb.	0.45 to 0.48

Nominal.

Sugar.—There is no change to report in the market for Formosa Sugar. The market continues quiet at reduced quotations for China descriptions.

Sugar:—Formosa in bag		per picul	4.60 to 4.80	China No. 5 Kong-fun		per picul	5.00 to 5.50
in Basket		„	4.50 to 4.60	„ No. 6 E-pak		„	4.40 to 4.80
China No. 1 Ping fah		„	8.10 to 8.20	Swatow		„	3.30 to 3.40
„ No. 2 Ching-pak		„	7.40 to 7.80	Daitong		„	3.30 to 3.90
„ No. 3 Ke-pak		„	6.70 to 7.20	Japan Rice		„	3.25 to 3.30
„ No. 4 Kook-fah		„	5.80 to 6.30	Kerosine Oil		per case	2.65

EXPORTS.

Silk.—The supplies of new Silk, which have come in rather more freely during the past week, give buyers but little satisfaction in point of quality and size, and the promise held out by the Japanese of a better thread than last year has yet to be fulfilled.

We quote Hanks as follows:

For No. 1 to 2, $440; for No. 2, $410 to $430; for No. 2½, $380 to $400; for No. 3, $350 to $370.

Some parcels of old *Hamatski* have been bought at from $425 to $450.

Since the 22nd instant arrivals are 380 bales, and deliveries 260 piculs of old and new silk.

Tea.—A steady demand has prevailed for the closing week, and holders have become rather firmer in consequence. Settlements amount to 4,800 piculs, and stocks still continue ample. The general tenor of advices from New York are anything but reassuring, and with the heavy shipments to be reported for the season from this country to date, little or no improvement in quotations can be hoped for.

Common			$21.00 to 23.00	Fine			$34.00 to 38.00
Good Common			23.00 to 24.00	Finest			nominal.
Medium			26.00 to 30.00	Choice			do.
Good Medium			32.00 to 34.00				scarce.

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been very small both as regards Bank Bills and Private Paper, with a slight advance in rates.

Gold Yen and *Satz* continue firm as last quoted.

Rates close as follows:—				On Hongkong Bank Bills on demand			par.
On London, Bank, 6 Months' sight			4s. 1¼d.	„ „ Private Bills 10 ds. sight			⅛ per cent. dist.

MISCELLANEOUS.

DIETZ & CO.,

St. Paul's Buildings, Carter Lane,

LONDON,

INVENTORS & MANUFACTURERS OF THE CELEBRATED

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

Unrivalled for Simplicity, Economy, Durability, Safety & Brilliancy of Light.

OVER 5,000 PATTERNS OF

Handle Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

May 22, 1875. B. 24ws.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

June 12, 1875. 1f. 12ms.

CAUTION.

BETTS'S PATENT CAPSULES.

The public are respectfully cautioned that BETTS'S Patent Capsules are being Infringed.

BETTS'S name is upon every Capsule he makes for the leading Merchants at home and abroad,

and he is the ONLY INVENTOR and SOLE MAKER in the United Kingdom.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 33.] YOKOHAMA, SATURDAY, AUGUST 14, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressea and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

We cannot but regret these fines and punishments visited upon the editors or proprietors of the native journals, thinking that they should in all cases have been preceded by warnings. We have no wish to see the Government placing itself at a disadvantage *vis-à-vis* of the Press, the attitude of which under these laws has been undoubtedly highly creditable to it. While wholly unshaken in our opinion that these laws were necessary, all our instincts as Englishmen are against them. We had ten thousand times rather be with Erskine than Eldon. Nothing but a profound conviction of the necessity for modifying in a suitable manner those European institutions which it is sought to introduce into this country, could prevail on us to take, or justify us in taking, the views we have expressed on this question. Nor should we now feel the smallest hesitation in acknowledging our error, could we be convinced that we had made one. But our maturer judgment on the point coincides with our first views, and by those we abide. It will be somewhat curious to see how the matter is regarded in Europe, where it is sure to attract attention. Prudence, especially in political affairs, is so essentially an English characteristic, that we may expect the measure will meet with approval in England, and this none the less that the English are justly proud of their Press, and most tenacious of the rights they have won which have made it what it is. Political development in America is such a huge hugger-mugger,—which the Americans acknowledge, but are persuaded that they will work though it,—that it is possible they may apply the same views to this country, though we strongly think the best opinion will point the other way. The philosophy which sought to explain the mathematical exactness of the bee's hexagonal cell by supposing that it arose from the close pushing of one bee against another, without any reference to plan or purpose, did not meet with much general acceptance and is now pretty well exploded. Good government will not come simply because it is called, and the greatest of all arts, or even experimental sciences, if we must call it so, demands a wisdom which is not to be found in the hedges.

A history of the Formosan Expedition from the pen of Mr. E. H. House, best known as the correspondent in Japan of the *New York Tribune*, though, latterly, we think, attached to the *New York Herald*, has been issued from the press. We have not been so fortunate as to see it, but judging from such extracts as have been given to the public, it appears to be a warm defence of the action of Japan in the whole of the Formosan affair, and a philippic against all who took or still take opposite views. The foreign ministers, press and public, all come in for a share of Mr. House's wrath or caustic humour, and to judge from the general tenour of his views, there is but one spot on earth where man has preserved his pristine innocence, and where the fall of our first parents has left no traces behind it. Here alone are the flowers of Eden inherited without the trail of the serpent, which, elsewhere, is over them all. No one can doubt the sincerity of Mr. House's convictions regarding this country and its people. What Spain is to Ford, Italy to Forsyth, Greece to Findlay, Egypt to Lady Duff Gordon, that is Japan to Mr. House. Yet he goes far beyond all these writers in his partisanship. They are merely inspired by enthusiasm. The present or departed glories of these several countries give to the pens which record their history or condition a warmth which kindles sympathy and kindred enthusiasm. But the secret of these writers lies in the fact that the rich colouring which their affection suggests is used with true discrimination and moderation. The shadows are painted according to nature, and though the hand which throws them in be loving, it is also faithful. But nothing satisfies Mr. House in regard to Japan but the claim to an absolutely spotless national and political character. A thoroughly conscientious assumption of the part of Othello requires that a man should black himself all over, and Mr. House—we are sure he will take our pleasantry in good part—is satisfied with nothing less. The foreign Ministers are a set of harpies who prey on the vitals of the country, who interfere with every step which it makes in virtue of its independent sovereignty, who gall and humiliate it of express purpose, and who compass their selfish ends by courses openly or covertly unjust.

He is no true friend to this country who writes like this,—who excites in the minds of the Japanese feelings of bitter antagonism and hostility to those who represent here the interests and duties of Europe and America. The best interests of Japan are those which are our own interests. There is nothing we can desire more for her than that she should become rich, independent and powerful, and prove herself worthy in every respect of the position she has lately taken up among the Western nations. But he who invariably exaggerates the virtues and ignores the faults of a nation, who proclaims that all it does is just and wise, and all adverse criticisms upon it are wicked and unjust, must accept the character of a passionate partisan, not of a wise, discriminating judge and censor, whose wholesome lessons tend to produce the character, which, however fictitious in the hands of such an advocate, might be ultimately realized by following the censor's monitions.

We can only write thus generally about Mr. House's book, because, as we have said, it is not before us. But he must permit us to express our opinion that it will not sensibly modify the views of foreigners upon the whole question. The Formosa Expedition was an act of war, to which the consent of the Chinese Government was never obtained, and it had in it the germs of territorial acquisition, and so far it was an unjustifiable aggression upon Chinese territory. The wrongs of the Japanese were great, and they avenged them, nor has their action been without advantage to the world, for the coast of Formosa is safer than it was, and a repetition of the outrages for which it had acquired a terrible notoriety, and from which other nations as well as the Japanese had suffered,

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

is not likely to occur in future. Nations have before this made movements upon their neighbours for the purpose of getting rid of internal pressure, and they will do so again. But the practice is not the less wrong because there are many precedents for it, and those who resort to it must expect to fall under the censure of the political moralist.

We have on several occasions during the past twelve months called attention, in the interests of legitimate trade, to the forgeries of trade marks in this country, and the manufacture and sale of spurious imitations of articles of western manufacture. We have now to request the attention of all who are interested in this subject to a letter, which will be found elsewhere in our columns to-day, showing the extent to which these practices are carried on here. We have taken up the subject in the hope that the agents here of the firms abroad who suffer from these practices will do their part towards stopping them. The Japanese are interested in the question to this extent, that one part of their people are in danger of being poisoned by another part, and the Government has already expressed its willingness to do anything that may seem necessary to put a stop to these practices. Foreigners are interested in it to this extent, that not only are spurious articles palmed off upon them, but because the original manufacturers are defranded of their legitimate gains in this market, and will further be injured by these spurious articles being exported to other markets with similar results.

The samples mentioned in the letter above referred to may be seen on application at the office of this Journal, and an inspection of them by all who are interested in the question is invited in the interests of the European and American firms whose manufactures are parodied and whose trade-marks are forged so abundantly and so unscrupulously.

It must be understood, of course, that the misprints in the labels, as given in our correspondent's letter, are actually those existing in these forgeries.

Far from offering any objections to a wider circulation of our views than could possibly be attained in the columns of this journal, we cannot but be gratified to find those views embodied in the articles of leading London papers. But when not only is this the case, but articles are taken bodily from our columns, it is only fair that the obligation should be acknowledged. The article headed "Japanese Affairs" extracted from the *Financier*, and published in the *London and China Express* of the 25th June, is wholly made up of two articles from the *Japan Weekly Mail* of the 27th March, and the 3rd April (reprinted in our overland issue of the 9th April). We are quite sensible of the compliment paid us, but it is only fair that this should be done *selon les règles*.

We cannot but be a little amused to find this article reprinted here quite unconsciously in journals which consume their whole existence in trying to combat our views. The file always has the laugh on its side.

The Government has very naturally forbidden its subjects to take the notes payable on demand issued by Messrs. Blakiston & Co., of Hakodate, nor is it easy to imagine how any one with the glimmer of a sound commercial perception could ever have set such a scheme on foot—for we put any idea of dishonest intention entirely on one side. If Messrs. Blakiston's notes were permitted to run in Yezo, we should have Jones's notes here and Smith's there, and the whole country flooded with what the Americans humorously call "wild-cat" banks. We have not the slightest intention, as we have said, of casting suspicion on the motives of Messrs. Blakiston's act, but it is excusable only on the ground of an entire ignorance of the economy of finance, and an utter thoughtlessness in regard to the inevitable consequences of such a proceeding in a country like this, or, for the matter of that, in any country.

At four this morning a fire broke out in a Japanese tea-house in the rear of Irifunecho, Tsukiji, Yedo, which quickly extended to the adjoining houses. The wind being light, and in a favourable direction, the damage done was limited to the destruction of the houses at the corner, which comprised a Chinese exchange, an Aerated Water Manufactory, and the store occupied by M. Joseph Ruel, the goodwill and stock of which he had recently purchased of M. Louis Caudrelier. The width of the street, and the fact of Chinese tenements being bounded by a canal, alone prevented the extension of the fire. As it was, the butchery of Messrs. Hall & Co. was endangered by sparks, but fortunately escaped without injury. No fire engine was on the spot, but only the native hand squirts. The carbonized water in the ærating machinery might have been used to effect; but no one seems to have thought of that impromptu *extincteur*. Mr. Ruel is uninsured and general sympathy is felt with him.

One of our translations this week treats of the subject of torture, which it is said that the Government has the intention of abolishing. We devoutly hope so, but many of our readers are possibly not aware that the whole system of the criminal jurisprudence of the country would have to be altered in consequence. A man is not punished in Japan until or unless he confesses, and it is obvious that torture or the dread of it thus often comes to the assistance of justice. It is needless to point out the difference between this system and that of Europe. But we must not forget that torture was only abolished even in Bavaria as late as the year 1813—we write from memory and are not sure that it was not even much later—and that the statesman who eventually carried the measure for its abolition did so with the greatest possible difficulty, and in the face of a thousand prophecies that crime never could be successfully dealt with without it. England has the proud and undisputed claim of having abolished it first among the European nations. And, indeed, it has always been against the genius of her institutions and people.

The *Hiogo News*, in an article of which we have no reason to complain, takes us to task for two or three expressions in our late analysis of its own article on the new Press-laws. It is right. The expressions, though not intended to be offensive, were discourteous, and we must cry *Touché* to our antagonist and uncover, though we remain unconvinced by his counter-argument.

The *Hôchi Shimbun* says that Hokiyama, Assistant-editor of the *Nichi Nichi Shimbun* has been fined 10 *yen* and ordered to undergo imprisonment for the term of one month for violating the Press-laws.

The editor of the *Hochi Shimbun* was summoned to be at the Saibansho of Tokio at seven o'clock this morning.

From the "Japan Mail Daily Advertiser."

We are informed that the ostensible reason alleged by the Coreans for declining to enter upon diplomatic relations with the Commissioners sent by Japan with that object, was the fact of their having presented themselves in modern European costume in place of the old Court dress which the Envoys from Japan had formerly worn. 'We do not,' they said, 'object to receive you, but we detest all that is tainted with the customs of Europe. Resume your ancient dress and we will acknowledge you. As you are now attired, we shall decline to do so.'

The *Choya Shimbun* says that the following judgments have been pronounced by the Tokiô Saibansho:

Suyehiro Shigeyasu, *shidzoka* of Ehime *ken*, Editor of the *Akebono Shimbun*.

You have published in your paper, Nos. 531 and 539, on the 20th and 29th of July letters of Mitzuroko and two others, whose residences are unknown, on the subject of the newspaper laws. Those letters are considered to offend against the established laws of the nation, as provided by Article 14 of the Press Laws, and you are therefore fined twenty *yen*, and have further to serve the term of two months in imprisonment.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Awoye Hiede, *shidzoku* of Miôdô *ken*, Manager of the *Akebono Shimbun*.

You have been summoned to the Court to answer for having published certain letters which violated the newspaper laws, and you have been examined for this offence. But, as you have stated that you were not thoroughly acquainted with the matter, the Court permits you to go free.

The third Promenade Concert, given at the Public Gardens on Saturday evening, was at least as successful as its predecessors, and attracted a large concourse of the residents. It is a pity that the Gardens cannot be better lighted than they were on this occasion, but artificial light is very expensive, and we presume that all was done in this respect which circumstances permitted. The Band of the *Vsadnick* led off the music, the programme of which comprised a selection of a popular character, from which, however, the specimens of what is known as 'nigger minstrelsy' might well have been spared. It is perhaps well, as a speculative question, to sound the greatest depths which belong to this branch of the art, and it may be presumed that they were reached in the song about the "gal in the blue gown"—we must be excused for our want of exactness as to particulars. The amount of line required was enormous. "Dinah, do" seems to lie a thousand or so of fathoms above this singularly debased example of dusky melody, which, to do the negro justice, is altogether below him. The joys and sorrows of the race, as reflected in their music, or what passes for theirs—for we imagine it is all written in New York, possibly in London—seem to be bounded by the possession or loss of 'yaller gals,' and it is conceiveable that the large sympathies which induced the English to abolish the slave trade in their own possessions, may be at the root of their strange affection for music chiefly devoted to depicting the ecstasies or distresses awakened by this form of property. National character is a thing extremely difficult of analysis, and it may generally be said that we are a proud race. But it may be doubted whether any other European nation has so wide and universal a sweep of genius as to produce sons capable of twiddling bones, kicking tambourines, and swaying the rod of empire. The principle of reversion in descent, however, is now well recognized by anthropologists, and it is possible that the tenacity with which we cling to the two former arts may throw some future light upon humble relationships of which we have now only a dim and alarming suspicion. It would be unfair, however, to forget that when Titania asks Bottom, "What, wilt thou hear some music, my sweet love?" he replies, "I have a reasonable good ear in music; let us have the tongs and the bones." Now Bottom was an Athenian.

The glees were very fair. It is a thousand pities a facility for reading music is not more generally cultivated. Were it so, the glee-party of Saturday evening might have given us a larger range of selections from the English or German part-song writers. But what they did was fairly well done.

Two violin solos with piano forte accompaniment had every claim to be well received, and both were encored. A scene from Arthur Sullivan's *Cox and Box* was also admirably sung, and the applause which it extorted brought the delightful duet "The butterfly dwells" &c. from the same clever work. Altogether the evening was a pleasant and successful one.

We read this in the *Choya Shimbun*:

While the authorities were recently engaged in registering the inhabitants of the village of Kujo, near Ôsaka, a Christian named Itzge Takenori presented himself for the purpose, adding that he was a believer in Christianity. The officials, however, declined to register him, alleging that the religion was not recognised by the Government. Itzge has persisted in his demand, and the Ôsaka *Fu* h. s referred the case to Yedo for the consideration of the *Naimusho*.

The following notice was placed on the gate of the *Genroin* on the 5th instant:—

Art. 1.—The senders of Petitions or Memorials must place their rank, name, age, business, or occupation and residence on their Petitions or Memorials; and a stamp or written seal must be affixed to the name of the sender. The heading of the Petition or Memorial must be placed on the envelope.

Art. 2.—Petitions and Memorials should be written in the usual character and mode of writing, not the foreign. But, should it so happen that foreign words must be used, the equivalent Japanese term should accompany them.

Art. 3.—Vulgar language should not be used in any of the Petitions or Memorials; and still more care must be taken when they concern the Emperor, Empress, their children or any of the Imperial family, and also when they concern any of the Imperial lineage. The government must not be calumniated.

Art. 4.—Two copies must always be sent in.

Art. 5—With the exception of the Petitions and Memorials sent through the post they must be delivered between the hours of 9 a.m., and 5 p.m.

A typhoon was reported to rage at Kobé yesterday. The heavy rain-storms during the night and this morning are probably not unconnected with it.

The *Hochi Shimbun* alludes to a current rumour that Mitsui's Banking Company was likely to become bankrupt. It has found on enquiry that the Bank is closing the greater portion of its branch offices in the different *ken*, and reducing the number of its assistants, and to this circumstance the rumour is no doubt traceable.

The *Hochi Shimbun* announces that its Assistant Editor has been summoned to the Police Station of his district in Yedo, to account for an article and letter published in that journal on the 26th of last month.

The Editor of the *Akebono Shimbun* who was condemned to a fine of 20 *yen* and two months imprisonment, does not, it seems, fare so badly. There is no prison available for his reception, and he has been handed over to the charge of his relations in whose custody he is to remain.

The *Nichi Nichi Shimbun* says that Mr. Hokiyama, its editor, was again summoned to appear at the divisional police station on the 8th instant. He was informed that the Judicial Department would call upon him to answer for certain articles which have appeared in has recent issues, and that pending the enquiry he must consider himself under *surveillance*.

It is said that the rewards allotted to Okubo, Genl. Saigo and nine others of the Kagoshima *Ken*—it is to be presumed for their services in the Formosa matter—have been employed in forming a private educational establishment in their *ken*. Many discharged soldiers and other young men attend it, and three of its pupils are about to proceed to Europe with the view of extending their acquaintance with foreign languages and learning.

The sub-editor of the *Nichi Nichi Shimbun* was again summoned to appear at the *Shihosho* yesterday. The journal adds that the law does not permit of its informing its readers of the nature and result of the enquiry.

The accounts which have reached Yedo of the floods in the Midzsawa *Ken* on the 10th and again on the 20th of July are even worse than the news first received had led us to believe. Only one half of the crop of barley had been cut and stored, and the remainder, and other growing crops, have either rotted in the ground or have been carried off by the floods. Forty lives have been sacrificed, 150 dwellings were wrecked and many more have been seriously injured, and hundreds of bridges and river-banks have been carried away. The water covered an area of 47,600 *chô* (about 115,000 acres). Fuller details are expected from other inundated districts shortly.

The fireworks which were arranged to take place on the Sumidagawa last evening have, in consequence of the weather, been postponed to the 20th instant.

Messrs. Blakiston & Co. have, it is said, withdrawn from circulation the notes recently issued by them.

Digitized by Google UNIVERSITY OF CALIFORNIA Original from

A rise in the barometer and the subsidence of the rain storm which broke over Yokohama last night give some reason to hope for a favourable change in the weather. The O. & O. Company's S.S. *Gaelic* from Hongkong was not signalled at the hour of our going to press.

Mamadalla, the Arab, charged with a criminal assault upon a Japanese female has been remanded to the 13th instant to allow of the production of evidence.

The Editor of the *Hioron Shimbun* has been summoned to appear at his divisional Police Station to answer certain charges.

Our report of the voyage of the *Gaelic* confirms the suspected severity of the late typhoon on the China coast.

We regret to learn that her Chief-officer (Mr. G. Ritchie) and a seaman were, during the storm, washed overboard, and that nothing could be done to save them.

An alarming outbreak of crime in the capital is noticed in the Yedo newspapers. On the 7th instant some forty-seven houses were entered by robbers. The value of the property taken would not seem to have been large.

It is understood that the report of the Hongkong & Shanghai Bank shows the profit for the half-year to have been $265,000. No dividend has been declared.

The *Daily News* says there is not a shadow of foundation for the statement quoted from a Conservative evening paper, that "after numerous conferences of the Liberal party Mr. Gladstone has promised to resume his leadership next year." There is no reason to suppose that Mr Gladstone has altered the intentions which he expressed in his letter to Lord Granville at the beginning of the year.

The steam launch of the Italian frigate *Vittor Pisani*, on entering the English Hatoba yesterday, ran into the yacht *Torment* then at anchor, doing her considerable damage. She was fortunately prevented from sinking by the exertions of the crew.

It was rumoured yesterday morning, that the barque *James Paton*, which sailed hence for Nagasaki on the 8th instant, had suffered total shipwreck on the coast, near Omaesaki. Subsequent enquiry, however, showed that the report was largely exaggerated, the barque having been driven ashore near the Tenliugawa river. Captain Dethlefsen of the *Horai Maru*, who reports that he approached the wreck closely, though without being able to communicate with her owing to the heavy sea which broke on the beach, observed that her masts, yards and gear were standing, but that her copper was stripped from her in many parts and her rudder torn away. He saw reason to fear that it might be necessary to abandon her as she lay. The *James Paton* was partly loaded with balk timber. She is understood to be covered by insurance.

The *Horai Maru* reports having passed the schooner *Iris* in the forenoon of the 11th instant.

A Japanese paper says that the rains of the 10th and 11th instant have had a serious effect in some of the low-lying parts of Yedo. The staging of the Riokogu Bridge at Kawasaki, which is under repair, was carried away by the violence of the flood.

The writer of a letter signed Takahashi, which appeared in the *Akebono Shimbun* on the 5th ultimo, was summoned to the Police Station on the 9th instant. As usual in such cases the journal declines to give particulars of the interview.

Kurimoto, editor of the unlucky *Hochi Shimbun* has been again summoned to his divisional office. He was apprised of the intention of the *Shihosho* to make enquiries respecting an offensive article which appeared on the 4th instant in his journal. Meanwhile he is under *surveillance*.

According to the *North China Daily News* "the Foochow *Herald* hears that instructions have been by the Provincial Authorities from the Tsung-li-Yamen, requesting that a gunboat should be sent, without delay to the Loo-choos; for what purpose is not stated, but it is surmised that there is some difficulty pending in regard to the payment of the customary tribute."

An enquiry was held yesterday on board the *Gaelic*, before the British Consul, into the circumstances which attended the deaths of George Ritchie and Adam Patterson, who were drowned in the late typhoon. Patterson was engaged in work forward, and, calling for assistance, Mr. Ritchie went to give it. The ship dipped suddenly and both were washed overboard. The engines were stopped and reversed, and life buoys were thrown towards the unfortunate men, but no boat could have lived in such a sea, and in a few minutes the poor fellows had disappeared. The ship then proceeded on her voyage. The Consul decided that they were accidentally drowned.

The cool weather of the first week in this month affected the ice trade in Yedo in a marked manner. The *Hochi Shimbun* says that a retail ice-house in Asakusa was taking about 30 *yen* a day during last month. When the temperature fell, its receipts were reduced to 10 *yen*, while the stock of ice rapidly diminished, though not from the demands of the public.

THE *Nisshin Shinjishi* reports a case in which the use of persimmon juice in an obstinate disease of the eyes effected the cure of the patient. The character of the disease is not stated.

A bridge which was in course of construction in Saimongashi, Tokio, has been carried away by the late flood.

The O. & O. S. S. Co's s. s. *Gaelic* which was announced to sail at noon to-day will not take her departure until Sunday morning at day break. The mail will close on Saturday, at 11.30 P.M.

The S. S. *Menzaleh* of the Messageries Maritimes Company, left Hongkong for this port with London mails to the 2nd ultimo.

SHIPPERS OF SILK.

Per Messageries Maritimes steamer *Tanais*, despatched 11th August.

	Marseilles.	London.
Sundries...	247 bales.	60 bales.
Total.....	307 bales.	

The Shanghai *Courier and Gazette* gives currency to a rumour that the Chinese meditate the establishment of a line of Ocean Steamers to run between Shanghai, Hongkong and England. We are able to confirm the report thus far: that the Directors of the China Merchants' Steam Navigation Company meditate making such additions to their existing fleet as will enable them to share the ocean trffic; and that they further propose to establish a domestic insurance office, which will be supported solely by the premia paid for Company's steamers. At first sight such proposals seem rather startling. The existing trade is so fully taken up by the P. & O., Messageries, Ocean and other lines, that there hardly seems room for fresh enterprise in the same direction. But the Chinese are an eminently business race, and are not likely to commit themselves to such a scheme unless there is very good probability of its paying them well. They are able to work their steamers much cheaper than foreigners, inasmuch as the larger proportion of native employés in the crew is paid at a lower rate. They certainly do not spend money in the adornment of their craft, and being willing to make smaller run profits than foreign ship-owners, attract native shippers. But the one great inducement they will hold out is, doubtless the facility that will thereby be given to native traders to deal directly with principals at home. Chinese agencies in London must naturally follow the establishment of a Chinese line of steamers, and directly these are opened a very large slice of the foreign commission business will be taken away from foreign business men out here. The Chinese are quite alive to the fact that if they can lay down British goods in China minus the charges of the resident agents, they will compete with them on exceptionally favourable terms; and it is, we believe, in the hope of thus altering the present conditions of trade that the project has been started.—*China Mail.*

THE POST-MASTER-GENERAL'S REPORT.

THE POST-MASTER GENERAL'S Report just issued, though short, is a very business-like one, and contains information which is at once important and interesting. The items of it which we subjoin are those from which most can be inferred regarding the work of the Department and its relations to the progress of the country.

The Post-Office revenues from all sources for the year 1874 amounted to *yen* 352,244, and the total expenditure to *yen* 502,190.

The increase of revenue in 1874 over that of 1873 amounts to 56 per cent; over that of 1872 to 437 per cent.

The increase of expenditure over that of 1873 is 115 per cent. over that of 1872, 378 per cent.

The estimated revenues for 1875 exceed those of 1874 by 55 per cent: the estimated expenses by 27 per cent.

The actual deficiency of 1874, relatively to the expenditure, was 42 per cent: the estimated deficiency of 1875, with a programme embracing far more work, is 16 per cent.

"The estimated revenues for the 7th year of Meiji, (1874) were Yen 320,000, but the actual amount realized was Yen 352,244.89. The enormous increase of 56 per cent over the revenues of the preceding year, is due to the increased facilities for communication furnished by the establishment of new Post-routes and Post-Offices, and the increase of service on the Post-routes already established; the local mail system for the transmission of official correspondence between the local Governments and the people within their jurisdiction, which system, as it authorizes the respective Post-Offices to receive and promptly deliver such correspondence at half-rates, is gradually superseding all other methods of local official communication; and the continually increasing publication of newspapers, books, pamphlets, etc., due to the rapid progress of civilization.

The estimated expenditures for the 7th year of Meiji (1874) were Yen 485,500, exclusive of the expenditures to be made by other Departments, but the actual disbursements were Yen 475,541.25. or about Yen 10,000 less than estimated. And yet, when the revenues are compared with the total expenditures of this year, there appears a deficiency of Yen 149,945.82. and an increase in expenditures of 115.7 per cent over the preceding year. This increase in expenditures is in consequence of the erection of the General Post-Office, and the Post-Offices at Yokohama, Kobe, and Nagasaki; the purchasing of clocks, fire-arms, and furniture necessary to be provided in each office throughout the country; the transportation of postal materials by Steamship, and the increased expense attending the transmitting of the ordinary mails as shown in the above section."

The Report proceeds thus:—

"In the gross estimate of the revenues and expenditures for the 8th year of Meiji (1875), the estimated deficiency is Yen 90,000. The deficiency for the 9th year of Meiji, (1876) will be probably much greater for the following reason:—

1st.—The postal-routes to be hereafter established will extend through the remotest and most uncivilized portions of the Empire, where the routes will be the longest and the mails the smallest; such for example as the routes to the Loochoo Islands. The expense of transmitting mails over such routes will be very considerable, while the postages collected will be very inconsiderable.

2nd.—The Post-Offices in all provinces are owned by the Postmasters, whose salaries are very small and entirely insufficient to compensate them for their services alone. For the present, however, they are satisfied with the small payments made them, because they are proud of being employed in the service of the Government, and, understanding the true object of the establishment of the Postal System, they deem it honorable to voluntarily perform such duties as tend to benefit and promote the welfare of the public. It is to be expected, however, that the spirit of our people will change and they will become more mercenary. For this reason the Department will doubtless find it necessary to erect its own Post-Offices as well as to increase the salaries of the officials connected therewith.

3rd—The issues of newspapers are continually increasing, but the expense attending their transportation amounts to more than the postages collected thereon; the general average being five times the postage. For example: the cost of transporting a packet of newspapers from Tokio to Osaka overland, averages fourteen Yen, while the postage is between two and three Yen. It therefore appears that the expenditures of this Department will increase as the mail increases, and as the Postal service becomes more extended."

The aggregate number of letters, newspapers, books patterns, &c., transported in the mails during 1874 was 19,937,423, an increase on that of 1873 of 89 per cent, and of 694 per cent on that of 1872. The fact that the number of letters, &c., bears the relation to the total population of only two rates to three persons is frankly adduced as an evidence of the backwardness of the national civilization and the difficulty of communication between different parts of the country. The increase of 411 per cent in the number of newspapers passing throug the Post during 1874 over the number in 1873 is likewise adduced as evidence of the progress of the national civilization—an expression we do not quite like, through we do not wish to appear to carp at it.

The increase in 1874 in the number of *ri* of mail routes over that of 1873 was 11,775 English miles, and the distance of total annual transportation was 11,441,035 miles, or 109 per cent over that of the previous year.

There are 3,244 Post-offices, of which 1,744 were established in 1874, and 476 street letter-boxes.

The total number of officials and employés of the Department in 1874 was 3,956. The official correspondence of the Department amounted to 100,208 letters, an increase of 72,855 over that of last year.

"During the year money belonging to the Government to the amount of Yen 562.37, and stamps to the value of Yen 770.42, were stolen from Post-Offices, and the mails were robbed of Yen 1,085.13. The persons who robbed the Post-Office of Yen 557 of Government money and the mails of Yen 1,035.50, and all the stamps mentioned above, having given themselves up and confessed, a request has been made to the Judicial Department for the reimbursement of the said amounts, but no answer has, as yet, been received. Another person, who had stolen 27 Yen, voluntarily confessed and paid back the money to this Department. The number of letters stolen during the 7th year of Meiji was 540; of these 366 were regained and have been delivered intact; 14 are not yet delivered and 160 are lost. 24 letters were lost in consequence of the carriers having been threatened by robbers and in other ways.

The number of persons who have stolen letters, and otherwise infringed the postal laws and regulations, or neglected their duties is 65; of these 50 have been punished, 1 escaped, 1 imprisoned, 11 are awaiting trial, and 2 died from sickness. The amount of fines paid to the Judicial Department on account of violations of the postal laws was Yen 119.51."

This summary is undoubtedly a gratifying one and deserves the congratulations of the public to the Department. It has been said that the condition of a national civilization may be justly inferred from the quantity of sugar consumed per head of the population. We have never considered the test otherwise than a very rough one, and prefer thinking that the Post-Office statistics are more safe guides, and, waiving all objections to the expression, the advance of Japan, tested by these, is marked and satisfactory.

It is now something like two years ago that we drew attention to the Postal Treaty made between Japan and the United States, and to the steps taken by the Japanese Government to carry this into effect, expressing at the same time the hope that the European nations would make similar Treaties with Japan as soon as they had sufficient assurance that the important interests involved in such an arrangement would be properly guarded. This matter has hung fire somewhat, and we are half inclined to suspect that the Japanese Government has made the grave error of urging upon the European Governments some fancied abstract right to take the management of the mails coming into and leaving this country, into its own hands. We have heard something of abstract rights of late, and possibly have arrived at some definite conclusions as to their actual value. But even though it were otherwise, the Japanese may take our word for it that they will grievously delay the fulfilment of their wish in this respect by urging it on any such grounds. The first duty of the European Governments is to take care of the interests of their subjects, and this in itself involves a correlated right to manage the transmission of the correspondence growing out of those interests, at least until a perfect provision can otherwise be made. Any demand by Japan to those Governments to manage the transmission of this correspondence herself, on the ground of abstract Imperial right, will produce two results: the first, civil, but most decided refusal; the second, a suspicion that those who ask it are more backward than is actually the case in their knowledge of the practical foundations of international agreements. There is but one ground on which this Government can urge and secure the fulfilment of this request, and that is, by demonstrating its power to carry out postal arrangements with that efficiency, certainty and celerity which characterize them in the hands of Europeans, and which are absolutely necessary for the security of commerce and the protection of official and private interests. If the Japanese can demonstrate this to the satisfaction of the European Powers, they have acquired a right to ask for Postal Treaties from them, and good reasons would have to be given to justify the refusal of such treaties. This Government, however, would be gravely mistaken were it to imagine that anything short of a proved efficiency up to the present moment, and such reasonable assurance in regard to the future as the circumstances of the case admit of, would induce the European Governments to grant, or justify them in granting, the concession demanded by Japan. The simple fact is that the power of a nation to deal with a matter of this nature is a question of national character, which, as it is solid or superficial, is better or worse adapted to undertake the responsibilities contemplated in treaties of this kind. The settled opinion of the world is generally not far from the truth, and the reputation earned by Japan hitherto is rather for swiftness than strength of wing, for impulsiveness rather than patient sobriety, for rapid advance rather than for real and consolidated progress, every step of which is made certain before the next is taken. It would take us too far away from our present purpose to point out the causes for this estimate of the national character, the dangers of such a temper and disposition, the facts which might be pleaded in mitigation of the view, or the exact amount of truth it may embrace. Here we have to deal with the fact alone of the existence of such a reputation, and this fact we must face. Nor will the Japanese do amiss to take into their calculations the fact that the [illegible] which, on account of its commercial supre[illegible] first to convince of their power and fitness to carry out a Postal Treaty, is one which values stability above all other qualities, and refuses, here and elsewhere, to be deluded with promises or hollow professions which either cannot be, or are in danger of not being, carried out. The question is whether the arrangements the Japanese have already made, which have been working under our own eyes for a fair length of time, and which they are not only prepared but anxious to extend to any required proportions, are such as to justify the Treaty Powers in placing in the hands of the Government the whole control and management of the correspondence between Japan and themselves.

While refusing to permit the intrusion of any sentimental grounds into our own view, or of listening for a moment to any question of abstract right in the matter, we think that the Japanese have earned the right to ask the Treaty Powers for such a treaty as we have spoken of. They have an organization here and at the open ports which has done its work very efficiently, which is in skilled hands, and against which, if any charges could be brought, the Press would long ago have given them to us. The maintenance of this organization in skilled foreign hands is, in our opinion, essential to its efficiency, and doubtless any convention would provide for this. There must be no risks run in the matter. But there are grave disadvantages arising to this community and all the other foreign communities in Japan, as well as to the foreigners scattered here and there in the interior, arising from the present condition of affairs, in which we see a Japanese, an English and a French Post-Office. There are also many advantages to be gained by admitting the Japanese Government to such a treaty as we have referred to, provided always the essentials are secured, without which there can be no thought of any such arrangement. But the enumeration of these advantages and disadvantages we must reserve until next week, as they demand more space than we can now afford them, and more attention than we are likely to get from our readers at the end of a long, and, but for the importance of the subject, uninteresting article.

BEMMO.*

The pamphlet the title-page of which we have above transcribed, is a scholarly English version of one of the most interesting products of contemporary Japanese thought; and the translator, Mr. J. H. Gubbins, of the British Legation, has deserved well not only of the missionaries for whose more especial benefit the publication seems to have been determined on, but also of all intelligent foreigners who care to observe the workings of the native mind in its contact with Western ideas. The work is a hostile criticism of the Christian religion as understood by the writer, a man, we are assured, of high literary repute, and is well worthy of attention on account of the influence which it is likely to exercise in guiding the opinion of his countrymen on the important subject of which it treats. We shall attempt no more in this place than merely to indicate briefly the scope of the writer's argument.

The essay is divided into five parts, of which the first and longest is devoted to a cursory survey of the principal events recorded in the Mosaic books, accompanied by a running commentary of objections, impugning in some instances the truth of the statements, in others the moral tendency of the teaching. That the heavens and the earth were created out of nothing, while pre-existing materials were used in the creation of man and of woman; that a serpent should have the faculty of speech and be permitted by an omnipotent Creator to tempt

Eve; that for Eve's individual offence all her unoffending posterity should be made to suffer punishment; that in the Noachian deluge all mankind and all the animal creation perished, with the exception of the inmates of the ark; that the difference of languages amongst the families of mankind was purposely brought about by Jehovah in his alarm at seeing men presuming to build a high tower; all these are statements which the author unhesitatingly rejects. And he adds "All the stories in the Foreign "Book are like the foregoing. If I were to take them one "by one and expose their falseness, a whole month would "not suffice for the task."

Then the dealings of Jehovah with the Hebrew patriarchs and people come in for review. The favouritism shown to Noah was extended to his descendants Abraham and Moses. "He appeared frequently to these men and "held long conversations with them. Abraham's first "name was Abram; his grandson Israel's first name Jacob. "Both of their first names were altered by Jehovah. "Israel did not love his wife Leah, but loved her younger "sister Rachael. Jehovah caused Leah to conceive, and "afterwards, remembering Rachael, suffered her to con-"ceive. Now the creation by Jehovah of the universe in "six days is a great deed. But his appearing to these two "men, and changing their names through his love for "them, and bringing his influence to bear upon the married "couples, and again his taking measures to prevent any "ill-will arising between the elder and younger sister— "these acts of his resemble rather the relations which sub-"sist between members of the same family. How small "and petty they seem! "But not only is the behaviour of Jehovah undignified; his actions and motives are oftentimes immoral. Bearing always in mind that "he being the lord and controller of the universe, mankind are his people," how can his constant partiality for his favourites and his ruthless severity to the rest of mankind be reconciled with benevolence or justice? Why having Pharaoh's heart in his power did he deliberately harden it to refuse to let the Israelites go, and then sorely smite the Egyptians in punishment for that refusal? In inciting the Israelites on the eve of the Exodus to defraud the Egyptians of their gold and silver utensils was he not imparting instruction in theft? "We have "seen two instances where he destroyed by water those "whom he hated. In the first instance he destroyed "them by the flood: in the second he destroyed "them in the Red Sea. When Moses was about to con-"quer the countries opposed to him he was further ordered "utterly to exterminate the people of those countries. "Can there be a greater love for killing than this?" It is evident, indeed, that the account given in these writings of the doings of Jehovah has impressed our author with a sentiment of anything but respect for the character of "this malignant deity." The first part concludes with an estimate of the character and work of Moses, "a clever, unprincipled man" as he elsewhere calls him, and a remark as to the narrowness of the range of country to which the stories of the Foreign Book belong.

The second part of the essay is an attempt to measure the value of the teaching of Christ by the standard of the Confucian ethics.

In the view of the Chinese sage the chief end of man is accomplished when "all the people live tranquilly in "their homes and the whole world is in peace." The means by which this perfect state is to be attained is the practice of the five cardinal virtues, which may, however, be in substance summed up in two, fealty to political and civil superiors of every grade, and filial obedience and respect towards the various members of the family group, of which the first place belongs to the sacred relationship of parent. Harmony in the household and the temper which it engenders, is the basis of tranquillity in the state. "Therefore" says the author, reducing the Confucian teaching to its most compendious formula "the doctrines of fealty and filialty" (the latter coinage seems necessary: Mr. Gubbins ought surely not to have left the terms *chiu* and *ko* untranslated) "are the great doctrines to be observed by living man." Now the great mistake which pervades the teaching of Jesus is that it makes light of this our real life, and directs all its thoughts and aims to a future life in which happiness and riches are supposed to be enjoyed without interruption or ending. Hence the all-important human relationships of this life are contemned. The parental tie indeed is too deeply founded in human nature to be altogether ignored, so Jesus partially adopted the virtue of filial piety into his system, but assigned it a subordinate position, and diverted it from its proper objects, our natural parents, to the imaginary therfa in heaven. But no such tribute of respect was paid to the scarcely less important virtue of civil fealty. Jesus in the assertion of his own extravagant pretensions set the example of opposition to constituted authority in every shape and form. Hence family ties will be loosened and civil disturbance prevail wherever this teaching spreads. Lured by the hope of future happiness, its adherents will hesitate at nothing. As for the future state of which Jesus was wont to discourse so confidently, it was an unpractical phantasy based on a mistaken view of the body's relation to the soul. Confucius knew nothing of such a state, and declined to give himself any concern about it. And, after all, when analysed, it turns out that it is something in which the pleasures and faculties of this life have no place. The author, therefore, will none of it; and neither for imperishable crown nor for eternal fire will he swerve from the plain path of his human duties.

Having discussed the merits of the doctrine of Jesus himself, the author then takes up the additions made to that doctrine by his followers. The theory that the death of Jesus was, or was ever meant to be, an atoning sacrifice for the sins of mankind is pronounced to be an invention. So also is the story about the resurrection of his body to life, and his soaring off into the aerial void. The theory and the story had their common origin in the pious fraud of his disciples, who, having secretly put the body out of the way, deliberately gave out, for the good of religion, the version of the matter which has since obtained, bolstering up the trick with distorted quotations from prophecy, which were, in reality, irrelevant. "Supposing that Jesus "had really returned to life and shown this miracle, he "would have done well to have mixed with the people "in the world and made more of them believe in his re-"ligion. But he only spoke (after his return to life) to "his disciples and to some old women." Altogether, it is plainly the author's opinion that the followers of Jesus made some additions to his doctrines after his death and that the additions thus made were not improvements.

In the fourth part the author proceeds to combat the error of those who are inclined to look upon Christianity as a superstition of the same harmless character as Buddhism. No such indulgent view should be entertained. On the one hand, it is distinctly inferior to Buddhism as an ethical system; and, on the other, its arrogant and aggressive spirit, which brooks neither control nor rivalry, would make havoc of the established customs of the nation. From its first promulgation by its founder, who openly avowed that he came into the world to create strife, down to its latest development in the twenty-five jarring sects of America, Christianity has been characterized by turbulence and intolerance. What constitutes its especial danger for Japan is the fanatical zeal with which it fills those who embrace it. These are generally of the ignorant lower classes, whose shallow intellects are easily imposed on by plausible arguments, and who are moreover led away by the adroit appeal which this religion makes to their selfish and baser feelings. Its followers "seek only to obtain for themselves the happiness which is in heaven," a motive which must work a hideous depravation of that ideal of unselfish fealty in which the national character and customs have their root. Social discord and national deterioration are, therefore, the consequences sure to ensue if Christianity be tolerated in Japan. And, besides all this, there is the possibility—remote, perhaps, but still to be reckoned with—of some unscrupulous foreign potentate making zeal for Christianity a cloak for territorial aggression, and being aided by native converts in accomplishing his designs.

The fifth and concluding part of the essay is of an altogether different stamp from what precedes. It possesses a high interest of its own, but unfortunately we are not fully able to judge of its merits, for the translator has exercised what we consider an unwise discretion in omitting several passages, under the impression, apparent-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ly, that the subject of divination is not interesting. Now divination in China at the present day is, as it continued to be in the most enlightened days of Greek and Roman civilization, a survival from the first stage of intellectual development, the theological, into the second, the metaphysical, stage. That this has been the order of evolution in the East, as surely as in the West, appears clearly even from the author's brief glance into the early ages. In the dawn of Chinese history there was, he says, "a mixture "of gods and of men in the country which caused great "confusion"; but a sage emperor caused a division to be observed between celestial and terrestial affairs, "the "effect of which was that transitions from heaven to earth "and from earth to heaven ceased, and a rational order "of things was established for the first time." Not Comte himself could have described the change more tersely. And of the metaphysical stage of thought, that in which the abstract ideas of the mind are mistaken for existing realities, no more perfect specimens could be desired than our authors own physical speculations. He descants as freely on the male principle of nature and the female principle of nature as if they were substances which apothecaries were in the habit of compounding daily by weight and measure in their mixing jars.

The line of thought connecting the concluding part with the body of the essay is not distinctly enunciated, but it seems to be this. The Bible owes its acceptance to the fact that it undertakes to supply the natural craving after knowledge of the beginnings of the universe and of man. But the account which it gives of the creation of the world by Jehovah does not stand alone. Japan has its cosmogony too, and so has China. They lack the authority of the sages however; so the author ventures to propound his own views; in which some of the elementary facts of astronomy are mixed up in a wonderfully curious way with the crude speculations of that oldest of the Chinese classics, the "Book of Changes." We hope that when a second edition of this pamphlet is called for, Mr. Gubbins will insert the passages which he has now thought proper to omit. And we venture to think that most of his foot notes might be omitted without disadvantage. The author's meaning is abundantly clear without them.

We cannot conclude this notice of Yasui Chiuhei's essay without saying that for its author the perusal of it has inspired us with a feeling of deep respect. Whatever may be thought of the worth of his criticisms on Christianity —a question which we leave to the Missionaries to discuss, there can hardly be two opinions as to his sincerity and candour as a controversialist. How superior his work is in this, and indeed, in every other, respect, to the similar manifesto of the Chinese literati, the "Death-blow to Corrupt Doctrines" published some years ago, it requires no comment to show. He has drunk deep at the fountain of Chinese lore, and it is his hope that the teaching of Confucius may spread into other lands; but he has none of the foolish Chinese contempt for the peoples whose creed he combats. "The "people of the west are clever in their knowledge of the "heavens and they understand thoroughly the various "questions relating to the earth. There must therefore "be some amongst them who know that the religion of "Jesus is false." These sensible people, however, are, he thinks, afraid to speak out.

THE P. & O. S. S. *Gwalior* seems to be a rather unlucky vessel. Scarcely has she well got the letter of the accident which befell her off the coast of Hainan than she again meets with small disasters. Ere leaving Shanghai on Sunday last, she was delayed from daylight till 3 p.m, by a breakage or defect of the air pump bucket. This being put to rights she proceeded on her way untill midnight of Wednesday, when, off Swatow, the bending of an eccentric rod caused another stoppage of eight or nine hours. Both the accidents were minor ones, and might have occurred to any steamer. But the public of course merely look at the fact of delay having three times been caused by engine-room defects, and, whether justly or not, get an idea that the engines are not in good working order.—*China Mail.*

THE YONEZAWA DIALECT.

By C. H. DALLAS, Esq.

(Contributed to the Asiatic Society.)

THE dialect treated in this paper is that spoken in a large irregularly shaped plain of some 250 square miles in area, lying about midway between Sendai Bay and Niigata, just on the west of that central range of mountains which stretches like a back-bone from Kôdzuké to Awomori.

The word Yonézawa formerly designated the territory of the Uyésugi family, but being the name neither of a *shiu* nor of a *kôri* should perhaps now be restricted to their castle-town, the present capital of the Okitama Ken. In common parlance, however, the name is still extended to the whole of the plain at the southern extremity of Uzen, (the new southern division of Déwa), of which a part belongs to the prefecture of Yamagata, a handsome town about 12½ *ri* to the north. Besides the central range already referred to, which marks the boundary between Déwa and Ôshiu, lofty mountains separate this plain from Aidzu on the south, and Echigo, and Sakata on the west, so that it is entirely hemmed in by these natural barriers, except on the north, where a narrow gorge communicates with Yamagata and the rest of Déwa.

It is said, but I have no means of testing the accuracy of the statement, that some of the peculiarities of this dialect are to a certain extent common to the language current in the rest of Déwa and the adjoining monster province of Ôshiu; but that the nasal intonation does not there acquire that intensity which makes a Yonézawa peasant hopelessly unintelligible to a man from Tôkiô. It is possible therefore that some of the facts put forward in this paper may apply to the more widely diffused dialect of Ôshiu, but I limit my responsibility to the assertion of their existence in the dialect of Yonézawa, where I have collected them from the lips of the natives.

Taking the ordinary language of Tôkiô as the standard for comparison, the Yonézawa dialect differs from it,

(1) In its peculiar intonation.
(2) In the pronunciation of certain syllables.
(3) In the meaning attached to certain words.
(4) In the possession of certain words not known in Tôkiô.
(5) In its phraseology and choice of expressions.

(1).—The intonation is exceedingly unmelodious, being deep, gruff, and intensely nasal, both nose and teeth being kept tightly closed. Among the lower classes this is aggravated by a peculiar lisp, from which as a rule the educated men are free. The difference of the mode of articulation is so great, that apart from the other peculiarities of the dialect, it is alone sufficient to render it a matter of no small difficulty for unaccustomed ears to understand the most ordinary sentence.

(2).—In the pronunciation of the syllables a distinction is made between イ and 井 both of which are in Tôkiô called *i*, the latter only retaining this sound, the former being called *é*. Thus they commence the syllabary *é, ro, ha,* and say *énu* 'a dog,' *éshi* 'a stone,' but *ido* 'a well,' *isha* 'a doctor.'

As at Tôkiô, no distinction is made between the syllables エ and ヱ, but the initial Y sound is invariably strongly pronounced as *Yéchizen, Yéchigo.* The pronunciation according to the spelling *Echizen,* which from its use in the columns of the *Japan Mail* I imagine to have the sanction of the highest authority, is not only never heard, but is hardly understood. '*Echigo*' would be understood to mean the wild strawberry.

The series of aspirate sounds (in Tôkiô *h·, hi, fu, he, ho*), all take an initial *F.*, thus *fa, fi, fu, fe, fo.* In the mouths of many of the *samurai* this *F* often becomes *Fu,* thus *fuana, fuata, fuato,* but the lower classes say decidedly *fana, fata, fato,* for 'a flower,' 'a flag' 'a pigeon.' This interchange of the initial sound of F and H is of such frequent occurrence in philology as not to require any comment, but I may perhaps mention it as occurring in China, where *Foochow* becomes *Hookchow* in the mouths of the Cantonese, while every schoolboy is familiar with the fact of the ancient digamma having been replaced by the rough breathing.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

In the T series, チ is pronounced *chi* as at Tôkiô by the majority of the educated class, but among the common people it becomes a lisping *tsi*, and as a natural sequence ヂ is pronounced *dzi*. In the pronunciation of the contracted syllables usually spelt *cha, cho, chu* (for *chi-ya, chi-yo, chi-yu*) it is to be noted that the Y of the second component part is preserved: as *tsya, tsyo, tsyu*. Students of Chinese will remark that this change of *ch* into *ts* is identical with one of the differences existing between the Peking and Nanking dialects.

In the S series (at Tôkiô *sa, shi, su, se, so*) the *sh* appears to be transposed, and the series runs *sa, si, su, she, so*. This also chiefly applies to the lower classes who lisp all the sibilants, and say *shenshei* for *sensei*, and for 'seventy-one' say *sitsi dzyu-itsi*. The word for 'seven' (*shichi*), which in Tôkiô is pronounced almost in one syllable, has its two syllables distinctly pronounced by all classes, and is made to rhyme with *ichi*. ジ has identically the same sound as ヂ, the Yonezawa dialect following the Tôkiô practice of ignoring the natural distinction * between them.

The contracted syllables usually spelled *ja, jo, ju*, are pronounced *dzya, dzyo, dzyu*.

The *R* in the syllable *ri*, the pronunciation of which varies so much in different parts of Japan, is in most words absolutely silent, thus two rios is *ni'yô*.

The diphthong *ai*, especially in the word *nai*, is commonly pronounced *éi*, thus *wakaranéi*.

With regard to the sounds of the consonants, the impure nasal *n* before the *g*, which is a characteristic of the Tôkiô pronunciation, is intensified in Yonézawa, where the dialect delights in inserting this same *n* before *d*, z, and *j*; and its equivalent *m* before *b*. Thus I have heard 'a spoon' *(saji)* called *sandzi*, which, as the Governor at that time happened to be a 'Sanji,' was slightly confusing. With many persons the insertion of this *n* or *m* seems to be the only mode of marking the distinction between the sharp and flat mutes; *k, t, p*, except when doubled, commonly taking the sounds of *g, d, b*, while the genuine *g, d, b*, become *ng, nd, mb*,† as *wadagusi, iyanda, ambunai*. *Iku* (to go) appears to be an exception; it is always pronounced *ingu*.

(3).—Of the words used in a sense totally different to that which they bear in Tôkiô, the list that I have been able to collect is not a long one; but being all words in common use they are intensely bewildering to one unsuspicious of their local meaning. Thus soon after my arrival I remember feeling no little astonishment at hearing a fine powerful looking young fellow, who had been pointed out to me as having distinguished himself in the war, decline a challenge to box with the words *kowakute sarenaish'*! It was not till some time afterwards that I discovered that *kowai* is used only in the sense of 'fatigued,' its ordinary meaning 'afraid' being invariably rendered by *okkanai*.

Wakaru, not only means 'to divide' and 'to understand,' but also, and more generally, 'to be able' 'to be sufficient' 'to be suitable.' Thus: *Kore de mo wakaru*, 'this is enough' *Mijikakute mo wakaru*, 'though it is short it will do.' *Omokute hitori de wak ranai*, 'it is too heavy, I can't carry it by myself.'

Dekiru and *deru* seem to have in some sort interchanged meanings, *deru* being used almost exclusively in the sense of 'to be finished'; *mo hambun deta kara, tôka goro deru*, 'it is half done already, so it will be finished about the 10th.' *Dekiru* on the other hand is never used in the sense of 'to finish' 'to be able,' but in that only of 'going' or 'coming' (the meaning by the way of the characters with which it is written 出来.) Thus: *Tadaima dekita*, 'He has just gone out;' *Asu deki béi*, 'He will probably come to-morrow.'

Ippuku, 'one puff,' is used for one cup-ful (*ippai*). The invitation 'Come in and have a cup of tea,' if given at the door or near the house of the speaker is usually couched in the words *Yotte ippuku yokambéish'*, while a guest is pressed to take more tea with '*ima ippuku*.'

Some important differences are to be noticed in the use of the pronouns. *Watakushi* and *sessha* are used by persons of some pretension to education, when speaking to a superior, but the word in everyday use by all classes is *ore*. For this, or rather for its incorrect form *ora*, the country-folks have a plural *orada*, while the townspeople and samurai use the regular plural *orera*.

Ware, which in Tôkiô as well as in the written language indicates the first person, is the ordinary word for 'you' in addressing inferiors.

Kisama, in Tôkiô usually expressive of extreme contempt, is used politely and familiarly among equals, and has the plural *kisama-gata*. It is also commonly employed to inferiors, and is in that case expressive of kindness and courtesy.

Omaye is respectful, and is used to superiors only.

Omaye sama expresses extreme deference, and was used in addressing the Prince.

Anata is never employed at all.

As in Tôkiô *boku* and *kimi* are the words chiefly used for 'I' and 'you' by students, while their elders delight to display their Chinese scholarship by employing *midomo, sokka, kiden, sokomoto*.

For pronouns of the third person, though *koré, soré*, and *aré* are known, the most usual words are *kaitsu, koitsu, saitsu, soitsu* and *aitsu* (contractions for *kono yatsu, sono yatsu* and *ano yatsu*) which are used without any idea of rudeness, and for things as well as for persons. I may mention here that the word *yatsu* which in Tôkiô has the contemptuous meaning of our word 'fellow,' has in Yonezawa the kindly and familiar meaning of the same term. Thus *riko no yatsu, teinei na yatsu* are complimentary expressions for 'a clever man,' 'a polite man,' while an intimate friend is described as '*kokoro-yasui yatsu*.'

(4.) Of the words peculiar to the dialect many of those I have noted have no equivalents in Tôkiô, the articles they represent being as little known as the names; but specimens of nearly all of them have been presented to the museum of The Asiatic Society. To this class belong:

Nizo.—A straw hat shaped like an inverted trowel, fitting closely to the back of the head, and projecting beyond the forehead.

Sakata-bôshi.—A straw helmet ornamented with coloured cotton, with a deep fringe falling over the shoulders.

Kugu-boshi.—A hood and cape in one reaching down to the knees, made of a grass called *Kugu*.

Suso-boso.—*Hakama* tight at the ancle, worn by both men and women of the samurai class.

Tachi-tsuke.—A similar garment to the preceding, but without the board in the back, worn by the lower classes of both sexes.

Habaki.—Gaiters made of reeds.

Jimbei.—Straw shoes.

Igara-jimbei.—The same shaped shoe made of rushes *(igara)*.

Oso-fuki.—A straw protection for the toes worn with the *waraji*.

Te no ura.—Similar to the last, made of plaited straw, and coming more under the foot.

Fuka-gutsu.—Straw boots reaching to the knee.

Take bo hora.—Clogs made of split bamboo used by children for sliding.

Kanjiki.—Snow shoes made of the shoot of a tree bent to an oval, with only a string across to fasten it to the foot.

Kana-kanjiki.—A bar of iron with three spikes worn under the foot to prevent slipping.

Tasu.—A basket, something like a knapsack, carried on the back, made of strips of cane *(matatabi)*.

Hakigo.—A basket either of bamboo or cane, also carried on the back, but of a different shape.

Mekkai.—A scoop made of withes to carry sand or snow.

Bokkai.—A wooden shovel with the blade slightly hollowed.

* It is stated that the distinction is observed at Kiôto, as well as all over Kiushiu; it is certainly marked in Satsuma where the initial sound of ジ is that of the French J, チ retaining that of the English.

† This observation must be borne in mind in pronouncing the local words given in a subsequent paragraph, since to avoid confusion the spelling does not imitate the pronunciation, but except in contractions follows the *kana*.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Suna-haki.—A wooden spade with a flat blade and very long handle.

It will be observed that almost all the foregoing are the names of conveniences necessitated by the snow, which lies from the middle of December to the middle of March, and even on the level ground attains a depth of five or six feet.

The remaining words, representing things and ideas not specially pertaining to the locality, have equivalents in the language of Tôkiô which I have in most cases appended in addition to the translation :

Abakeru...	to romp,...	Odokeru.
Baita	firewood in lengths but not split. N. B. The word *maki* is unknown.	
Beko	a bull or cow... ...	Ushi.
Bero	the tongue	Shita.
Buijo noru	to swing	Buranko suru.
Bimbô / Bippô / Bôroku	... ... bad...	Warui.
Chinto / Chikuto	... ... a little	Chitto.
Dada	mother	Haha.
Da sama / Da sa / Da tsa	... ... mother	Okkasan.
Hen nashi	useless	Muyeki.
Jabara	a very elastic crape.	Shibori banashi.
Kasé	an ornament for the hair, usually of colored crape	Atama kake no kiré.
Kata de...	an interjection especially used with negations.	
Megoi	dear little	Kawairashii.
Mogosai...	pity	Aware.
Mutsuri...	always	Itsu de mo.
Najô	what sort? how? ...	Donna. Ikaga.
Nobeni	frequently	Saisai.
Nŭnai (pron: nŭnći)	yes	Hai.
Ogurisama	the lady of the house	Okusan.
Oyagenai	lamentable	Kuyashii.
Patanto...	bang	Battari.
Perori / Perotto	... ... all	Mina.
Shaiko wa nai / Sunashi na	... prying, gossiping.	
Taka-ashi	stilts	Take-mŭma.
Tentsu	a lie	Uso.
Tepikapite / Tesozorashii	... fidgetty...	
Tetchiri... ...	exact, ... / plenty	Kippari. / Takusan.
Ŭdatei	disagreeable... ...	Iya na.
Utsukeru	to romp...	Odokeru.
Warashi	a lad of 5 to 15. (cf. *warabe* in book language.)	
Yachimuchi	valiant	Isamashii.
Yachamucha... ...	headstrong	Muyami.

(5).—Of the phraseology and choice of expressions in the dialect the most marked features are its fondness for the simple forms of the verb, and the recurrence of the suffix *shi*, and the words *Nŭnai* and *Béi*. The polite verb *masu* or *masuru*, behind which at Tôkiô the tyro in the language can so comfortably veil his ignorance of the simple forms, has no place in this dialect ; *gozaru* moreover is never heard. By way of replacing them a sentence is rendered polite by tacking on to the last word the suffix *shi*. Thus: *sayô de gozarimasu*, is rendered by *sô dash,' koré desŭ ka* by *koré kash,'* or more often *koitsu kash.'* Respecting the origin, derivation, or history of this suffix, I have been able to obtain absolutely no information. I have met with it as far south as the Takuhara Toge, some ten *ri* from Nikkô, and have traced it from there all through the Aidzu country and Yonézawa and have heard it also in Echigo. At Yamagata, already referred to, where the Mógami dialect is spoken, the *shi* is not heard, nor have I observed it on the Ôshiu kaidô along which, as far as Fukushima, I have travelled eight times.

Nŭnai meaning 'yes' corresponds to *Hai*, but is rather more decidedly affirmative. There is something inimitably comic about the pronunciation of this word, especially in the mouths of the women; the *n* is prolonged indefinitely and at length the vowel comes out with a jerk. For the ejaculation to denote attention while listening to a superior the most common word is *ha*, but *hai* is sometimes used.

For the formation of the future, or affirmation of probability, *bei* is used to the almost total exclusion of the forms in *ô* and *de arô*, thus, *kuru béi, sô dambéi (*for *de aru béi), Béi* is a contraction for the *béshi* of the written language, and its use in colloquial is said to be the distinctive characteristic of the dialects of Ôshiu and all the northern part of this nameless main island. It is joined to the present indicative of verbs of the first conjugation, and to the root or present indicative of those of the second.

The two hardest worked words in the dialect are *damé* and *yokambéi*. To attempt to render in English all their shades of meaning would exhaust a dictionary. Suffice it that the primary meaning of *damé* is 'of no use,' while *yokambéi* means literally 'will be good.' They are generally exactly antithetical ; for instance 'Will it do if I go to-morrow' is *Asu itte yokambei kash'?—Asu dame d›sh'*, 'Tomorrow will be too late.'

The meaningless *né* so much used by the lower classes at Tôkiô is changed into *na* and is used by every one. In polite conversation it takes the suffix *shi* and becomes *nash'*. Occasionally a yokel, in his desire to be excruciatingly polite, attaches the *shi* to the preceding word as well ; as *sô dash' nash'! Amari samuish' nash'!* But this is reprehensible and betokens a sad want of education.

Sa is *par excellence the* postposition of the dialect. Besides embracing all the ideas of motion towards and rest at, it occurs in such phrases as *Tsukuye sa oite o kure.* 'Put it on the table.' *Uchi sa wasurete kita,* 'I left it at home. *Oboko sa kureta.* 'I gave it to the child.'

An expression of constant occurrence is *Najô na konda* which is a contraction for *Nani jô na koto da,* (*jô* meaning 'item,' 'particular.') It is used interrogatively in the sense of 'what is the matter?" and also reflectively to express surprise or inability to answer a question. *Najô* is much used in all interrogations. I was once politely asking a little lady of about eleven years old, after the welfare of her mother who had recently been ill, and for want of this word utterly failed to make myself understood, especially as none of the words that I knew for 'mother' seemed to be familiar to her. I was abandoning the attempt in despair, when a student came to my rescue with *Da sama wa najô de o idenashita kash'*, which elicited the prompt answer '*shidai ni iish.*"

San as a title is of quite recent introduction, and its use is considered a sign of affectation, and is ridiculed as an imitation of a cockneyism of the metropolis. A few years ago the word was not known, and a gentleman said *Sama* at full length when speaking of or to the Prince or a member of the Prince's family, and to his own father and elder brothers. For all other persons the title was *Dono*, used not with the family name, but with the *na* or given name. The lower classes use *Sama* more generally and have for it the contractions *sa* and *tsa*.

The favorite word for feeling unwell is *yameru : ha ga yameta, atama ga yameta* are the only expressions ever heard for 'I have a tooth-ache,' 'a head-ache, &c.' It is written with the character for *itau eru* 痛 not with that for *yamai* 病 as given in Dr. Hepburn's Dictionary.

Amari is especially used in the two phrases *amari ii* meaning 'with pleasure' or simply 'yes,' and *amari yokambéi* 'that will be the very thing.'

Nambu does duty both for *ikutsu* and *ikura* (how many, how much,) and *nambu ka* for *sazo*, as *Nambu ka o kowakatta beish'*! How tired you must be !

There are a few other words which are known, but not much used in Tôkiô, but which are specially affected by the Yonezawa people of all classes :

Oboko, for instance, is almost the only word for children of both sexes.

Samazama and *Shuju* which in Tôkiô are considered to belong to the book style, replace *iro-iro* with the meaning 'various' 'all sorts of.'

Zŏsa-nai is always used for 'easy' to the exclusion of '*yasashii*' which is never heard.

Itamashii 'deplorable,' *tawai-nai* 'senseless' and *shô-*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shi 'pitiful' are all common; and a coolie makes believe to decline a second cup of *saké* with the phrase *Ora fa o shôshi na!*

Kusai (stinking) is used in the locution *mi-kusai* 'ugly,' 'unpleasing to the sight,' and sounds to Tôkiô ears singularly forcible and inelegant.

It will of course be understood that in collecting the foregoing words and phrases I have not attempted to exhaust the peculiar expressions of the dialect; but on the eve of quitting the district I threw together those facts which had from time to time come under my observation, in the belief that, to those who from a philological point of view are making a study of the Japanese language, no contribution of new material however humble can be totally devoid of interest.

C. H. D.

Tôkiô, March, 1875.

ADULTERATION AND FORGERY IN YEDO.

(From a Special Correspondent.)

Imitation *may* be the sincerest form of flattery, but it is a species of adulation peculiarly distasteful to such commercial magnates as have, by dint of persevering publicity, established a good name for their specialties in the great marts of the world. For merit alone will not suffice; although, if an article have no intrinsic merit, its proprietor may as well cast his money into a quicksand, hoping for its return with interest, as scatter it in fragments on the paper wings of the press. This hasty generation rides, and reads as it rides—running has long ceased to be the lot of any but coolies—and to it, as it rides, appeals every form of advertisement that can be devised; from the gorgeous crystal illumination that glitters the night through in front of Helmbold's Broadway Drug Store, to the flimsy "dodger" dispersed broadcast among the passing crowd by "sandwich-men." That judicious advertising has made many a fortune, none can doubt, for proprietors of good things have long since ceased to believe that

On their own merits modest men are dumb,

and seize every opportunity duly or unduly to exalt themselves and their wares. The Asylum for Incurables at Virginia Water, the clipper yacht at Cowes, the crack team at Jerome Park, do as much for Robert Bonner, J. L. Davenport and Thomas Holloway as his Roman helmet and pink poodle for Mangin, the "Dead Heart label" for Webster, or his autobiography for P. T. Barnum, each of whom has been successful in life, chiefly through his knowledge of How, When and Where to advertise.

"Yet they're not happy" as Mr. Toole observes. Holloway has flies in his ointment, and all the others like every body else suffer from unscrupulous competitors both at home and abroad. In fact, "easy" morality is infectious, and virtuous panics intermittent and fleeting. Importers of oversized cottons will recollect when, at a meeting of the Manchester Chamber of Commerce, the president, Mr. Hugh Mason, made some very uncomplimentary remarks on the morality of the cotton manufacturers of Lancashire. He commented severely on a case which has been made public where cotton bobbins holding fifty or sixty yards had been falsely labelled "100," and stated that he had been informed by thread manufacturers for whom he spun that "they could scarcely exist if they were to be honest men, so great was the fraudulent competition which now prevailed." He had known many frauds perpetrated in which the cotton spinner had sold his customer as 40's what he had paid his operative spinner for as 38's and spun as 39's. Things have, indeed, come to a bad pass when the President of the Manchester Chamber of Commerce gives utterance to such a speech.

Happily, though the appointment of food analysts and their microscopic researches have baffled in a great degree adulterators of what the Scotch call "vivers," yet the practice of fraudulent imitation of labels and trade marks for inferior articles still flourishes, despite the Registration Act, in England; whilst Hamburg is notorious for the facilities it has afforded unscrupulous traffickers from the days of Accum to those of Hassall. The intelligent public is satisfied with a hasty glance at the exterior of a package, and grumblingly puts up with its inferior contents, taking no heed to prevent repetition of the fraud on other sufferers by destroying the bottle, tin, or jar which has been already the cause of disappointment, although pathetically asked to do so by Crosse & Blackwell in nearly every known newspaper. So long as this is not done, nor the labels defaced, so long is it to be expected that fraud will be practised by refilling with rubbish. Whether in Europe or locally, did it stop here, the public might easily remedy the evil; but at this point, forgery steps in to aid the imposition, and the natives of Japan, with their unscrupulous imitative skill, have not been slow to avail themselves of the resources European art has supplied them with.

Being extremely ill of pyrosis a few days back, I sent to a dispensary off Ginza for some chlorodyne. A mixture, redolent of prussic acid and spearmint was brought me, in the bottle, (No. 1), sent herewith, the label on which is an exact copy of that covering the chlorodyne put up by Burgoyne, Burbidge & Co:—except that in place of their name, the words "Medicine Apothecary" are substituted. Below is a black diamond (their trade mark) containing instead of the firm name, the letters "RRCE, Medecin House," and below "Export Drnggist Coleman Street, London, established 1711." I then went in search of some genuine Burgoyne's which I failed to procure, except at the Tokei Dispensary, where the dispenser insisted it was poison (!) and refused to sell it till furnished with my name and address. The labels of medicines made up at this shop bear the Royal Arms of England. I never heard that the Duke of Edinburgh made "Appointments" of the Household functionaries when here, and can therefore only conclude that it is placed on the label to carry a certain false impression to the minds of partially-informed Japanese.

Fraud sat on my breakfast-table. The "Eagle Brand" was present,—not the genuine, but a Hamburgh imitation, (No. 2) a facsimile of Gail Borden's putting up. Japanese talent contributed (No. 3) "Grimwade's Dessicated Milk"—nice stuff—"Wite this Patent Trade Mark Capsul," which I was directed to "cue off," and add "ooiling water to the Powdor." If any Government emigration Agent can enthusiastically eulogise such stuff as its contents, as the label asserts he did, I beg to differ from him. The butter, known of old to be palm-oil and oleo-margarine, can be passed over in silence, but the meat, labelled "Advance, Australia!" turns out of the newly opened tin very far "advanced" towards decomposition. After my milk-experience I pity the Japanese infants whom it is proposed to nourish with ARTIFICIAL HUMAN MILK, the necessary printing for which is, or was lately, being done at the *Nishin Shinjisshi* printing office. Baby farming in Dai Nipon is a new idea.

Although a few days since chlorodyne was almost unattainable in Yedo, to-day it may be had in any quantity. You buy it retail for a *boo*—its price in England being 1s. 1½d. It *must* be genuine—for has it not the Somerset House Inland Revenue Stamp? Going from Ginza to Tskidji,—down the street at the corner of which is the *annexe* of Messrs. Favre-Brandt's Yokohama establishment—you pass an unscreened window, through which are visible five lithographic presses busily at work, under the supervision of an accomplished American craftsman. You admire the readiness of the natives to adopt foreign improvements, and predict a great future for THE TOKEI ENGRAVING COMPANY, whose card is an excellent specimen of engine-turned engraving of the highest-class, and equal to many banknotes in point of artistic execution. Those pretty little stripes of red and black, six deep, on the stones of two of the presses that go hopping in and out like the little feet Sir John Suckling sang of, are

FORGERIES.

Look at them closely. They are imitations of the English Government Inland Revenue Stamp, with Dr. Collis Browne's signature in black and red. Other presses are preparing attractive facsimiles in yellow and green of Preston's effervescing Sugar of Lemons, the present fraudulent wrapper (counterfeit No. 37, tin enclosed) not coming up to the mark in point of typographic art. With engaging candour, you will be told—"Bring anything you "like here, and we'll copy it for you. There's no ex-terra-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"toriality law here." To which point, at the revision of Treaties, the attention of Ministers is respectfully directed.

"The sun is over the fore-yard," and a cock-tail is in order. Sample No. 9 herewith, together with a dash of Boker's Bitters, (Sample No. 10) makes a 'pick-me-up,' justly entitled to the epithet of "curious," hitherto chiefly assigned to Old, (or Elder) Port. It is true that Sample No. 11, purports by its label to be "Booth's Old Tom;" but as the capsule bears the words "Hongkong Distillery Company," it is not unreasonable to mistrust its genuineness. Absurdly fastidious must he be who does not recognise the superior excellence as a frenetic of straw color Old Tom, No. 9. Its claims to the name are as well-based as those of the liqueur quoted in Cohen's Price List as "*dit* de la Grande Chartreuse." It appears to be made from a collection of receipts contained in a volume termed the *French Wine and Liqueur Manufacturer*, published by Dick and Fitzgerald, New York, one of which produces an excellent Bourbon Whisky from oak sawdust and green tea. Some, apparently of this brew, is now in Yedo on sale; but the ingenious gentleman who formerly combined liverystable keeping with illicit distillation being for the present lost to Yokohama society, I cannot be certain on this point. The author of the work speaks of "a bed-bug flavour" as a distinguishing characteristic of Otard brandy, desirable to the palates of Parisian connoisseurs, and instructs tyros how to ensure it. I have tasted some resembling it here, which I learn is popular at the Kaigunsho; but one would hardly think a *bon* a bottle paid for the opium each must contain.

Shade of Courvoisier! Ill-used man! Well may'st thou be restless in thy unhonoured grave. Barbarous were they who hung thee for thy playful experiments in toxicology. But their descendants are degenerating, and thy namesake's empty brandy-bottles will revenge thee in this land slowly and surely as Agua Tofana. Could'st thou behold sample No. 8, and ask Old Patch, who followed thee to Tyburn Tree, or Mr. Fauntleroy, both equally skilled in the *ars d. cipiendi*, as Bank of England records shew, either would point out on comparison with the original, that the capsule is not similar to the real—that the cork differs—that the O is wanting and that *Honi soit qui mal y pense* is NOT Jules Robin's motto, whilst it is singularly inappropriate to bad brandy. Sample 12, James Hennessy & Co. would probably repudiate. The nativity of the label is indicated by the word "Registered" instead of "Entered" at Stationers Hall. Messrs. J. & F. Martell's Brandy (?)—sample 13—bears an etiquette never "diposé" by G. Nisson, nor entered at Stationners' Hall, with two n's and the apostrophe in the wrong place.

The traditional drop of good beer, said to gladden, strengthen and fatten the "gentles all of merrie England" comes to us in questionable shape. Aware that Allsopp's and Bass' labels have both been imitated to perfection, and that at the instance of Sir Harry Parkes the authorities have promised that the counterfeiting should be put a stop to, suspicions are somewhat lulled. But so long as labels preserve their integrity, it is hopeless to expect the Japanese to maintain theirs. Sample No. 5, herewith, is a bottle with labels and capsule intact; but, if like a fellow-sample, certainly not containing Bass' Beer. Recently, when passing Maruya's shop near the Kaisei-Gakko in company with a friend, we witnessed the operation of filling, with Yokohama beer from Hegts' casks, used bottles with intact labels.

Sample No. 6, is unquestionably a daring imitation—colourable is the correct phrase—of Bass' label, Cameron and Saunder's endorsement, and the proper capsule. So long as this is executed in the creditable manner in which it is, one cannot wonder at the further step being made, and the Rubicon which divides colourable imitation from fraudulent counterfeit being passed.

I have vainly tried to obtain a tin of the mixture of riceflour and sugar sold for native use as milk, but forward one of the labels engraved in exact imitation of the Gail-Borden. This preparation, according to Japanese ideas, is Milk Punch! Hence the exceedingly appropriate label on Sample No. 4. ("Borden's Extract of Beef.") On holding it to the light, lumps of some coagulated substance will be seen floating in it.

Mr. Yotsuraya, No. 2 ground, Yamashitacho, is a cheap wholesale and retail manufacturing perfumer—the Rimmel of Japan. His Lavender Hair Oil label is a fair specimen of the Tokei Engraving Company's work. A slight error in date occurs in his edition (No. 16) of "Dummonier's Eau de Lavande." International Exhibitions were not instituted when the mythical medal was awarded. The lithographer alone was the *source d'honneur*. An old label and bottle serve the turn for improvised Florida Water, (No. 15) and if the eau de Cologne (No. 14) is unsatisfactory it can't be helped. "Johann Maria Farina, gegenuber dem *Rhein*," is a vague address, but the contents are genuine Japanese fragrance.

"Candy's Disinfectio" is the sign of a house near Ginza, where an experimental chemist attempts to rival Battersea manufacturers. The Japanese spelling may make one incredulous of trusting too implicitly to its merits as a pest-preventer; but when another shop offers Dawson's Boots, with a stamp "Warranted solid leather" on the soles—thus painting the lily—we are repelled from the other direction.

"Black Chinese Tea" is now being prepared for the market in Yedo. "La Ferme" cigarettes (No. 17) are popular, and fairly imitated. Those enclosed are made in Tsukidji—a part of the Empire not yet within the grasp of Russia.

With regard to the late quinine edict, I have heard that it was issued in consequence of the Government being "stuck" with some rubbish at the Custom House, but very prudently did not prohibit its sale by the small fry, till after it had "unloaded" itself. Pity it is that it does not hinder the sale of other poisons. Whatever may be said of the high duties, it is decidedly in their favour that they limit importation to the best articles, though they may encourage smuggling. Better far than the rubbish flooding the capital to-day, genuine articles imported at Mr. Townsend Harris' duty of 35 per cent. To Earl Russell and M. Drouyn de Lhuys are the community indebted for the 5 per cent. *ad val.* tariff, which has given the impetus to the importation of Hongkong concretions,—put up in such ways as to deceive the very elect, and only to be detected on opening. Price cannot be held a guide to quality, as the sacrificed consignments of shippers too eloquently testify.

I have not thought it worth while to forward articles apparently of Hongkong manufacture, but only some *obviously* fabricated in Japan, and as bearing upon the injury suffered by some of your prominent advertisers. If the local presses refused to aid by printing labels, and such as remained unused from those supplied with casks, were sedulously destroyed, in place of being sold, something would be gained. The tide of imitation has, however, only commenced to flow, and it is not until the worthlessness of Osaka-made-sewing-machines, and Yedo-cast printing presses, the danger of Niigata petroleum and the peril at which they consume certain edibles, will be sufficiently manifest to the native mind to hinder it from being penny wise and pound foolish. Greed, and not desire to advance in art, is the main cause of the movement, and none can guess how long these times are likely to last. But surely some restraint can be put on such imitation. If not, its products will soon be exported from Japan to other markets. That want does not lead to the act, is evident from the fact that one of the greatest sinners is the house of Z. P. Maruya & Co.—a firm with ten branches in Tokei, Saikero, Yokohama and Osaka, who thus possesses peculiar facilities for "placing" artistic productions before the public.

SPIRIT OF THE JAPANESE PRESS.

The effects of office.

"A plague of opinion, a man may wear it on both sides like a leather jerkin."

Troilus and Cressida.

"A sentence is but a cherril glove to a good wit: How quickly the wrong side may be turned outward."

Twelfth Night.

(Nichi-Nichi Shimbun.)

It has been well said that the world changes like the opinions of men. Those who so late as yesterday urged that a House of Commons should be instituted, the rights of the people advanced, freedom and liberty granted,—who complained that the Government issued one order in the morning and a contradictory one in the evening, and that men turned their opinions inside out like a leather jerkin, have been reappointed to their old offices. On hearing of these appointments, my heart was filled with joy to think that the oppressions of the past two thousand years were about to cease, and I have been watching for this with eager ears and eyes. But no such notifications have as yet appeared, and the only trifling changes which have occurred are the establishment of the *Genro-in* and *Daishin-in*. But the rights of the people are as yet undeveloped.

I have heard that the editors of the different newspapers were greatly astonished that they were refused permission to attend the debates of the *Chikohokuan Kuaigi*. I infer from these facts that absolutism still remains the characteristic of our Government. Of course such facts may be trifles, but those who have been thus reappointed to office must have strange feelings while they maintain a silence on these proceedings. Whether it was that they wished to vex the Government by talking about a House of Commons and the rights of the people, in order to secure their re-nomination as officials, or that their views had actually changed when they were appointed, I cannot tell. But be the cause the one or the other, or what it may, it is a sad fact that the people were made tools of, and we were very foolish to rejoice at these appointments from which we expected so many advantages. To me, speaking in this manner, such men would probably say, "You are one of the common people, and cannot understand anything about the Government. Before we do anything, we have to consult circumstances and the condition of the mind of the people. The present epoch is called "Daily Reform," so that we can change the edict of yesterday to-day and that of to-day to-morrow." It is a deplorable fact that those who rebuked the Government for the rapid issue of contradictory orders are now the very framers of similar orders, and do not pay the least heed to the remonstrances made on this account by the people. Have not these men very changeable minds? Is it not too hard upon us that we should be governed by such people as these? But as such common people as ourselves cannot understand the hearts of gentlemen, we think it best to keep silence, as we do not know what excellent administration may yet be in store for as. Still, though the present time may be called the period of "Daily Reform," this principle is carried too far. It may be superfluous to say this. But as I am now young and ignorant I shall endeavour with all my might to become more sober when I am a man.

The Proposed Abolition of Torture.

(Akebono Shimbun,)

Above ten men have been brought up before the criminal courts on supicion of being the murderers of the late *Sanghi* Hiroshima, and four of them, unable to endure the severity of the tortures inflicted, confessed to being guilty. But as doubts existed in regard to the truth of their confessions they were re-examined over and over again, and finally it was concluded that they were not guilty of the deed which they had confessed, and they were all liberated on the 13th of July. We have since heard that the Government, persuaded of the evils of torture, have determined to abolish it. This intelligence has caused us both joy and sorrow; joy that torture is to be abolished; sorrow that the murderers of an able and respected official of high rank have not been discovered.

The above matter has now been in suspense some five years. Hands have been spread throughout the empire to arrest the murderer, and any one who was suspected in the slightest degree was brought before the courts and severely examined. But no clear evidence as to the perpetrator of the crime has ever been obtainable, and it cannot be said that it is a happy state of affairs that we should have failed to find who the murderer is.

Some good may arise from the application of torture to a guilty man to make him confess his deeds. Its great evil is that the innocent often make false confessions to avoid the sufferings they are called on to endure. We ourselves have witnessed in a certain *ken* the trial of a man suspected of assassination. The case was that some one had gone into a house and killed the master of it. The local authorities suspected a certain *samurai* to be the criminal, arrested and tried him under severe tortures, when he made a clear confession that he was guilty of the crime, and, as no doubts remained on the mind of the judges, the prisoner's own report and the punishment to be inflicted were made known to the *Shihosho* or Department of Justice. The *Shihosho*, discovering some discrepancies in the report, re-examined him, when the prisoner said that the severity of the tortures to which he had been submitted had compelled him to make a false confession. The officials examined him again and again, but, concluding that he was innocent of the crime, ultimately liberated him.

There are cases in which men prefer to face death rather than torture, and people who are weak are apt to make false confessions before they are even submitted to torture; and again, had no doubts suggested themselves to the Judges from the *samurai's* evidence, he would most probably have lost his life. We observed the countenance of the *samurai* while he was signing the depositions he had made, and an unutterable anguish was expressed upon it. Truly, the evils of torture are dreadful!

We do not mean to say that all cases are like that of this *samurai*; but though there be only one in a thousand, what must be the misery of that one! It is better that one hundred criminals should escape punishment than that one innocent person should be punished.

The Government has expressed the intention to abolish torture. Hitherto it has been considered necessary, and has been resorted to in the various *Saibansho*. But the Government has recognised the evils attending it and purposes its abolition. Should this be so, there will no longer be any danger of innocent people being punished, and this will be a blessing to the people. Had the examinations for the murder of Hiroshima taken place ten years ago, some of the men examined would surely have succumbed to the tortures, while others would have been executed on false confessions. But the present Government did not punish them, although they had made false confessions, but examined them again and again until their innocence was established and they were released, and the determination was arrived at to abolish torture. Is not this a thing to be thankful for?

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Legends.

(Continued.)

About the year A.D. 1153 the *Ten O* Nari-hito (Konoye no In) fell sick, and the doctors could not discover the nature of his malady. Every night at the hour of the bull (*Ushi mitzu*), about 3 o'clock a.m. the *Shiu-jo* (Emperor) was stricken with a horrible nightmare, and not even the numerous female attendants that surrounded him could avert the fearful visitation. At last some of the night-watch noticed a dark cloud over the grove of trees at Sanjo no yama, and it appeared to move towards the *Dairi* (Imperial residence). Presently it rested above the roof of the apartments occupied by the *Shiu-jo*, and above the cloud shone out two fiery orbs. Just then the drums in the surrounding temples sounded the hour *Ushi*.

This being reported to the *Tonoye* (Kugés of the palace) and the *Hokumen no Samurai* (the Imperial guards), a watch was kept and again the same cloud and its bright

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

orbs were seen. The reverend and celebrated priests were then assembled to pray for the restoration of the health of the *Shiu-jo*, and to ward off the evil spirits; but this was of no avail, and as a last resort it was suggested to try if any of the *bushi* could find a remedy, or means to destroy the demon that nightly haunted the Imperial pillow.

Amongst the *Hokumen* (facing the North) was a brave warrior and a celebrated archer, one of the Genji family and a *San-mi* (or I. the third rank) Hiogo no kami Yorimasa, who was chosen to destroy the evil thing that nightly visited the palace.

For three nights he kept watch, and on the next night with one of his most faithful followers, I no Hayata, prepared to destroy the disturber of his Emperor's rest. A powerful bow and a few trusty three-feet shafts, feathered with the plumes of the pheasant, a keen blade in his girdle, and his follower armed with a trusty sword, and they thus awaited the usual time. When the cloud approached within one hundred yards of where they lay concealed, Yorimasa, with steady aim and his full power, bent his bow, and as he delivered the missile, breathed after it a soldier's prayer, *Namu Hachiman Dai-bo-satz*, (I pray to the great Hachiman). The shaft had struck home, for one of the bright orbs was immediately extinguished, and with horrid noises there fell down a huge animal, and *Hayata* bounding upon it held it down while he rapidly drove his sword to the hilt into the beast nine times. The commotion aroused the people of the palace, who bringing lights discovered the dead thing to have a monkey-like head, the body and claws of a tiger, and its tail was a huge venomous serpent. It was taken to Rokujo Kawara (an execution ground) and there burned.

It was called *Nuye*, from its cry resembling that of a bird of this name.

The *Shiu-jo* wishing to reward Yorimasa, gave him a celebrated sword called *Shishi no O* (the king of wild boars). Besides, knowing that he secretly loved Ayame* no Maye† and that the love was returned, he bestowed her on Yorimasa.

The *Kuge* who was appointed *Ben kan*, or Imperial deputy to present the sword to Yorimasa, knowing his reputation as a poet as well as a brave man, both fought him of trying a verse after the *Zo-to* style, and just at the moment a *Hoto togisu* (cuckoo) was heard, giving him the "key note" of his verse, the *kami no ku* of three lines of five seven and five syllables.

Ho-to-to-gi-su
Na-o mo ku-mo i ni
A-yu-ru kana

and immediately Yorimasa answered him with the following *shimo no ku* of two lines of seven syllables each

Yumi ha-ri tsu-ki no
A-ru ni ma-ka-se-te

making the complete *honka* of thirty-one syllables. And his readiness and wit increased his reputation as a scholar and a soldier.

Note the double meaning of the verse, which it is impossible to render into English.

It reads one way.

The hotogisu
Above the clouds
How does it mount.

The waning moon
Sets not at will.

but as it alludes to Yorimasa and his elevation to royal favour, the concealed meaning may be rendered,

Like the cuckoo
So high to soar
How is it so?
Only my bow I bent,
That only sent the shaft.

The play on words in the first portion is only alluding to the soaring of the bird and comparing it to Yorimasa's elevation, the neat comparison and readily improvised verse inciting the native admiration.

In the second portion, the allusion to the bow-like shape of the waning moon and its setting, the play is on the word *tsuki no*, moon or one's own will—on *Yumi hari* to bend a bow—the shape of the waning moon—and *Iru* to (sic)—or to send a shaft.

In the days of the 80th Emperor Nori-hito, known to us by his posthumous title Taka-kura no In,* and about the year A.D. 1180-1, the Heiki being very powerful had excited the enmity and jealousy of the other great families. Yoritomo the head of the Genji or Minamoto† raised his standard in Idzu and met his opponents at Ishibashi yama.‡ He was defeated in this engagement and with only seven followers left, he took to flight and hid himself in a large *yenoki*§.

One of the Heiki leaders named Oba no Kagechika was searching for him and ran his bow through the branches carelessly, left the spot and reported to his comrades that as he had frightened a pair of pigeons from their nest, there surely was no one concealed in the tree.

It appears he knew that Yoritomo was there, but had wit enough to know the power Heiki was on the wane, and it would be better to have a friend in Yoritomo than to deliver him to the Heiki, besides the trouble and danger of attempting to make such a powerful man and valiant warrior prisoner—nor was Oba wrong as events turned out.

Ushi-waka Maru was in Oshiu raising warriors and had adopted the name he is best known by, Yoshi-tsune, and by his young brother's efforts Yoritomo once more had a numerous army at his command.

The *Heiki* pushed north to meet the *Genji*, and the *Heiki* arrived at the banks of the Fujikawa at night. It was covered with waterfowl, and at a late hour the waterfowl being started, rose in one great flock, making considerable noise.

When the drowsy Heiki warriors heard the commotion they were alarmed, thinking that the Genji who were supposed to be yet far away had attacked them, and so complete was the panic and rout that they galloped off on bare-backed horses without armour or weapons. Thus Yoritomo gained a bloodless victory and immense booty, at the time invaluable to his ill-armed troops. Thus it was that ever since the Heiki have been jeered with the saying "that they ran away at the sound of a water hen's wings." Oba was of course, amply rewarded.

These wars are full of incident that is worked up into Japanese history, as is the history of the Stuarts with our own Scottish Highlanders.

In the year A.D. 1185, Nori-yori and Yashi-kune the brothers of Yoritomo and the leaders of the Genji, had defeated the Heiki, who fled to Dan-no-ura in Yashima province of Nagato, taking with them Toki-hito,* the son of the Mikado by the daughter of Kiyomon† the great leader of the Heiki. A great storm coming on hostilities were suspended, and after its becoming calm a large vessel was seen to approach the shore in the neighbourhood of the Genji encampment. It was soon recognized as the royal barge, and a small boat was seen to put off from it containing one of the ladies of the Court; she raised and spread out a gilt fan on which was painted a crimson sun (*hi no maru*) on the split end of a bamboo, and waved towards the shore her own fan, made of thin *hi-no-ki* (*retinospera obtusa*).

Yoshitsune observing this called upon his followers to shoot at it with their longbows, but all declined to attempt the feat; at last Nasu-no-yoichi Munetaka of Shimotzuke, the most celebrated archer of the eight provinces, (*Kwan hatzu shiu*), was charged to support the fame of the Genji in the face of the enemy. Taking but one arrow and mounting his war horse he vowed to succeed or in event of failure to commit suicide (*setzu-puku*,) and then rode out in the shoal water as far as he could towards the

* Ayame, the blossom of the *Calamus Acoradus*, or flowering sweet flag. Female names were usually derived from flowers (see ante-page 82).

† *Maye* is the ancient affix to female names. Hime was only used for the daughters of men of rank.

† In is one of the affixes to the posthumous titles of Japanese of exalted rank, an indirect substitute for a personal pronoun.

‡ Heike and Genji wars of Japan are the great civil wars, so similar to the English wars of the houses of York and Lancaster with their red and white roses.

§ Ishibashi yama. Stone bridge hill.

‖ Yenoki, the celtis Willdenawiana, the "Royal Oak" of Japan.

¶ Yoritomo's younger brother, whom he afterwards compelled to commit suicide, being jealous of him in war and love.

* Tokishito was the 81st Ten-O Antoku Ten-O.

Ogi no mato † (fan target). He then observed the boat to be so unsteady on the water, rising and falling on the waves raised by the late storm, that his heart almost failed him, but closing his eyes he fervently breathed the warrior's prayer ‖ *Namu Hachiman Daibo-satz*, and then opening his eyes saw the boat for a moment steady in the moving billows. He then drew his bow and releasing the shaft saw the fan rise aloft to the skies. A shout of astonishment and admiration arose from the shore and also from the enemy, and all were congratulating and thanking Munetaka, when one captious and jealous man disputed the fact of the fan being struck and accounting for its disappearance by saying that it was profane to shoot at the image of the sun, and the gods had snatched the fan away to protect it from harm. Munetaka then stated that he had aimed at the iron rivet and not at the round sun (*hinomaru*), but this was discredited and set down as a vain boast. Presently a boat approached the shore from the Imperial barge bearing a flag of truce, and the messenger brought back the arrow and the fan, with a complimentary message from the Ten-O. On examination the fan shewed the mark where it had been struck by the arrow, in the metal rivet, as Munetaka had boasted. This clever archer was the ancestor of the family of Satake, princes of Akita in Dewa and the family cognizance is a fan with a round sun.

SIR JOHN LUBBOCK ON BEES AND ANTS.

(The Spectator.)

The Vice-Chancellor of the University of London has just printed another paper in the Journal of the Linnean Society on "Bees, Wasps, and Ants," which contains some further and very interesting experiments on the powers of communication and co-operation displayed by these insects. These new experiments of Sir John Lubbock's confirm in general the former experiments, of which we communicated the results to our readers,—namely, that bees, on the whole, however delicately adapted their instincts may be to their needs, have either very little power now-a-days of communicating with each other, or else are very little inclined to use it,—while some ants, at least, have a great deal of of power of communicating with each other, and appear to use it freely. Sir John Lubbock experimented in this fashion. On October 9, he took a bee out of a particular hive, putting a mark on the bee, and put it to a good stock of honey. This bee worked away at this stock of honey during the six days, October 9-14, visiting it continually, usually at intervals of six or seven minutes, during many hours of each day. But she brought no comrades with her to work at the honey, and most likely sent none. The first visit of the bee each morning was apparently one of inspection only. She did not alight on her first visit, but returned (probably to the hive) for some purpose of her own,—was it perhaps as a matter of business, to give notice of her engagements for the day, and to communicate the intervals at which she might be expected to be entering with loads of honey?—but on every other visit during the day she carried back honey with her. Yet during these six days she appears to have brought no friends, and though one or two strange bees found the honey out, during the six days it seems pretty certain, both by their fewness and from there being no sign of any connection between these arrivals and hers, that they came on the stock of honey by accident, and not through her means. Another bee behaved in the same way during the two days, July 19 and 20, and during those two days not a single other bee visited the honey at which she was sedulously working. So that if any inference be warranted from the procedure of these two individual bees, it is that they either wished to keep their knowledge to themselves, or that they did not possess the means of communicating it to their companions. Now, as the bees gather honey for the hive, and not for their own individual benefit, it seems more likely than not that if they had the intelligence to secure help for their operations, they would do so. But though this is the inference which Sir John Lubbock evidently draws from their preceedure, he gives us the means of showing how very insecure it is. First of all, he exhibits, we must say, some little prejudice against bees and in favour of ants, for while he *killed* the strange bees which found the honey out by accident, in order to test the better whether or not his marked bee would really bring or send comrades, he only *imprisoned* for the afternoon the strange ants which surprised the stock of honey by which he was testing the communicative faculties of his marked ant. This little fact alone betrays, we think, more consideration for the ants than for bees. Besides, Sir John Lubbock gave the ants a great deal more patient investigation than the bees, making many more experiments and observing them much more carefully. However, the result of this careful investigation was no doubt to suggest that if the bees had been tested as elaborately, there might have been, as there certainly was with the ants, a good deal of variety of result. The experiments with the ants were made in this wise. Sir John Lubbock took a piece of cork about eight inches long by four wide, and stuck seventeen pins into it, and on three of these pins he put pieces of card with a little honey. He then put an ant to one of the cards with honey; and he argued that if after its visit many more ants came to the pin which this ant had visited, than to the others, it might be argued that the ant possessed the power of communicating where she had found the honey. And this experiment seemed to show decisively that either she had this power or that in climbing down the pin she left a trace of honey on the pin itself which was not to be found on the other unvisited pins. For during two hours, while twenty-seven ants visited the pins, not counting those brought by the first ant, nineteen went at once up the right pin, and only eight went up other pins. Other experiments of the same kind gave still more decisive results of the same nature; but then, again, certain others gave much less decisive results; and on one occasoin, on the 19th August, an ant worked at some honey for more than three hours, going and returning to it regularly, without either bringing or sending a single comrade. Still more remarkable were some experiments made with some ants' larvæ; every individual ant to which Sir John Lubbock showed a supply of larvæ worked very hard at removing them to the nest, worked all day, and sometimes for more than one day, but not in any case did any ant thus shown larvæ invoke the assistance of any other ant, as was done in all but one of the cases of experiments with the honey. This behaviour of the ants in one case with the honey, and in all the cases with the larvæ, suggests that the bees may not have had a fair trial. Either from the difference of their individual tastes, or perhaps from differences in the circumstances of the ant-hill and external circumstances, the ants behaved in one way at one time and in another at another. It may be that the ant which kept the honey to itself was of a reserved and reticent disposition. It may be, again, that it is thought much more honourable to increase the number of larvæ in the ant hill than to add to the stock of honey, and that this was the reason why the ants told no comrade of the larvæ, and generally told many of the stock of honey. And it may be true, of course, that modern bees have much less power of communicating with each other than modern ants. But unquestionably an arbitrary element is shown to have affected the conduct of the ants, which may very well contain also a sufficient explanation of the two observations made upon the bees

But supposing the inference which Sir John Lubbock probably draws as to the inferior intelligence of the mordern bee, and of the superior intelligence of the modern ant, be true, it would be interesting to know to what unfortunate circumstance in the evolution of apine civilisation, which has not as yet occurred among the ants, this arrested type of life among the former may be due. It is certain that as regards architecture, the apine civilisation has been the more subtle and scientific of the two, and that Mr. Darwin's Melipona bees (with circular cells) are as far behind the modern hive bees (with hexagonal cells) as, amongst men, the eighteenth century was in mechanism behind the early part of the nineteenth. Why with such absolutely highly-developed instincts have the bees allowed their power of communicating with each other to drop so much behind their architonic skill? Can it be that the bee has suffered by the beneficent despotism of man's artificial selection? Sir John quotes from F. Müller a curious instance of the inability of the bees to invent for themselves a natural language:—

"The following fact is mentioned by F. Müller as seeming also to show a limited power of communicating facts on the part of bees:—'Once,' he says, 'I assisted at a curious contest, which took place between the queen and the worker bees in one of my hives, and which throws some light on the intellectual faculties of these animals. A set of forty-seven cells had been filled, eight on a nearly completed comb, thirty-five on the following, and four around the first cell of a new comb. When the queen had laid eggs in all the cells of the two older tombs she went several times round their circumference (as she always does, in order to ascertain whether she has not forgotten any cell), and then proceeded to retreat into the lower part of the breeding-room. But as she had overlooked

† Kiyomori was the man who raised the Heiki to its great power. His daughter was Kô-gô (Consort) of the Ten-O Takakura, and thus the family gained the royal favor.

‡ A common subject for native artists to delineate.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

this part to the queen, pushing her, in an odd manner, with their heads, as they did also other workers they met with. In consequence the queen began again to go around on the two older combs, but as she did not find any cell wanting an egg she tried to descend, but everywhere she was pushed back by the workers This contest lasted for a rather long while, till the queen escaped without having completed her work. Thus the workers know how to advise the queen that something was as yet to be done, but they knew not how to show her *where* it had to be done.' '

Now if it be true that one of the ants who had been gathering honey at the top of a pin met two other ants, crossed antennæ with them, whereupon the two advancing ants ran straight to the top of the right pin, as if they had been told where to go, without being personally guided, it would be almost clear that the ants have advanced much farther in the art of speech, or what is equivalent to speech, than the bees. May not the reason of this be the greater pressure on the resources of the ants due to the wild state in which they live? We may have provided the bees with too safe a type of industrial civilisation,—one that is too well organised, that depends too much on our provision for their habits, and that does not develope in sufficient degree the principle of individualism. What with their industry, economy, and formidable defensive weapon,—the sting,—the comparitively small number of the dangerous enemies of their species, and man's care for their outward habitation, it would seem not improbable that bees have too little stir and interest in their lives to keep up the development of their sagacity. The various tribes of ants go to war with each other, plunder each other systematically, and have altogether a great deal of excitement and active competition to develope them. Some tribes of ants keep cows, and others slaves. Others have blind beetles resident with them,—blind bards perhaps to sing to them. Altogether, the conditions of life amongst the ants are probably much more various than amongst the bees, and hence, though their instincts are not nearly as complete, and there is no beneficent despot like man to watch over them, they are more wide awake than bees and more alive to the meaning of individual emergencies. The bees are perhaps the Chinese of the insect world. They preserve the arts of a very high type of industrial civilization, but have lost the key to those arts. The consequence is that they are as indifferent to death in the pursuit of honey, as the Chinese are in the pursuit of wealth. Does not this, for instance, read rather like the description of the way in which the Chinese will cast away their lives for wealth?—

"Since their extreme eagerness for honey may be attributed rather to their anxiety for the common weal than to their desire for personal gratification, it cannot fairly be imputed as greediness; still the following scene, one which most of us have witnessed, is incompatible surely with much intelligence. 'The sad fate of their unfortunate companions does not in the least deter other who approach the tempting lure from madly alighting on the bodies of the dying and the dead, to share the same miserable end. No one can understand the extent of their infatuation until he has seen a confectioner's shop assailed by myriads of hungry bees. I have seen thousands strained out from the syrup in which they had perished; thousands more alighting even upon the boiling sweets; the floors covered and windows darkened with bees, some crawling, others flying, and others still, so completely besmeared as to be able neither to crawl nor fly—not one in ten able to carry home its ill-gotten spoils, and yet the air filled with new hosts of thoughtless comers.'"

And the evidence as to the way in which bees go to the bad altogether, when they once take to thievish courses, illustrates again the inelastic character of their intelligence, their complete want of power to recover themselves, when once they take a step in the wrong direction:—

"If, however, bees are to be credited with any moral feelings at all, I fear the experience of all bee-keepers shows that they have no conscientious scruples about robbing their weaker brethren. 'If the bees of a strong stock,' says Langstroth, 'once get a taste of forbidden sweets, they will seldom stop until they have tested the strength of every hive.' And again, 'Some bee-keepers question whether a bee that once learns to steal ever returns to honest courses.'"

Evidently the "dangerous classes" among the bees, though small in number,—for they are the most respectable of insects,—are moral incurables. The predatory wasps would probably say of predatory bees, as the Yankee said of 'that heathen Chinese,'—"We are ruined by Chinese [apine] cheap labour." Indeed, if Sir John Lubbock has really done justice to the bee in his experiments, which we somewhat doubt, it seems not improbable that the bee has been prejudiced by human patronage, and by habitual instincts of too perfect a kind, till the stimulus which developes advance was exhausted. 'Better fifty years of ant-hill than a cycle of the hive,' the ant might say. [illegible] mischief of a conventional civilisation out of the st[illegible] of the bee. While the ant runs swiftly down 'the ringing grooves of change,' the bee, conservative of its hexagons and its honey, makes no fresh advance in the telegraphic communications it has established, and so is possibly in danger of sinking into the hindermost ranks of the insect world.

Shipping Intelligence.

ARRIVALS.

Aug. 8, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Aug. 1, Mails and General, to M. B. Co.

Aug. 9, *Meijii Maru*, Japanese steamer, Peters. 1,010, from Otteranai, to Lighthouse Department.

Aug. 11, *Gaelic*, British steamer, Parsell, 2,660, from Hongkong, Aug. 2, Mails and General, to O. & O. Co.

Aug 13, *Costa Rica*, American steamer, Conner. 1,917, from Shanghai and ports, Aug. 5, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Aug. 8, *James Paton*, British barque, Cotter, 395, for Nagasaki, Ballast, despatched by Captain.

Aug 11, *Iris*, German 3-m schooner, Taylor, 258, for Keelung, Ballast, despatched by F. Knobloch.

Aug. 11, *Tanais*, French steamer, Reynier, 1,010, for Hongkong, Mails and General, despatched by M. M. Co.

Aug 14, *Jessie McDonald*, British 3-m. schooner, Stort, 275, for Kobe, General, despatched by Simon, Evers & Co.

PASSENGERS.

Per *Oregonian* for Shanghai and way ports: Mrs. Stevens, Miss Naraye, Madame Mori, Miss Remusat, Messrs G. Roggers, A. H. Groom, Macomber, Carroll, MacBean, L. C. Masfen, Maclagan, Mackenzie, Schepel, Houlden, Anglin, Wienstadt, 28 Japanese in the cabin, and 458 Japanese in steerage.

Per *Tokio Maru* from Shanghai and ports.—Mr. F. Grosser and servant, Mrs Katsura and servant, Messrs. T. Nakakin, Hatsutori and servant, Soga and servant, Mr. and Mrs. Kumano, child and servant, Mrs. Kansho, Messrs. Ise, Kangouchi, Kono, Captain H, Reynell, E. H. Hunter, G. H. Pole, E. D. Segonzac, Hankai and servant, Mamelstein, Furukawa and servant, Takabe, Komatsu, Eki, Osaki, Mr. and Mrs. Kumano and servant, Mr. Tedzuka and servant, Mr. Asagawa, Mr. Yamaguchi, Mr. and Mrs. Sing Kee, 3 children and 2 servants, Messrs. Kobaihashi, Ono, Krowara, Yasui, L. Van der Polder and servant, N. Nordenstadt, Miss Kuikuisan, Mr. and Mrs. Mito, Messrs. Hirage, Joseph M. Collins, Kotokokori, Yashinaga, E. C Kirby, Suguira, Okabe, and 161 Japanese, 4 Chinese and 1 Foreigner in the steerage.

Per *Tanais* for Hongkong.—Messrs. Benjamin and Spinall.

Per *Gaelic* from Hongkong.—Messrs. Rovinshi, Suiéquinese, Sobayashi, Wadell, Lapraik and Wotton.

Per *Costa Rica* from Shanghai.—For Yokohama: Mrs. Paul, Mr. and Mrs. Illies, Messrs. C. Bockman, H. Godmeath, T. A. Waters, and servant, Hubuco and servant, Patmen, U.S.N., J. R. Anglin and servant, J. A. Ailan and servant, Witkouski and servant, Zabel de Zanagraney and servant 46 Japanese in the cabin, and 5 Chinese and 246 Japanese in the steerage.

CARGOES.

Per *Tokio Maru* from Shanghai and ports.—Sugar, 876; H. Wood, 731; Tea, 2,887; Merchandise, 1,700; Donkeys, 27; Cattle 47; Sheep, 30

Per *Tanais* for Hongkong.—					
Silk for Marseilles	...	...	...	...	247 bales.
London	...	...	...	...	60 "

REPORTS.

The *Tokio Maru* reports: left Shanghai July 31st, Nagasaki Augt. 2nd, Shimonosaki August 3rd, and Kobe August 6th at 4 p.m. Arrived August 7th at 12 p.m. From Shanghai to Kobe fine pleasant weather. Kobe to port, strong E.N.E. winds with heavy swell from S.E.

The *Gaelic* reports, a severe typhoon during the passage, commencing on Sunday afternoon with the wind from N.E. It gradually increased in violence till the next evening, being at its height about 4 p.m. on Monday, the Barometer having fallen to 28.10, and the wind veering from N.E. to S. and S.W., the centre of the storm passing the vessel pretty close astern. In the evening about 5 p.m. when off the entrance of Kii channel with a tremendous sea running, while the chief officer Mr. Geo. Ritchie was engaged with some of the crew under the whale's back, a heavy sea broke on board, washing him and a seaman named Patterson overboard, and both were drowned.

The *Gaelic* is sister ship to the *Belgic*.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—There has been an increase in the general demand for these goods, but, notwithstanding this, prices continue to evidence a weak market and in some instances shew even a further decline. We quote as follows:

Grey Shirtings:—			White Shirtings:—		
7 lbs.	38½ yds. 39 in. per pce.	$1.95 to $2.05	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20 to 2.40	
8 lbs.	38½ yds. 44 in. „ nom.	2.20 to 2.40	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75 to 0.97½	
8 lbs. 4 to 8 lbs.	6 „ 39 in. „ „	2.20 to 2.45	Black Velvets	7.75 to 8.75	
9 lbs.	„ 44 in. „	2.52½ to 2.85	English Drills 15 lb. 40 yds, 30 in.	3.25 to 3.35	

Yarn:—

No. 16 to 24	nom. per picul	27.50 to 35.00	No. 28 to 32	nom. per picul	35.00 to 38.25
Reverse	nom.	nominal	„ 38 to 42	„ „	40.00 to 45.00

Woollens are scarcely in a better position to-day than that at the date of our last issue some three weeks since, the Autumn season's business not having yet commenced. A few small sales of *Black Italian Cloth*, also of *Presidents* and *Pilot Cloth* disposed of at public auction, are to be recorded. All other staples continue neglected. Plain *Mousselines* are in fair demand.

Plain Orleans	40—42 yds. 32 in.	6 25 to 7.75	Figured Mousseline de Laine	30 yds. 30 in.	0 25 to 0.28
Figured Orleans	29—30 yds. 31 in.	4 50 to 5.25	Multicolored „	30 yds. 30 in.	0.32 to 0.36
Italian Cloth	30 yds. 32 in.	0 25 to 0.36	Cloth, all wool plain or fancy	48 in. to 52 in.	1.00 to 1.30
Camlet Cords	29—30 yds. 32 in.	6 00 to 7 00	Presidents	54 in. to 56 in.	0.75 to 0.85
Camlets Asstd.	56—58 yds. 31 in.	18 50 to 19.00	Pilots	54 in. to 56 in.	0.45 to 0.55
Lastings Japan	22—30 yds. 32 in.	13.00 to 14 50	Union	54 in. to 56 in.	0.70 to 0.85
Plain Mousseline de Laine	30 yds. 30 in.	0.18 to 0.19½	Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.45 to 0.48

Nominal.

Iron and Metals.—In consequence of the accumulating stocks in hand rates are still further reduced and show a lower tendency. The low rates prevailing have led to transactions in Pig Iron for Export.

Iron flat and round	per picul	$3.50 to $4.00	Iron hoop	per picul	$4.50 to 4.75
„ nail rod assorted	„	3 50 to 4.00	„ pig	„	1.50 to 2.00
„ small size	„	3.80 to 4.20			

Sugar.—The market for Formosa Sugar continues weak and without change. Lower rates are accepted for China descriptions.

Kerosene Oil is difficult of sale at the rate noted.

Sugar:—Formosa in bag	per picul	4.60 to 4.80	China No. 5 Kong-fun	per picul	5.00 to 5.50
in Basket	„	4.50 to 4.60	„ No. 6 E-pak	„	4 40 to 4 80
China No. 1 Ping fah	„	8.10 to 8 20	Swatow	„	3.30 to 3.40
„ No. 2 Ching-pak	„	7.40 to 7 80	Daitong	„	3 30 to 3.90
„ No. 3 Ke-pak	„	6.70 to 7 20	Japan Rice	„	3 25 to 3.30
„ No. 4 Kook-fah	„	5.80 to 6 30	Kerosine Oil	per case	2.65

EXPORTS.

Silk.—Our mail issue dated 12th instant was to the following effect:

"Since the 24th ulto. supplies of new Hanks have come in more freely, but quality and size are such as to give buyers but little satisfaction. If, however, Japanese reports are to be credited regarding the good quality of cocoons in some districts and the increasing number of native filatures, good silk may be expected to turn out in the course of the autumn.

Settlements are 275 bales of old and new Hanks, and 125 of old Oshius, say in all 400 bales, leaving a stock of 250 bales. The shipments of the fortnight are 104 bales, making the total export since 1st July 252 bales against 439 last year for the same period.

Taking into account the difference in the rate of exchange the opening price for Medium No. 2½ Hanks, compared with last season's, shows a decrease of about 25 per cent. $630 was paid last week for a handsome parcel of native filature."

		At Exchange 4s. 1¾ in London.	*At Exchange 5.28 at 6 m.s. in Lyons.*		*At Exchange 4s. 1¾ in London.*	*At Exchange 5.28 at 6 m.s. in Lyons.*
Hanks—				Oshiu—		
Good	No. 2	430 to 440	16s. 4d. to 16s. 8d. frs. 44 to 45	Hamatski	430 to 460	16s. 4d. to 17s. 5d. frs. 44 to 47
Medium	No. 2½	400 to 420	15s. 3d. to 16s. 0d. frs. 41 to 43			
Common	No. 3	370 to 390	14s 3d. to 14s. 11d. frs. 38 to 40			

Since the above was written, arrivals have been 240 bales, and deliveries 190 piculs. $590 is reported to have been paid for new Kakeda best, and $460 for new Hanks Best No. 1 to 2. The French mail of the 11th inst. took 307 bales.

Tea.—Our market has been extremely active at advancing rates since our last mail issue, prices for the grades most in favor, i.e. "Medium" and "Good Medium," shewing a rise of $1.50 to $2.00 per picul. These crasses comprise the bulk of goods offering, fine Teas being rather limited in quantity at present and higher grades very scarce.

Settlements for this port and Kobe are on a scale hitherto unprecedented, being 77,000 piculs for Yokohama, and 31,000 piculs, according to last advices, from Kobe, for the current season to date; being equivalent, deducting 10 per cent loss in firing, to about thirteen millions pounds of fired leaf. We may the refore reckon on our past season's export being fully equalled, and if business with the States continues on the same basis we see every reason to think that an export from all Japan of at least twenty-five million pounds will be arrived at.

To-day's prices close firm as under:

Common		20.00 to 23 00	Fine		35.00 to 38.00
Good Common		24.00 to 27 00	Finest		$39.00 to 43 00
Medium		28 00 to 30.00	Choice		$45.00 to 50.00
Good Medium		31.00 to 34.00			[scarce and almost nominal.

Arrivals within the last two or three days have been interrupted by the state of the weather, but the stocks to hand are ample.

EXCHANGE AND BULLION.

Exchange.—There has been a fair business doing during the past fortnight in Private Paper, but the demand for Bank Bills has been small although rates have considerably advanced.

Gold Yen are slightly weaker with little doing.

Rates close as follows:—

On London, Bank, 6 Months' sight		4s. 1½d.	On Hongkong Bank Bills on demand		par.
„ „ Bank Bills on demand		4s. 0½d.	„ „ Private Bills 10 ds. sight		¼ per cent. dist.
„ „ Private, 6 months		4s. 1⅜d. to ⅞	„ San Francisco Bank Bills on demand		98½
„ Paris, Bank Bills 6 months		5 20	30 days' sight Private		101
„ „ Private		5 28 to 29	„ New York Bank Bills on demand		98
„ Shanghai Bank Bills	On demand	72⅝	30 days' sight		101
„ „	Sight	73	Gold Yen		405
			Kinsatz		406½

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d, 10d., 1s., 1s., 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d., and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The week has been a quiet but very hot one, though the air after sundown is becoming perceptibly cooler. The Press prosecutions continue, but we observe that two of the Editors have been discharged for want of a case, which leads to the belief that the Government has recommended as lenient an interpretation of the laws as is compatible with the small amount of discretionary power placed in the hands of the native magistrates. We have shewn elsewhere what seems to us now the obvious duty of the Press, and we hope it will pay attention, from motives of an unselfish patriotism, to the moderate views which we are quite certain we shall see urged in the best class of papers in the East and in Europe on the whole subject. To those of a different stamp it need pay no attention, except in as far as they afford warnings and examples of the evils which attend institutions of the highest value to free nations. There is perhaps no institution of such magnitude and importance as the Press which combines so many disadvantages with the benefits it confers. If you could ensure that there would be no mischievous and bad newspapers, there would be no problem to solve. The difficulty consists in this, that with a free Press you may have as many or more of these as of good newspapers, and while the one do nothing but good, the other do nothing but harm. England is, so far, the only country where the problem has been satisfactorily solved, and to argue from what must be admitted as an exceptional case would be folly in a statesman. When the Emperor Alexander of Russia came to England he was so delighted with the working of our constitutional system, that after having attended a debate in the House of Commons he said, "I must have an Opposition, too." But this institution has not yet made its appearance in the Czar's dominions.

In our last issue we expressed some curiosity regarding the view likely to be taken elsewhere of the new Press-laws, and, as any comments of value upon these reach us, we shall lay them before our readers, whether in harmony with our own conclusions or otherwise. The native papers have shewn so much good sense and good feeling under the restraint of these laws, that we are sure we may call on them to read attentively such remarks upon the question at issue as reflect intelligent opinion expressed elsewhere.

The following are the views on the subject, of the *China Mail*, a paper which has for many years, we might say, ever since its foundation, been in very able hands:—

Both the Japanese themselves and a large number of, we venture to think, injudicious friends are clamouring about the recent press regulations published by the native Government. People seem to forget that our own much-cherished institution has been established by slow degrees, and that what may be eminently suitable for us may be by no means the best thing for the Japanese, or for any other people but just emancipated from centuries of slavish subjection to superiors. We willingly grant the undoubted ability shewn by the people of Japan in adapting themselves to new circumstances, but are not so sure that a press without supervision would at once contribute to their happiness. As a matter of fact, moreover, the new regulations seem to be not more stringent than those which obtain in many European states, while practically the advantage is likely to lie with the Japanese. It seems at all events rather unreasonable to abuse the Mikado's Government for refusing to grant whatever such enlightened countries as France and Germany are unable to concede to their publicists. That in Great Britain and America the press enjoys an unusual amount of freedom is true, but it does not follow that it would be politic or even safe to grant similar concessions everywhere else. One reason is that the Anglo-Saxon races are less easily roused to excesses by written declamation than either romance or Asiatic nations. Many reasons might in fact be given, but we only write in stay of judgment as to Japan upon a matter regarding which European Governments are as yet by no means unanimous.

ON the 20th February last we drew attention to the fact that there was a Chinese gambling house in this settlement, where several well-to-do Chinese had been ruined, (among whom the compradore of the Deutsche Bank was one, besides others we could name,) and the suppression of which was a matter of importance to all who have Chinese employés. Our note had the effect of closing the house, and it has remained closed until within the last few days. It has now been opened at No. 71 again by the former proprietor whose name is Chan Kee, and we call the attention of the authorities to the fact before any more of the Chinese or their own people are ruined there. There is also a Chinese lottery kept at No. 135, which is largely frequented by all classes of Chinese and Japanese as well. It is sure to be a fruitful cause of robbery, and should be immediately suppressed. The police have made many arrests of the humbler frequenters of it, but none of *habitués* of more ample circumstances, and this suggests that the police or officials are bribed by the proprietor. The attention of the highest authorities is called to this.

Why is there no horse-pond here—that summary execution-ground of the casual scoundrel? One of the local papers reports that two persons, on Wednesday evening last, met a gentleman accompanying a lady in a *jinrikisha*. One of the two said to the other, "I guess I'll kiss her," and, the wager being accepted, made an attempt to do so. The husband hit the ruffian over the head with his cane, a course which his companion so far resented as to attack the avenger, giving him two black eyes. When natural justice is offended in this manner, the horse-pond is the true corrective, and it is a thousand pities we have not the institution: or could not tar and feathers be kept at hand for the punishment of this kind of thing?

We are glad to hear on unquestionable authority that these two persons were evidently not coming from the Promenade Concert, with which the incident has erroneously been identified, and it to be hoped that the prejudicial effect on the concerts which might have been produced by any such association, will be removed by this statement. But the Japanese set us an example even in these matters we might do well to follow. At the show of fireworks on the Sumida gawa the other night, there was as perfect an exhibition of order, good behaviour, good temper, sobriety and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

urbanity as could distinguish the most polite people in the world. It is at the open ports alone in this Empire that full-blown blackguardism is to be witnessed. These things make one despair, damp half the desire to extend the relations between ourselves and the Japanese, take from us weapons we would gladly use for this purpose, and inflict on our pride as representatives of another civilization cruel wounds which incidents of this kind keep perpetually open.

The Chinese have just overdone it, as the Tientsin correspondent of the *N.-C. Daily News* shows in a paragraph which will be found elsewhere. Li Hung-chang could not deny himself the luxury of trying to keep the British Minister waiting at his gate, and Mr. Wade paid him out handsomely. Never was there a race so clever and yet so foolish at the same time as these Chinese. The spirit which the Viceroy of Chili showed on this occasion pervades their whole foreign policy. And what a miserable failure they have made in Formosa! as another paragraph on this subject shows. Pretension, insolence and chicanery seem to unite in them with a minimum of the qualities which make nations respected or respectable. It is very amusing to see the measure which the minor newspapers in the East take of Mr. Wade. The writers seem to think that because he knows more about the Chinese than any living foreigner, he is specially disqualified from dealing with them, and yet when any emergency arises Mr. Wade invariably leaves a mark behind him which is indelible. As for a war with China every ten years, England will not hear of it; but if she should unhappily be forced into any course of the kind now, the chances are that the weakness of her home policy on the China question—for this is the real cause of errors which are laid at Mr. Wade's door—will induce her to leave her Minister at Pekin a larger scope of action than he has had for some years. England's dread of the worry, the expense and scandal of a China war make her think that it can be avoided by what is called a conciliatory policy at Peking. The Chinese heap every possible insult upon us in consequence, and some slight occurrence produces the very evil which so much pains have been taken to avert.

A correspondent sends us the following:—

Left Hakone, 16, Aug. 5.35 a.m. crossing the lake in one and a quarter hour. Arrived at top of zigzag at 7.45, and had a beautiful view of the mountain and plain intervening;—reached Gotemba at 9.33 and breakfasted; started again 11.11 arriving at Shubashiri 0.56 p.m. Remained for luncheon until 2.27, and reached the actual foot of the mountain at 3.40. A detention of 39 minutes took place here, pack-horses and *kagos* not being able to proceed further, and we waited for our baggage to come up. The place is called Umagaishi. Reached the huts where we had determined to rest for the night at 5.22, Chiujikyba, this was about one *cho* from the temple where the *alpenstocks* are to be had. The next morning started at 4 a.m. and arrived at ... . 4th Hut 5.26 a.m.

	5th	,,	6.02 ,,
	6th	,,	6.35 ,,
Here we breakfasted and remained 50 minutes	7th	,,	7.45 ,,
	8th	,,	8.30 ,,
	9th	,,	9.16 ,,
	Summit		9.50 ,,

The actual walking time occupied in the ascent being 7 hour 16 minutes, reckoning from Shubashiri. The run down again was made in 3 hours 26 minutes: leaving the top at 5 minutes past 12 and stopping at Chujikiyba 43 minutes for tiffin we arrived at Shubashiri at 4.14. The town and tea-houses here, however, did not impress us very favourably and our previous night on the mountain having been a sleepless one, we pushed on to Gotemba, having determined to stay at the tea house there recommended in the *Japan Weekly Mail* of August 7, and which we found to be a most clean and comfortable one. We left Gotemba the following morning at 6.46 and arrived at Hakoné lake in 3 hours and 5 minutes: the total time on our feet during the whole journey having been 10 hours 43 minutes.

A good night's sleep being almost indispensable before ascending the mountain, it is doubtful if the plan we adopted of remaining at Chujikyba is a good one, and I think that a preferable mode to be adopted for the journey from Hakone would be to sleep the first night at Gotemba and the second on the top of the mountain, whence Hakone could be reached again in about 10 hours. The thermometer during the night is, about this time of the year, at freezing point on the top of the mountain, and care would have to be taken to provide against the cold, but the huts there are the best all the way after leaving Shubashiri. The programme would then be—leave Hakone in the afternoon, remaining at Gotemba the first night—thence to the summit, about twelve hours including stoppages for rest and meals, returning on the third day the whole distance. Too great importance cannot be attached to the kind of *boots* to be worn for such a trip—they should be light, but strong and easy fitting and should cover the ancles; long boots or shoes being both unsuitable, the one especially for going up, the other particularly for coming down.

As regards the programme he recommends, much must depend on whether the tourist intends to walk from the head of the Hakone lake to Shubashiri or to take a *kago*. If the former, he will find that by the time he has arrived there, he will be far more inclined to rest than begin the ascent of the mountain that evening. If the latter, he can make a good push for one of the rest-houses the same night. But of course the object should be to get to the summit as early in the day as is compatible with a start after early breakfast. Inclusive of stoppages, few will do it under nine hours, so that a start at 6 a.m. should ensure the victory of the summit by 3 p.m. Then there are several hours of day-light during which it is hard if some glimpses are not caught of the surrounding country, while, if the sky be clear overhead, the cloud effects below are indescribably fine. In such weather the sunset may be awaited with confidence, (though its glories are by no means certain) and the sunrise next morning as well, after which Hakone may easily be reached the same day. Our correspondent adds a caution about boots which (as we gave it him), we entirely confirm. A man who goes up Fusiyama in shoes, long boots, or shooting boots has yet to learn the rudiments of mountaineering with judgment. A pair of easy every day walking boots, such as Englishmen wear, (not such as the French or Americans wear) are the only suitable protection for the feet. You want no heavy nailed boots as you do among the glaciers of the Alps, and the weight of these on a long ascent tells much against you. For the descent a broader soled boot would undoubtedly be better, because the ashes and scoriæ are extremely loose. But an every day boot does perfectly well, and you must choose according to the obvious balance of advantages. We recommend no one who comes to Japan to leave it without making the ascent, and ladies—if really good walkers, as nine English women out of ten are—may do it just as well as men.

The *Nichi Nichi Shimbun* has a good article on the *Genroin*, which proves, if proof were wanted, that it is easier to bring a body of officials together than to get them to do any practical work. "A man may take his horse to water, but he cannot make him drink unless he list." Here is the difficulty of creating full-grown institutions. We are almost tempted to say, better a good intelligent absolutism than a constitutionalism which is not the result of spontaneous growth. But we must wait and hope. The stroke of wit at the end of the article is capital.

Among the smaller, but still curious and interesting evidences of the desire of the Japanese to acquire European languages, is the fact that the Roman letters, small and capitals, and the Arabic numerals, are to be found worked up ingeniously as patterns stamped upon the common cotton stuff used by the peasantry for their dresses. The effect is curious, but the combinations are so cleverly made that it is not nearly so bad as would be imagined.

There are a thousand good things in the Greville Memoirs, of which the following is one.—"Miraflores" (the Spanish Ambassador at the Court of St. James's) paid a droll compliment to Madame de Lieven the other night. She was pointing out the various beauties at some ball, and among others Lady Seymour, and asked him if he did not admire her. He said 'Elle est trop jeune, trop fraiche,' and then, with a tender look and squeezing her hand, 'J'aime les femmes un peu passées.'" This is irresistible.

From the "Japan Mail Daily Advertiser."

It is generally understood that Mr. Wade had returned to Pekin to lay before the Cabinet the *ultimatum* of England necessitated by the murder of Mr. Margary. Report says that twenty-four hours were to be allowed to the Cabinet to decide on the acceptance or rejection of the English terms.

Nine students are to be sent by the government to America two to France and two to Germany.

The *North-China Daily News* reports that the representations made to the native authorities had so far prevented any repetition of the passage of troops through the foreign settlement at Shanghai.

THE *Hioron Shimbun* announces that a school has been opened at Tsugaru in the Awomori Ken, and that about ten converts to Christianity have been made by some missionaries who visited the place.

The *Choya Shimbun* reports a great fire at Nanokamachi in the Wakamoto ken, which destroyed about 200 houses.

The *Akebono Shimbun* reports great successes in the herring fishery at Tzugaru, where the value of the take is estimated at 80,000 *yen*.

The *Nisshin Shinjishi* reports the return yesterday of Kuroda, Governor-General of Yezo.

The *Choya Shimbun* reports that its editor Narushima had been ordered to appear before the police on the 15th inst.

The case of Oki, Acting-Editor of the *Hochi Shimbun*, came on at the Saibansho at Tokio on the 14th instant, with what result the journal which reports the circumstance does not state.

An incident which is calculated to bring all the questions relating to foreign travel in the interior under discussion, and to warn the Japanese authorities of the extreme impolicy of taking narrow views of the whole question, occurred on Saturday last.

It would appear that the Honourable Mr. Richardson, Judge of the United States Court of Claims, and Commander Lewis, U. S. N., left Yokohama last week, purposing to visit Hatchoji and return by way of Miagase. They were furnished with passes from the United States Legation. At Hatchoji they were informed that they had no right to visit that town, and the exhibition of their passes and plan of their intended route did not serve to convince the local authority before whom they were brought, of his error in denying them access to the place. Permission was also refused them to proceed to Miagase or Tanna, and they were informed that they must return to Yokohama. A policeman was put on watch over them during the night, and they were escorted back on the following morning to Yokohama, where they were taken to the police head quarters and had to give security for their future appearance.

So far as the case appears *prima facie*, the whole proceeding of the Japanese authorities has been as unwarrantable as it is clearly illiberal and unwise, and we trust that the steps taken in the matter by the U. S. Minister will not only have the effect of redressing the wrong done to the gentlemen who were the victims of this stupid piece of interference, but will convince the Government of the impolicy of that jealousy in regard to the interior which is as much opposed to the interests, as it is unquestionably to the wishes, of its subjects. Putting all questions of politeness aside, recent experience of travel, which, though limited, were sufficient for the purpose, have convinced us that there is a strong desire among the people in the country that foreigners should come freely among them. At present the mutual advantages which would arise from this course are denied by a policy which bears fruits such as that which the above incident illustrates.

The first reports of the affray between the Italian sailors and the police gave it a more serious complexion than it wears on closer investigation. One of the sailors has several bruises, some of them severe; another has some bruises and two wounds on the head; the third several bruises and three wounds on the head, but which should be healed in less than a week. The men did not carry long knives, which are against the regulations of the service; two of the men carried small pocket knives, one of which was old and pointless.

As regards the police, the medical evidence shows that one has a bruise on the shoulder, and the others wounds on the head and arms produced by these small knives, but of easy cure. The above particulars are those of the official report.

A letter which reached town yesterday from Captain Cotter of the *James Paton* reports that she went ashore at night in the gale of the 10th inst. All her sails were torn away, the cables had parted, the rudder was broken, and she now lies nearly high and dry. The hands were hauled through the surf. Captain Cotter is engaged in saving all he can from the wreck.

The Japanese man-of-war *Nishikan* left the harbour on the 16th inst, under salutes from the Russian corvettes *Vsadnick* and *Abreck*, which she returned.

Some Chinese opium-smokers have been apprehended by the police, who were violently assaulted in the discharge of this duty. They will hardly meet with much consideration at the hands of the Japanese authorities.

An Englishman, mate of the Japanese steamer *Tsuru*, was stopped at Ashinoyu on Saturday last, and sent back to Yokohama. He had no pass, and the right he imagined himself to possess of unrestricted access to the interior because he was "in Japanese employ," was, naturally enough, not regarded with any large respect.

The first of a second series of Promenade Concerts in the Bluff Gardens is announced for to-morrow, when we trust that a good attendance will reward the exertions of those who have been prominent in getting up and sustaining these popular entertainments.

The asserted discovery of a mountain in New Guinea 32,786 feet in height, by Captain Lawson, who gives a sensational account of his experiences upon it, is not likely to meet with much credence until established on far better evidence than that at present adduced on its behalf.

We reported some days back that a Japanese newspaper stated that the flood caused by the rains of the 10th and 11th instant, had carried away the staging of the Rokugo Bridge at Kawasaki. There was, however, no staging there at the time of the last floods, nor has there been any for the last six months, and the bridge is not undergoing repair. So that the Japanese newspaper has had its whole wicket carried utterly away!

The P. & O. S. S. *Sunda*, with the English mails of 9th July, left Hongkong on the 16th inst, at noon.

The Promenade Concert at the Bluff Gardens on the evening of the 19th was very fully attended, and the performances of music were of a very pleasing character.

Albert Casseau, a Frenchman, has been found guilty of swindling in connection with a lottery being got up at the Hotel de L'Univers, and has been sentenced to two years' imprisonment by his Consul. He will be sent to France by the next mail steamer to undergo his punishment.

A large kite manufactory in Yedo, says the *Nisshin Shinjishi*, has received an order from a foreign house for 70,000 kites.

The *Hochi Shimbun* says that Kioto has suffered severely from the floods, caused by the late rains. Rice had risen 10 per cent.

The *Nichi Nichi Shimbun* says that at Yasshu many rivers have overflowed their banks, the bridges are carried away, navigation was impossible, and the surrounding country in a terrible state.

The *Hochi Shimbun* reports that Kuroda is to be sent up to take formal possession of the Kurile Islands.

Oka, the Assistant-Editor of the *Hochi Shimbun*, was summoned on the 18th inst, to receive judgment.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Government has paid the priests of the Honganji temple 500 *yen* for permitting it to be used as the hall of assembly for the *Chikuhokuan Kuaigi*.

A subscription list has been opened at the French Consulate for the relief of the sufferers by the late inundations in France, and we trust it will be generously filled up. The sum remitted from Yokohama in aid of the wives and families of the French soldiers who fell in the last war, was very large, relatively to the resources of the place. Times are not so prosperous now, but distress such as that reported from France constitutes an unusual claim.

THE *Akebono Shimbun* says that there are 800 Ainos living in the Island of Saghalien who are anxious to leave it for Yezo now that Saghalien has been ceded to Russia.

THE case brought against Kurimoto, the Editor of the *Hochi Shimbun*, of violating the Press-laws, has broken down, and he has been released from custody.

THE *Nichi Nichi Shimbun* announces that as Mr. Kishida, the Editor, has no desire to be a martyr, and dislikes being fined and imprisoned, he intends retiring to humbler occupations on the staff, and another Editor has been appointed.

THE Editors of the *Hioron* and *Hochi Shimbun*, summoned upon the charge of having violated the Press-laws, have been acquitted.

We regret to see the death announced in the *North-China Daily News* of Mr. J. A. T. Meadows, formerly in the British Consular Service, and well known to all old residents in China.

The *Rising Sun* devotes an article to the "Brutal treatment of sailors ashore." It appears that some men of the *Kearsage* had broken their leave, and the U. S. Deputy-Marshal, assisted by twenty or thirty Japanese coolies armed with bamboos, was sent after them. They were taken, some after many blows and much brutality, and, with their hands tied, were sent off to the ship. The journal rightly points out that to employ Japanese coolies on such work is likely to excite a spirit of retaliation among the men and lead to a conflict between the sailors and the natives. Why cannot a boat's crew be sent for them?

As many as 65 houses in Tokio were entered by robbers on the 18th inst.—*Akebono Shimbun.*

The northern provinces have been visited with unusually heavy rains. The southern provinces are suffering from excessive drought.—*Eiri Shimbun.*

THE *Choya Shimbun* states that its editor was examined yesterday regarding an article on the Japanese (Press-)laws published on the 15th inst.

THE *Hochi Shimbun* says that the price of Sugar has risen in Tokio in consequence of the wreck of a Sugar-laden ship on her way from China.

TIENTSIN.

Falstaff was nearly right when he said there was nothing so easy as lying. At any rate nothing seems so difficult as to know just what the truth is, especially when it relates to official or public business in China. In my letter of the 4th inst., I stated that their Excellencies Mr. Wade, Her Britannic Majesty's Minister, and Li Hung-chang had had a long conference on public affairs, at the Viceroy's yamên on the 3rd instant.

The truth of history requires me to modify that statement in a most important particular. As a truthful correspondent I feel bound to make the correction, and forever make my peace thereby with the Muse of History and the readers of the *Daily News*.

It is true that Mr. Wade *did* visit the yamên of the Governor-General at Tientsin on the 3rd instant, at the hour of 10 o'clock a.m.; but it has just come out that the long, confidential conference, which was reported to have followed, was summarily postponed by an unhappy circumstance, which it now my business to relate.

Every resident in China is familiar with the peculiar way Chinese officials have of receiving foreigners, by keeping them in waiting for an indefinite time in front of the great central door of the yamên, before permitting them to come into their presence, in the Hall of Audience.

Of all the numberless devices to which the cunning Mandarins have resorted to gratify their ancient pride, there is not a happier one than this. The very idea of keeping an official,—especially if he is a "Barbarian" as well,—waiting before the yamên door, is pleasing beyond degree. And like all other earthly pleasures, the longer it can be spun out, the better it is.

It is hardly to be expected that Li Hung-chang despises these vanities. Indeed it is said of him that he is exceedingly partial to these sweets—that the attentions of Foreign Ministers and other high dignitaries are his great delight, and that nothing cuts him so deeply as to be passed by unnoticed.

Chinese officials, by long experience and shrewd observation, have learned just about what length of time a Foreign Minister will *wait* for an interview, and they generally give the full measure of it. But once in a while they make a mistake and overdo the thing. And that is exactly what Li did with Mr. Wade on the 3rd instant.

Mr. Wade, accompanied by Mr. Mayers, left the British Concession in their chairs a little before 9 o'clock in the forenoon of the day in question, and in the due time they appeared before the Viceroy's door. The visit had been arranged the day before, and a messanger had gone ahead to notify their coming, as is usual in such cases.

When they reached the Viceroy's Yamên, they found the great door shut. How long the party waited in that hot broiling sun, no one seems to know. Quite long enough it seems, to wear out Mr. Wade's patience. Without further ado, therefore, he turned himself about, and leaving a verbal message that he had made his visit, proceeded homeward straightway.

He had not gone far, however, when he was overtaken by the Viceroy's runners, who begged of him to return. "I have made my visit, and now I am going home; give my compliments to the Viceroy, and tell him I am sorry he could not see me when I called upon him"—said Mr. Wade, as he passed on.

The consternation which the incident caused amongst the inmates of yamên, including the Viceroy himself, can be better imagined than described. There was gnashing of teeth and general confusion. Some explanation was necessary on the part of the Viceroy. With the single exception of the case of Sir Rutherford Alcock, with the Viceroy at Nanking, a similar case has never before happened, in the intercourse between Foreign Ministers and high Chinese officials. In this instance, to, there was no plausible excuse for Li. He knew the day before that Mr. Wade was coming. The hour of the conference had been fixed. What excuse could he make for thus detaining Her Majesty's Minister at his very door?

It is to be hoped that his apology,—which I am assured he did make,—was sufficient. The unfortunate *weiyuens* whose business it is to record visits and attend the opening of this great central door-way of the Ticeroy's yamen, have been made the victims. They have been degraded and dismissed from their office, for *not announcing* Mr. Wade's visit. A poor excuse is better than none. The Viceroy has done the best thing possible under the circumstances. But it must be confessed that, after all, there is little to be said for him.

Mr. Wade's action appears to have been most dignified and becoming, and he deserves well for his praiseworthy conduct in this matter. Let us hope that the lesson which he has thus taught the Viceroy, will have a wholesome effect.

The ratifications of the Treaty between China and Peru were exchanged to-day in Tientsin, between their Excellencies J. Frederico Elmore, Peruvian Minister, and Ting, late Footai of Kiangsu. I hope to be able to give you particulars of it at no distant day.

August 7th.

THE DUTY OF THE NATIVE PRESS.

WE heartily sympathize with many of the public writers who are at this moment suffering under the recently issued Press-laws, nor shall we deny that their case is a hard one. They have drunk for some months the unaccustomed and delicious cup of freedom, and it is suddenly snatched from their lips. They know that there are regions of the world where it has become the right and prerogative of all men; that the temperance with which it is there enjoyed makes it a source of life and health and power; and they think it hard that so delicious and invigorating a draught should be denied to themselves. They do not know, however, that this magic cup is only wholesome for those for whom it is wholesome, that ages of experience have been required to qualify men for moderation in its use, while its intoxicating power has often been the destruction of those who, unaccustomed to, have partaken too freely of it. They do not know, perhaps, that the freedom of which they have tasted, which has been partly taken from them, and which they seek to regain, is the last prize of a race which has struggled and fought and died for it during centuries; that many of the most advanced nations of the world have not yet succeeded in grasping it; and that any attempt to lay the foundations of popular rights upon it is visionary, impossible, and might be fatal to order itself. Many of these writers are doubtless animated by sincere and patriotic motives. Many of them have shown ability and moderation, as they now exhibit courage, calmness and patience. For them, such a code may be unnecessary, and they may feel themselves aggrieved by its apparent harshness. But we would repeat for them the words we lately quoted on the subject from the works of a great philosophical statesman:—"It is better that the whole" (*i. e.* the ends of government) "should be imperfectly and anomalously answered, than that, while *some parts* are provided for with great exactness, others might be neglected, or *perhaps materially injured*, by the over-care of a favourite member." The "over-care of a favourite member" in this case would be the granting to the Press of an unlimited freedom wholly unknown to the other parts of the national polity; not enjoyed by many of the most advanced nations in the world; and enjoyed only in its entirety by two, in spite of large concomitant disadvantages, which, certainly in one of the two cases, are enormous, frightful and revolting. To put the case in a nutshell, Do the Japanese think that what cannot be conceded to Germany, the land of LUTHER, or to France, the land of MONTESQUIEU, can be conceded to Japan, a country which has not even the germs of a consititution, and the form of government of which is one of the most absolute on the face of the earth?

What then is the clear duty of the Native Press at this moment? It is, first and foremost, to obey and conform to these laws, which are in no way more stringent or repressive than those under which the Press of France and Germany works. Second, it is to improve the quality of its work by bestowing on it more serious effort and labour, and trying to infuse into the minds of the people the rudiments at least of political knowledge, under which their views may gradually expand, in order that they may be eventually fitted for taking a larger part in the management of the national affairs. There is still left to the Press considerable room for discussion, in which it can move easily if it will control its movements by good sense and good feeling, and we have not the slightest sympathy with those writers whose license has afforded the Government a warning of the mischief which would be done here were the Press liberated from all control. But the Government, quite rightly, refuses to allow an engine to be kept in motion which would soon, we repeat it most advisedly, make all government impossible; and if the absolutism of its act somewhat shocks our constitutional notions, we must remember that this country is absolutely governed. The Press has yet large powers, the proper and reasonable exercise of which may enable it to do a great deal of good, and its present attitude of suffering arises in some measure from the want of a sensible view of the real boundaries which have been laid down for it. This attitude in no sense convinces us that it admits of entire justification. To our mind, it rather implies an entire ignorance of the relations of such a force as the Press to governments constructed like that of this country, and, if so, it is an actual argument for these Press-laws. We observe that one of the writers, a translation of whose article will be found elsewhere, complains that the memorial of the collective editors, requesting a clear definition of certain clauses in the laws the meaning and extent of which are doubtful, has not been replied to by the Government, and he justly complains of a delay which exposes them all to anxieties and even dangers. This is to regretted, and should at once be terminated. But when they have got their answer, let them set about the survey of their estate, see what productions of value to the commonwealth it can be made to produce, clean and clear it from the rubbish of which there has been too much, and fortify themselves to maintain such rights as they have in it. By doing this they will show a true patriotism and good sense; they will justify the good opinion they have earned during this period of trouble; and will prepare themselves to support their claim to an extension of those rights, besides earning the gratitude of a people who will then more firmly back the claim to such an extension.

THE OPIUM DEBATE.

IN writing of the Opium Trade we have always said that the conscience of England had never been touched on the question; and it has never been touched because the national mind is not informed as to the facts of the case. For the accusations of enemies or rivals England does not care one jot, and will no more give up the opium trade because America or the Continent casts it in her teeth, than she would give up Gibraltar for the same reasons. This is not the result of indifference to her character; far from it. It arises from a firm conviction that she knows right from wrong as well as any one can tell her; that she looks upon moral lectures from other nations as impertinencies; and that having considered the whole question in a fair and practical manner, she is perfectly right in keeping a trade in her hands which is of great value to her, and which, though attended with certain evils, is only incidentally and not necessarily so. Her conscience is clear in the matter; and it is a good conscience, whatever her enemies may say to the contrary. She feels on the subject as a proud, self-reliant man does against whom false accusations are made. They neither irritate nor influence him. He goes on in his accustomed manner, turning neither to the right nor the left, and still less heeding the pack at his heels.

The mind of the English people, too, is singularly unimaginative, extremely practical and impatient of what it considers sentimentalism. It is, generally speaking, warmed only with great difficulty into enthusiasm, and though capable of making itself up to great sacrifices in the clear path of duty, it is little moved by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

abstract resolutions in favour of unproved conclusions. As soon as WILBERFORCE, CLARKSON and BUXTON had convinced England that the slave trade was an enormous evil in which she was personally concerned, she paid her twenty millions sterling as compensation to her slave-holding subjects, ruined her West Indian colonies, and has laboured in the abolition of the slave trade ever since, at a cost, and with a sincerity and tenacity of purpose, of which it would savour something of national vanity to speak in just terms. But this step was due to the unwearied exertions and agitation during many years of the men whose names we have mentioned, and England will never move on the question of the opium trade until similar means have been taken to inform her mind upon the facts of the case.

Those who voted against Mr. STEWART's motion conceded that opium was sometimes smoked to excess, but they pleaded that the Chinese smoke opium as other men smoke tobacco, or as others again take beer or whisky or brandy. They plead that the Chinaman of Singapore who smokes opium is worth three of the Malay who chews betel-nut, and we do not doubt that, for some time, he is so. But we say that it is ten chances to one that the man who takes to smoking opium will ruin himself physically and morally by it, and that the man who chews betel-nut, smokes tobacco or drinks beer—we do not say spirits—is in no such danger. You see the man at work, and think that because he does it well the opium does him no harm. But follow him up. See what he is a year afterwards, and a year after that; and *where* he is a year again after that. If not in his grave, he is, in nine cases out of ten, a lost and ruined man, with physical and moral power gone, and the victim of a craving, from which, if unsatisfied, he dies. This is the trouble,—this the difference between opium and other stimulants. Then Lord G. HAMILTON calmly says that "honourable members who have lived in our own fens must be aware there is a large consumption of opium and landanum in that part of England." If China were one vast fen there might be some logic in his Lordship's remark. But opium is for the most part a source of death in China, not of life; of waste, not of reparation; of loss, not of gain of force. Look at an opium smoker of five-and-thirty, when other men are in the prime of physical and mental vigour. Sallow, emaciated and vigourless, it is only by a resort to his opium pipe that he can get through his work. We particularly wish not to overstate the case. Had this never been done, we might now be in a train to deal as a nation with this enormous evil. All the mischief has been done by the well-meaning men who could only see one side of the question, and could not see this straight; who talk about England forcing opium upon the Chinese, as though they did not want it; as having introduced the trade into China, which is historically false; and as being now engaged in smuggling it, which is equally false. As far as the introduction of opium into China goes, the English had nothing to do with this. It was introduced into, if not grown in China long before the English went there to trade. We rather think the Postuguese introduced it, though the Turks sold opium to the Asiatic merchants, who travelled eastward with it and sold it to the Chinese on the western borders of the Empire. All readers of Robinson Crusoe will remember how he made a fine profit out of a venture in this direction, bringing his chests to a brisk market and returning home by way of Siberia. As for forcing it on the Chinese, the Chinese go down on their knees for it; and as for smuggling it now, the trade was made free by the Treaty of Tientsin. But, on the other hand, all our legislation on the subject in India has been in the direction of encouraging instead of suppressing the trade. We do not force it on the Chinese people; but we trade on what even the low moral code, or rather, perhaps, opinion, of China regards as a vice, and we forced the legalisation of the trade upon the Cabinet in Peking. We did not like our merchants to be dealing in a contraband article. Our fidelity to the idea of honourable trade was, like Launcelot's fidelity to Guinevere, constancy in crime:—

And faith unfaithful kept him falsely true.

The Chinese bureaucracy was corrupt and permitted the smuggling, and we said to the Emperor, whose father refused at any price to legalize the trade, "Your officers are so corrupt that to legalize is the only way of dealing with the trade." And thus it was legalized. LIN knew nothing of international law; but he knew that the twenty thousand chests of opuim which he seized meant so much death and palsy and ruined health, and so many beggared wives and starving children. He threw the opium into the sea and imprisoned some of our merchants, and brought war on his race. This is what the Pagan did. Lord Elgin afterwards represented the Christian in the transaction, and had he been truly worthy of the name he bore, he would have asked to be relieved of his ambassadorship rather than have forced this legalising clause into the treaty. It would have crushed him as a diplomat; but made his memory imperishable.

No: the misfortune of England is that she does not believe that opium works the mischief which it actually does work. She compares it with her own spirit trade, and as she derives an enormous revenue from this, she sees no reason why she should not also accept a similar revenue from a similar source. She will not legislate for what she considers an impracticable and unpractical ideal of morality, and in this she is largely right. Her logic is good, and her morality is good every-day morality from her own stand-point. It is this stand-point which is all wrong.

The *London and China Express* has the following letter on the subject in its issue of the 2nd July. We must give it entire, though we wholly disagree with the last paragraph of it, not because we do not believe in the efficacy of Christianity to cope with the evil, but because Christianity does not convert fifty Chinese in a year and there are three hundred millions of them.

(To the Editor of the *London and China Express.*)

SIR,—The debate on the Opium traffic in the House of Commons on Friday last appears to have been, on the whole, an able one, as the speakers on both sides kept, with few exceptions, to the subject before them, namely, the Government monopoly in India; and the arguments amounted on the one side to the assertion that the Opium revenue, as at present raised, is an absolute necessity; while on the other side the demoralising influence of the drug, both in China and India, was urged with ability, but in vain.

It is pretty certain that until some terrible pressure of a providential nature shall arouse the Indian Government to abandon the Opium monopoly, things will go on just as they are. Meanwhile, the attempt to cover over the plea of necessity in India by denying the existence of the evil in China will not bear inspection. Public opinion in China condemns Opium smoking as a vice, and the native Christian Churches exclude Opium smokers from their communion. Such being the case, to put Opium in China on a par with beer or tobacco in England is to show entire ignorance of the real evil of Opium smoking. It is possible that the native grown Opium in Western China may be smoked there with comparative impunity, as it is much milder than the Indian drug, but the former is used chiefly for mixing with the foreign article.

The fact is, that this tremendous evil is utterly beyond the control of politicians, or even philanthropists. Nothing but the divine power of Christian life can cope with it, and though this process may be slow, it is sure. Christian missions alone can deal with the Opium traffic, now that it has attained such gigantic dimensions, and the despised missionaries are solving a problem which to statesmen is insoluble. Those, therefore, who recognise the evils of Opium smoking will most effectually stay the plague by supporting Christian Protestant Missionaries in China.—Yours faithfully,

AN OLD RESIDENT IN CHINA.

London, June 28, 1875.

The writer calls it a tremendous evil, and he is an "Old resident in China, whose identity we half suspect

Digitized by Google UNIVERSITY OF CALIFORNIA

under his combined good sense, earnestness and faith. Indeed, it is so—an evil more tremendous than England has the slightest conception of. Nature may have some of her mysteriously cruel precedents for it. But we much doubt whether there is any evil of man's making equal to it.

It is like enforced matricide to have to write like this. But it must be done.

THE PASSPORT SYSTEM.

THOSE who have travelled on the continent of Europe are apt to forget, and those who have not cannot be expected to know, the inconveniences and disagreeables arising from a passport system. Englishmen and Americans who have been accustomed to ramble over their own country, happily know nothing of such restrictions, and fret and chafe under them as true children of liberty should. But, if we mistake not, France alone among the continental nations has dispensed with them, and every one conversant with foreign travel reckons the obtaining and *viséing* of them as among the greatest of his minor troubles. If the foreign resident in Dresden wants to have a few days fishing at Bodenbach, whither the train takes him in an hour, he must get a passport from his Legation and have it *visé* by the Austrian Minister, and directly he sets his foot on the frontier he is asked to produce it by a being in a cocked hat and sword. We very well remember the days when the ceremony of obtaining passports was accomplished by a minute inspection of the applicant's person, and when, in virtue of a criticism which it was impossible to resent or to appeal against, a prominent nose, a retreating forehead, a blighted limb or unusual hair would be set down in his *signalement* with unflattering fidelity. A consul of any gallantry would spare, and even delicately flatter, women; but men never escaped his practised eye and too truthful criticism. A grey eye never was called blue, nor a green, hazel, in these severe analyses, and even BYRON'S haughty look would not have averted the mention of his lamented club-foot. Thus the sense of hardship which has found more or less expression here, of being obliged to obtain a passport before going into the country, is a mere reflection of ignorance of world-wide custom, and seems to us no wiser than the reflections which the footman in Moore's *Zeluco* makes against the French because their customs are not the counterpart of our own. Complaints have been made here that it takes sometimes ten days to get a passport from the Japanese Foreign Office, and though this is entirely contradicted by our own experience, the complaint reached us from the victim of this unnecessary delay, which should certainly never occur. The Foreign Minister makes his application for passports upon an application previously made by the Consul, and this impliedly recommends the applicant for the privilege. The delay in getting a passport in Europe never exceeds a day, and generally the lapse of a few hours will ensure it. Despatch is such matters is not only a sign of good business habits in an office, but is a courtesy as well: delay, the reverse.

As far as the Regulations are concerned which foreigners travelling in the interior of Japan are called upon to observe by the passport system instituted some months back, they mostly reflect, and are necessitated by, the great differences which exist between the civilization of Europe and that of this country, and also by the presence here of a class of foreigners which it is the grave misfortune of Japan to have attracted to its shores—a class of which it would not be easy to write, and which it would be wholly impossible to describe, without the use of terms which we prefer to exclude from these columns. The various States of Europe have to deal with specimens of this class among their own people; but they have not to deal with aliens of this class, or only so to a small extent, and then they deal with them by their own laws. Japan has to hand them over to their respective authorities, who do not deal with them slackly indeed, but the whole tribe is a curse to the country. Of course all decent people pay heavily for this. Immunities and privileges which would be freely granted to scores of the Yokohama residents are now denied them because this horrid crew has to be reckoned with. It cannot be forgotten, too, that the extra-territoriality clauses in the treaties are advantages for which, in one way or another, we shall always have to pay more or less heavily. It is idle to suppose we shall ever obtain, or can justly claim, the same tale of advantages from a nation allied to us by treaties containing these clauses, as from nations to whose jurisdiction we willingly submit ourselves. They are necessary in the present condition of the country, and the error of those who would persuade the Japanese that they entail an unnecessary hardship on the nation nearly amounts to guilt, for they are evils necessary to avert far greater evils. But inasmuch as they are sources of protection to ourselves, we have to pay for them, and must make up our minds to it. We cannot have both sides of the argument.

An incident which occurred this week, the details of which will be found elsewhere, shows that there are exceptions to the ease and security with which foreigners may and do travel about the country under the present passport system. Hachoge seems to have gained an unenviable notoriety for the impoliteness of its inhabitants and officials, which was exhibited not ten days ago in the case of two English subjects who passed through it, as well as in the case of the Honourable Mr. RICHARDSON and Commander LEWIS. But the outcry made for some exhibition of force when, in spite of a thousand instances to the contrary, a Japanese policeman is guilty of rudeness to a foreigner, would create laughter but for the disgust it causes. A little experience away from the huckster-stalls behind which some of those who make this kind of outcry have probably been brought up, and which they ought never to have been allowed to leave, would convince them that the insolence of the Jack-in-Office is not confined to Japan. Its diffusion is world-wide, and the spectacle of a great nation bullying a small or a poor one for such an occurrence—unless it can be proved to have originated in obedience to higher authority, or can be paralleled by analogous cases betraying the same spirit, instead of being entirely confined to a certain town, as in this case—is one which has long since ceased to edify, and we trust may not be witnessed here to disgrace, the world. We are glad that the incident occurred, in both cases, to gentlemen none of whom are in danger of any imputation of misconduct, because it makes the case a clear one, which the Japanese will show good sense and good feeling in dealing with without any of that hesitation which once or twice has characterised their proceedings in such cases. The question of Treaty Limits is one of measurement, and the question of the possession of a Pass is one of fact. If Mr. RICHARDSON and Commander LEWIS were sent back without good reason, the officer who is responsible for the act should be dismissed and degraded, for he has disobeyed the orders of his superiors and offered an indignity to two

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

strangers who had taken the proper means to ensure the hospitality of the country, and had never forfeited their right to it. That the occurrence originated in any instructions of the Government we absolutely refuse to believe, in the face of ample personal experience, and abundant concurrent testimony to the contrary given by travellers of all nationalities. On the other hand, Hachoge has become notorious for its incivility to foreigners, and this the Government should at once interfere to prevent any repetition of.

Recent experience has convinced us that the examination of passports in the country is attended with the smallest possible amount of trouble, and the testimony to the same effect given us yesterday by a gentleman who has just made a journey of four hundred miles, besides an abundance of other evidence, coincides with this. The keeper of the tea-house in which a night is passed, asks for the pass, copies its contents and returns it. The intrusion of the police is as small as the circumstances of the case permit of. Nor can any one deny that, as a general rule, the urbanity and courtesy both of the officials and people in the country, leave no room for anything but favourable criticism. And there can be no doubt that considering the securities offered by the passport system to the Japanese, they should do all in their power to encourage the visits of foreigners into the country. It tends to produce good feeling on both sides, while the interchange of benefit and courtesies, like oil applied to machinery, does something towards making treaties work smoothly.

PENNY WISE, POUND FOOLISH.

THERE can be nothing worse for this country than that a demoralizing, dishonest system of carrying on trade, or executing work, on what may be termed a "penny wise, pound foolish" method, should become one of its ruling principles. It is one of the most noticeable failings in the character of the Japanese that, in regard to knowledge of any kind, they persuade themselves that they have acquired it when they have only become acquainted with its mere rudiments. And, with a strange and amusing self-assurance, which, to those having any connection with them, is distressing in the extreme, they will, with the utmost complacency, proceed to bring their semi-education into full play, and to undertake work which they are far from capable of accomplishing. This is an impatient clutching at results without the honest labour necessary to secure them. We fear, also, that, in reference to more vital matters, the same spirit is noticeable, and that there are evidences of every day attempts at procuring the semblance of articles without expending on them the labour or money they require or deserve, and an eager desire for money without earning it fairly. The spread of such principles as these will tend to the most vicious unreality in all things, and will utterly frustrate all efforts at real advance or improvement.

"No good man ever did, or ever should, encourage *cheapness* at the ruinous expense of *unfitness*, which is always infidelity, and dishonourable to a man. If I want an article let it be genuine at any cost. If the price is too high for me, I will go without it; unequipped with it for the present, I shall not have equipped myself with a hypocrisy at any rate. This is the temper for the purchasers of work; how much more for the doers and producers of it!" In this way wrote one who is probably the greatest detester of shams living, and who wields full as much influence as any writer of the present day. It would be well, in our opinion, if the rulers and people of this country took these words well to heart. It is one of the large questions for Japan, in this her state of transition, as to the amount of conscientiousness and honesty she is prepared to bestow on the new work she undertakes, and the principles she intends to make her own. In the various and multitudinous reforms and changes which are called for in this country, and which are being daily talked of, are their promoters earnest in endeavouring to prevent any fiction? Are they determined that what they do shall be well done? and that faithfulness of purpose is their one guiding principle? Or is there not rather too much evident desire for only the outward semblance of work done? Do the reforms, carried out, or projected, not often belong to an airy and visionary class? And is there not an evidence in these of flightiness, want of sincerity, and attempts at reaping where no seed has been sown? "The glory of a workman, still more of a master workman, that he does his work well, ought to be his most precious possession; like the honour of a soldier, dearer to him than life."

It is of importance that these words should be accepted by the rulers of the country—and that whatever efforts are made by them, whether educational, political, or constructive, that the work shall be well done. It would be a thousand fold better that one small reform of integrity should occupy the attention of the statesmen of Japan, than that they should attempt to introduce one after the other, with undue haste, a multitude of hypocrisies, and infinitely better that the requisite expenditure should be laid out upon a public work of small magnitude, but of faithful workmanship, than that the whole face of the country should be covered with shams.

The same author as is above quoted, speaking of some modern London houses, says "Not a house of mine this, not a built house, but a congeries of plastered band boxes, shambling askew in all joints and corners of it, creaking, quaking, under every step, filling you with disgust and despair. For their lies in it, not the Physical Mischief only, but the Moral too, which is far more. I have often sadly thought of this; That a fresh human soul should be born in such a place; born in the midst of a concrete mendacity; taught at every moment to abhor a lie, but to think a lie all proper, the fixed custom and general law of man, and to twine its young affections round that sort of object."

We fear, alas! that it requires not to be born in the modern house of Japan, built in the European style—which house may our sturdy philosopher be preserved from ever beholding—to destroy the abhorence of mendacity in the modern Japanese. Their "fixed custom and general law" tends more to a free and diplomatic use of deceit, according to their own lights. Look into the shops in Yokohama and Yedo; are not ninety-nine of the European articles out of the hundred which are there exposed for sale, most deadly shams,—got up for sale by unscrupulous traders for their own ends? Is any one of these a genuine article, likely to prove of real service to the purchasers? Do they not, on the contrary, merely supply what is a fictitious resemblance to the real thing, got up for purposes of deception and well deserving the vulgar but expressive appellation of "cheap and nasty." This is the description of merchandize for which there is almost the only demand in Japan. The people do not, in their desire for violent change, prudently stay until their position or their finances would warrant the purchase of trustworthy or honest articles, but, on the contrary, they buy up the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cheapest procurable, until each man becomes, in his outward self, a living sham. They do not appreciate or feel, in any way, that delicacy of conscientiousness which would be likely to deter them from such a species of deception.

There is one feature in the training of a Japanese which may lead him rather to the adoption of a cheap article, and that is, he has never been accustomed to look much to permanency in anything. His own constructions and manufactures are of so extremely fragile and unstable a character, that they have no pretensions to be lasting, and there is no question of their simplicity and cheapness. These, however, on account of their not being extensive in character, may without much loss, be replaced from time to time. But when he comes to adopt the more intricate and extensive European devices, the cheap, the unlasting, the dishonestly constructed, the "pound-foolish" ideal, should be most rigidly eschewed.

In the matter of Public Works it might be argued by the Japanese in this way:—'We imagine that a system 'of Railroads throughout the country would tend greatly 'to its advancement. We therefore desire to have this 'system with all the speed in our power. But our finan-'cial condition is not such as would warrant the expendi-'ture of such large sums of money, as would enable us to 'make Railways of great strength and permanency, and 'rather than delay their construction for an indefinite 'time, and so retard the progress of the country, we wish 'to construct them in a more temporary and the cheapest 'possible manner. There may possibly be circumstances under which such reasoning might have some weight, but it is most fallacious in most cases, and, we venture to submit, most decidedly so in the present circumstances of Japan. The first question which arises is this. Is the Public Work intended to be of a permanent character? If so, then it is a simple question of economics, which has long been laid at rest, that none but permanent materials should be used in it. Again; is the Public Work required for a certain specific purpose? If so, then its strength should correspond with that purpose, else there will be danger of its total annihilation. To make it cheaper, what is necessary? Either to put in material of an unenduring nature, or to so reduce the proportions as to render it dangerously weak. English Railways are sometimes pointed to as extravagantly carried out, and American Railways as so much the cheaper and more suitable for Japan. English and American Engineers are perfectly at one on all points connected with their professions. They are perfectly aware of the necessary sizes for the beams or other details in their works, and are further well acquainted with the respective lasting properties of stone, wood, iron, or the other materials with which they work. And there is no design in either country which, if it could be advantageously introduced into the other country, has not been adopted there. But the political exigencies, the modes of thought, the abundance of one class of material and the dearth of another, have led to a style of construction in America, which, while possibly suitable to American peculiarities, could not either with advantage or economy be adopted elsewhere. Most American railways are thriftless and temporary in their construction, and it is questionable whether some of them have all the necessary strength in some of their details. English Railways, on the other hand, are made with lasting material, and no more of this is used than experience has found to be necessary to sustain the load, or to bear the working, and strict economy is generally practised in all details. A system of railway most suited to this country, therefore, should not necessarily be the English system, or the American, but one which will best afford the accommodation likely to be required in the country, which will carry its traffic with safety, and which will be of as lasting and enduring a nature as the locality it traverses is likely to require.

Above all, let us, once more, conjure the Government of this country to avoid shams in this work, as in all other things. If Railways are required, those constructed on true principles are the cheapest in the long run. If the country cannot afford to construct anything but temporary or flimsy works, let it wait patiently until the time arrives when it can do something of a more permanent and lasting character. Better to be unequipped at all, than be equipped with a sham.

POSTAL TREATIES.

WE showed last week that the time has come when the Postal organization which this country has created, justified it, in our opinion, in seeking from the European Powers that privilege of managing the receipt and transmission of correspondence arriving at and leaving its shores, which every nation, proved capable of doing so, takes on its own shoulders, and which, under such conditions, it regards as an Imperial right. We pointed to the fact that this organization had been at work under the eyes of all of us for some time, that it has worked well, and that an extension of the system would be undertaken, in order to meet larger demands upon it, were new Postal Treaties made which created such demands. We further urged that great advantages would accrue to us all were Postal Conventions entered into which threw the whole Postal work of the foreign residents into a large office capable of dealing with it, and guaranteed, so far as this could be done, to deal with it efficiently; and we said that under the present system we were at certain positive disadvantages which it would be well to remove as soon as possible.

Now, it will hardly be gainsaid that the existence of three Post-Offices, with three different systems, rates of postage and denominations of stamps, is in itself an anomaly and disadvantage in so small a place, which, however necessary at one time, should be got rid of as soon as possible. It stands to reason that the larger an organization is the closer it can be worked—provided, of course, it is in good hands. Improvements and facilities which a small office cannot undertake and give, by reason of the expense they entail, are an economy in a large office which has ten times the work to get through, and it is certain, that, under the conditions of efficiency which our present hypothesis involves—and which we shall not mention again as they must be taken for granted in our argument—we should have our Postal work done far more expeditiously and certainly than at present. Another disadvantage entailed by the present system is that letters for foreigners not resident at the open Ports come to the foreign Post Offices occasionally, and lie there because it is not the business of those Offices to forward them further. They advertise them, and there their duty stops. A Japanese office would be compelled to send them to their destination. Those uninterested in this point may think it a trivial one; but those whom it directly affects must be permitted to estimate it differently.

Then, as regards the advantages we should derive from the change of system which we advocate, the first would be a considerable reduction on a heavy item of expenditure. This is an argument which need not be greatly pressed, for it does its own work. If the conventions we

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

advocate could be made with Japan, she could at once seek and gain admission into the Postal Union, of which the particulars will be found elsewhere in our columns to-day. This would constitute a boon to all of us, the magnitude of which can be estimated only by a careful perusal of the document to which we refer, and we ought not to be denied a participation in such advantages as the Union extends, without far more reason than can now be shewn for withholding it. We maintain, in short, that we are deprived of many advantages by the existing system which we should enjoy under the new one; that we labour under considerable positive disadvantages, the removal of which would be ensured by the new system; and that we shall never enjoy our share of the great benefits of that combination which, known as the Postal Union, constitutes as great an æra in postal history as ROWLAND HILL's measure did in England, until we place the Japanese in a position to which they have shewn themselves entitled, and from which, whatever advantages they may derive, we shall by far the largest gainers.

SPIRIT OF THE JAPANESE PRESS.

THE GENRO-IN.

(Nichi Nichi Shimbun, August 16th 1875.)

The *Genro-in* was closed on the 12th of the month, in accordance with the rule for vacation during the hot weather. In the other public offices, the officials divide themselves into two sets and take their holidays in turns. In regard, however, to this public office, which constitutes a whole by the Assemblage of all its members, it is impossible to follow the precedent of a division into two sets. It is said that this difference springs from the dissimilarity in constitution between the deliberative and executive parts of the Goverement

In accordance with the Imperial decree of the 14th of April declaring that 'the source of legislation will be extended,' the ceremony of opening the *Genro-in* took place on the 5th of July. The Tennô was present in person, and delivered a speech in which he said "I constitute you the assembled *Gikuwan** as a Legislative body." This shows how great expectations the Tenno has from the *Genroin*. The people too, won over to the ideas of this speech have deeply fixed their hopes in this Assembly, and on tiptoe—with outstretched necks look forward wishfully to great things to be done by it.

A considerable time has now elapsed, but on casting our eyes upwards to the Government of to-day we see nothing but a thick grove of trees, the height of which we observe from the road before the gate of the Assembly House.

Since the establishment of the *Genro-in*, it has yet done nothing whatever. Time has gradually passed by, and now the time for closing it has arrived. Has it after all failed to fulfil the hopes placed in it by the Tennô and by the people, or if not, has there not been monstrous procrastination?

Only see! The Proclamations and Notifications of the various Departments published in this journal amount to several hundred thousand characters. But of all these not one proceeds† from the *Genro-in*. Has it then had no draft measures to consider, no laws to formulate? Or if this be not so, why this profound silence?

Notwithstanding all this, the *Genro-in* has not failed to satisfy the expectations entertained of it by the Tennô and by the people. Nor can we for a moment suppose that they have had no draft measures to consider, or no laws to formulate, and why? The *Genro-in* is preparing of itself to extend greatly the bounds of its authority and gradually to consolidate its constitution as a legislative body, and at the opening of this Assembly on the 5th of July, the Tennô himself said in his speech "We now establish you the *Gikuwan* as a Legislative Body. Let each one of you act harmoniously with his colleagues and discharge fully the duties of his office and strive sincerely to promote the welfare of all classes." In their reply the *Gikuwan* said. "We have reverently received into our hearts the Imperial will; we will strive by industrious attention to our duties to compass the happiness of all classes of the nation." If we consider the liberal spirit of the Tennô's Speech and of the address in reply, there is ample evidence of the intention that this distinguished body shall not disappoint the expectations entertained of it. It is already the Legislative Assembly. If the laws of the country do not proceed from it, from where will they proceed?

We hear that the questions submitted for the consideration of the *Genro-in* are—The abolition of Torture, The Tobacco Tax, the Questions determined by the Assembly of Local officials with the exception of Local assemblies, —A measure for the amendment of the Law of the new code concerning frauds and thefts committed by employés, and other measures of a like character. It is also said that a Department for expounding the laws (Mei hô kyoku 明法局) is being established in the *Genro-in*. This is connected with the consolidation of the legal system. From all this it is plain that the *Genro-in* has yet plenty of subjects for discussion and projects of laws to draft.

But although this is so, the *Genro-in* has as yet held no formal official meeting. The rules for the purchase of land by the state and the weights and measures Regulations have, as we are told, been published without having been decided by the *Genro-in* (the Slander and Press-laws having been issued before the opening of the *Genro-in* were of course not submitted for its decision.) The *Genr -in* is the Legislative Body, and the explanation has been offered that if there are laws which do not proceed from it, this is the doing of the *Genro-in* itself. We do not believe in this theory, but what explanation can be given?

The *Genro-in* is now closed and it is said that it will not be opened till the 10th of September. The reason why there are openings and closings of European assemblies is that the Executive Government follow a corresponding arrangement. According to the request formerly made by the *Genro-in* (see our issue of June 3rd) that no Japanese Law should be made without the consent of the Government and of the *Genro-in*, the Government cannot issue any Law without waiting for the opening of the *Genro-in*. Will they do so? Our Government, possessed though it is of all imaginable merits, is only in its infancy. How can it wait listlessly for this event? We in the street have not yet learnt whether the Government and the *Genro-in* have come to an understanding upon these points.

In the above paragraphs we have stated merely the public opinions without change or adornment of any kind, —we have written them down frankly word by word. The reason why we have not concealed words which perhaps border on presumption is the strong hope which is reposed in the *Genro-in*, and not any wish to offend against the Press Laws. That we have yet heard little of the deliberations of the *Genro-in* we cannot complain of. It is like the case of a newly married girl who has not yet completed all her toilet arrangements and has yet little time for household matters.

POPULAR ASSEMBLIES.

(Nichi Nichi Shimbun.)

We have always regretted the disgrace of the rulers in such cases as that of King John and Magna Charta. Had the King been sagacious enough to perceive in time the views of the nobles before the fatal hour arrived, he would probably have avoided his subsequent disgrace. A proverb says, "Sagacity will overcome, while short-sightedness will ruin." John had not this sagacity, and thought he could oppress his subjects with impunity, and it was not until his palace was seized for the first time that the determination of the nobles occurred to him. But even then he did not acknowledge to his subjects that he had done wrong. He complained to the Pope, hoping to complete his oppressions with the aid of foreign

* *Gikwan* or Councillors is the official designation of the member of the *Genroin*.

† It is true there was a notice with directions for the presentation of petitions.

Original from UNIVERSITY OF CALIFORNIA

mercenaries. But finally, being coerced by the nobles, he signed Magna Charta. He then sought to avenge himself on his subjects by uniting his forces with mercenary soldiers. But the nobles, on the other hand, announced a prince of France as the sovereign, and then fought against the King. When the French prince entered London the King's forces went over to his side, and while the King was marching hither and thither perplexed and in despair, he died, leaving behind him a name covered with eternal disgrace. Oh! when a multitude of oppressions is broken, consequences such as these follow. Let those whose duty it is rule over men pay good heed to this!

In glancing back for six or seven years, we see that the breezes of freedom and liberty seem to have blown over oriental lands, and their germs have been planted and have since grown up, so that their growth can no longer be prevented. It is the desire of our Mikado to civilize this country, and, understanding the vigour of those germs, he established the *Chikuhokuan Kuaigi*, where a special question in regard to the formation of local assemblies was laid before the members. To compare his sagacity to the blindness of King John, who could not discover the intentions of his people until his palace was seized, would be like comparing heaven with earth, and the object which the people find so precious that they compare it to heaven is the Mikado. On account of the great number of men who debated this question (local assemblies), the establishment of them was not decided upon, and it was determined that the *Kucho* and *Kocho* should represent the people. One of the officials who commended the above determination said "that the people of Japan are ignorant and have neither power nor vigour, and that none but those who are really administering the affairs of Government are capable of criticising the administration." We people are, as this official said, ignorant and without vigour or power, and without applying for their aid to intelligent officials nothing can be done. Still, when we heard this saying of this official we were greatly astonished, and, hot as the season is, fell into a shivering fit. But we cannot accept such a fate and abandon our determined will. We must rouse ourselves and lay the foundation of real popular assemblies. The *Chikuhokuan Kuaigi* was a very important thing, which might be respected and honoured by us, but it was in no sense a popular assembly. The members of it were not representatives of the people and it had no legislative power. This may be ascertained by reading the Imperial decree of the 14th April, and the question put to the *Chikuhokuan* about local assemblies by the Government. The Mikado has set his mind upon our having popular assemblies, and therefore the *Chikuhokuan* determined that the meeting of the *Kucho* and *Kocho* should only be a provisional measure until real assemblies of the people could be instituted. Moreover, the President of the *Chikuhokuan Kuaigi* said that if the people were collectively bent on having such assemblies, there would be no reason for refusing them. We think that ignorant and powerless and vigourless as we are, when we are spoken to in this way by an authorized official, we should rouse ourselves and not permit our wills to be thwarted by thirty or forty men. It is therefore obvious that the people who are desirous to have such assemblies established should apply for this in the various *kenchos*, and in so doing we also believe that they will be acceptable to the Mikado. There were twenty-six listeners in the Assembly who sent in memorials requesting that the representatives of the popular assemblies should be chosen from the people. Most of these listeners were either *Kucho* or *Kocho*, and some of the members brought with them officials of lower rank. There were some of the *Kucho* and *Kocho* who declined to become the representatives in local assemblies, for they wished to see the people choose their own representatives, and among those with whom we are acquainted there are many who hold these views. And if among so few listeners there was so large a proportion who thought in this manner, it may easily be estimated what is the general opinion of the nation upon the question. Oh! the sense of the country is expressed so clearly in this, that it would be well for the Government to deal with matters agreeably to this sense. If one false step is taken, a party like that of the English nobles may arise and incite the people, and we may see in our country to-morrow what England saw some six hundred years ago. Let us not make our posterity think of the present time as we now think of the days of Magna Charta!

The Press-Laws.

(Choya Shimbun.)

Were the question to arise whether it is the duty of the government of any nation under the sun to protect its people, or calmly contemplate their starvation, the most ignorant person would most probably reply that it was its duty to protect them. Such being the case, governments make laws and issue notifications to the people. There are none of those laws which are not made for the people's protection, and the people, by observing them, are protected by the government. This is the mode by which nations are governed, and a government like our own, which is taking such pains to promote the civilization of the country, bestows unusual care upon the protection of the people.

Since the issue of the new newspaper laws and the laws of libel, many complain that hindrances have been put upon the advance of our civilization and have expressed themselves to that effect. We have received hundreds of communications on the subject from our correspondents, but, careful to observe the laws, although hard for us to do so, we have not published them. We have also been desirous to publish something which we deemed of great importance, but which, up to to-day, we have withheld. This will now be found at the end of the present article.

The Editor of the *Akebono Shimbun* has recently been fined and imprisoned for violating the new Press-laws, and his family thrown into anxiety. We also hear that the Acting-Editor of the *Nichi Nichi Shimbun* is now undergoing a trial at the Court. Our merciful Government surely does not wish to entrap the people, nor do the writers purposely act against the Government with a view to being punished. It must surely be something else which brings the newspapers before the Courts. The fact is, that although there were Press-laws, the newspapers were accustomed to write as if there were none. An abundance of articles is sent in to the newspaper offices with a view to publication, and the laws themselves, not being sufficiently clear and well defined, have been unconsciously violated by those who have been punished. The form of this writing may, in many cases, have seemed odious to the Government (or calculated to bring odium on the Government), but if an attentive consideration is bestowed upon the mind of the writers, some of them are much to be pitied. We are among the public writers and feel that our feet are near the courts and our face is close to the prison walls; and although on the very brink of these dangers, we have something which we desire to ask of the officials; and this is not alone for ourselves, it is for the public writers of the whole nation. And this is the important matter of which we have speken above. All of us assembled and discussed those sections of the press laws which were not clear to us. These sections were, after due consideration, put together, and we then petitioned the Government to give us a clear explanation of them. This was done in the middle of last month. But as no reply has yet been received, Kishida, the Editor of the *Nichi Nichi Shimbun* and ourselves, acting as representatives of all the newspapers, have since twice petitioned and urged that a reply should be sent to our memorial, and seven or eight days have elapsed since our last petition was sent. Oh! our government is so greatly occupied both with home and foreign affairs, that it has no time to spare for such trifling matters. But these trifling matters are of serious moment to us editors. They may lead us to prison and plunge our families into anxiety; and, as it is the duty of the Government to protect the people, we are ourselves, however humble, one of the people, and we entreat the Government officials to favour us with a more minute explanation on the point. If the Government edict were published in the morning and we were punished that very evening for violating it, we should not murmur, for we have no enmity against the Government.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

We entreat the Government to pay a due consideration to our feelings in this matter.

The Press-Laws.

(Akebono Shimbun.)

Oh! what a month is this, the August of 1875. Great Heaven has caused its thunders to fall upon the newspapers, the wholesale promoters of civilization. The might of Heaven is exceedingly great!

We were the first to whom the dish of fines, imprisonments, and being charged with violating the laws was offered. It was then passed round to the *Nichi-nichi, Hóchi, Hioron*, and, ultimately, to the *Chóya Shimbun*. Why, if the dish is passed round in this manner, all the editors, acting and assistant editors and writers will be in prison, the proprietors will become anxious about the supply of editors and writers, and our book-keepers will find some trouble in meeting the amount of fines out of the monthly profits. The present moment may indeed be called a dangerous one for the newspapers. In all countries, even those in the highest condition of civilization, the newspapers are controlled by certain laws, and if they incite the people to breaches of the peace and sow seditious feelings in their hearts, or urge men to breaches of natural law,* they are punished in accordance with law, nor can it be said that they are never subjected to fine or imprisonment. But in glancing back at the history of any nation whatever, we have never heard of all the editors of a whole city being brought up before the courts for violating the laws or inciting the people during a whole month, nor that while one editor is on his trial another is brought up, and, before judgment is given against him, before even his trial come off, another is brought in, and thus no day passes without the trial of on editor. No, we have never heard of such proceedings, nor do universal histories furnish any parallel for them. It is conceivable that something resembling it might be found; but never in a civilized country.

Our monarch is virtuous, our officials are intelligent, and our country is said to be civilized and the pride of the east. We have never heard of newspapers in places of wh ch these things can justly be said, being collectively brought before the Government as violators of its laws.

Our Government makes it its object to adjust itself to the degree of the civilization attained by the country. Surely it will not do anything so illogical as to close the mouths of the entire nation. And, with the exception of our ignorant selves, all the editors are learned men, not one among whom is deficient in the spirit of patriotism. What, then, is the cause of all these imprisonments? It is more than persons so unlearned as ourselves can tell. The laws made by the Government must be in harmony with the condition of our civilization and the feelings of the people, for if it were otherwise the laws would only represent so many written tools, and become hindrances to instead of promoters of our civilization. Of course we do not doubt that the late newspaper laws were drawn up in harmony with our present condition of civilization, and the wishes of the people. But there are many bigoted people who say that these laws are too severe, and in this manner calumniate them. Since the beginning of last month we have received many letters on the subject, and most of them say that the freedom of the Press ought to be granted, and that it was wrong of the Government to close the mouths of the people, and some, arguing the matter very warmly, used some insulting expressions against the Government. We believe the intentions of the writers to have been good, but as their expressions were too severe, we did not publish their communications, and on enquiry we have heard that the *Nichi Nichi, Ch ya* and *Hochi Shimbun* are similarly circumstanced. Such writing proceeded in all probability from light-headed young students, therefore much heed need not be paid to it. But even one discontented person may do some mischief, be it never so small, to the administration, so that the Government should keep its eyes on such matters and consider them well.

The discussions of the hour are as when men stand face to face in the some room, each plainly discerning the features of the other. The discussions of ten years back are as though men were in different rooms, and could only see that each had features. But looking back a hundred years is like seeing a person afar off, his form only being recognisable. The punishments have been inflicted on the newspapers in the interests of order, and thus it is gratuitous to say that the Government has closed the mouth of the nation. When a hundred years have expired, the history of this time will not be minutely, but only generally, written, and it will merely be recorded that in August 1875 the editors of such and such newspapers were imprisoned, and this record will show that men were not pleased with the fact. The embarrassments of the existing newspapers are matters of very trifling moment, and unworthy of more than a passing thought. The question of present injuries or benefits is not that which demands consideration. We must think how this action will appear to future ages.

* An expression often used by Japanese writers, but which implies, we suspect, loose views both in regard to law and nature. We venture to recommend the first of J. S. Mill's posthumous essays to the writer.

The Press-Laws.

(Akebono Shimbun.)

"Mr. Rogue, you are a fortunate man, are you not?" said Justice. "What do you mean by saying that I am fortunate?" replied Rogue.

Jus.—Have you seen Notification No. 110 of the Daijókwan? Think well over it.

Rogue.—Yes, I have seen it, but what of that?

Jus.—It is the law of libel, and whether a statement be true or not, if it has the effect of casting a slur on the honour of others the offender is punished with heavy penalties. Your good fortune lies in this, that whenever any of your craft secretly committed your rogueries and they became known to the public through the newspapers, you grew frightened and were prevented from playing any more of your tricks. But hereafter we cannot pursue you in the newspapers, and as we cannot always be running to the authorities every time some iniquity is committed, you will be able to do whatever you please for the future, so that you must feel as if a heavy burden were taken off your shoulders. On the other hand we also are in a dilemma ourselves, for there has been no notification issued as yet regarding the amount of honour we are permitted to do to others who deserve it.

Rogue.—You, unlike Justice, talk in a strange fashion. The laws were not made for the purposes you say. They are made to protect the honour of our thirty-five millions of brethren, and it is not right for you to speak in that fashion about the Government. You might entangle yourself in such a manner that it would be difficult for you to extricate yourself.

Jus.—If I am spoken to in that manner, of course, I have not a word to say, and must confess that it is extremely kind of the Government to take such care of our honour. But as you never knew until we told you so that it was a disgrace to be addicted to shameful practices, I fear that when you are not reprehended you will begin them again. The newspapers have often reported that such and such malpractices were committed at such and such places, and people, ashamed of being detected in them, ceased to commit them. Hereafter I fear they will be committed just as before. We fear no calumny from others, because we try to act uprightly, though sometimes, not being omniscient, we make mistakes. But when they are pointed out and made clear to us, we can avoid them for the future, and therefore we deem those who calumniate us not as enemies, but as friends, and viewed from this point of view these laws appear of no benefit to the just but only to the rogues.

An argument for a Free Press.

Choya Shimbun.

What do the officials think of the present state of affairs? Do they imagine that civilization among us has arrived at its zenith, and that our country may be compared with those of Europe; or do they think that we are still weak, that our finances are disordered, that our laws are yet in confusion and that the whole nation is not yet in harmony within itself? Should the officials believe the country was in the highest state of civilization, we should think their view erroneous. We believe that from

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the *Daijin* and *Sangi* down to the *Tōgai** there is anxiety about our finances, about our laws, and the general condition of the people, and all entertain the hope of advancing the country a step higher and making it fit to compare with highly civilized countries. It may appear impolite to write in this apparently imaginary manner, but there are good grounds for what we have said.

All must be well acquainted with the Imperial Decree of the 14th April, which contains these words: "By the favour of the spirits of Our ancestors, and also by the exertions of our servants we have happily attained the slight degree of tranquillity of the present day. But, upon consideration, we find that Our assumption of power dates from no far distant period, and, that as regards the pacification of the interior of the country, there are by no means a few matters that have to be set on foot and freshly regulated."†

We assuredly do not believe that our gracious and virtuous Sovereign has deceived us. It is clear that our condition does not equal that of the civilized countries, and of course the *Daijin*, *Sanghi* and *Togai* cannot be more intelligent than the officials of those countries. If we wished to flatter or obtain anything from them, we might easily say they were like the great ministers of ancient times or as great as Bismarck. But this is neither what the editors of papers have done nor wish to do. If the officials are really in earnest to promote the civilization of the country, above them they have the Imperial Decree just referred to, and below them they have the people claiming their protection, so that they had better let the people say what they will and permit a free Press.‡

It has been said by the ancients, "Hear advice even from the meanest." Such advice ought to be given and heard as aids to administration. The present "degree of tranquillity" ought not to suffice us, nor should we imagine that we are at the height of civilization.

The *Genroin* has been established, and a mouthpiece has been created by which the voice of the nation may be heard. The local assemblies of the *Kucho* and *Kocho* have been decided upon, and in this manner the desires of the nation may be made known. These are good things. But we think that there is still something better for the improvement of the administration and more calculated to advance the interests of the people and the country. Such ignorant persons as ourselves cannot tell what this is §, but we think that if the Government would think the matter well over, they would soon find it out.

TSUSHIMA.

(Nisshin Shinjisshi.)

It being a part of our duties to translate articles contributed by foreigners and information given in foreign languages, we read various newspapers written in English, and, in the course of our accustomed perusal, have commonly noticed that there frequently appear statements in the leading articles of the *Japan Herald* which are recklessly false, and which tend to disturb the minds of the Japanese. This being the case, we have long felt great concern about it. Some of these refer only to small matters and can do little or no injury, and for this reason we have passed them unnoticed. But on the 5th instant it published a wholly imaginary statement which is nothing less than detestable to us, and silent though we have generally been, we cannot now remain so. We think the editor of this paper must bear this Government some ill will, and must have purposely created this fiction to excite the minds of our people. If this be not the case, why should any one living among us Japanese be so unkind and unfriendly towards us? The following is a translation of the matter referred to.

(Here follow extracts from an article in the Japan Herald of the 5th instant relating to a cession of the Island of Tsushima to Russia.)

Oh! is not the argument of the *Herald* false? Although there may be no laws to prevent such proceedings, is not the above too shamefully reckless and thoughtless? When we try to fathom the heart of the editor who wrote this madman-like and imaginary fiction, we come to something like this conclusion. He must mean that as we have given up the Island of Saghalien, we shall also give up the Island of Tsushima in like manner. If he means this, it proves that he is utterly unacquainted with the mind of the Japanese people, and despises them without reason. He must be called one who seeks to lead them astray. Such unlearned persons as ourselves have no right to say that an editor so instructed * in the affairs of the world does not understand our national circumstances. But we will now give our reasons for the views we hold.

The exchange of the Kurile Islands for Saghalien was a great advantage to our people, not because Saghalien has become Russian territory, nor that a few of the Kuriles have become ours. It is because our Government annually spent millions in colonizing and developing the productions of the Island. But as the land yielded nothing, we never got back one-half of our expenditure. Moreover, to move in Saghalien was to advance from a mild to a very rigorous climate, while the Russians were advancing from a colder north to a warmer south. There was no satisfaction in all our labour, and we were fearful that the money and toil we had expended there would disappear like water bubbles. Besides, troubles have arisen from mistakes which have been made, and these caused us much anxiety. But the exchange, which has neither stained our honour nor caused the effusion of blood, has relieved us of these anxieties.

Were any possession, however small, of interest or importance to us, threatened either by open hostility or covert artifice, there would be no reason for us to abandon it from fear. The cession of Saghalien was the deliberate act of our Government. The *Herald*† says that were we offered sufficient compensation we should give up the Island of Tsushima to the Russians. What reckless falsehood is this? Tsushima is an integral portion of our dominions and differs utterly from the jointly-occupied Saghalien. Why, if we were to give up Tsushima to the Russians simply because they would like to have it, then Tsushima may not be the only spot which the Russians would like to have, and probably they would like to have the whole of Japan. Oh! why did this editor urge such detestable, unkindly and unfriendly arguments, and suppose that we Japanese are to be regarded as senseless puppets? Of course it has been said that we are without power or vigour, but we are not such a set of cowards as the editor makes us out to be. Therefore, though the place be never so trifling, we are neither to be threatened nor deceived into giving it up. And how much less Tsushima, which has been called the Gibraltar of the Japan seas! Though the Russians may wish to obtain it never so much, we will not give it up. The editor says we would give it upon sufficient compensation. But what does he suppose could be sufficient compensation for the importance of such an island? As the island is now in our hands, the possession of it may not seen to be of so much importance; but were it in the hands of an enemy, we should be like a bird without wings. The injury which the loss of it would be to us is obvious, and, besides, it would be an impediment to our intercourse with Corea.

Our noble Emperor and his ministers have their settled plans, and we will guarantee that these will not be recklessly changed as the *Herald* says. We tell our people that if they believe such things to be true, they will excite themselves and fall into the *Herald's* trap.

The above are the reasons why we cannot remain silent upon this matter, and for thus giving expression to our views.

---

* Unclassed officials.

† Vide *Japan Weekly Mail* 17th April, 1875.

‡ The argument here is that as the Sovereign himself acknowledges there was yet much to be done, and the people feel that such is the case, the latter should be permitted to say so in their own manner. The writer evidently forgets that the acknowledgment made by the Mikado is made by his ministers, who, of course, composed his speech.

§ The writer obviously means a free Press.

* This form of sarcasm may have been observed in many of our translations, and is far more polite than our own.—ED. *J. W. M.*]

† The writer here says "The Editor of the *Herald*." We would venture to tell him that this is an offence against all propriety. It is done indeed in Yokohama, but this is perhaps the very best reason for avoiding the practice.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Cession of Saghalin to Russia.

"Choya Shimbun" of the 12th August, 1875.

The fact of the cession by Japan of the Island of Saghalin to Russia in exchange for Chijima (the Kuriles) has been for some time past the subject of discussion in Foreign countries, but Japanese actually at the present date do not know for certain whether the report announcing this is true or false. This affords good cause for wonder.

We now hear that it has been stated in a foreign Paper in Yokohama that on the 31st ult. the Russian Plenidotentiary Colonel Barash arrived in Yokohama and is to leave for Saghalin to arrange about the transfer of that island; and moreover that the Russian Commissioner Olaroffsky has also arrived in Yokohama and is to leave for Saghalin in the course of the next ten days in company with the Japanese Commissioner. These are merely the statements of the Yokohama Foreign Press, and consequently we cannot vouch for their correctness.

For our own part, not having been to Saghalin we cannot pretend to argue on the advantage and disadvantages attending the cession or retention of that island. But speaking generally we do not think even if it be ceded that the entirety of our country is injured in any degree. It has rich mines, and the fisheries along the coasts are, it is said, very productive,—but its climate is not suited to our people. Okamoto is the only Japanese we have heard of who has made researches in the island and sailed all round it. Take a people born in a very mild and favourable climate and remove them to a place where the cold is excessively severe, and they will all die. There is no help for them. This is the reason why our colonization of Saghalin has proved a failure. Still, for us who have not as yet made ourselves by the use of our eyes actually acquainted with the true state of the case, to attempt to doubt the advisability or otherwise of the cession of Saghalin is like holding a council of war in a *Kotatsu** or learning to swim in a field of wheat-land. The government in their action are sure to have been guided by reasons advantageous to the country. It is said that there are many seals on the coasts of the Kuriles, and that Americans acquire much gain in hunting these. Our people might engage in this pursuit of seal hunting and also make profits thereby.

Our Government abstained purposely from marking Saghalin any colour in our maps, (though the Russians have it marked in their maps with the same colour as that given to their own territory), for the reason that there was no definite boundary line drawn and the territory was held jointly by the two countries. Now to desire to have a clear and defined boundary dividing one's own country from a neighbour is not a matter of small importance. We wonder, however, how it has happened that although this matter has been reported to foreign countries and has there been made a topic of constant discussion—yet that Japanese, our countrymen, in the case of a question which affects Japan, are unable to tell up to the present moment whether the rumours concerning that question are true or false!

* Futon placed over a Hibachi full of charcoal, under which Japanese sit in very cold weather.

The last number of the *Wan-kuo Kung-pao* contains an abstract of memorials on Foreign Affairs and other questions of State policy, that have been lately addressed to the Chinese Government by the Chief Mandarins in the empire. They are supposed to be secret, but have shared the usual fate of official secrets. Rumours of them have from time to time got abroad, and now at last the whole abstract prepared for submission to the Cabinet has found publicity. Judging from it, these memorials must be among the most important State papers that have been penned in China. We translate to-day a first portion of the abstract, giving seven of the memorials —from the Viceroys of Chihli, the Two Kwang and the Two Kiang, the Governors of Anhwei and Fohkien, and certain Peking Magnates. Chief among the subjects advocated, are the appointment of Ministers to Foreign countries.—Li Hung-chang specially urges the case of Japan; and that measures should be taken to seek out and train officials who may be utilised (in foreign) matters when needed. The memorials are no doubt in response to an appeal from the Central Government, such as was made at the time the revision of the Treaty was being pressed. Their purport is that it is clearly time for China to relax her policy of concentration within himself, and to go out into the world.—*N.-C. Daily News.*

扶桑耳袋

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Kotowasa-gusa.

Some Japanese Proverbs.

Inu mo arukeba, bo ni ataru. "If dogs go about, they must expect the stick." In allusion to the reproofs that busy-bodies and idle inquisitive people earn.

Ron yori, sho ko. "Before argument, proof." A little proof is better than much discussion.

Hana yori, dango. "Before flowers, dumplings," or fruit is more acceptable than flowers.

Nikumari ko, yo ni habakaru. "Hated children fear not the world." Hated children being used to unkind words do not fear reproof, and are therefore self-willed.

Hone ori son no, kutabire mouke. "Thankless labour, gains fatigue." Labour without reward, nought is gained but weariness. A thankless job's reward is fatigue.

Taka goie shite, kuchi wo tsubomeru. "To speak loud, and then purse the lips." It is useless to shut the mouth after shouting out, like the English "to shut the cage when the bird has flown," or "to tie the bag when the cat is out."

Toshi yori no hiya midzu. "Old persons and cold water."

(Note).—Old people do not drink cold water, as being unwholesome; a common saying used as our English adage, trying to run before you can walk.

Chiri tsumotsute yama to naru. "Rubbish accumulated, a mountain arises." "Mole hills become mountains" with some, and "neglect of trifles causes serious difficulties."

Richigi mono no ko takusan. "Moral people beget many children." Honest bodies get the heaviest loads thrown upon them by the cunning.

Nusubito ni oie sen. "Money thrown after thieves." Throwing good money after bad.

Rui mo hari mo teraseba wakaru. "Emerald and chrystal are known by their sheen. Look through emerald or chrystal and they are known by their color. Good or evil is known by appearances, guilty conciences betray themselves.

Oie te wa, ko ni sagaru. "Old people are led by their children." To allow ones opinion to be overruled,—easily led astray.

Wore nabe ni mo, togi futa. "For a broken pot a mended lid." Nothing is so bad that there is not some use for it. Even an unprepossessing woman finds her mate.

Katzutai no kasa urami. "Lepers envious of those with sores." Undervaluing what we possess and coveteous and envious of others.

Yoshi no ana kara, ten wo miru. "Through the hollow rush to view the heavens." Small minds incapable of understanding great things. Taking a narrow view of a thing.

Tabi wa michi tsure. "On a journey, a travelling companion." A travelling companion should be carefully selected; the converse of the adage "want of company welcome trumpery."

Rio yaku kuchi ni nigashi. "Good physic is bitter." The truth though wholesome is not always pleasant. Our welfare and our desires do not always agree.

Soriyan no jiar ku. "The first born is most difficult." Young parents do not beget the most clever children, and the first born is the great anxiety of the family before and after birth. This adage is applied to worthless people.

Tsuki no yo ni, kama wo nukarern. "On moonlight nights to lose the pot." The house being left open on the faith of thieves fearing the moonlight, the light and shadow help the rogues. "Never fear" lost his ship.

Nen ni wa nen wo irern. "Be careful to be careful." The first trouble is the least trouble.

Naki tsura hachi ga sasu. "Crying faces wasps sting." Misfortune seldom comes singly. When it rains evil it generally pours.

Note.—In most of these, there is a play upon the words that renders literal and close translation most difficult if not impossible.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Raku areba k ari. "After pleasure there is grief." Laugh to-day cry to-morrow. Roses have thorns.

Muri ga toreba, dori shitzukomu. "If falsehood takes the road, truth hides." Oppression and violence keeps down reason and truth.

Uso kara deta m koto. "Truth that cometh of falsehood." Truth comes to the surface.

Imo no niye ta mo gozonji nai ka. "Do you know how to boil potatoes?" Used in addressing stupid or clumsy people when they commit some foolish mistake.

Nod moto sujureba atsusa wasururu. "After being swallowed the scalding is forgotten." In allusion to sipping hot drinks that scald the mouth but descend cool. Danger past is laughed at, it might be paraphrased.

Oni ni kana bo. "A demon with a club." Doubly frightful. A clever and courageous man; a lover handsome and a poet—one that is too clever.

Kusai mono mi shiradzu. "Offensively smelling people are unconscious of it." Those who believe the world is unconscious of the sins they are guilty of.

Yasu mono gai zeni ushinai. "Cheaply purchased, money lost." Cheap and nasty.

Makeru wa katzu. "To give in and to win." To give way in a dispute so that eventually one's own point is gained.

Gei wa mi wo tasukeru hodo no fushi awase. "The great misfortune of having to live by one's genteel accomplishments—as when ones own profession fails" Commonly used to degraded or unfortunate officials.

Fumi yaru ni mo kaku te wa motau. "To wish to send a letter but not being a writer." When one wishes to excuse oneself on the ground of inability or want of opportunity.

Ko wa san gai no kubi kase.* "The *Canjue* —wooden frame round the neck." Children are a burden in all time. A common adage to explain one's utter inability to follow one's own inclinations.

Yete ni ho ageru. "To my own experience hoist the sail"—meaning "to ride ones own hobby."

Teishiu no suki no akai yeboshi "The master's favorite red cap." The great man's will must be humoured.

Atama kaku shite shiri kaku sadzu. "To hide the head but not hide the tail." The ostrich that sticks its head in the sand to hide; to blind one's own eyes and fancy the world sees us not.

San ken mawate tabako ni shiyo. "Three times walk round and a smoke," like "A pull and a look at the town."

Kii'e gokuraku, mite gigoku. "Hearing of paradise and seeing Hades." Distance lends enchantment to the view.

Yudan tai teki. "Carelessness is great danger, literally. Oil exhausted a great enemy." Without resource from negligence in time of danger.

Me no ouye no kobu. "Above the eye a man." There is a play on the words, *me no ouye*, above the eye, or one's superior the proverb is used to express that there is some superior though secret influence at wark.

Mi kara deta sabi. "The rust that exudes from the blades." Where dirt is it must out.

Shiranu hotoke. "Ignorance bliss." What the eye seeth not, nor the ear heareth not, the heart careth not.

Yen wa i na mono. "Providence is a strange thing." Chance brings together queer couples.

Bimbo hima nashi. "The poor have no leisure." Only the rich can afford the luxury of idleness.

Mou zen no kozo narawanu kio wo yomu. "Children before the gateway (of a temple) repeat prayers they have never learned." Parrots repeat what men say.

Se ni hara kayerarenu. "The back and the belly are not interchangeable." Blood is thicker than water—is the corresponding adage.

Sui ga mi wo ku. "Intimate acquaintances devour." The knowledge of a thing or dexterity in some special hobby wastes time and energy.

"Persons who know the ropes have to do most hauling," would be a good free translation of this adage.

Kio no yume, Osaka no yume. "A dream of Kioto a dream of Osaka." Building Castles in the air.

The first syllables of the foregoing are arranged according to the order of the I Ro Ha, except when alteration was unavoidable to place them before the foreign public.

* *San gai* the three worl is. *Ka ko* before birth—*Gen zai* present world.

AMATEUR ATHLETIC ASSOCIATION.

A special general meeting of the Amateur Athenletic Association was held yesterday afternoon at the U. S. Club.

Mr. Dodds was voted to the chair.

The minutes of the late meeting were read and confirmed.

The chairman then stated that the first business before the meeting was elect a number to fill the vacancy on the committee caused by the resignation of Mr. J. H. Longford, and whilst so doing the expressed the regret of the committee at the loss of that gentleman's co-operation.

On the result of the ballot being made known, it was found that Mr. G. Hamilton was elected.

The Chairman than requested to hear the views of the members with regard to the holding of an autumn meeting. It had, he said, appeared to the Committee seeing the want of interest evinced in athletics as shown at last meeting, that it would perhaps be desirable to hold, but one meeting a year until an importation of fresh blood should give fresh vitality to the pursuit.

It was here pointed out by one of the members that by one of the rules of the Association it was obliged to hold two meetings in each year, and as no formal notice had been given of the intention of amending this rule, the present meeting was precluded from dealing with the question.

This having been found to be the case, a long disusgion took place as to the propriety of extending it over two days, and eventually the subject was left to the decision of the committee, it being understood that should the number of entries warrant it, the sports should extend over two days.

Various suggestions were then made as to the introduction of new classes of competitions, with a view of getting Germans, Americans and other nationalities to join the Association, which now consists almost entirely of Englishmen.

The chairman promised that these ideas should be laid before the committee with a view to if possible, giving effect to them.

The being all the business before the meeting, a vote of thanks to the chairman closed the proceedings.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 17th August, 1875.

SIR,—In the absence of fuller information on the subject than is gathered from your interesting *resumé*, it may be premature to attempt anything in the way of reply to the Essay entitled "Bemmo." Yet the subject is one of such paramount importance that even the semblance of indifference to it would be blameworthy on the part of those whose minds are convinced of the truth of Christianity and of the supreme excellence of both the Jewish and Christian Scriptures.

When a scholar of high reputation publishes a carefully composed treatise on the subject of the rival religious systems which claim the allegiance of truth-loving men, of all who are anxious to uphold good government and to promote the happiness of mankind; and when a great Cabinet Minister endorses such an essay—so far, at least, as to introduce it to his countrymen by a preface—then surely the time has come when we may look for such a consideration of the subject as is worthy of the occasion, and of the dignity of the topics discussed.

In China, as you may be aware, such an occasion arose when *Paul Sien* presented his apology to his Imperial master some two hundred and fifty years ago; but the Literati of that remarkable country did not, neither do they yet, understand what calm and courteous discussion means when dealing with the views and learning of the West; and hence we have nothing better, as an exhibition of Chinese thought concerning Christianity, than the disgusting *brochure* (to which you have referred) entitled the "Death-blow to corrupt Doctrines." Any reply to such a pamphlet, on the part of decent people, was impossible, just as it would be out of the question for a man of respectability to carry on an altercation with an obscene reviler; and consequently the vile pamphlet remains unanswered—a specimen of the practical working out of the tenets—a mélange of Taouism, Buddhism and Confucianism—which the Chinese people practically hold.

Here, however, in Japan, among a people more courteous and less conceited, it would seem as if we were to be favored with a better and more worthy treatment of the great topic; and we wait, with great interest, for the filling up of those omissions which, as you tell us, the translator has unfortunately made. I say unfortunately, because it is impossible to do justice to a writer's argument unless you have before you all that he himself has judged it well to state; and the conclusion of an essay often has much to do with the right understanding of its commencement. As an instance, I would refer to Mr. Satow's valuable treatise on the attempted "Revival of Pure Shinto"—the latter part of which explains much of the native author's meaning in what preceded.

Judging from Yasui Chinhei's course of remark, as given in your review, he is not only conversant with what Chinese writers have said on this general subject, but also with what some European (and American) objectors have urged. On this ground, however, no exception can be taken to his Essay, as a specimen of Japanese thought, if he and those whom he represents have so assimilated those foreign thoughts—Chinese, English, German, French—as to make them their own. "Truth is of no country," or rather its home is in all lands where there are honest hearts to give it shelter and welcome.

We cordially second your suggestion that Mr. Gubbins will give us *the whole* of this Essay; and are so desirous of seeing it soon, that we hope he will make use of your columns for the purpose without waiting for the delay which attends printing in pamphlet form.

I am, Sir,
Your obedient Servant,
CHRISTIANUS.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Tôkiô, 18th August, 1875.

SIR,—In your journal of the 14th instant, a special correspondent furnishes an article on "Adulteration and Forgery in Yedo." The writer says, "After my milk experience, I pity "the Japanese infants whom it is proposed to nourish with "*artificial human milk*, the necessary printing for which is, or "was lately, being done at the *Nisshin Shinjishi* Printing "Office."

If the author of the letter saw in the *Nisshin Shinjishi* printing office any of the "imitation labels" about which so much has been justly written of late, I find no fault with him for mentioning it. As no such work has ever been undertaken by the office, he cannot have seen anything of the kind there, and this letter is merely to ensure no such mistake lodging in the public mind.

As to the *artificial human milk*, "for which the necessary printing is or was lately being done at the *Nisshin Shinjishi* printing office," the writer might easily have obtained, from the author, an exemplar of what was printed on that subject; but I cannot think that his mentioning outside what he or any friend of his might have seen during a visit to that office is quite worthy of such a purist.

However, it may be as well to mention that the "necessary printing" was in the form not of any fraudulent label; but was professional information, printed on large sized letter paper, for distribution among the author's professional friends not in Japan only, but in many lands.

The information most certainly was valuable and it was signed by the author's name in full.

I am, Sir,
Your obedient Servant,
J. R. BLACK.

Law & Police.

H. B. M.'s PROVINCIAL COURT.

Before His Honor C. W. GOODWIN, Esq, Assistant Judge.

WHITFIELD & DOWSON *vs.* G. W. WAKE.

This was a claim for $9.63, for goods sold and delivered.

Defendant admitted the debt.

His Honor made an order that he should pay the amount claimed, and costs, by the 1st September next.

POSTAGE.

PROVISIONS OF THE NEW INTERNATIONAL POSTAL TREATY.

The Changes to take Place on July First—The Rates Established by the Treaty of Berne—Application of Stamps—Newspapers—Conditions as to Forms, Etc

WASHINGTON, June, 6.—The following circular containing important information concerning the postal rates established by the Treaty of Berne, has just been issued by the Post-office Department:

POST-OFFICE DEPARTMENT,
OFFICE OF FOREIGN MAILS,
WASHINGTON, D. C., May 27, 1875.

On and after July 1, 1875, uniform rates of postage will be levied and collected in the United States on correspondence to and from the whole extent of the General Postal Union, formed by the Treaty of Berne, embracing within its limits the following countries, viz: Germany, Austria, Hungary, Belgium, Denmark (including Iceland and the Faroe Islands), Egypt, Spain (including the Balearic Isles, the Canary Islands, the Spanish possessions on the northern coast of Africa, and the postal establishments of Spain upon the western coast of Morocco), Great Britain (including the Island of Malta), Greece, Italy, Luxemburg, Norway, the Netherlands, Portugal (including the Islands of Madeira and the Azores), Roumania, Russia (including the Grand Duchy of Finland), Servia, Sweden, Switzerland and Turkey. These rates are as follows, viz:

(*a*) For prepaid letters, five cents for fifteen grammes (half ounce.)

(*b*) For unpaid letters received, ten cents per fifteen grammes (half ounce.)

(*c*) For postal cards, two cents each.

(*d*) For newspapers, if not over four ounces in weight, 2 cents each.

(*e*) For books, other printed matter, patterns of merchandise, legal and commercial documents, pamphlets, music, visiting cards, photographs, catalogues, prospectuses, announcements and notices of various kinds, whether printed, engraved of lithographed, 2 cents per each weight of two ounces or fraction of two ounces.

(*f*) For the registeration, fee on all correspondence, 8 cents.

(*g*) No fee will be charged on return receipts for registered articles in cases where such receipts are requested.

The same rates of Union postage will be levied and collected in the United States on correspondence to and from France on and after January 1, 1876. In the meantime the postage rates as fixed by the existing Postal Convention with France, will be collected on the correspondence exchanged with France.

The prepayment of letters is optional, but unpaid letters will be charged in the country of destination with double the rate levied on prepaid letters. The prepayment of postal cards, registered articles, newspapers and other printed papers is compulsory. Prepayment of postage of every description of article can be effected only by means of postage stamps or stamped envelopes valid in the country of origin.

Newspapers and other printed papers unpaid or insufficiently prepaid cannot be forwarded. Other articles, when unpaid or insufficiently paid, will be charged as unpaid letters, after deducting the value of the stamped envelopes or postage stamps employed.

No additional postage will be charged for the retransmission of postal articles within the interior of the Union; but in case an article which has only passed through the inland service of one of the countries of the Union should by being redirected enter into the inland service of another country of the Union, the Postoffice of the countryof destination will add its inland rate.

Official correspondence relative to the postal service is exempt from postage, with this exception, no franking or reduction of postage is allowed.

Not only letters, but legal and commercial documents, patterns of merchandise, newspapers, stitched or bound books, pamphlets, music, visiting cards, photographs, catalogues, prospectuses, announcements and notices of various kinds may be registered, and the postage payable on registered articles is the same as that on articles not registered.

The maximum weight for patterns of merchandise is fixed at 250 grammes (8¾ ounces), and the maximum weight of other articles (except letters) is 1,000 grammes (2 pounds 3 ounces).

APPLICATION OF THE STAMPS.

Correspondence of every kind must be stamped on the upper part of the address, with a stamp indicating the place of origin and the date of posting unpaid or insufficiently paid correspondence

must, in addition be impressed with the stamp 'T" (to to be paid), the application of which will devolve upon the exchanging office of the country of origin. Every postal packet which does not bear the stamp "T" will be considered as paid to destination and treated accordingly.

NEWSPAPERS AND PRINTED PAPERS—CONDITIONS AS TO FORMS, ETC.

Books, newspapers, and printed papers, and other similar articles must be placed under bands, or in an envelope open, or simply folded so as to admit of their being easily examined, and except in the following particulars they must contain no manuscript, writing, figure or mark whatever.

Proofs of printing or of music may bear corrections, made with the pen, relating exclusively to the text or to the execution of the work. It shall be allowable to annex manuscript to them.

Circulars, notices, etc., may bear the signature of the sender, with his trade or profession, and may also indicate the place of origin and the date.

Books shall be admitted with the manuscript dedication or a complimentary inscription from the author.

It shall be permitted to mark with a simple stroke the passages in the text to which it is desired to call attention.

Printed or lithographed stock and share lists, prices current and market reports shall be admitted with the prices added in writting or by means of any impression whatever.

No other manuscript additions will be allowed, nor even those produced by means of typographical characters, if the latter tend to take from the packet its general character.

Such of the above-mentioned articles as shall not fulfil the foregoing conditions will be considered as unpaid letters and charged accordingly; with the sole exception of newspapers, and printed papers, such as circulars, notices, etc., which will not be forwarded in such cases.

PATTERNS OF MERCHANDISE—CONDITIONS OF FORM.

Patterns of merchandise will only be admitted to the benefits of the reduced postage extended to them by the treaty, under the following conditions:

1. They must be placed in bags, or in boxes, or envelopes, removable so as to admit of an easy examination.

2. They must not have any saleable value, nor bear any manuscript writing other than the name or the trade or profession of the sender, the address of the person for whom the packet was intended, a manufacturer's or trade mark, numbers and prices.

3. It is forbidden to introduce these articles into a letter or into a packet of any other kind, save in the case in which they form an integral part of a particular work

4. Patterns which are not in accordance with the requisite conditions will be charged as letters, except those which are valuable; the latter will not be forwarded, nor those the conveyance of which would be attended with risk or danger.

LEGAL AND COMMERCIAL DOCUMENTS

The following articles are considered legal and commercial documents, and will be admitted as such to the reduced postage extended to them by the treaty: Acts and deeds of all kinds drawn up by public functionaries; invoices: the various documents on the service of insurance companies; copies and extracts of deeds under private seal, written upon stamped or unstamped paper, scores or sheets of manuscript music, and in general all manuscript papers and documents which have not the character of an actual and personal correspondence.

Legal and commercial documents must be sent under a movable band, and made up so as to admit of their being easily examined.

Packets which do not fulfill the conditions above enumerated will be treated as unpaid letters and charged accordingly.

ARTICLES EXCLUDED FROM THE MAILS.

The treaty provides that there shall not be admitted for conveyance by mail any letter or other packet which may contain either gold or silver money, jewels, or precious articles, or any other article whatever liable to Customs duties.

Correspondence for all portions of the General Postal Union will be forwarded through the existing exchange offices.

By order of the Postmaster-General.

JOSEPH H. BLACKFAN, Superintendent.

THE WEAKNESS OF MODERN MISSIONS.

(Saturday Review.)

A Conference on Foreign Missions in connexion with the Church of England was held at the Cannon Street Hotel last Tuesday, on which the *Times* has expended a good deal of rather contemptuous criticism. The object must, however, be allowed to be one of considerable importance, about which, to say the least, the last word has not yet been spoken. The insignificant or inadequate gains of modern missionary enterprise have been for some time past a standing proverb of reproach against Christianity with indifferentists and sceptics. And it is not very long since the Archbishop of Canterbury, who is not much given to sensational language, ventured on the startling observation that, if we did not take care, instead of our converting the heathen, the heathen would be converting us. Certain it is that the net result of recent efforts in this direction has been absurdly disproportionate to the enormous outlay of both of money and labour bestowed upon them. On the whole, it is no doubt true, as has been remarked, that Roman Catholic missions have been more successful than Protestant ones, and it is easy to account for the difference without having recourse to theological considerations. The varieties of doctrine among teachers of rival sects could hardly fail to prove a serious hindrance to their influence, and although their contradictions have more or less tended to prejudice the claims of Roman Catholic missionaries also, still the united phalanx presented by the latter secures them a great advantage. But what is more important to notice here, as having a direct bearing on some of the points raised at the Conference of last Tuesday, is that the Roman Catholic Church has shown wisdom in the selection and adaptation of instruments for the work. The Jesuits have been during the last three centuries by far the most successful missionaries, after making every deduction for merely temporary triumphs, the use of questionable expedients, and the like. And the Jesuits, with all their faults, which are neither few nor light, have been all along not only the most zealous, but the ablest and most intellectual, order in the Church. There is little ground, however for boasting on any side, when we reflect that considerably over two thirds of the human race still remain strangers to every form of Christianity. So imperfectly has the commission to make disciples of all nations been discharged at the end of eighteen centuries.

Whether the speakers at last Tuesday's meeting succeeded in throwing much new light on a confessedly trite and difficult subject we are hardly prepared to determine. But they contributed several suggestions which, if not new, have every appearance of being true, and are well worthy of practical consideration. Such was the Bishop of London's opening remark on the importance of a a native ministry, which also formed the subject of the Bishop of Edinburgh's paper, who himself formely held a colonial see. Bishop Cotterill had little difficulty in proving the early, and indeed apostolic, origin of the plan he advocated, and there is much force in his argument for training a native clergy in colleges in their own country instead of sending them to England for the purpose This was evidently the opinion of the late Bishop Patteson, whose authority on such a point must be considerable, and the same principle was vigorously maintained and acted upon by Bishop Tozer during the comparatively short period in which his health permitted him to carry on his laborious duties in Central Africa. It is manifestly irrational to imagine that unity of belief can override all distinctive peculiarities of national character and habit, and that it is necessary to reproduce all the detailed accessories of an English personage among the Iroquois or Bengalese. Several clergymen of extensive missionary experience spoke in the same sense as Bishop Cotterill. Mr. Long pointed out that the Roman Catholic Church had not been slow to apprehend the need of flexibility in external details, and allows her clergy, for instance, in China to dress like mandarins. There is much force again in the suggestion of Mr. Higgins, a clergyman from Madras, that "a more expressive ritual" than is customary in England will best meet the requirements of Indian natives. But Professor Monier Williams's paper on "The False Religions of the World and the Best Ways of Dealing with them," formed, if we may judge from the report, the most interesting feature of the meeting. It remarkably illustrates what we said just now about one main secret of Jesuit missionary success. *For Mr. Williams's great point was that a time had come when thoughtful Christians are bound "to readjust"—not their faith, which cannot change, but—"themselves, to their surroundings," and take pains in the first place to master the dogmas of those whom they aspire to convert.**

Original from UNIVERSITY OF CALIFORNIA

* We have italicized the passages which seem most to bear upon

It is surely obvious at a glance that the neglect of this sensible, but by no means superfluous, counsel has been one chief cause of missionary failure. A profound conviction of the exclusive truth of the Gospel, and of the certain damnation of all who reject or are ignorant of it, coupled with an earnest zeal for their conversion is at best a very slender outfit for so vast an enterprise. Yet it would be no exaggeration to say that many even of our most devoted and excellent missionaries have had no more serviceable equipment. We are familiar with the old story of the heathen chief who paused on the eve of baptism to ask his new teacher what had become of all his forefathers who had died in their errors, and, on being told they "were all in hell," declined to take a step which would separate him from their company. It is a mediæval tale; but this sort of reckless denunciation has been very common, probably more common among modern Protestant missionaries. Partly, no doubt, this has arisen from the exceptionally gloomy estimate of the heathen world insisted upon so emphatically by the leading Reformers, as a corollary from their peculiar views of grace and original sin. And it is also due in great measure to an ignorant habit of confounding all non-Christian religions in one indiscriminate mass of "heathenism," besides forgetting the infinitely various degrees of moral responsibility among their individual adherents. And this way of looking at things has probably been encouraged by an unfortunate mistranslation in the Authorized Version of the Bible, to which Mr. Williams very properly called attention, and which, it may be hoped, will not escape the notice of the New Testament revisers. St. Paul was so far from the questionable taste, and still more questionable policy, of beginning his address to the Athenians by telling them they were "too superstitious," that he did, in fact, base his appeal to their consciences on the fact that they were "very religious," though he proceeded to urge that their religious sentiment had clothed itself in mistaken forms. A modern preacher need not be ashamed to follow what is at once the apostolic pattern and the dictate of sound sense in appealing to what is best, rather than to what is worst, in his hearers when he wishes to lead them on to the recognition of a higher truth. *Misbelief is generally a more hopeful foundation for the Evangelist to build upon than simple unbelief, and it is almost a truism to say that no religion which has exercised any appreciable influence in the world can be wholly false.* The conversion of the Jews could obviously not be attempted on any other principle, for a Christian preacher who denied the divine basis of their faith would cut the ground from under his own feet. And though he may admit no claim of direct revelation for Pagan systems of belief, he will show more zeal than knowledge if he refuses to recognize at the root of all of them the distortion or corruption of some primeval truth. And that alone would be a sufficient reason for studying them before he undertakes to confute them. There is indeed often an enormous difference, as Professor Williams very pertinently insists, in reference to Brahmanism, between what he calls the "exoteric" and "esoteric side" of a religious creed. This holds good even of Christianity, and Dr. Newman has somewhere observed that "a people's religion will always be a corrupt religion," because mankind, being what they are, are sure somehow or other to twist their professed principles into conformity with their debased practices, though every article of their creed may in the abstract be perfectly true. But no religion can be effectively assailed by attacking only its weak points. *A Protestant controversialist who relied for the refutation of purgatory on his exposure of the scandals of Tetzel's traffic in indulgences would be laughed at by every educated Roman Catholic. And a Christian missionary who assails Brahmanism while he is content to remain in ignorance of the Veda has no better prospect of success.*

There was, however, till recently a plausible excuse for such ignorance, for the sacred writings of the three great religious systems which divide the empire of the world with Christianity were not easily accessible. Professor Williams shows that this difficulty has now been removed. A greater part of the Veda, the Koran, and large portions of the Tripitaka, or sacred books of the Buddhists, have already been translated into English. We cannot follow him through his interesting account of the characteristics of these several systems, but one point deserves especial notice from all who are concerned in the work of foreign missionaries, as also, we may add, from its bearing on the religious future of our vast Indian Empire. If the Professor is right, and we believe he is borne out by high authorities in his estimate, there is a radical difference between these three great religions in their power and spirit of propagandism, which is an essential condition of permanence and life. Brahaminism neither is nor ever could be from its own nature a missionary faith; it has no desire or capacity for expansion, and its dying out is therefore a question of time only. Buddhism came into the world as a reforming and missionary power, but its energy is exhausted, and it has no future before it. Mahometanism, on the other hand, which at first was propagated by the sword, has developed a new moral force, and is already disputing the ground with the old religions of India. In Africa it makes rapid advances, and Professor Williams thinks that, unless a fresh and powerful impulse is given to Christian missionary effort, it will speedily overrun the whole of that continent. He believes that Christianity is really far more congenial to the native mind of India, and that it will be our fault if it does not eventually supersede the moribund faiths of our multitudinous Eastern Empire; but he adds that, if we do not convert them, they will unquestionably embrace the creed of Islam, though it has by no means so close an affinity with their character and convictions as our own. It is hardly necessary to point out that this question has a profound [illegible] as religious interest, to which indeed Mr. W[illegible] attention some little time ago.

discussions as that of Tuesday last may be of great service, if they can be kept from degenerating into mere vague generalities, and the best guarantee for that will be the presence of Orientalists like Mr. Monier Williams and men of practical experience like Sir Bartle Frere to take in them. *Sir Bartle Frere's remarks on the supreme importance of missionaries displaying a thorough acquaintance with the views of their opponents, and a scrupulous fairness in stating them, entirely confirmed the advice given by the Professor.* It is worth remembering that no parallel can be drawn in this respect between the position of modern and that of mediæval missionaries. The latter may have been in some ways superior, and were certainly more successful; but their task was a widely different one. *To preach the Gospel to rude and barbarous races, with no civilization and a creed for the most part as simple as it is superstitious, is one thing. To confront an elaborate theological system which has lasted for centuries, or which is even older by many centuries than Christianity and prevails in a nation with a long history and complex civilization of its own, is quite another.* Our British or Saxon forefathers were not as the disciples of Buddha or of the Arabian Prophet. And different weapons are required for a different warfare.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—During the last few days a good general demand has sprung up in our import market, and though quotations are not actually higher, at any rate the tendency of prices is upwards.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1 95 to $2.05	60 to 64 reed 40 yds.	35 in.	nom per pce 2 20 to 2 40
8 lbs.	38½ yds.	44 in.	„ nom.	2 20 to 2 40	Turkey Reds 24 yds.	30 in.	2¼—3 lb. per lb 0.75 to 0 97½
8 lbs. 4 to 8 lbs.	6 „	39 in.	„ „	2.20 to 2 55	Black Velvets		7.75 to 8 75
9 lbs.	„	44 in.	„	2.50 to 2 90	English Drills 15 lb. 40 yds,	30 in.	3.25 to 3 35

Yarn:—

No. 16 to 24	nom.	per picul.	27.00 to 35.00		No. 28 to 32	nom.	per picul. 35.00
Reverse	nom.	nominal			„ 38 to 42	„	„ 40 00 to 45.00

Woollens.—There has been some demand for Cloth, *Pilots* having sold in pretty considerable quantities at from 45 cents to 55 cents per yards, while in other descriptions no business has resulted on account of the low prices. *Plain Mousselines* are in good request, but other Woollens are as yet disregarded.

Plain Orleans	40—42 yds	32 in.	6 25 to 7.75		Figured Mousseline de Laine	30 yds.	30 in. 0 25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 50 to 5.25		Multicolored „	30 yds.	30 in. 0.32 to 0.36
Italian Cloth	30 yds	32 in.	0 25 to 0.36		Cloth, all wool plain or fancy	48 in. to 52	in. 1.00 to 1 30
Camlet Cords	29—30 yds	32 in.	6 00 to 7 00		Presidents	54 in to 56	in. 0.75 to 0.85
Camlets Asstd.	56—58 yds.	31 in	18 50 to 19 00		Pilots	54 in. to 56	in. 0.45 to 0 55
Lastings Japan	22—30 yds.	32 in.	13 00 to 14 50		Union	54 in. to 56	in. 0.70 to 0 85
Plain Mousseline de Laine	30 yds.	30 in.	0.18 to 0.19½		Blankets, scarlet & green 7 to 8 lbs.		per lb. 0.45 to 0.48

Nominal.

Sugar.—Market very quiet—no transactions in Formosa kinds.

Kerosine Oil.—Dull, at $2.60 to $2.65.

Sugar:—Formosa in bag	per picul	4.60 to 4.80		China No 5 Kong-fun	per picul	5.00 to 5.50
in Basket	„	4.60 to 4 60		„ No. 6 E-pak	„	4 40 to 4 80

„ No. 2 Ching-pak	„	7.40 to 7 80		Daitong	„	3 30 to 3.90
„ No. 3 Ke-pak	„	6.70 to 7 20		Japan Rice	„	3.25 to 3.30
„ No 4 Kook-fah	„	5 80 to 6 30		Kerosine Oil	per case	2 60 to 2 65

EXPORTS.

Silk.—The market is well supplied, transactions are active and prices in spite of very unfavorable news from home are advancing. Since the 9th instant, arrivals are 960 bales and deliveries 612 piculs.

We quote Hanks Best No. 1 to 2, $470 to $480; Good No. 2, $440 to $460; Medium No. 2½, $410 to $430; Common No. 3 to 4, $380 to $400. Oshiu best, $550. Hamatski best, $460.

Tea—Business continues extremely active, and prices consequently shew a further advance of about $1 per picul on grades most in demand, i.e. Medium, and Good Medium, which classes have been recently in fullest supply. Amount settled for closing week is about 5,400 piculs, stocks are well maintained, as arrivals have been on a most liberal scale.

To-day's rates close firm as under; general quality of parcels offering inferior and undesirable.

Common	$21.00 to 24 00	Fine	$36.00 to 39.00
Good Common	25.00 to 28 00	Finest	$40 00 to 44 00
Medium	29 00 to 32.00	Choice	nominal. $47.00 to 50.00
Good Medium	33.00 to 35.00		

EXCHANGE AND BULLION.

Exchange.—There has been a fair business doing in Private Paper during the past week, with some few transactions for forward delivery at 4/1¾ for first class credits; at the close, however, rates are slightly firmer, with but little demand for Bank Rates.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s 1⅝d. to ⅜	On Hongkong—Bank sight	par
„ Bank Bills on demand	4s. 0½d. to ⅝	„ Private 10 days' sight	¼ per cent disct.
„ Private 6 months' sight	4s. 1¾d to 4s 2d	On San Francisco—Bank Bills on demand	98½
On Paris—Bank 6 months' sight	5.20	„ 30d. sight Private	101
„ Private 6 ms. sight	5.29	On New York—Bank Bills on demand	98
On Shanghai—Bank sight	72½ to ⅝	„ 30 days sight Private	101
„ Private 10 days' sight	73	Gold Yen	404
		Kinsats	405½

This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The summer has broken and is practically over, so far as we have anything more to dread from heat. It has not been very long, or, with the exception of one week perhaps, very severe When the typhoon is past, we may begin to think about the pheasants, and hope meanwhile that the Shooting Regulations will be out before the first of next month. No one would object to pay for a licence, and there is no better class of tourists than good sportsmen. They are almost invariably orderly, humane and peaceable, as becomes gentlemen. (For the "cockyolly"-killer there is no word bad enough in any language.) The ascent of Fusiyama has become the rage, and ladies who have not made it threaten to decline all invitations. Two young English ladies (sisters) have been up during the week, and the cry is now for a dangerous volcano somewhere. Why not Asamayama, which is active at this very moment and has some most fascinating crevasses in it? Or yachting excursions to Vries might be made; there is generally a little something going on there. *Punch* makes fair fun of the extreme particularity with which tourists have to define their routes in their applications for passports. Free men detest being tied down to some given line of country, and grievances which are perhaps sentimental in their origin become real when relaxation and pleasure are in view, instead of work, to which men perforce accommodate themselves. But the relations between nations possessed of different civilizations, regarded from a truly just point of view, become, more and more, as we look at them closely and attentively, relations of logic as well as of individual interest, and extra-territoriality jurisdiction, so long as it necessary—and no one doubts its present necessity—is fatal to unrestricted movement in the country. We must cherish no illusions on this subject, still less must we pretend that what we want, whether for pleasure or business, is what we don't want. There is no international intercourse which can thoroughly justify itself, as we have said over and over again, which does not bring mutual and equal advantages.

Another editor, Oka of the *Hochi Shimbun*, has come under the Press-laws, and the whole question is far from being settled yet. One of the incriminated articles for which he suffers will be found elsewhere, and, though the second has reached us very late, we will try to lay it before our readers to-day.*

* This has been since found impossible.

In the first the writer argues that an ill reputation will come to Japan on account of the conflict which is likely to arise between the Government and the newspapers, which is simple nonsense. But were it otherwise, this is reviling—if there be any reviling—the newspapers and the Government, not the laws. In point of fact, the laws seem to be misunderstood by the Government, the Courts and the Editors alike. It is taken for granted on all hands that these laws are repressive of fairly free discussion. Obata takes for granted that Editors must be always violating the Press-laws. Why? They certainly do not interdict argument and discussion on the effect of any laws. All that these laws really do is to register the newspapers and make the Editors responsible for what appears in them. It is truly extraordinary, indeed, to observe there is no law for writing matter which tends to bring the Government into contempt, one which, we speak under correction, certainly must exist in France. If this has been excluded from the code with the direct intention of the Government, it proves abundantly what we asserted some time back, that the original desire of the Cabinet was to give the utmost possible liberty to the Press. Really, the general impression made on our mind by all this is that of men who have drunk water all their lives, and instead of being grateful for an almost unrestricted draught of wine—which has certainly got into the heads of some of them—are not content because they cannot bathe, swim and play antics in it.

A new question has cropped up, that of trial by jury, advocated in the *Choya Shimbun*, under the misapprehension apparently that it will ensure a more perfect administration of justice. Speaking very broadly, it may do so, inasmuch as it is a check on the power of the Crown, and the possible ignorance, venality or servility of judges. As a step in constitutional government and as an educational instrument, its value cannot be overrated; but we imagine that a good judge under a free government would smile if told that the system ensured a more perfect administration of justice than the decision of cases by judges. The crass stupidity of common juries is an old theme of mirth, and rather than trust to their verdicts where special juries cannot be empanelled, men will often forego their claims on justice.

WHAT an extraordinary change has come over the spirits of the Hongkong and Shanghai Bank shareholders! At the last General Meeting they were all in arms, and now are they very lambs. If the questions asked by Mr. Kingsmill and the answers he received to them had all been arranged beforehand, they could not have been more delightfully in harmony. His "Quite so," and "Pray, understand, I am ready to stop if you think I am going too far," and his "I'm very much obliged to you for answering my questions, and must say that taking every thing into consideration matters are far from being unsatisfactory: I think we have great reason to be satisfied with the result," and his "that was very satisfactory indeed" &c. &c. seem to our mind but a feeble treble echo of the bass rumble of the last meeting. Of course we have nothing but satisfaction to express if the affairs of the Bank warrant all this. But an opposition which sings these pretty tunes is unknown in the history of sturdy, English investigation and controversy. Shakspeare makes one of his by-standers in a scene, commenting upon another speaker, say, "Methinks he doth protest over much."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The home papers are ringing with praises of Major Murata's wonderful rifle practice, which beats that of the finest shots in Europe. We do not know whether he has shot against the American team, now in London, who beat the Dublin men, but we trust he will do so. We should amazingly have liked to see him carry off the first Queen's prize—a silver medal, badge and £60. The "Children of the Mist," as the *Times* calls the Scotchmen, seem to have been well to the front; but, so far as we have seen, the Japanese has beaten all comers. We have some curiosity to know whether he abstains from tobacco and drinks only tea. Other things being equal, we should be inclined to back the man who did so.

The Japanese Post-Office has announced that double postage will hence forward be charged upon letters posted after the advertised hour of closing the mail. This has been necessitated by the fact that so large a proportion of the mail is sent in after hours, that the whole mail is delayed beyond the time when it should be on board, and this gives rise to complaints.

We are glad to observe that an uniform rate of 20 cents per 15 grammes has been established for many of the principal European countries, and that this makes a greater or less reduction in rates all round.

Among the items of news reported by the mail which arrived this afternoon are the following:—

The "Alberta," with the Queen on board, in crossing from Cowes to Gosport, ran down the yacht "Mistletoe," which sank, and three persons were drowned.

London, 19th August, 1874.

The insurrection on the Northern Frontier of Bosnia is assuming a serious character; 20,000 Turks are operating against the insurgents in Herzegovina, and there is apprehension of a religious war between the Moslems and Christians.

(From the Japan Mail Daily Advertiser.)

The following is the letter addressed by the Minister for Foreign Affairs to Mr. Bingham, U. S. Minister, on the subject of the late proceedings of the police at Hachoji towards the Honorable Mr. Richardson and Commander Lewis. These proceedings are condemned as wholly indefensible by Mr. Terashima, though it is pleaded that the police acted on a mistaken idea that Hachoge was beyond the treaty limits. It is obvious that they ought to have been left in no such doubt, and it is also clear that the argument so long contended for by the Japanese that the ten mile radius was to include the windings of the road, instead of being measured by an air-line, is abandoned directly it suits the purpose of the Government. These two facts have taken from the letter of the Foreign Minister any grace which might have attached to his ample expression of regret, and are calculated to increase distrust where it was most important to create a feeling of confidence. We must also take marked exception to the obvious stress laid upon the position of the two gentlemenn who were the objects of these indignities, though it is conceivable that the expression which is used for this purpose was employed by Mr. Bingham in making his complaint. If so, it is greatly to be regretted, as it tends to keep up in the Japanese mind the idea that we have any analogies in our own laws for the distinctions between classes which abound in theirs. It would be curious indeed if this pernicious delusion were in any way fostered by the letter of a Minister of an ultra democratic Government, while the English Government, thanks to the vigilance of its Minister, has always watched with equal care over the privileges of the highest and lowest of its subjects.

[TRANSLATION.]

Department of Foreign Affairs, Tokio,
22nd August, 1875.

HIS EXCELLENCY HON. JOHN A. BINGHAM,
Envoy Extraordinary and Minister Plenipotentiary of the U. S.

SIR,—I had the honour of receiving on the 18th instant your Excellency's note of the 16th ditto, wherein you detail to me the facts in the matter of the stoppage at the village of Hachoji, in the Province of Musashi, of two eminent American citizens, and of the further improper treatment to which they have been subjected.

Previous to the receipt of your note, I had heard of these occurrences through another source, and was very greatly surprised and annoyed at them, and directed Mr. Mori to call upon your Excellency, and ascertain the facts; at the same time that I issued instructions that strict inquiry into the matter should be made by the Governor of Kanagawa, under whose jurisdiction the village of Hachoji is situated.

I have now the honor of making known to you the result of the inquiries that have been made.

It seems that the chief of police at the village of Hachoji, Ito Shigehide, who ordered the arrest of Captain Lewis and Mr. Richardson, was sadly mistaken in supposing Hachoji to be without the treaty limits,—his error being based on the fact that, as indicated by the posts along the road, Hachoji is eleven and one-half *ri* from the Kanagawa Kencho, whereas the distance should have been calculated in a straight line.

Ito Shigehide had been recently appointed to the position he occupied at Hachoji, and pleads that he was unaware that foreigners were within their rights when sojourning in the village, and, consequently, deemed it his duty to ask the two gentlemen to produce their passes; and when they failed to do this, he summoned them to the Police Court, and sent them the following day to Yokohama, under escort of a policeman, still thinking he was merely performing his duty.

And here allow me to remark to your Excellency these two gentlemen were not detained at Hachoji; they requested to remain the night at the village, and proceed to Yokohama the next day. But this is only a trifling circumstance of the case.

Ito Shigehide has been found guilty in that he had failed to inform himself accurately of the treaty limits, and that he had failed to show proper respect and consideration to Captain Lewis and Mr. Richardson, when these gentlemen had informed him of their names and positions, and in that he had ordered them to be conducted back to Yokohama by a petty police officer, when they had expressed their readiness and willingness to quietly return at once. Ito Shigehide's conduct has been unwarrantable and rude.

The policeman in Yokohama, Yoshimura, on the arrival at the police station of these two gentlemen, and of the letter from the chief of police at Hachoji, detained them unnecessarily long at the station house, interrogated them as to their names and positions in a disrespectful and unbecoming manner, and appealed to the Constable of the United States Consulate for confirmation of their assertions, thereby subjecting them to fresh humiliation.

Your Excellency will please observe that Mr. Elmer, the official in the United States Consulate, was not called upon to stand surety for the appearance of those two gentlemen; he was merely called upon to corroborate their statements of themselves.

These two Japanese officials, Ito Shigehide and Yoshimura, have been dismissed from the service of the Japanese Government; for though they thought they were merely doing their duty, they have exceeded the power conferred upon them, and have acted unbecomingly towards two American gentlemen, even after they were made aware of their names and positions.

I hope your Excellency will favour me by communicating to Captain Lewis and to Mr. Richardson the very sincere regret which is felt by our Government for the injustice and indignity put upon them, and to beg them to believe that their treatment arose out of no desire to offend or embarrass, but out of ignorance, however unfortunate have been the consequences.

To guard against a recurrence of such usage as befell your two distinguished countrymen, the Government has taken steps which it is hoped and deemed will prove effectual.

I hope the explanation I have here given you of the misconduct of the police officials will prove satisfactory and sufficient to both your Excellency and the two gentlemen interested, to whom I request you to communicate the above.

With respect and consideration,

(Signed,) TERASHIMA MUNENORI,
His Imperial Japanese Majesty's Minister for Foreign Affairs.

The aquatic sports which took place on Friday evening afforded an excellent opportunity for the display of some good swimming and diving, in which Messrs. Jeyes, Dowson, Dare, Shand, Vivanti, A. H. Dare and Hunt all distinguished themselves.

The Russian Commissioners were entertained at the Kaitakushi on the 26th instant, after having inspected the gardens of the department.

It has been proposed that a large temple now in Kōshiu, shall be bought and placed on the spot where stood the temple of Shiba which was destroyed by fire the year before last.

The *Hochi Shimbun* states that two buildings in foreign style are to be constructed for the Okurasho at a cost of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

13,000 *yen*; and a similar building will be constructed for the Naimusho.

The *Chuya Shimbun* states that Narushima, its Editor, has been committed to prison for five days for violating the Press-laws.

We promised our readers to lay before them all fair comments which we might meet with elsewhere upon the Press-laws and our own views of them, whether these comments were for or against us. The question here is not "*who*" *is right*, but *what is wise*. The importance we have attached to it arises from our conviction that it underlies the order, stability and progress of this Empire, and the interest of every native and foreigner in it. Those of our readers who view it more lightly are doubtless growing weary of the constant mention of these laws. But if so they are, in our opinion, more indifferent than they should be to a question which touches them so nearly. If we are correct in our views, these laws will prevent a great deal of mischief, which, if committed, would prevent anything like the progress we have seen during the last six years. If we are not correct, this progress will be retarded. We quite admit that in the art of ruling, something must at times be risked. But the occasions are altogether rare and exceptional when a "leap in the dark" can be justified, and we are persuaded that an unrestricted newspaper Press in this country would have involved this. The *Shanghai Courier* has the following matter on this subject, which we reprint in conformity with our promise:—

> The new press-laws have already begun to operate among the native newspapers in Japan. The well-known and we believe very respectable shirt-soiled the *Nichi Nichi Shimbun* has been apparently the first victim, and although the examination of the editor resulted in his temporary release, the circumstances of his arrest form a fitting illustration of the utter impracticability of the Code itself. It seems that the jealousy of the authorities was excited by a letter addressed to the paper, urging it to put a little more life and energy into its articles. "I beg your pardon, Mr. Gen," begins the writer, with quaint politeness, naming one of the editorial staff, but "you and the editors of other newspapers have, until lately, written and published in your journals articles against matters which are injurious or non-beneficial to the country and have reviled your thirty three millions of brothers and sisters for what you thought was bad and mean in their characters. Thus, your new-papers were a benefit to us. But now I am compelled to say that you show neither spirit nor energy of mind. Since the promulgation of the press-laws, the points of your pens have melted even as lead in a fire. . . . Alas! I grieve to see such paltry writing as is now published. Write freely and with energy as of yore. . . . We used to look upon you and your fellows as the staff and pillar of our freedom. . . . Why shrink before the severity of the press laws, and tremble in thinking of the amount of money you may be fined? An ancient writer has it.—*A true patriot and philanthropist will die for his lord or his country.* Remember that death comes but once, and go on with your work. O our eldest brother Gen!" This is the gist of the letter; and before the "eldest brother Gen" could either act upon the advice or reject the whispers of temptation, the letter-mischief was hauled before the District Police Office, and warned to hold himself in readiness to answer for having published this inflammatory effusion. Frankly, we can hardly understand the position of a man who would undertake the defence of such tyranny. Even the *Japan Mail* appears to be modifying its views, advocating the lenient administration of these laws, and warning the Government not to make an enemy of the press. It is short-sighted policy. The public writers, having for some time enjoyed a reasonable amount of liberty, will not endure muzzling with patience; and any official persecution of a newspaper will naturally awaken sympathy with the cause which is the martyr, against the persecutors. It would be a pity for a generally intelligent press like that of Japan to degenerate to the level of the *Times*, for example. At present they deal with questions of the highest social and political importance; we should be sorry to see their columns filled instead with stories of oviparous mice and similar rubbish. But this is what it will end in, if they are to submit.—*Shanghai Courier.*

The writer declares against our views, but makes a grave error in saying we have modified them. We are not pleading that there is necessarily any merit or wisdom in our constancy. We are only speaking to a fact; and about this there must be no mistake. A reference to our files will show that:—

1st.—We pointed out the license into which the Press was running and the probable consequences of this.

2nd.—We approved of the laws issued in order to restrain this license, advocating at the same time the abolition of the book-censorate.

3rd.—We pointed out the grave errors we thought the Government was committing in excluding the Press from the Assembly of the Local Officials; and in a series of press prosecutions the issue of which was fine and imprisonment instead of warning for the first offence. We pleaded for a liberal and temperate interpretation and administration of these laws, and said that if there was any reason or justice in the application of severe sentences to such writing as had actually been incriminated, the whole Press had better be shut up at once. This would be logical and intelligible, however deplorable.

4th.—Still confirming our unshaken adherence to the Press-laws as political necessities, we again pleaded for the abolition of the book-censorate.

In all this there is no shadow of turning. But we plead that there is at least an attempt at discrimination, instead of mere popular clamour; an apprehension of the extreme difficulty which surrounds the question, not the off-hand answer of irresponsible carelessness.

The writer in the *Courier* says that he cannot understand how any defence can be made of a prosecution of the incriminated matter which he quotes. Neither can we, and we said so most distinctly at the very time the prosecution was instituted. We were most desirous that in dealing with this new and unknown force—unknown, that is, in this country—the Government should make a friend not an enemy of it, and this could only be done by showing that while the country was still unripe for an unrestricted Press, so much liberty would meanwhile be granted to it as appeared, from a liberal point of view, compatible with the public safety.

No particulars appear to have reached Yokohama regarding the failure of the Bank of California announced on Saturday evening, and it is probable that little will be known until the arrival here of the steamer starting from San Francisco about this time.

The *Hochi Shimbun* says that there is an island about three *ri* from the shores of Idzu containing forty-two houses and one hundred and sixty souls. They do not increase the number of these houses, and live in perfect harmony like the members of one family. None of them can either read or write, and their customs retain all the simplicity of ancient times.

The *Nichi Nichi* say that the Kagoshima *Ken* is singularly free from litigious spirit, only one law-suit having occurred since the establishment of the *Ken*.

The *Akebono* mentions two priests, Otani by name, who had lately been made *kaikoku*, but refused the annual allowance attached to their rank, on the ground that they could not accept it while there was so much poverty among the people.

The *Hochi* states that the Japanese steamer *Yuko maru*, while running from Oshika to Tokio, struck on a sand-bank near Saihagawa and damaged her cargo. No injury was sustained by the passengers.

A repetition of the swimming matches of last Saturday is to be given on Saturday next under the auspices of the Rowing Club. The entry list, confined on the previous occasion to the members of the Club, is now thrown open very widely to the members of the Yokohama, German and Eastern Clubs, the officers of all services represented in the port, the members of Athletic Clubs and visitors introduced by members of the Rowing Club. This makes a large field and we trust the afternoon will produce some good sport.

The *Hiogo News*, in calling attention to the adulteration of commodities and forging of trade marks to which we recently gave great prominence in our Weekly issue, speaks strongly upon the subject of counterfeit or adulterated medicine, a trade which it says is carried on on a very large scale in this country by foreigners.

Oka, the Editor of the *Hochi Shimbun* has been fined 10 *yen* and ordered to undergo imprisonment for one month. *(Hochi Shimbun.)*

It is reported on good authority that one of the prominent officers of a London bank largely interested in the eastern trade has committed suicide. There is no ground for supposing that the act was in any way connected with the affairs of the bank.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The *Nichi Nichi Shimbun* says that the land in towns and cities of the *Fu* and *Ken* has hitherto been taxed to the extent of one per cent on the value. It was notified in July 1873 that when the new system of land taxation comes into operation this tax will be raised to three per cent.

An enquiry was held yesterday before Mr. Consul Robertson, assisted by Lieut. H. B. Warren, R.N., of H. M. S. *Charybdis*, and Mr. Orchard, master of the *Lothair*, into the circumstances attending the recent loss of the *James Paton*.

The finding of the Court was as follows:—

FINDING:—The Court finds that the British Barque *James Paton*, William Cotter, Master, Port of Registry, Ayr, Official No. 12098, was driven ashore between the hours of 4.30 and 5 P.M. on the 10th August, 1875, at Fukusima, District of Hamamatzu, Japan, through stress of weather, and may now be regarded as a total wreck;

That the vessel was well found, well manned, and properly ballasted:

That every exertion was made to save the ship and cargo prior to and subsequent to the stranding, and that no blame attaches either to the Master or to the Officers and Crew.

The Master's Certificate is herewith returned.

(Sgd.) RUSSELL ROBERTSON,
HENRY WARREN,
B. ORCHARD.

REPRESENTATIVES of all the newspapers were ordered to attend at the Gunimusho on the 31st, and instructed to designate the rulers of the countries having treaties with Japan *Kotei Heika* (His Majesty the Emperor or King). We do not know what title has been reserved for the rulers of states under a republican form of government.

The *Hochi Shimbun* states that *pébrine* has attacked the silk-worms and is spreading gradually. It may be doubted, however, whether this statement has been made on any grounds other than those which furnished the basis of the paragraph which appeared in our last Weekly issue on the same subject. Of course our assertion was strictly warranted by examinations made by skilled investigators, and it is certain that the Japanese have neither the instruments nor the knowledge which would enable them to determine the facts for themselves. We may fairly assume, therefore, that the last part of the statement of the *Hochi Shimbun* is not warranted by any new facts.

THE *Hochi* says that Kuroda of the Kaitakushi Department started on the 31st inst. for the Kurile Islands.

THE *Nichi Nichi* says that a disease resembling cholera has broken out in a block of houses in Yedo, and carried off three of the inhabitants.

The *Hochi* gives currency to a rumour that a rider to the press-laws will be issued within a few days, on the appearance of which all books may be published by simply sending an intimation to the Government of the intention to publish. The writer adds that, should this be true, a large number of books will immediately be passed though the press.

The *Choya Shimbun* mentions a report that the Japanese man-of-war No 1 Teibo has been wrecked on the coast of Itourup.

"BEMMO."

We have to call the attention of the *Japan Herald* to what is an act of grave injustice committed—we are willing to think, thoughtlessly,—(had we thought otherwise, we would have drawn blood with every line,) to the translator of the Japanese pamphlet called "Bemmo."* Had the injury been attempted on ourselves, we should not have condescended to say a word on the subject. But it is otherwise in this case. A young member of the British Legation, still a Student Interpreter, has occupied himself, in all probability has expended his leisure hours, upon a very laborious translation of a work, which, though not of any great length, is of high interest from the fact that it deals with the most important subject which can occupy the human mind. It consists of an attack upon the Holy Scriptures made by a Japanese writer of great eminence, and, unlike a similar attack made two or three years ago by a Chinese writer, it does not, so far as we remember, contain a single word which unfits it to be read by the purest minded woman who may be interested in the question of the truth of Christianity. We mention this solely because, were it otherwise, its contents might militate against its general sale. The translator has gone to the expense of publishing the work, and though we happen to know that he will be quite content to find the expense of doing so defrayed by its sale, it is most unfair to deprive him of this prospect by publishing the pamphlet in the columns of a newspaper. A great part of it appeared yesterday evening, including the preface by Shimadzu Saburo, which lends it a special interest, and we observe that the remainder of it is promised for a future issue of the paper. It is obvious that if the public is afforded the means of reading the work in this manner, the author of the translation has no chance of disposing of the edition, and will find himself a loser by undertaking a work of high interest and importance to every one who hopes that the doctrines of Christianity, or, if we may be permitted the alternative expression, the religion of Christ, may be diffused throughout this Empire. As we have already said, we are willing to believe that the act has been committed inadvertently, but its consummation should certainly be arrested, and so much of it as is irreparable be atoned for by a full and sincere expression of regret.

STUART ELDRIDGE, M.D.,
Surgeon in charge.

It does not appear on the surface that the recent move Westwards of the British men-of-war in these waters has led to anything. According to a paragraph in the *Japan Herald* three weeks ago, it was then rumored that the Russians were again busy on the island of Tsushima, whence they were dislodged by the English some years ago when trying to effect a settlement, and as it is now generally known that all or most of the vessels which went Westwards went to Tsushima, it was surmised that something serious might be in the wind. We believe, however, that whatever else the fleet may have found, they did not find that anything was going on of the kind which foreigners seem to have suspected, and the fleet has been again distributed. One vessel is said to have gone up to the Amoor, and it looks as if attention were being afresh directed to Corea, as the *Erolic* has been left at Port Hamilton, and it is said that the *Sylvia* will shortly make a trip to those waters for surveying purposes.—*Hiogo News.*

THE PRESS-LAWS.

IF the Government of Japan does not take care in administering these Press-laws, it will do itself a great injury in the eyes of the world, and will produce the most unfavourable impressions in regard to the circle of ideas within which it moves and by which it is animated. With the laws themselves we are wholly persuaded that no fault will be found by most of those who will fairly sit down and consider them carefully in relation to the past and present condition of this country. Our own impression is that very few people have done this. The Code has naturally not been scrutinized by many who have been led into the adoption of opinions about it without having formed those opinions for themselves. It was published and commented upon by the foreign newspapers, and the controversy upon it arose subsequently. Most people certainly read the comments without referring to the Code, and were content with holding such opinions on it as the general bent of their minds inclined them to. In a matter which only remotely or indirectly affects them, few people will take the trouble of referring back to the actual circumstances of a case, on which they are still satisfied that they have formed an honest opinion and which they have substantial grounds for holding. A curious case of this sort—if we may be pardoned for referring to it—arose only a few weeks ago here, and gave rise to an article in this journal entitled "Financial." A writer published elsewhere a letter in which he stated that his object was to "reply" to certain statements made in our columns. The letter was a very clever one, as are all those which, under very various signatures, may be traced in a moment to the same hand. But every statement he made about our views was either gravely incorrect or totally erroneous. He had read some article which did not coincide with his general opinions and conclusions; it excited his thought and he sat down to reply to it. But instead of keeping it before him, he trusted to his impressions of it, and fired at them. His aim at the impressions was excellect; but he placed his imaginary objects in the direction in which he purposed firing, instead of firing at the real objects. The consequences, of course, were what alone they could be. He hit all the shadows—if you can hit a shadow: but the real facts and the arguments based on them remained untouched. We rather think the same thing has occurred even in the minds of otherwise thoughtful and careful men here in regard to these Press-laws. They have been told that the code is very harsh and tends to the suppression of all free opinion, and the action of the Government has unfortunately supplied them subsequently with abundant reason for believing this. But we wish to take away all excuse for this conclusion, and have therefore republished the laws this week, in order that readers may turn to them without trouble and judge of the whole question for themselves. If, after having done this, they still are of opinion that the Code is too repressive, we have not a word to say beyond this, that we entirely differ from them. But we shall be very much surprised if nine people out of ten do not at once confess that the laws are throughout perfectly reasonable, and that the outcry made against them is utterly otherwise. Men do not like to confess errors of judgment, even when convinced of them; while, on the other hand, we are quite certain that there are here many careful thinkers who are wholly opposed to these laws, and who would entrust the writers of this country with a freedom which the soundest statesmen have never thought it wise to grant at once to the freest nations in the world. We are persuaded that this opinion is most conscientiously held by some; and although it is wholly unintelligible to us, we neither blind ourselves to the fact nor impeach the honesty of the opinion. But it is also quite as unintelligible to us that people should not see the serious dangers—dangers which are all the more formidable because of their unknown position and extent—against which these laws are intended to guard a country the government of which is so absolute that we incline to believe, it could, if so disposed, declare Christianity as the State religion tomorrow, a thing no other pagan government on the face of the earth could do. That this absolutism is a good thing, we have never for a moment contended. But we have to deal with facts and existing conditions, and might as well plead that the ten commandments are a slur upon human nature as that the Press laws are unduly restrictive of the mind of this people or any disgrace to them, as Mr. OBATA is so anxious to plead. The Press-laws will excite no such reflections in Europe, or even the shadow of them. They will simply prove,—if proof were needed, which it is not—that men cannot pass at a bound from a condition in which they were satisfied to live under an absolute government, to one in which they can drink without stint the most intoxicating draught which the richest and ripest constitutionalism offers. There never was and never will be any such experiment successfully made. The history of the world is against it; the analogies of nature are against it; it sets at naught all the knowledge of the human heart which we have acquired with so much pains and at so much cost; it makes fools of the wisest statesmen and the most sagacious moralists; it gives ignorant clamour the preference over profound maxims of government, and tempts to a fatal license those who, three years ago, would have been grateful for an indefinitely smaller concession of freedom. Let a government be never so absolute, it is still a complicated, and, even in some sense, a delicate machine. Its various parts stand in designed, definite and established relations to each other. There have been ages of interaction between it and the people it has controlled, and while their thoughts and feelings have modified it, it, in turn, has moulded the intellectual and moral nature of the people. What must be the inevitable consequences if you introduce into this machine a contrivance which has not the smallest relation to it; the very object of which is to derange it; and which is almost wholly without responsibility in doing so. What would any prudent statesman say to such a proposition if he understood the full bearings of it?

But now let us turn to the laws themselves, and this we have enabled our readers to do without trouble.

If we take the first seven sections, there is not one of them which is in any way unreasonable, and of most it may be said that they are reasonable and proper. When we come to No. VIII we find that the only condition imposed upon journalists is that they must sign their names "in every case where the discussion turns upon foreign or domestic politics, finance, the feeling of the nation, the aspects of the times, learning or religion, or matters effecting the rights of officials or people." Now here is an enormous range for discussion open to any man who will sign his name to what he writes. To say that this is any hardship is preposterous. It may be, and is, an open question whether writing thus compulsorily subscribed gives to the Press, as an institution, the force which anonymous writing gives. We doubt whether it does. It substitutes the voice of an individual for the voice of a corporation, and though the corporation

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

endorses it by giving it utterance, it never enjoys all that cumulative effect which belongs to it under the anonymous system. But what do we see now in England, where there is no necessity for this subscription of the writer's name? The leading magazines and one very important Review have adopted the principle. If Mr. GLADSTONE, or the Duke of ARGYLE or Mr. MORLEY or Mr. FROUDE writes an arcle, he places his name under it. Whether it be a better or worse system, there certainly are excellent precedents for its adoption. Why should the writers of Japan object to it? The fact is that the superior advantages of anonymous writing can only be realized where the traditions of the Press, and the character of the contributors to and editors of papers is of a high standard, and where the general tone of public opinion is sound and healthy. Where these things are otherwise, the advantages are not reaped. It certainly gives any scoundrel a means for discharging his venom or his filth against those whom he can attack in no other manner, and it cannot be for the benefit of society that any engine whatever should be used for this purpose. The only objection we can see to this Clause VIII in the code, is, that it is perhaps unnecessary in view of the full responsibility which other clauses impose on the editor personally. It is, perhaps, however, salutary, inasmuch as it tends to enormously diminish the importance of a published opinion. The article so signed simply contains the views of A or B, and these are taken for what they may be worth.

Clause IX is equally reasonable. It would be folly to permit the expression of opinions or statements in a translation which would not be permitted in an original article.

Clause XI is assuredly reasonable.

The interpretation of Clause XII is the only difficulty which it presents, and if explanation has been sought on this point, it should be furnished. The interpretation of the clause as it now stands will vary somewhat with the political condition of the times, and there is no jury in this country to stand between the writer and the Government.

Clause XIII is assuredly reasonable.

Of Clauses XIV and XV, again, it must be said that all depends on the interpretation placed by the Courts upon the words 'reviles' and 'confuses the sense of duty.' To argue for a change of law ought not certainly to be considered as 'reviling' the existing law, nor do we know that any such interpretation would be given. Here, again, any explanation lawfully sought should at once be given.

The libel and slander laws demand no comment.

And now we come back to the observation we made at starting, and must extend it somewhat. The Government has put together a Press-code assuredly moulded from a foreign model. Nor can there be any exception taken to this. The institution is foreign, it has been at work for generations among ourselves, and nothing is more natural than that the Japanese should have cast their laws regulating it in a foreign mould. But here we come face to face at once with the difficulty of interpreting and administering laws which are not in harmony with the traditions and feelings of a nation. The Courts have got a code for their guidance, but they do not know the spirit under which it was drawn up by the nation which originally produced it; just in the same way as the Editors of the papers have got into their hands an instrument which they banged on so disorderly that a soft pedal has had to be added to it. In speaking of the proposals, now some years old, to introduce a foreign code into this country, we compared it to a person getting an organ, but understanding nothing of the organist's art. And here we have an instance of it. The *hottos* of the Government should here taken the form of warning, kindly, serious and even paternal. Instead of this, it has come down with both fists on the manuals and both feet on the pedals, and produced irritation where it should have soothed, comforted and encouraged in sounder principles. In like manner the Editors. There really is nothing in these laws to prevent them discussing any subjects they please. The whole range of politics, foreign and domestic, is open to them. Yet they seem to us to resemble those curious nocturnal insects for which light has much attraction, but which knock their heads against the lamps, burn their wings, and cripple themselves for no earthly purpose. If they will consider the advice we ventured to offer them in our issue of the 21st ulto., set about the survey of their large estate, see what productions of value to the commonwealth it can be made to produce, clear it of rubbish, and fortify themselves to maintain such rights as they actually and by statute possess in it, they will do vast public service; and when they have proved and substantiated their claim to a more entire freedom, public opinion and gratitude will endorse a demand in regard to which, so far as we can judge, the public is at this moment apparently profoundly indifferent.

THE LATE AFFAIR AT HACHOJI.

The following Notification has been issued by the Prime Minister in reference to the late affair at Hachoji, in which Judge Richardson and Commander Lewis, while within Treaty Limits, were unwarrantably interfered with by the police, and sent back to Yokohama under circumstances of serious annoyance and indignity.

NOTIFICATION No. 133.

[TRANSLATION.]

To SUI, CHO, FU, AND KEN.

It is allowed by the Treaties that Foreigners may make excursions within the limits freely and at their own pleasure. On the 15th instant, however, an American Captain of a man-of-war, named Lewis, and a judicial officer of the same nationality called Richardson, were brought back under guard by the Police officials on duty at Hachoji in the Kanagawa Ken, and again, on the same day, some Englishmen were stopped at that place. These were rude actions,—and it was owing to the fact of the Police officials at the place in question not paying attention to the terms of the previous Notifications that these inconveniences were occasioned. The said officials have in consequence been removed from their offices—but in order that persons charged with the same office may not in future fall into the above error, further instructions are to be issued.

The above is hereby made known.

(Signed) SANJO SANEYOSHI,
Prime Minister.

August 30, 1875.

On Monday, July 5th, the Court of Queen's Bench sat for the last time. It then (says the *Times*) closed its long existence of at least 1,000 years, for it is curious that just that period has elapsed since the time when the King, in the person of Alfred, first exercised its high jurisdiction over all magistrates and superior judges. This special jurisdiction, indeed, constitutes the exclusive jurisdiction of the King's Bench, which preserves the memory of its origin in its peculiar title, "the Court of the King before the King himself." Its jurisdiction is under the Judicature Act transferred to the High Court, and it ceases to exist as a separate Court.—*China Mail.*

SPIRIT OF THE JAPANESE PRESS.

The Press-Laws.

(Hochi Shimbun.)

Were the question asked what was the motive of our Government in instituting the Press-laws, doubts would probably arise in the minds of those to whom it was put, and they would reply to it with some imaginary answer. A might say "The Government is desirous of increasing the recoiling power† in the minds of the people, and on this account the laws have been made so severe." B would say, "The Government has no such purpose; its object is to prevent violence in written argument." C says, "The Government has no such deep purpose as either A or B imagines. It simply does not wish its acts discussed, whether good or bad." And in this manner men would give reasons which have no foundations in fact.

We, the editors, are of course desirous to know the motives of the Government. It matters not what these are. It is our business to discuss them, and if we think that they are devoid of reason we must argue against them until we drop. If we think well of them, we must accord them praise, and assist the Government in carrying out such objects as are involved in them. But we are wholly unable to divine the motives of the Government, and we have heard that it considers its convenience best consulted by withholding a knowledge of these. But if we do not know what its motives are, how can we either further or oppose them? Under these circumstances we can only follow the guidance of our reason and argue freely, taking the welfare of the people as our aim. The freedom of the Press is the food of the Press, and if it does not enjoy this, the newspapers must starve and cease to exist. Therefore, whatever may be its motives, we do not think our intelligent Government is so foolish and cruel as to withhold this freedom, which is granted in all civilized countries, and we shall continue to pursue our avocation without any sense of anxiety. But all foreigners do not call ours an intelligent government. It cannot even be said that some of them do not call it a barbarous‡ one, and when the Press-laws were issued it was said that there was nothing extraordinary in such a code being issued by such a Government. Now, we, regretting that such a disgrace should fall upon the reputation of our Government in foreign countries and be embodied in everlasting histories, discussed this question on the 10th instant, since when we have been eagerly waiting for the expression of public opinion on the subject. Meanwhile Obata has sent us the following communication, and although we cannot coincide with all his views, we agree with him as to the disgrace which will fall upon us in foreign countries by reason of these laws, and have substituted his letter for our own leading article.

(Obata's letter is as follows.)

"Our Government, in virtue of its perpetual power, issued laws against libel and for the regulation of the Press on the 28th of June last and has crushed all free discussion. I cannot, of course, understand the motives of the Government in issuing such laws, which may have accomplished the objects of the older men (lit. bearded men) belonging to it, viz., to crush the ideas of the rising generation of scholars whom the people call the patriots. The Japanese people are, as a member of the *Chikuhokwan Kwaigi* said, mad and ignorant, and therefore the Government has no wish that they should achieve their own purposes, and would even be sorry to see such purposes achieved.

Both the Government and the people, in fact the whole of Japan, should be indignant and sorrowful and weep over the disgrace brought on the country by the issue of these Press-laws; and here we will state what we mean by this disgrace spreading throughout the world. The editors, with anger in their hearts, will be in constant antagonism with the Government. Of course, all of them are not wise and learned men, and some of them even blacken paper to procure their daily rice. But when the word Editor is attached to a man's name in civilized countries, he is supposed to be a man of some eminence. But here, as our government has made these laws in the interests of the people, be the editors never so famous they will be arrested, fined and imprisoned. Oh! it does not appear that many days can elapse before such occurrences take place. If the Government should bring these persons before the courts, we do not believe that many of the people, mad and ignorant as they are said to be, would discuss the matter. (Yet there are some who believe they would.) But if this intelligence should go to Europe by telegraph, should be published in the foreign newspapers and carried throughout the world by steamers and locomotives, foreigners would most probably say, "The Government of Japan is the enemy of liberty and independence, and the country is a fit home for savages. All it can boast of is its climate, soil, mines and geographical position." If the Government were spoken of in this way throughout the world, it could no more clear itself from the imputation than you can bore through rock with a thread. Is not this very deplorable?

Our Government has made these laws by means of its perpetual power, but the editors will violate them with the power of their perpetual pens; and this will bring on us perpetual disgrace throughout the world. This is a grave misfortune!"

The Taxation of Land.

(Hôchi Shimbun.)

Many reforms have taken place since the revolution, but the greatest one which can touch the agricultural classes will be the change in the mode of taxing land. Most people do not understand what *chiken* (the taxation of lands according to their value) is; and not understanding the change which is about to be made, they murmur greatly. Though myself an unlettered man, I will explain to my thirty-five millions of brethren why the present method of taxing must be reformed, and why the system called *Chiken* must be adopted. The following is a brief explanation of the different modes of taxing our country from the most ancient times.

In remote ages we had a system called the *Seiden* system, which was as follows. The land was divided into squares, each of which was again subdivided into nine smaller and equal squares, eight of which were worked each by one man, while the square in the middle, reserved for the Mikado, was worked by all the eight men collectively. This system was imported from China. Each farmer was permitted to have two *tan* of land, for in those days all land was in possession of the Mikado. But this method of taxation gradually went out of use, and the system became confused, and when a farmer fell into debt, he was compelled to cede his lands to a richer farmer. The land thus gradually became the property of the people, and the *Seiden* system died out.

The landowners of the present day have either bought their lands, or have reclaimed waste lands, and no one has now the power of taking their land from them. The *Chiken* system must therefore be practised. In ancient times 8 square *shaku* made one *tsubo*, and 360 *tsubos* made one *tan* (which is at present equal to 640 *tsubos*). In these times 50 *soku* (bundles of rice) were produced from one *tan*, or one *koku*, five *to*, and one twentieth of the whole was given to the Government as taxes. Whenever the lands were devastated by floods, drought or locusts, by taxes were demanded. The system was easy for the Government, and one day's labour in each year was given by every man to the State.

At the time of Yoritomo the taxes were increased by five *sho* a year, and when the feudal system was introduced the system of taxation became confused and the taxes were very heavy. In the time of Taiko, four tenths of the revenue were given to the Government and six tenths were left to the people; while 300 *tsubo* made 1 *tan* and 7 square *shaku* 1 *tsubo*. Finally this was reduced to 6 *shaku*.

The great severity of the system of Taiko must have caused the rapid downfall of his family. The Tokugawa family retained during a time of peace the same system that Taiko had instituted in times of war, and this, [illegible] for them, continued for three hundred years, the

* Incriminated article.

† It may be remembered that this 'recoiling power,' as it was called, was treated of in a previously published discussion.—[Ed. *J.W.M.*]

‡ The Japanese word used here has the English word 'Barbarous' in *kana* placed alongside of it.

Original from UNIVERSITY OF CALIFORNIA

people gradually accommodating themselves to its severity.

The land tax in England is even lighter that the taxes of our ancient times, for only one twenty-fifth of the value of the land is taken. If one man leases to another land worth 100 *yen*, he receives 4 *yen*, while he only pays taxes to the extent of 16 *sen*. The reasons for our people continuing to live under so severe a system as that of Taiko seem to be as follows. In remote ages there was not such a thing as a *samurai*, and if rebellion against the Government broke out, the Mikado himself sallied out against it and his subjects followed him. In this manner the country was protected, and as money was not required for this the taxes were light. But as the power of the Mikado diminished, the *samurai* arose and they had no occupation but that of fighting. The class was first formed from wealthy men, and gradually acquiring power, rose against the Mikado's Government and overthrew it. The feudal system arose out of this. Then the people were consumed by the wars of the feudal chiefs, and no word can express the miserable state into which they fell from about the year A. D. 1220 to 1580, when tranquillity was restored by the policy of Taiko. But by this time the number of the *samurai* had enormously increased, and their pensions grew with their numbers, so that the taxes laid on the farmers were not sufficient to defray them. The taxes were therefore again raised, and the sufferings of the farmers increased. But the *samurai* got into their hands the power of levying these taxes, and the farmers, rather than become soldiers, supported the *samurai*. Whenever the taxes were remitted, the obligation to become soldiers was supposed to have ceased.

Since the Restoration our Mikado has abolished the olden custom, and has decided that the soldiers shall be drawn from all classes, and therefore although the farmers are called *Heimin* they enjoy the privilage of becoming soldiers and protecting the country in time of war. Since this change, the farmers do not in the least depend upon the *kadz ku* and *shizoku*, and thus there is no reason why they should support them. I think, therefore, that the mode of taxing the lands ought to be changed, as the Mikado has ordered the abolition of the old customs. If the *kadzoku* and *shizoku* claim that their ancestors have laboured greatly for the country, that their receipt of pensions at the present d y is the reward of this, and that so long as they pay their pension taxes they are entitled to their pensions; the farmers may rejoin that they will not allow and cannot consent to this. All this fighting was not for the good of the country, but for their own good. The descendants of those who went to the province of Yamoto and protected the rights of the true Mikado when the country was divided into two parties and a rival Mikado was set up, or of those who lent their arms to repel the invasion of Japan made by the Mongol dynasty of China, we, the farmers, allow have a claim for pensions. But as the others did their deeds not for the sake of the country, but for their own sake, they ought no longer to enjoy any reward for them.

The labours of those who assisted in the Restoration of the Mikado, and of Okubo, who went as ambassador to China at the time of our late trouble with that Empire, were great, and had these events taken place in the olden times, these men would have been made masters of their own castles. Let the *kadzoku* and *shidzoku* look back and see whether this has been the case!

It is a sorrowful fact that the taxes are so heavy. Since it was ordained that the soldiers could be drawn from all classes, the taxes have not in the least diminished, while fresh imposts, such as the revenue tax, the wagon and horse tax, the servants tax and the like have been levied. Good example has been taken from foreign countries, but many evils remain which surely ought not to continue unchanged for ever. But what is the best thing to do until changes can be carried out?

The change in the land-tax is proposed for the purpose of doing away with all injustice in this respect. But the first thing that this involves is the doing away with the farmers' valuations of lands, and assessing them according to their actual extent, fertility and production. The reason for the present unequal valuations is as follows. A, for instance, is a poor man, and desires to sell land to B who is rich. The land measures a *tan*, and 1 *koku* 2 *to* of rice can be got from it. The average price of such land is 4 *yen*, but as this does not suffice the seller, he takes off half the tax of this piece and puts it on to another field, and then gets 22 *yen* for it. It is on this account that there such inordinate differences in the value of land. It might seem unjust if the Go-insisted on disturbing these arrangements. But although I am myself an owner of lightly taxed lands, there are so many people who hold land much more heavily taxed, that I think this reform is one which the Government ought to make. The rent of land ought also to be settled before hand. For example; here is a piece of land measuring only one *tan*, but near houses, having water at hand and a rich soil. If this were let, the rent might be 1 *koku* 2 *to*, although only 1 *koku* 8 *to* can actually be got from it. Now let us suppose another piece of land one and one eighth of a *tan* in extent. But the soil is bad and it is distant from habitations. At harvest time only 1 *koku* 8 *to* can be produced from it, and, if let, the rent would not even be 8 *to*. Therefore this proves that the production cannot be made the sole criterion and basis of valuation. It would be wrong to tax the lands on their production alone without taking into account the labour it required to ensure this production.

The reform of the position of the labourers on rented lands is also another important thing, and I will state what that position is. Let us say that there are two able-bodied men who work on twenty *tan* of land and have to support their families. At harvest time they can gather 15 *koku* of rice. If then 10 *koku* of this are to be paid to the owner as rent, there remain only 5 *koku*, and if this is divided by 360 it would give them but 1.39 *sho* a day. Now, this if not enough for their sustenance, and we can see at once the suffering they must undergo. Though they may raise rice, they never have a full meal of it, and though they raise cotton, they can wear no good clothes. Thus it would seem that the taxes must be reduced. But our present Government, unlike its predecessors in old times, has a great deal to do in its intercourse with foreigners, it must keep up an army and navy and so on, and thus I think there is no other way of relieving all these poor people than by abolishing the pensions of the *kadzoku* and *shizoku*, and using the money so saved for the more general welfare of the people.

Advocating Trial by Jury.

"Chiyo Shimbun" of August 24, 1875.

'The question whether our judicial system is good or bad, and whether the decisions of our judges are just or unjust, is one which is connected with the misfortune or happiness, the good or evil, of us people and is therefore a subject which must not be treated lightly.

If we look back through the past history of our country, we fail to find any good judicial system existing under any dynasty whatever. The plan obtaining was that one or two or more judges were able to decide cases as they liked, and in this way instances occurred in which the judgments, though given in all sincerity, were mistaken, and in which, though the real truth was known, a wrong decision was pronounced, and those who objected to judgments given were not able to appeal.

Of course with the present just and enlightened judicial officers an innocent person cannot be punished, while wicked people cannot escape justice by subterfuge, and therefore a regular judicial system may appear unnecessary; but it must be borne in mind that all judicial officers are not like Awoto and Ooka. This we undertake to guarantee, and with how much more certainty can we say that even Awoto and Oo made mistakes occasionally in the cases which they judged. The whole system in judicial matters being as we have briefly given it above, it may even be said that there was no regular judicial system at all in olden times.

Now, however, since the revolution everything is changed, a regular judicial system has been established, for those who do not accept decisions in either civil or criminal cases there is a road open for appeal, the sub-

* Celebrated Judges of olden times.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

stantial advantages of which are now being reaped by the people. Still this is not everything. Partiality and injustice must exist under the system of the whole judicial power being vested in one judge, and therefore it is that an able foreigner has said, "To leave the decision in the "hands of the judge alone is not a perfectly satisfactory "plan." We consider then that there should be some expedient by which mistaken and partial judgments might be prevented, and this expedient we have, we consider, in the system of juries. This system had its origin in England from which country it has spread to America, and it now forms the most important of the rights possessed by the people of those two countries.'

After a brief explanation of what juries are and how they are empanelled &c., in which he states that any person, whether in a civil or criminal suit, may apply to be tried by a jury, and that under this system it is impossible for a wrong decision to be given, however unjust or incapable the judge may be, the writer concludes by observing that 'such is the system which prevails in in America and England, though India and China may form exceptions, in that people's rights are in those countries not deemed of first importance. The appeal procedure is the same now in Japan as it is in England and America, but it is a matter of deep regret with us people that we have not yet received the right of Trial by Jury. We feel confident however that the able men composing our Illustrious Government will shortly add to the lustre of the excellent judicial system of our country by granting the people the right of Trial by jury.'

Reform of the Written Character.

(Nichi Nichi Shimbun.)

What our literature will be in future ages it is now impossible to tell. Our Government labours earnestly for the education of the people and seeks to dispell their ignorance. This is the work of a good administration and carries with it the essence of civilization. Literature is the highest of all arts, and although thousands spend their lives and talents in its pursuit, the writers of the first class may be counted upon the fingers even in Europe* where the written and spoken languages are the same. How much more scarce must they be, then, in Japan, where the written and spoken languages are altogether different! Letters are a difficult pursuit, yet their object is, after all, simply to make one person understood by another. However awkward may be the *i-ro-ha*, if sentences can be constructed with and ideas conveyed by means of them, even children can communicate those ideas one to the other. But if the writing of it is made difficult, the difficulty of such communication is greatly increased. It will be asked then, Is literature useless, and a thing of so little importance that it will not repay the labour spent on pursuing and acquiring a knowledge of it? I reply, By no means so. The labour so spent enables a man to express his thoughts freely. By writing only the *i-ro-ha*, however, in an awkward style, a portion only of his ideas can be communicated, and this does not answer the ends of a literature. No; the art of letters is one of the first importance, and no effort we can make to acquire it is misspent.

But if the art of writing is so necessary an accomplishment, what course should a student of letters pursue? The present mode of writing in Japan is not uniform—putting altogether aside our ancient modes, which are no longer in common use. There are three grand divisions in our styles; the style for discussion, the historical, and the epistolary. The latter may be subdivided into two styles, that for men and that for women, for these differ so greatly that without learning the latter no man could write a letter for his wife. The male style may be again divided into two sections, the public and the private. However accomplished a man many be in general literature, he cannot write in the public style unless he has gone through a secretaryship in a public office. The above are only the main divisions, and might be further subdivided. The European styles used by men and women, for public and private letters may differ somewhat; but they surely do not differ to the extent which our own do.

The historical style may be divided into several sections, the *kata-kana*, *gunki* (historical wars), *kesaku* (novels) *kusazoshi* (stories for women and children). With the exception of the *kusazoshi* none of these can be understood without some preliminary knowledge of Chinese.

In discussion, there are hundreds of different styles, but all the models have come to us from China, and this style is far above both the historical (or narrative) and epistolary styles. Without a knowledge of Chinese, therefore, a knowledge of general literature does not suffice for the mastery of this style. Speaking generally, it is writing Chinese in our grammar. Lately, however, what is called a translating style has sprung up, and this has changed the form of argumentative writing. The composition of the sentences is more analagous to that in English, though the Chinese characters are used and the grammar is Japanese. The new literature is a union of English, Chinese and Japanese. We grieve to say that in our daily writing something of this style invariably may be found, though this need not greatly trouble us or give us much anxiety. What we have to settle is whether the objects of education can be attained if the still keep the present mode of writing.

Our literature somewhat resembles the drawing by an artist of the figure or face of an actor. If he observes any striking departure in any one feature from the average type, he exaggerates it, so as to ensure the recognition of the person whose portrait he draws. For instance, if he makes a thick lip and a very round face, we know that it is a likeness of Danjuro, or when he draws a very high nose, it is a portrait of Kisaburo. But if we look at the faces of the actors, we find no such excess as this. And thus, in writing, unless we drew the good and evil in somewhat of excess, the true circumstances of the age could not be truly depicted, and thus exaggeration is condoned and false aids are brought into play. A good literature cannot be constructed under such attendant disadvantages. The merit of a literature consists greatly in its truthfulness, and no healthy impressions can be made on the human mind without this prime qualification. Look at the pictures drawn by European artists. The eyes, nose and mouth in no way differ from those of the person represented, and looking at the picture is like seeing the person pourtrayed. Which, reader, do you think the better, the European or the Japanese pictures? Now the difference between our respective literatures is precisely analogous to that between our pictures.

When we read foreign writing, we are always struck with its completeness; and when we translate foreign writing, or read foreign translations of our writing, we always feel a natural regret that they are so superior to our own. When we remember that our entire literature exhibits the same poverty, this regret is in no way diminished, and the cause of this is that by reason of the confusion of our language our style is bad, and so little knowledge comes to us through Chinese that we do not know what to write about. If the foreigners, instead of writing in their own languages, were forced to express themselves in Latin and Greek, we do not think they would have distanced us so far.

The poverty of our literature arises from our mode of writing, which is inferior to that of the Chinese or the Europeans. Unless, therefore, it is reformed, all our schools will avail us but little towards the encouragement of a real literature, even although the people may learn to read and write. To reform this, it is necessary that the written and spoken language should be identical as it is in Europe. There are four good works which may be cited as examples of this: the *Hakkenden*, the *Inakagingi*, the *Hizakurige* and the *Mumegoyomi*. We do not mean to plead that the reasoning in these books is sound, but that the writing is so near that of the spoken language that when people read them they laugh or weep at the will of the authors, and this is because there is no Chinese in them and they arouse the emotions of every day life in every day language. A good literature does not depend upon the use of the dead languages.

These are the actual facts we have to deal with. We ourselves are compelled to use Chinese, because it is the general rule and others must do the same: but it is a deplorable necessity.

* Hardly, we think.—Ed. J. W. M.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It is, we repeat, impossible to foretell what our future literature will be.

FAIR MOUNTAINEERS.

(Akebono Shimbun.)

The courage of English tourists of both sexes greatly astonishes the Japanese. Thus the ascent of Fusiyama, lately undertaken by a lady of this nationality, has struck terror into the inhabitants of the neighbouring hamlets, who had all refused to act as guides. Setting out alone and returning in as good health as at starting, these simple folk could not believe that she was the same person they had refused to accompany; and old and young implored her to reveal the promise made to the goddess of the mountain which had so easily appeased her wrath and averted her vengeance.*

THE SUMMARY OF OFFICIAL NEWS FOR JULY.

From the "Government Gazette."

2nd July.—His Majesty the Mikado announced his gracious intention to attend the ceremony of the opening of the *Genroin*.

7th.—It was ordered that officials must not communicate the affairs of the Government to the newspapers except to be published officially. All scientific writing, however, is exempted from this rule.

9th.—The *Okurasho* reported that the paper-money issued by the *Daijokwan* and *Mimbushô* and the convertible notes issued by the *Okurasho* and *Kaitakushi*, and all the various descriptions of paper-money issued by the old *Han* had been destroyed by being boiled in water at the place where the paper money had been previously burned. (Sukumusho, Kanda, the 4th subdivision in the 5th main division.)

The amount and description of paper-money thus destroyed from the 22nd May to the 14th June of the present year are as follows:

Daijôkwan satsu	Riyos	1,445,068
Mimbushô	„	138,713
Convertible notes from Okurasho	„	1,602,555
Kaitakushi	„	299,692
Paper-money of the old Han currency	„	783,316
Equivalent in new currency to		721,168
Total	„	3,564,384

10th.—Scale of rewards for meritorious actions settled:

First class	300 to 500 *yen*
Second „	150 „ 250 „
Third „	50 „ 100 „

These amounts are fixed as standards, but if some act of extraordinary merit is performed, seeming to transcend these, the local officers must make a special communication about it to the Naimushô.

Persons, exclusive of the *Chokunin* † *Sonin* † and *Kadzoku*, presenting less than 1,000 *yen* towards the expenses of schools, hospitals, roads or bridges or any charitable institutions shall be rewarded in accordance with the above regulation. But if the amounts presented be over 1,000 *yen*, a special application in regard to the reward must be made to the Najimushô. (Here follow the regulations concerning the presentation of wine-cups as memorials of this nature.)

12th.—In the articles regulating the government of the *kans*, provision has been made for the relief of the poor, from the 10th August, as follows:—Cases which should be promptly relieved by the *ken* with the money reserved for emergencies, are five in all. Cases which should be referred to the Home Department are two in all.

14th.—The *Daishinin* is to take rank above the Colonization Department and next to the *Sho*.

It was ordained that the assembly of the *ken* officials, originally fixed to close on the 14th of this month, should sit until the 17th.

The redemption of the hereditary incomes and pensions of the *samurai* and lower classes has been suspended for a time.

15th.—It was declared that as the Assembly of the *ken* officials should close on the 17th His Majesty the Mikado would be present at the ceremony at 10 o'clock, a.m., and strangers should be admitted on application.

18th.—In the Satsporo district, Ishikari province, Yezo, Shinoro was made a post station.

28th.—Regulations were made about the purchase of land for public purposes.

THE BOTANY OF JAPAN.

(FIRST NOTICE.)

Of all the natural sciences Botany is the one most worthy of being taken up by those whom an intelligent curiosity prompts to seek after acquiring some knowledge of the phenomena and laws of nature, but whom their circumstances or occupations prevent from devoting more than a limited time to its indulgence. One cannot well collect lions, boa-constrictors or whales, or study their anatomy or habits, without devoting one's life to such a pursuit; but anybody with some leisure, a tolerable education, some power of observation and a certain love of truth, can find both pleasure and instruction in acquiring the strange diversities and often still stranger similarities that exist between the innumerable members of the vegetable kingdom. Botany is often contrasted disadvantageously with zoology, especially with marine zoology, but wrongly so. The office of plants in the economy of nature is fully as important as that of animals, and from a mere human point of view far more so; for while mankind could shift for themselves without the aid of the latter, without the presence of the former on the face of the earth they would soon disappear from it. Elephants, Oken, Owen or Huxley would be the very last to depreciate the labours of such workers as the common field (though in a different division of it) as the Decandolles, Jussieu, the Hookers, Asa Gray or Robert Brown, and although the boundaries of the vegetable and animal kingdoms seem now to be well ascertained, the solidarity of these two great divisions of life on our globe is better established than ever. The newest approaches to the beginning of life are undoubtedly to be found among the lowest forms of cryptogamic vegetation, and here probably if anywhere, will posterity find the solution of the great problem of the origin of life. No animal is so close to mere organic matter as the great slimy *Nostoc* that in rainy dampness will clothe the stones of a gravel walk without the powdery lichen that manages to subsist on a bare dry rock beneath the fierce glare of a tropical sun. And then *quæstio mexata* of the origin of species will in all probability be sooner settled by the botanist than by the zoologist, for the objects of the former's investigations, destitute of the element of caprice or at least of uncertain action with which the latter has to contend in the nervous system and freed from the difficulties with which the multiplicity and complexity of parts beset his path, are more likely to reveal the hidden laws of which they are the more direct and less mediate phenomena. These considerations, however, rather show the width and profundity of the science of botany, than serve the purpose we have in hand in these days of exact research, there are but few subjects which the amateur can, while amusing and instructing himself, aid the progress of science. The physical sciences require expensive apparatus, and the demands they make upon the time of those who would pursue them renders their useful study—useful in the sense of in any notable

* The writer of this paragraph pays a just tribute to the courage of our countrywomen, but overdoes it a little. On a recent occasion we observed a Japanese woman, evidently of a very respectable sphere of life, on the top of the mountain.

* In the last Summary of Official News which was published in our issue of the 24th July, the expression 'writ of extent' occurred. As the meaning of it may not be generally known, we take this opportunity of saying that it signifies a writ by means of which the total property of a debtor, both real and personal, may be seized for the benefit of his creditors. The Japanese equivalent is *Shin dai kagiri*, 身代限 and means the full extent of one's property. (See Bouvier's American Law Dictionary.

† *Chokunin*, officers appointed directly by the Mikado.
Sonin, officers appointed by the Daijokuan.

† Enumeratio Plantarum in Japonia sponte crescentium hucusque rite cognitarum adjectis descriptionibus specierum pro regione novarum quibus accedit determinatis herbarum in libris Japonicis, Somocon, Zonsets (Sômoku dsussetsu) xylographice delineatarum auctoribus A. Franchet et Lud. Savatier Med. Doct. vol. I. Paris F. Savy libraire, 24, Rue Hautefeuille.

Original from UNIVERSITY OF CALIFORNIA

degree adding to our knowledge of phenomena or their laws—impossible, except to those who are fortunate enough to have the disposal of considerable means and the enjoyment of considerable leisure. The same remarks apply to zoology, to comparative anatomy and physiology, and even, though in a less degree, to geology and its allied sciences. But the botanical amateur may render inestimable services to the successors of Linnæus. Plants are for the most part easy to collect, and easy to preserve. A vast number of specimens may be got together, dried, packed in a small compass and conveyed from one end of the world to the other, at hardly any other expense than that of a little trouble, more than amply repaid by the insight into the ways of nature even the least observant collector cannot fail to gain in the course of his studies. After having devoted a little time to the acquirement of the rudiments of the science—of none are the rudiments more easy of attainment, in none does the learner so speedily commence to reap the fruits of his exertions—he will find a new interest lent to every country walk, and himself in possession of an infallible specific against every form of ennui. To his educated eye the commonest flower will reveal a new world, and as his knowledge increases, he will come to know that his new acquaintances are never dull, and that whatever may be the case with man, in nature commonplace has absolutely no existence. In the most gradual manner he will find himself led to higher and wider conceptions, and a broadening field of activity will be presented to his mind, and his intellectual imagination will be stimulated to loftier flights under the guidance of a more extended knowledge. I will even be that a latent enthusiasm will be awakened in him, and it is to this he should look for a rich share of patience and a love of rigorous truth, he will have assuredly gained a noteworthy increase to science than which none is more capable of satisfying the truest needs of the highest intellect, and know that rare and high joy which is born only of honest mental work.

Nowhere is the botanist's fuller field to work in than Japan. No doubt much is known of its flora, but much still remains to be investigated. Here, too, peculiar attractions tempt the worker in this department of natural science. The climate of Japan is a singular one; rapid variations of temperature, heavy and continuous rains succeeded by scorching heats, the fierce glare of an almost tropical sun accompanied and tempered by strong and constant winds. Under these circumstances a very varied and mixed flora was to be expected, and we find accordingly semi-tropical forms in close contact with northern temperate types. Japan is from a climatic point of view almost the reverse of Britain, the former a colder, the latter a warmer country than we should *a priori* expect from its latitude. The respective floras present a contrast, due to the difference of climate, that of Japan being preeminently shrubby, that of our own country preeminently herbaceous. Geographically, Japan is connected with north western America and north eastern Asia to the north, and to the south, though less distinctly, with the Malayan and Melanesian chain of islands. These facts of themselves would lead us to infer the presence of a flora Americo-Asiatic and semi-tropical in character, and it is matter of the highest scientific interest to know how far this inference is warranted by the facts, and how far species common to the above named four regions are modified by the climatic conditions obtaining in this country. On this point it would be out of place to go into further detail here; enough, it is hoped, has been said to show the absolute necessity for a full and complete investigation of the flora of Japan. To effect this the co-operation of many workers is necessary, more especially of workers more or less trained to recognise in some degree the specific differences of plants and their scientific importance. Any elementary Manual of Botany will afford the requisite groundwork study in the field, conjoined with a perusal of the more advanced treatises on the science such as Asa Gray's wonderful Lehrbuch, and Hooker's edition of Le Maout, and Decaisne's superbly illustrated work will insensibly and pleasantly convert the collector into a botanist. But study in the field will prove tedious and unfruitful without the assistance of a worthy guide in the shape of an adequately complete and accurate flora of the country under investigation. With the exception of Thunberg's Flora Japonica (published about 1780) no such help has aided botanical research in Japan. That work it will readily be understood, though intrinsically excellent, falls far short of the requirements of the present day, and it is therefore with extreme satisfaction that we see the first volume of Messrs. Franchet and Savatier's 'Enumeratio,' resuming all the known dicotyledonous plants of Japan, placed in the hands of the public. We shall reserve for a future issue a detailed examination of this remarkable work. No such important contribution to Botany East of Singapore has, so far as we know, ever appeared, and we congratulate its authors upon the exhaustive manner in which they have completed the larger half of their great task. We do not doubt that their labours will bear the fruit they would most desire they should bear, and lend a powerful impetus to the cultivation of botanical science in Japan. We have ourselves made frequent use of the book, and have come to recognise in it an absolutely indispensable companion. The conscientious accuracy and wide learning exhibited by the authors demand the most sincere admiration, and the hundreds of plants the kindly and intelligent research which their labours have produced will inaugurate a new era in Japanese Botany. With the usual modesty of real workers they have termed their treatise an 'Enumeratio.' But the book is far from being a mere catalogue of plants arranged in order, genera and species. It is much more than a mere guide to the botanical explorer, and it will be recognised by scientific botanists as (in most) valuable contribution to the philosophy of their science, while it will be no unimportant aid in the development of that new science, Botanical Geography, which may be said to have been created by Alphonse Decandolle, and which in time will afford answers to so many of the great questions that perplex and divide naturalists to the present day. Our space, however, forbids a further treatment of the subject for the present. In our next issue we trust to be able to give a more detailed notice of this important work, of which for the present we take leave with the wish that its reception by the public may be equal to its merits—and we do not know that we can wish it a more complete success.

(To be Continued.)

"GO-GAKU HITORI ANSAI."

[FIRST NOTICE.]

It is now beyond doubt that the English language is to be the medium through which the fertilizing thought of Europe is to be diffused over the hitherto not very fruitful soil of the Japanese mind. It is easy to see how the march of events has determined that it should be so. It was an English speaking power that drew Japan within the comity of nations. It is English and American commerce that is now most powerfully promoting the development of her national resources. Of the strangers sojourning on her borders the mother-tongue of the great majority is English, and of the rest of other nationalities all with scarcely an exception have, of necessity, to understand and use it. Of all alien tongues, therefore, it is the one which, from its immediate practical importance, has the strongest claims on the attention of Japanese men of affairs, whether in office or in trade. And so well is this fact understood that the students of English in this country may be counted by tens of thousands. It must be confessed, however, that the progress hitherto made has not been great. It is yet an extremely rare distinction for a Japanese to speak or write English even moderately well. There are hundreds of them who have command of a copious enough vocabulary and who would yet be puzzled to understand many a simple idiomatic sentence in every-day use, a fact nowhere more painfully exemplified than in the native Courts of Justice in cases in which foreigners' testimony is taken through interpreters. After all, this is scarcely to be wondered at. The differences between any Aryan tongue and Japanese are radical and far-reaching. The contrariety which so many foreign observers have noted in the Japanese ways of doing things is eminently remarkable in their language. The single fact of the absence of relatives, pronouns or particles, as it is a source of endless difficulties to foreign students of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Japanese, so, conversely, the correct use of the relatives is perhaps the most formidable stumbling-block in the path of a native's linglistic studies. There is no definite article in Japanese, and when to use it and when not to use it remains, to students of many years standing, a perpetual conundrum. But the compound tenses of the verb occasion, perhaps, more anguish of spirit than all other knotty points combined. "Imperfect Subjunctive: I might, could, would, or should have been loving." There is a hedge, in the attempt to clear his way through which many a bold student has been daunted, after having so far worked his way over the thorny paths of English accidence with painful steps and slow. And besides the merely grammatical tasks, there are the more subtle perplexities of phrase and idiom.

Of so-called helps to the study of English the native press for several years back has been very prolific. Primers, vocabularies, grammars, exercise-books, manuals, phrase-books and lectures of every variety and degree of meddlesome and badness abound in the book-shops. And there is still the people for the demand for them is great, and it is doubtful if the compilers of them that find the readiest sale. This multitude testifies to the national thirst for knowledge, their workmanship tells no less clearly of the weakness of the national character. From the smallest and most pretentious of them they are marked by hastiness and superficiality. There was a crying want of a good guide to the acquirement of English, and we have now to congratulate native students that the want has at length been well supplied.

"Go-gaku Hitori Annai" is a very remarkable book just issued from the native press, and for more reasons than one its appearance deserves to be hailed with something more than merely a passing notice. It may, we believe, lay claim to the distinction of being the first original work written in the language of this country by a foreigner. Not that the author asserts this claim for himself; for his modest preface, which barely fills a page, merely states that the motive which impelled him to write the work was a desire to relieve so much of the student's toil as may be due to the scarcity,—he might truthfully have said, the utter absence—of good guide-books in the native tongue. The title-page being interpreted, runs: "Guide to Self-Instruction in The Language, by Mr. Brinkley, English Officer of Artillery: printed by the Insho Kiyoku, 1875." It is safe to predict that the work will be the beginning of a new era in the knowledge of English in this country. In three small quarto volumes, numbering, exclusive of the index, less than a thousand pages, the author has compressed, methodically and fully of every branch of the grammar of the English tongue. Of the distinguishing excellence of the work, its copious store of examples, we shall have something to say further on.

It would be idle to attempt within the limits at our disposal to give anything like an adequate review of a work which is at once so comprehensive in range, and so concise in treatment, and it may seem the less necessary to do so as it is written in Japanese and intended for the use of Japanese students only. To them it will be an invaluable boon, and will not have long to wait for the recognition of its merits. But its sphere of usefulness is not restricted to them, as any English student of the Japanese language who glances over the book will readily perceive. The bulk of the second and third volumes consists of long sentences and dialogues expressed in the purest and most idiomatic form of colloquial English, on one side of the page, while opposite each is the Japanese rendering, not, as a native grammarian would most probably have had it, expressed in the stilted book language, but in the genuine easy colloquial at present spoken by the educated classes.

The book contains one hundred and thirty-two chapters, and is complete in itself as an introduction to the English language. A vocabulary stands at the head of each chapter, the words are grouped in their respective classes as nouns, verbs, &c, and the pronunciation and meaning of each is clearly set forth. The first thirty chapters constitute Part I.

In this part, beginning with the alphabet, the principles of orthography and pronunciation are lucidly set forth in the compass of fifty-eight pages. We commend this portion of the work to the notice of Mr. Mori. The Japanese student who by two or three perusals masters this introduction to English orthography, will be afterwards but little troubled by the vagaries of our unreformed spelling. Throughout the book, whenever a word is used for the first time, it is given in triple form, first in its actual spelling, then in phonetic spelling aided by diacritical marks indicating the power of the vowels, and lastly in the nearest approach to the sound that can be made with *Kana*. The system is so simple and so consistently applied throughout that it is scarcely possible for the tyro to go far astray from the true sound, even when studying alone; but of course it is desirable that he should have the guidance of the living voice for at least a short period at the commencement of his lessons.

Part II is mainly etymological. The gender, number, and classifications of nouns, the comparison of adjectives, the numerals, the inflexion and use of the pronouns are treated of with a fulness and clearness that leave little to be learned on these matters elsewhere. It is when we come to the author's treatment of the verb, however, that we recognize the advance that has been effected within the last few years in the correct analysis of this most complex product of the language-making faculty. Even yet there are grammars in use in English schools which speak of the imperfect tense, and to whose authors' minds the description of a tense as the present perfect would have seemed an incompatible combination. Thanks to comparative grammar, however, we can now give a structure of the Aryan verb-tree. Doubtless, etymologically, tense simply means *time*, but the time of the action is not the only particular denoted by our conjugational forms. The state of the action as regards completion or incompleteness may be indicated as well. And it is due to a dim and only half realized apprehension of this fact that the word 'indefinite' is found figuring in our grammars as applicable to a tense at all. What is there indefinite in the expression, "I loved?" Surely not the time of the action; that is distinctively put; and from the proper stand-point "I love," is indefinite too, though the time of the action is unmistakeably the present. It is not till we come, in English at least, to analyse the signification of the compound tenses, that is, those tenses, for the construction of which in English,—though it was not so in the older and more perfect branches of the Aryan speech-tree—we have to call in the aid of auxiliary verbs, that we hit upon the true antithesis of that quality of indefiniteness which we are now considering. Place together the three locutions "I am loving," "I have loved," "I love," and the distinction is not hard to see. It is not any difference as to the time when the action is conceived as taking place, for in all three alike that is plainly the present. There are, therefore, in English not merely one present tense but three, and in order to differentiate one from the other some further attribute of the action must be taken into account. This is none other than the state or quality of the act itself as regards its perfect fulfilment or otherwise. Hence in "I am building," and "I have built," though the time in both is present, the *states* of the action in each case are put in pointed contrast, and the two tenses are only accurately defined when we call the present imperfect and the other the present perfect. But in "I build," "I love," no indication whatever is given of the state of the act, any more than in "I built," "I loved." Here only the time is marked out, the other attribute being left altogether out of consideration, purposely left, in fact, undefined. That, and not any idea of vagueness or uncertainty as to time, is what is implied in calling a tense indefinite, or, in its Greek equivalent, aorist. And of the indefinite or aorist's tenses there will obviously be just as many distinctions as there are distinctions of times in which the act is conceived to occur, namely time past, passing, and to come. The true paradigm of the English verb is thus seen to be:—

Indefinite or aorist (state of the action not defined).
Present ... ...I love.
Past ... ...I loved.
Future ... ...I shall or will love.
Imperfect (state of the action incomplete).
Present ... ...I am loving.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Past ... ...I was loving.
Future ... ...I shall or will be loving.
Perfect (state of the action complete).
Present ... ...I have loved.
Past ... ...I had loved.
Future ... ...I shall or will have loved.

This, the true scheme of the English tense formation, is explained, and we will venture to say explained to Japanese students for the first time, by Mr. Brinkley's lucid pages. It is not by any means the only point in which he shows himself abreast of the latest advances in grammatical science, but is perhaps the most important. For though to persons empirically trained from infancy in the use of the English tongue correct scientific views of the principles of its grammatical structure may be a matter of indifference, it is not so with learners approaching the study from without with minds cast in an altogether different mould. To them the right apprehension of these principles is of the first importance: and the elaborate care expended in this book on their elucidation will save the great host of Japanese students an incalculable amount of bewildered and disheartening toil.

FU SO MIMI BUKURO.

A Budget of Japanese Notes.

Sketches from Japanese History.

The Conspiracy of Okubo Iwami no Kami, A.D. 1558.*

It was the year *Yeroku*—and during the reign of Okimachi the 107th Ten O, that the two southern Christians Urgan (?) and Bateren (?) arrived in Japan and made their way to Kioto, curing the sick, giving money to the needy, and thus gaining over not only the husbandmen, but also the Daimio and Hatamoto; finally gaining the favor of Nobunaga, who built a temple called Nam-ban-ji. Throughout the five provinces (Goki nai) Saikoku, and Kinshiu the Christian religion became honored, and its priests revered. Nobunaga in 1582 became alarmed at the rapid spread of the new doctrine, especially as the priests seemed to have unlimited control of money, which they freely expended amongst their converts, and Nobunaga ordered the demolition of the Temple Nam-ban-ji.

In 1586. Hideyoshi came to power, and he issued an edict against the observance of the rites of the new creed.

In 1595. The priests were deported, and the observance of Christianity made penal.

In 1499. Iyeyasu defeated Hideyori at Sekiga-hara—and the three great generals of the latter, Ishida Mitzunari, Konishi Yukinaga and Otani Giôbu fell on the field of battle; these three were the leaders of the native converts to Christianity. Amongst the followers of Iyeyasu was Okubo Sagami no Kami Tadachika who was the direct descendant in the 32nd generation from Amatzu Koyane no Mikoto (before Jimmu) and was therefore of ancient family and of noble birth: he was a most influential man. In 1590 Taiko made Iyeyasu master of the eight provinces and Okubo was established at Odawara with a revenue of 180,000 *koku*. He, being not only a valiant warrior but also an accomplished gentleman, surrounded himself with a numerous circle consisting of men of talent and congenial tastes and habits. Amongst these men was one called Hanni Sankuro, the son of a Min (Chinese) refugee named Hatchi-kan. Sankuro was an exceedingly handsome and attractive youth, was a clever performer on the Tsusumi and other instruments, he sang well and had a fine voice, wrote poetry and could dance the *No-kiogen* to perfection. Now this Sankuro, being an ambitious young man, looked higher than serving Tada chika, and watching an opportunity obtained the favor of being sent as messenger to Iyeyasu; and so well did he use the chances thrown in his way that he speedily succeeded in ingratiating himself with the founder of the Tokugawa Shogunate, and his services were retained. Okubo was pleased to see one of his favorites thus fortunate.

Iyeyasu had taken under his protection the widow of a man who had been persecuted by a provincial governor, who coveted the woman as she was very handsome, and had trumped up a criminal charge against the unfortunate man, whose name was Fujii Kanske. Iyeyasu made her his mistress, and she bore to him his ninth son Kadzusanoske Tada-teru. This son was most unlike Iyeyasu, and a source of constant anxiety to his mother. He was of very dark complexion, heavily boned, coarse featured, bad tempered, and very cruel and brutal and a drunkard. Sankuro, whose name was changed now to Mondo, was sent by Iyeyasu to the mother, now called Acha no Tsubone, and they consulted as to how to control the bad conduct of Tadateru. Mondo was successful eventually, and stood many tests put upon him by Iyeyasu, until his integrity was undoubted, so that he became Governor of the Sado Mines with a revenue of 100,000 *koku* and the title Iwami no Kami. Mondo subsequently, by permission, adopted the name of his former patron Okubo.

Tadateru was given Echigo and 600,000 *koku*. Mondo, having no friends or relatives of influence, bethought him that to join the Christians would be politic, and by gaining their support to eventually use them for his own purposes.

Previous to the development of his plot he had collected an immense hoard of precious metals, as subsequently appears in the sequel.

The battle of Sekiga-hara (1599-1600) and defeat of of Hideyori, together with the death of the three leaders of his army Ishida Mitzunari, Konishi Yukinaga and Otani Giôbu was a great blow to the cause of Christianity. These men, especially Konishi had been successful in Corea, and were the leaders of the native converts to Christianity as taught by the Popish priests.

The Christians now being without influential leaders, and suffering under successive prohibitory edicts, were in great straits, and this was the opportunity that our parvenu Daimio awaited. But we must not anticipate.

We must now come to events in the year 1611.

Our Okubo fell sick. He had for years led a life of great luxury and extravagance; from amongst a numerous crowd of concubines he chose twelve † of the most beautiful and accomplished women, and in other ways affected the regal style.

He however fell greviously sick; fever and delirium came upon him, and none could approach him in his wild raving and vicious madness, until at last he died. His son Hayato had been long ago disinherited and cast adrift upon the world; but he was soon found, and set about settling his fathers affairs. No money could be found, no accounts of his father's property seemed to exist, so in his distress he applied to Iyeyasu for employment, so as to be in a position to pay his fathers creditors who clamored for a settlement. Amongst these were the twelve concubines, who claimed twelve thousand *riôs* each, and they each produced in writing Mondos' promises to them for that amount in event of his death. There was no disputing the validity of the documents, so Kurozawa, a confidential *Karo*, advised Hayato to pay to each 500 *rios*, which was done to save appearances. Iyeyasu hearing of this, refused Hayato employment on the plea of his inexperience and sent for the twelve woman, examining each of them separately, and privately cross questioning them as to the circumstances under which such a large sum was promised them by a man of such humble origin and small income.

The favorite of Mondo, a woman of great beauty and ability, at last under fear of Iyeyasu, confessed that her master Okubo had once responded to her expressed doubts of his continued faith in her, by disclosing his ambition to outvie the lowly born Hideyoshi, (Taiko) and promised her that one day she should ride in a carriage. (only used by the Dairi) Moreover, that in the godown (Kura) at the corner of the garden an immense treasure was buried which he would some other time show her.

The result was, that carefully concealed in an old

* *Note*—The student may find some particulars in "Okubo Musashi Abumi" a book containing this and many other interesting items.

† Twelve is the number allowed the Ten O in olden-time, and in other ways adopted regal style.

well under the place named, a vast hoard of gold and precious articles was found, and beneath all a small iron bound box containing the *Rembun-jo*‡. A long list of native converts and foreigners, including the name of Okubo Iwami no Kami, with his *keppan* (seal of blood) and a treaty to reduce Japan to the position of a subject state under the *Nanban* (southerners.) Okubo to be invested as Hereditary Ruler but subject to his supporters.

Hence the cause of the persecutions that had their climax in Shimabara, aided by Dutch guns, and the subsequent exception of messengers from Macao and Manila.

Hayato committed setzuppuku by order of the Shogun, his retainers were disbanded and all the property confiscated. Okubo Sagami no Kami was much enraged and sending for Kurozawa, burnt him with a red hot poker. In revenge for which Kurozawa concocted a plot, that was nearly the ruin of Okubo.

The contents of these documents never became public, and there does not seem to be any account of this conspiracy being known at the time to any but Iyeyasu and his immediate retainers. This find was a great wind fall to him, no doubt one of the means that enabled him to become himself a successful usurper.

The suspicions of the Government were being constantly kept alive by successive attempts to open communication, and the number was daily increased by men who confirmed the belief in the danger of the land by permitting the Christians to open up communication with the converts and their buildings.

THE GOVERNMENT OF MIDZUNO.

A.D. 1816—1845.

Midzuno Echizen no Kami was of the Seiwa Genji Sei and a descendant of the family of Yeto Tajima no Kami, whose daughter was the mother of Iyeyasu and now known by her posthumous title (*Okurina*) Den Zuin. Midzuno therefore claimed relationship with the Tokugawa family.

In the year 1816. He being lord of Karatzu in Hizen, with a revenue, nominally 60,000 *koku*, but actually three times that amount, was anxious to become Gorōjū (member of State Council) but Karatzu being from ancient time an important military strategic post, the lord of the province was prohibited from holding office in Yedo or Kiōto, so that he might be at all times ready for any emergency. He at length induced Iyenari (the modern Ogoshō†) to change him to another province, and Enshiu Nunmamizu was the one chosen, its assessed revenue was 60,000, but it only brought in some 50,000 *koku*.

At length about 1834 he became Gorōjū, but the Ogosho treated him and his advice with indifference and sometimes with contempt. However in 1838 Iyenari abdicated in favor of Iyeyoshi, but matters were little improved for Midzuno until after Iyenari died in 1840. In 1841 Midzuno induced Iyeyoshi to visit Nikkō in great state, giving the former opportunity to take precedence to display his family connexion with the Tokugawa and hence was subsequently bought royal honors from the Mikado.

Midzuno now gained new great power over Iyeyoshi, commenced a series of retrenchments and reforms became very unpopular, so he turned about for assistance and the idea of bringing in foreign power occurred to him, but he had to use great caution, as it was only a few years since seven persons, one an old woman, were executed at Osaka (A.D. 1829) as will be hereafter related, and this was followed in 1837 by a resurrection in the same city headed by Osho Hei-hachiro.

About 1844 Midzuno communicated with the Dutch in Nagasaki through the governor of the town, and subsequently through other channels, his desire to open up commerce with the outer world.

The following is the substance of his statements to the Dutch and the few natives in his confidence.

"Iyeyasu the founder of the Tokugawa line of Shoguns and who was of common origin with myself, his mother being of my ancestors family, ordained that Japan should not hold intercourse with foreign nations, and with that object permitted only the entry of small and unseaworthy ships. But during the two centuries that have passed since this decree, great changes have occurred, and we too must make corresponding changes. Our people who have been cast away in our miserable and unseaworthy vessels, receiving frequently pillage and treatment by the barbarians, blockships§ and the frequent visits of these foreign ships makes it imperative that we should arrive at some new regulation. Japan hitherto had a good name, let us preserve the continuation of good repute."

This seems to have been occasioned by the foreign powers by the Dutch, their selfish and exclusive policy was no doubt the reason (see Perry's Expedition page 59 and 80).

In the same year the Governor of Yedo Tori-i Kai no Kami had sent to him a translation of the document taken from the old woman and which was found in Osaka in 1829, and which Osho Heihachiro had kept in his retainers till it was taken from him by force in 1837. The document had been sent by Atobe Yamashiro no Kami, Governor (*Machi Bugio*) of Osaka, to Gorōjū Inaba Mino no Kami (*Rōjū*), who subsequently received orders to burn it, but he had retained it, and was now in great straits. He feared to deny it to Midzuno and at the same time dreaded the consequences of not having destroyed it. Finally Midzuno got the interesting papers, and it was kept a secret to himself.

Midzuno being a man of unlimited ambition, now demanded to get possession of the Citadel of Osaka and a revenue of 1,000,000 *koku*, but in some way he offended the unstable Iyeyoshi, and he was shut in his palace near the castle, and his gates closed (*keimon*).

One night there was a great uproar and a great crowd of people, immense numbers of stones were thrown at the gates (palace) of Midzuno, but the guilty persons could not be detected in the dark amongst the throng. In a few days Midzuno was restored to his position as Gorōjū, but again displaced finally. He had 10,000 *kokus* of his revenue confiscated, and he was sent to the province of Dewa where he died about three years afterwards.

It was the common talk that he had endeavoured, as Okubo Iwami had done, to make use of the foreigners to lift him into the position of Shogun.

It is interesting to compare these native accounts with those given by the Dutch and others, as also to note that from the end of the sixteenth century the Shogun was invariably considered the *Temporal* Emperor. Perry feel into this error (see Expedition Page 45 and elsewhere) and there is little doubt that, frequently, these attempts were not the sole private conspiracies of the men whose names appear the most prominently therein.

THE MYSTERIOUS DOCUMENT.

AND THE REVOLT OF OSHIO HEIHACHIRO.

In the year 1829, a certain woman and her family were suspected of professing and practicing the *Yaso* (Christian) religion, and were therefore crucified. Osho, was a *Yaritz* (officer) of Osaka, and, as it afterwards appeared, he got possession of certain documents of the old woman's evidently, as being most precious, and therefore probably of importance. In 1837 during a period of great scarcity of rice, being very much grieved at the many poor starving kindred spirits who daily came in contact with him, and the rich and unfeeling merchants, whose parsimonious conduct had aroused his ire.

Heihachiro was a most accomplished man and a very ambitious one too, and one of his companions, Hiyakuma suspected that there was deeper design in the plot than the mere relief of the poor. He therefore privately informed Atobe Yamashiro no Kami, the (*Machi Bugio*) (governor) of Osaka, who at once took measures to seize the rebels. Heihachiro finding he was betrayed at once made a rush on the rich men and set fire to the city, and then it was "each for himself."

‡ List of conspirators.

† The student will find some account of this in *Fuku Yume Mono Gatari*.

† The same name as the temple in Yedo where her tomb is.

§ In allusion to the visits of the Brothers a Isti, The Morrison in 1837. The Eclipse and the Cyprus in 1839-40. The Mercator an American whaler that rescued eleven men in 1845 especially.

§ Ogosho—Retired Shogun.

The conflagration consumed one hundred and twenty wards, and 18,259 houses.

Osho hid in a friends house, and when it was at last being searched, he set fire to it.

Two heads were taken, said to be that of Hellachiro and his son, but it was the general belief that he had escaped to foreign parts.

Amongst his property seized in his house, when he was betrayed by Hirayama, was the mysterious document, Arobe Yamashiro sent it to Yedo, and as we have already related, it eventually came into the possession of Midauna.

Correspondence.

ADULTERATION AND FORGERY IN YEDO.

To the Editor of the "Japan Weekly Mail."

Yokohama, 3rd September, 1875.

Sir,—In your issue of the 14th ultimo, we observe that you have made use of the following expressions in an article entitled "Adulteration and Forgery in Yedo":—

"That want does not lead to the act, is evident from the fact that one of the greatest sinners is the house of Z. P. Maruya & Co., a firm with ten branches in Tokei, Saikei, Yokohama, and Osaka, which thus possesses peculiar facilities for placing artistic productions before the public.

Having no knowledge of the existence of any firm in this country trading under this name other than ourselves, we shall feel greatly obliged, if you will inform us on what authority this statement has been made, and what proofs can be adduced to substantiate it.

We remain Sir, your obedient Servants,

Z. P. MARUYA & Co.

[Messrs. Maruya will probably be surprised to learn that the Milk, Rubin's Brandy, Lemonade and other counterfeit stuff were all bought at their store. Their enquiry has an air of such lamb-like innocence that another unconscious blunt may probably follow this statement.—Ed. J. W. M.]

Law & Police.

U. S. CONSULAR COURT.

Before Geo. Van Buren, U. S. Consul General;

And F. R. Wetmore and O. Dicke, Assessors.

Wednesday, 1st September, 1875.

In this case, plaintiff claims a sum of $10,715 42 balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

We published the petition and answer at length on the 29th July last.

Mr. E. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Mr. E. V. Dickins opened the case for plaintiff. He stated that the total sum involved was between $140,000 and $150,000. On the plaintiff's side a sum of about $108,000 was claimed, and that defendants claimed that some $30,000 was due to them. The case was a very clear one to him, and he was sorry it had been denied in the by defendants. After the liability had been settled, he would ask that the question of accounts be gone into by a competent accountant. Before going into details, he would wish to dispose of some statements made by the defendants in their answer, which were false, and which defendants knew were false when they were made. The business transactions between the parties, did not close in the year 1871. Plaintiff had often applied that the accounts be settled, but always had been refused; but it was not till the middle of 1874 that plaintiff threatened proceedings and friendly intercourse ceased. This was the reason the case had not come before the Court till the present time. He denied that a settlement of accounts had taken place between the plaintiff and defendants, as stated. He then went into the question of figures. The $40,000 claimed to have been lent by defendants to plaintiff had been returned, as he would prove by evidence. It was at the request of defendants' firm that the exchange transactions were entered into. The agreement was that certain securities should be deposited, together with a capital of $20,000. This was done, and plaintiff had at times to borrow money to carry on the exchange operations, for which he had to pay interest, and he (plaintiff) had debited the account with such interest. The total securities deposited amounted, in a round sum, to $100,000. The money received in the ribbo transactions was remitted to defendants. He then fully explained the modes of speculating in ribbo and rice. It was when paper money was introduced that many people speculated in the coinage and made profits, but in this case a loss was unfortunately sustained. He then explained the various speculations in ribbo, and the losses that had been sustained, amounting to $36,582 38. Some of the speculations in ribbo had been successful, but in the aggregate they left the above loss. There had been four transactions in rice, leaving a total loss of Y0,582 55 rios. Thus a total loss of 47 161 93 rios had been sustained in the ribbo and rice transactions, irrespective of some expenses and fees, etc. After some further remarks he would proceed to call his witnesses.

Mr. Ness applied that plaintiff's [illegible] should leave the Court room whilst plaintiff gave his evidence.

Mr. Dickins objected to this; it was necessary to refer to him at times.

His Honour thought that it was a reasonable request. He, without throwing any imputation upon the Japanese character, thought that Japanese witnesses, by being present whilst others were being examined, were very apt to get hold of the facts thus.

Mr. Ness applied that five of plaintiffs' witnesses should leave the Court, and this was, after some discussion, agreed to.

Mr. Dickins then called [illegible]

Ito Yachibei cautioned to speak the truth. Is a Samoa Shahai agent at Tokio and elsewhere. I am the 4th Hachibei mentioned in the two documents produced. They are stamped by the Okurasho.

Mr. Dickins. The documents are letters of thanks to Hachibei from the Okurasho, for services rendered during the war as a financial agent.

Mr. Ness said he desired a certified translation of them, and not Mr. Dickins'.

After some discussion it was decided that a proper translation should be handed into Court.

Witness continued: I first knew defendants in the third year of Meiji (1870). Previous to the exchange transactions with defendants, I did some business in coal with them. During the 5th month of the 4th year of Meiji, I had a conversation with the [illegible] of defendants (Kumagi Iske is his name) about entering into business transactions with defendants. Hachimoto Benzo also spoke to Kumai Iske about entering into business transactions with defendants. The three of us were present at this conversation. Hachimoto Benzo was not in my employment at this time, he was a merchant in Yokohama. At this time Hachimoto Benzo and Kumai Iske were on friendly terms. They had been at school together. A conversation was held about the buying and selling of foreign money. Kumai Iske expressed a wish to enter into this business. No other conversation took place at the time. In the 7th month Hachimoto Benzo came from Mr. Irwin about the same business. This was at the time of the establishment of the Mint, and it was supposed that the price of money would rise.

The Court then adjourned, and reassembled at 2 p.m.

Witness continued: In the 6th month of the 4th year of Meiji I had a conversation with Kumagi Iske. It was about the buying and selling of foreign money. It was to be with defendants' house. There was no other conversation. Hachimoto Benzo was present. At that time I had no other conversation with Kumagi Iske. In the beginning of the 7th month I had a conversation with Mr. Irwin through Hachimoto Benzo. The proposition brought from Mr. Irwin was that the profit and loss was to be divided between me and defendants; they were to have two-thirds of the profit or loss and I one-third. Mr. Irwin said that as the Osaka Mint were buying silver to melt down, it no doubt would become dear, and therefore profitable. Kumagi Iske requested me to deposit with defendants, as security, securities to the amount of 100,085 yen. Iske desired this to be done as security in the exchange transactions. This deposit was made about the middle of the 5th month. Hachimoto Benzo took them to defendants. Hachimoto Benzo and I, Mr. Irwin, Kumagi Iske, and Uchida Zenjiro were present at some conversation held in the 7th month. They were present when the affair was finally settled. I am not certain if Iske was present.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Uchida Zenjiro was to act as go-between. Hachimoto Benzo was to act as inspector between both parties. Uchida Zenjiro was then a merchant in Yokohama, and understood the silver business well. Uchida Zenjiro was also employed in the Shoshu. I supposed he was a broker. Besides the securities in the 7th month deposited with defendants, I deposited $20 000 on the 5th day of Meiji. Hachimoto Benjo and Uchi Zengiro took the $20,000 to defendants. On the next day they brought a contract, and said defendants would stand two-thirds, and that I was to stand one-third. This contract was in writting. Uchida Rikichi made out the document, and I and Uchida Zengiro took the contract and handed it to Mr. Irwin. I ordered Uchida Rikichi to write the contract.

Mr. Ness said that defendants had no knowledge of this document.

Mr. Dickins said he had a copy somewhere.

Witness continued: I, Irwin, and Uchida Benjiro were present when I handed the document to Mr. Irwin. I have a copy of that contract. I have not got it with me but it can be found. Only Benjiro was present when I handed Mr. Irwin the document. This exchange business was to be for three or four months, and if good was to be continued. The moneys for carrying on the business were to come principally from defendants, the remaining money I was to advance. Uchida Zengiro, Hachimoto Benjiro, and another man were daily to receive the money. They used to buy and sell foreign money with it, and have a pass-book from defendants, which they took to them every night. I am a resident of Tokio, and know this to be so. I have seen money pass between defendants and Uchida Bengiro and the others. Saito Kuskii was employed as accountant. The business was left in the hands of Uchida Rikichi, Saito Kuske, and two others. When I came to Yokohama I was informed of the transactions that had taken place. I have seen a translation of the accounts appended to the petition. [A very long discussion took place about the statement of accounts, and it was finally decided that the original, in Japanese, was to be produced.] I recollect all the documents shown to me as being translations of the accounts I have examined and compared them with the original books and vouchers. They are quite correct.

Mr. Ness applied that the original accounts be produced.

Mr. Dickins objected, and it was allowed by his Honor, who did not think this the proper time to put them in.

Witness continued: Saito had charge of the books. I have not compared them with the original accounts, but with the books and vouchers. I have at times assisted. There is not the slightest mistake in the accounts. I think I remember a transaction in which Nakamura Sobao was interested. Mr. Irwin was interested in it. Nakamura Sobao was to have half the profit or loss, and the other was to be divided between Mr. Irwin and myself. On the 30th day of the 9th month (1871) I heard of this transaction. The next day I went to defendants' office to tell them that I should come the next day for $481,000. I did not go for the money. During the exchange transactions I have advanced money. Mr. Saito the accountant knows all the figures. In the year 1871, I entered into business with defendants for the purchase and sale of rice. Hachimoto Benjo came to me with a message from Mr. Irwin to enter into rice transactions. I came down to Yokohama, and went with Hachimoto Benjo and another to Mr. Irwin. Saw Mr. Irwin and had a conversation about rice. The Okurasho had given permission to export rice and Mr. Irwin had heard of this. Mr. Irwin had heard this before it was known publicly and thought that it would be a good thing to purchase rice, and that the profit on it would go as a set off against the loss on the exchange transactions. I thought it a very good idea and made an agreement. The agreement was made on the base of the agreement for the exchange transactions. I only heard of the permit from Mr. Irwin. Hachimoto Benjo and Uchida Zengiro were to act for both parties. The money left over from the exchange transactions was to be used for the purchase of rice, and defendants were to gradually supply further funds. The defendants did supply money. Saito, the accountant, knows about it. The rice business left a heavy loss. Mr. Irwin said the Okurasho permit was to be issued soon; but it was not issued till next year, and I think that was the cause of the loss.

Court adjourned till 10 a.m. to-morrow morning.

Thursday, September 2, 1875.

Court re-assembled at 10.15 a.m.

Mr. Dickins said before proceeding with the evidence he desired the other side to produce a certain promissory note.

Mr. Ness said he had only had a few hours' notice to produce it. Mr. Dickins said he had given notice two days ago. He called for the production of certain other securities deposited with defendants by plaintiff.

Mr. Ness said they were not in his possession, and he could not produce them till this afternoon, and then, perhaps, for only an hour.

Mr. Dickins said they had been deposited as security by plaintiff with defendants, and ought to be produced. He must have them. If defendants had deposited them as security for a loan with other parties, it was a misappropriation. He wanted to know what had become of them.

Mr. Ness said the securities had been deposited with defendants by plaintiff to be deposited with a bank to get loans on. There was an agreement to this effect between plaintiff and defendants.

Mr. Dickins said this was totally different from the answer filed by defendants. If defendants had deposited them with a bank, they had acted fraudulently. He denied that plaintiff had deposited them with defendants to be used to get money on, or for any purposes of their own. They were deposited with defendants as security for any sum in which he might become indebted to defendants by the exchange transactions.

His Honor finally decided and ordered that defendants' counsel was to produce them this afternoon, if possible.

Examination of Ito Hachibei continued: I recognise the book shown to me. It contains receipts and payments in financial business,—I mean the exchange business. The English writing is all in Mr. Irwin's handwriting. I saw Mr. Irwin make some of the entries, as I was present. In many instances I left the matter to my agent, who could fully explain it. There is no doubt about the correctness of them all. I have seen, and understand, the accounts appended to defendants' answer. I have had explained and understand, the items in the accounts now read to me. [Items read.] The items are incorrect. The two items in the account-book now shown me are the same as those I have just seen. They are not correct. The writing in pencil in this book is Mr. Irwin's. There are a great many reasons for their incorrectness. Hashimoto Benzo used the book, and he could explain fully. The items are dated the 10th day of the 10th month of 4th year of Meiji. At that time I had seen no account of profit and loss on the exchange transactions. I saw no account current made up to that date by defendant on exchange transactions. On the 12th day of 1st month this year, I first saw these items in defendants' account. [Account handed in, signed by defendants.] The half seals in the book shown me are impressions of my seal, but there is no whole seal at the bottom of the entries. My seal is not appended to the incorrect entries. My true seal is on each receipt entry in this book. [Marked C.] My true whole seal is also appended to every true entry in the book now shown me. [Book D.] I think my half seal is affixed to the top of every entry in the book, and my whole seal at the bottom of all correct entries. After speaking to Mr. Irwin, "Book D" was given to me by Kumagai Iske. As the items were incorrect, the book was returned to him. It was returned to him at Mr. Irwin's order. Hachimoto Benzo and Uchida Zengiro were present. After the matter was discussed I went with these two men and received the book. On or about the 1st day of 10th month of 4th year of Maiji I remember borrowing $40,000 from defendants. The note shown me is the note given at the time. Uchida Zengiro gave it when he received the money. I do not know how the money was paid; I was not present. I only know what I have heard from Zengiro. The money was useless. It was returned to the defendants. I think it was returned on the third day after it was borrowed. The identical money was returned. At that moment defendants were busy with the departure of a vessel and did not return the note, but said eventually they would. I have never yet received the note. I have often been and have sent others, and have seen Mr. Walsh and Mr. Irwin, but they always said they could not find it. The defendants never denied that they had received the money back again. Rikichi and Kuskei can explain the charges that do not refer to the exchange or rice transactions. In 1872, '73, and '74 I continued my business transactions with defendants without interruption. During that time my business relations were exceedingly pleasant with defendants. About the 6th month of last year I began to strongly urge defendants to settle the accounts between us. In the 12th month, 4th year of Meiji, Mr. Irwin asked that the settling of the accounts might be postponed. I and two others went to defendants office and requested that the accounts might be settled, and it was then that the delay was asked for. Mr. Irwin said,—„If I settle this matter now, Mr. Walsh will be displeased, and it will affect my position." In return for this,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Irwin said he would make a large business with me and balance the accounts with the profits. In consequence of the promise of the great business, I waited. Irwin said, "If we fail to make this large business with you, we will settle the accounts, by deducting payments and allow you interest, so that you shall sustain no loss." The interest was to be compound, and 1 per cent. per month. When this agreement was made, I was there with Benzo and Zungiro. In the 6th month Sadajima, a relative of his in Osaka, found out a large speculation. The speculation was to be in Government bonds. The amount of a million dollars was required to go into this speculation. Defendants refused to enter into the speculation.

Court re-assembled at 2.15 p.m.

Witness continued: The book (F) shown me is a payment and receipt book of the exchange business. It is the same as book C. All payments made are marked "paid," and all receipts are marked "received" in it. Incomplete payments are marked *adskare*. As I was absent from Yedo I left my seal with Rikichi, who put it on all true receipts. On the 15th day of the 11th month last year, I had a conversation with a clerk of defendants, through an interpreter named Futai. The accounts were compared. We waited for Mr Irwin, but as he did not come the matter was allowed to rest. I remember the securities being deposited with the defendants. They were to secure my liability in the exchange business. Defendants were to receive them, and keep them in trust. I only put them into the hands of defendants to be kept safe. I did not authorise defendants to use the securities for any purpose whatever. I never received any application from defendants for permission to use the securities for their own purposes. During the 7th month last year I went with Rikichi to defendants', and saw Shoski and Futani, and they told me that they could not find the $50,000 promissory note. They told me they would look for it and if they found it I could have it. I went again in the afternoon, but they said it could not be found. In the early part of the 9th month Ito Hachiro and Rikichi went again for it, but did not get it. My right to receive the note was never denied. From 20 to 30 applications were made to recover the promissory note.

Mr. Dickins handed into Court three letters received by plaintiff from Futani, interpreter to defendant, asking him to wait till the accounts were made up.

Witness continued: I believe that defendants owe me the $108,715 24 I claim in the petition.

Cross-examined by Mr Ness: I know the sum of $108,715 24 is owing to me by defendants. It is all written down in the papers of the case. I really know that they owe that amount. I have not conversed with anybody about the securities since noon to day. I have not spoken to any one about this suit at all since the adjournment. It was during the 4th month of the 5th year of Meiji that the securities were handed to defendants. Hashimoto Benzo delived them. Benzo gave me a receipt for them. I do not know if Hashimoto Benzo got a receipt from defendants. The securities were put in the hands of Benzo, and he knew all about them. I know they were deposited with defendants, because I had occasion to use some of the documents, and Kamigi Iske brought them to Hashimoto Benzo's house, and after I had looked over them, Iske took them back to defendants. On one occasion I went to defendants, and the securities were opened and I examined them. This was the 2nd month of the 6th year of Meiji. I only know that the securities were deposited with defendants through having seen them on these two occasions. It was in the spring of last year that I saw the securities at Benzo's house in charge of Iske. The proceeds of the dollars sold were to be immediately handed to the defendants. Ordinarly, the mony was to be paid daily, but there might be times when the money would have to remain for a time in my hands. As soon as transactions were finished the proceeds were to be handed over to defendants. At the beginning of the arrangement I deposited 2,003 rios with defendants as a portion of the capital of the partnership. The securities were placed in the hands of defendants to be used in case my contribution of 2,000 rios to the capital was insufficient. There was no specification as to the amount of capital each party was to put in. The copy of the contract I speak of is written in my cash-book; Saito has charge of it. On the 5th day of the 7th month of the 4th year of Meiji, I think the copy I speak of was made. I think Uchida Rikichi wrote it in my book, and delivered an exact copy to defendants. [Book produced and handed into Court.] I think this is the original draft of this contract, a copy of which was handed to defendants. The contracts were put together and sealed, half of the seal going on each copy. Walsh, Hall & Co.'s signature is not on the contract. My seal is on it. Walsh, Hall & Co.'s name is on the contract as an address. I, in company with Zungiro, went and delivered the contract into the hands of Mr. Irwin. Transactions in niboos ceased in the 10th month 4th year Meiji (1871). I did not then get back the securities, because the rice transactions were immediately entered into. They were left with defendants as security in the rice transactions. The rice transactions finished in the 12th month of the 4th year Meiji. Considerable loss was experienced in the rice transactions, and it was decided upon that some large transactions should be entered into, and till that time the securities should be left with defendants. No large speculation had then been discovered. Thinking that some large transaction would be discovered, the securities were left. Benzo is my friend. He is a wholesale merchant, and is not in my employment. Benzo had not charge of my business in Yokohama, I could employ whom I pleased. I had the services of Benzo. Benzo was employed by both parties in the business, between myself and defendants. Benzo has not yet been paid, as considerable loss has been experienced. No remuneration for his services was decided upon. If there had been profits made he would have received remuneration from (out of the general profits) both sides. At Mr Irwin's request Benzo came into the transaction as he (Benzo) had known defendants a long time, having been introduced by myself. I never went to defendants to ask for money, but I have sent others to do so.

(Court adjourned till 10 o'clock next morning.)

Friday, September 3, 1875.

Court re-assembled at 10 a.m.

Cross examination of Ito Hachibei continued: Benzo was a man in whom I had every confidence. I did not entrust my seal to Benzo. I never entrusted my seal to Benzo, and he never put it to any transactions (entered in my book) with defendants. I entrusted it to Rikichi. Rikichi was my clerk. The seals in the books shown me in my examination in chief were put on in the upper storey of the house adjoining that of Benzo. I rented the house. I was present some times when the seal was put on. I never saw Benzo put the seal on. I don't know if he ever did do so when I was not present. Benzo has the reputation in Yokohama of being an honest man. I believe him to be so. If Benzo acted under my orders I should endorse everything he did. I don't know if Benzo has done anything unfair in these transactions. I approve of every step Benzo has taken in this matter that I know about. I think Benzo has taken no step of which I do not approve. I approve of everything that I know of that Benzo has done. I still have the most perfect confidence in Benzo. I have seen the accounts rendered by defendants in this action, and I have also examined them. They were translated, but they were not correct. Only a part of them were translated. The translation was a correct one. I do not know a word of English. The balance in the accounts shown by defendants to me was a little over $100,000, with interest, making it $114,000 in favor of defendants. I compared the translation of the accounts with my own books, my cash book. Saito and Rikichi had charge of my cash book. I compared the accounts with that book, and a great many other papers and documents. I mean that the cash book which I examined the accounts with is a great many books. Some of the items were correct in defendants' accounts, but a great many were incorrect. I went to Mr. Walsh, but neither he nor his clerk knew anything about it. I instructed my clerk to make the examination of the accounts, and took his word about them. I have personal knowledge of the accounts, both of those of the defendants and my own besides that of my clerk. I have examined the accounts of defendants and ascertained that they are incorrect in many particulars.

Mr. Ness called for the production of the cash books that witness had compared defendant's accounts with and found them incorrect.

Mr. Dickins objected, but his Honour ordered them to be produced.

Witness continued: Saito and Rikichi are in charge of my books. I have perfect confidence in them, and would leave my seal with them. I approve of everything they have done for me that I know of since 1871. Uchida Benjiro was the man appointed by both sides to make the purchases of coin. Defendants' Chinese compradore, Zin Coy, made some purchases as well. Hashimoto Benzo was appointed by both sides as inspector. He was to move between both parties, take messages, and superintend matters generally in the exchange and rice business.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A record of the money transactions in the exchange business was kept in cash-books. They were kept in duplicate: one at defendants and one at my house. Some items were kept on separate papers, the parties who had charge of which can give particulars. Saito and Rikichi can give the information. The separate papers were kept by request of defendants; but I do not know their contents, my accountants kept them. I asked my accountants the contents of these separate papers; they told me they were made by request of defendants. There was an advance on rice for one thing. Some exchange transactions were written on these separate papers. They were payments and receipts, such as should in the ordinary course have been entered in the cash books. These separate papers are memoranda of exchange transactions. The duplicate cash-books should entirely agree up to the termination of the exchange transactions. I have seen the separate papers in Benzo's house after they were made. These papers were correct. I do not recollect how many there were. After the end of the transactions in 1871, nothing whatever was written in my cash-book. My seal was not put in my cash book to any transaction after the business was finished. My instructions were that my seal was to be put on all receipts; and I believe that was always done. On documents my half seal is sufficient; but receipts must be stamped with the whole seal to be binding. Receipts would not be complete without both half and whole seal were on them. A Japanese receipt with only a half seal on it will not pass; in fact, would be of no use. half seal on a receipt is only a mark. It is a tally with my copy of the receipt. It would also be a proof that it was recorded in my book. A half seal is of use only as a tally. At the time that a receipt is recorded, the half seal is put on it. There are no such things as genuine receipts with half seals on them only. The half seal is placed on all payments; and the half and the whole seal upon receipts show that the amounts have been received. As to payments, the contents of the paper is agreed upon before the half seal. A receipt must have a whole seal. The contents of a paper are agreed on beforehand, and then in case of receipts, the whole and half seals are put on. The half seal upon a paper shows that the contents have been previously agreed upon.

Court adjourned, and reassembled at 2 p.m.

The cash books of plaintiff with which he had compared the accounts of defendants were then handed into Court. Witness continued—I do not know when the entries in "book C" now shown me were made. They were made by Saito Kaske. Saito Kaske can say when they were made. This is my copy book. All the receipts and payments are entered in defendants Cash Book. This book contains the sum totals of the previous entries. [Some items in Book F were gone into. The cash book deposited with defendants is the one to be relied on. Book C is of no consequence. The two entries in "F" are not in "C," but "F" is correct. I think I have another copy of this book. The document now shown me is a true one. It contains payments and receipts. These are entries apart and outside of the partnership. I think the first four items refer to other exchange. He who had charge of the only one who would know about it. I don't know about it. The document and some accounts marked "A" handed to witness to point out some items, but he said it would be useless for him to look as he had had nothing to do with exhibit "A."

Saito is the person who can give the amount of the exchange transactions, I can't tell. Saito had the matter in charge and I don't know anything about the books and appers that exhibit "A" was compiled from. On the latter part of the 12th month 4th year of Meiji, I first heard from Saito that money was owing to me from defendants. The amount was understood to be about $100,000.

Some entries showed to witness in book "D," dated 10th month 4th year of Meiji.

These entries are false. They bear my half seal, but as they are false they do not bear my whole seal. All entries that bear my half seal are not false. This book was made because Mr. John Walsh was coming back. If you were to show me a receipt with my half seal on it I would at once tell you of it was false. I can't say if there are any of my genuine receipts with my half-seal only on them. There are probably some genuine receipts with my half-seal only on them, but I can't tell without seeing them. I can't tell if any receipts with my half seal put on them by my agent are genuine or not without seeing them. My agent would inform me every time that he used my half seal and thus I should know if such a receipt was genuine or not. My agent did not make the entry on page 1 exhibit D. The entries were made at the request of Mr. Irwin, who promised to make them right afterwards. The impressions of my seal were made by my agent, by my order, in my presence. I did not have my full seal put on, because the entries were false. I was present with four others, but none of the defendants were present. In anticipation of the expected arrival of Mr. J. Walsh in Yokohama, in the early part of the 10th month 4th year of Meiji, Mr. Irwin said as immense losses had been experienced in the exchange transactions great trouble would arise with Mr. Walsh, and his standing in the firm be injured. He said this to Benzo and requested that Benzo would make the false entries recorded there to prevent Mr. Walsh knowing it. My three clerks were requested by Benzo to do as Mr. Irwin requested, but as they knew this was wrong, and the entries would be false they refused to make them. After this Irwin repeatedly begged Benzo to make these entries. Repeated requests were after this made by Benzo to my three clerks, but they still refused to have anything to do with such a false transaction." After repeated attempts to get them to do so I being in Yedo received a letter from them asking me to come to them on the 8th of the 13th month. On the 9th I went to the clerks' place and heard about the matter and then I heard the whole tale, and with my clerks discussed what was best to be done. As I said the transaction would be a false one, I refused to have anything to do with it. Irwin ridiculed it. Then Benzo asked if the thing could not be done in consequence of the large exchange business then being transacted. Then I asked Benzo if the entries requested to be made would correspond with the actual balance of the exchange amounts when made. Benzo then said correct entries would be made to take the place of these. I said incorrect ones will be substituted at some future time if I will consent, but on the condition that they shall be written as *adzukari atzke* as they were false entries. As it would not do to make them in the ordinary way in the day book, I had them made in the 1st page as described, Benzo guaranteeing to keep me from all harm. I ordered the writings to be made on the 10th day 10th month 4th year Meiji, and Benzo took them to Mr. Irwin. Then I received $20,000 advance on rice transactions and that entry was made immediately after the false entries. Shortly after I received 3,000 *ryos* in *nihoo kin* from Mr. Irwin. This amount was also entered in the same book. Afterwards I received $5,000, and that was entered in the same book. I think another payment was made but am not certain.

Adjourned till 10 Monday morning.

IN THE SAIBANSHO.

September 1st, 1875.

EDGAR ABBOTT *v.* MITSU BISHI S. S. CO.

The particulars of this case were as follows:—It appears that the Plaintiff's Agent in Nagasaki had shipped per *Kanagawa Maru* 170 tons of Coal, and had received back from the steamer a clean Mate's receipt for the quantity shipped, on receiving the documents the Plaintiff's Agent paid the Coal merchant at Nagasaki for the 170 tons; on delivery being taken at Yokohama, only 142 tons were delivered and the Plaintiff then commenced action for short delivery, his argument being that the Mates receipts in the first instance were the original documents to go by which stated received on board so many piculs of Coal which exactly corresponded with the number of tons called for in the Bill of Lading. He had paid for that quantity shipped, and he contended that the Bill of Lading should be made out strictly according to the Mates Receipts, the Defendants had inserted clauses in the Bill of Lading, such as, more or less, not accountable for weight, &c., and held that by the insertion of such clauses they were not liable for the deficiency. Then again the Defendants stated that the Mates Receipts produced were not their usual ones; they should have been on printed Forms. The Plaintiff argued that he was not aware that any particular class of paper was requisite. A receipt was a receipt and he wished to have the receipt before the Court fulfilled. The Defendants stated that other receipts were filed up and signed at their office in Nagasaki. The Plaintiff stated he never heard of before two mates receipts being issued for the same goods.

The Plaintiff then called the attention of the Court to the fact that the Defendants had broken a clause inserted in the Bill of Lading, it was this $400 received on account of freight balance to be adjusted and paid on Yokohama. Instead of paying this in Yokohama the Defendants pay the difference in Nagasaki to the shipper without the Plaintiff's knowledge, and then brought that fact in as a proof that the shipper having received this sum must have had some doubt of the incorrectness of the quantity shipped.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

No documents were produced to shew that the shipper had been paid. The Plaintiff here stated that he did not think this materially mattered, he wished, to go back upon the mate's receipts, they were the documents he was prepared to stand by, he had paid for his coal on receipt of them, because they were "Clean receipts." Had the Coal been signed for by the Chief Officer "Received a quantity of Coal" then, the Plaintiff's Agent would never have made any settlement until the Coals were discharged at Yokohama. As the matter now stood he the Plaintiff did not see why he should be the loser, because the Company's business had been conducted in such a careless manner; he at the same time wished to draw attention to the fact that he the Plaintiff held both Mates receipts and Bills of Lading for the cargo referred to.

The defendants, in reply, said that the coal was taken on board in Nagasaki without being weighed, and that the mate's receipts, on which such stress had been laid, were simply an acknowledgement from that officer so that the lighterman might show his master that he had delivered the coals at the proper ship.

Judgment reserved.

THE NEW PRESS LAWS.

(*Nisshi Shimbun, June 30th.*)

NOTIFICATION No. 101.

It is hereby notified that the Newspaper Law published by Notification No. 352 of October 1873 is now repealed, and the following accompanying new law ordained in its stead.

(Signed) SANJO SANEYOSHI,
Daijo daijin.

28th June, 1875.

NEWSPAPER LAW.

I.—Whenever it is wished to publish a newspaper or periodical magazine, the proprietor, or, if a company, the director, must send in a petition to the Home Department through the office of the *Fu* or *Ken* for permission to do so. In any case of publication without such permission a charge will be laid against the offender before the Judicial Authorities,* the publication will be put a stop to, and the proprietor or director as well as the editor and printer will severally be punished by a fine of one hundred *yen*. Any one who falsely describes himself as having obtained permission will be fined not less than 100 *yen* and not more than 200 *yen*, and his types and machinery will be confiscated.

II.—The following particulars are to be inserted in the petition.

1. The title of the proposed publication.

2. The time when published, whether daily, weekly, monthly or at indefinite times.

3. The name and residence of the proprietor, or if a company, of the directors, exclusive of persons having only a share in the newspaper.

4. The name and residence of the editor, or where there are several editors of the principal editor.

5. The name and residence of the printer. If the editor and printer are the same person, this should be stated.

Any false declaration with regard to the above five particulars will be punished by the stoppage or suspension of the publication, and by a fine of from ten to one hundred *yen*.

III.—In the event of the death or resignation of an editor or chief editor, the publication may be continued with a provisional editor or chief editor, but the name and residence of the new editor or chief editor must be reported by the proprietor or director to the office of the *Fu* or *Ken* within 15 days at latest, counting from the day after the death or resignation. If a report is not made within this time, the publication will be suspended, and the proprietor or director will pay a fine of one hundred *yen*.

If any change should occur in any of the other particulars mentioned in clause II., the proprietor or director and editor or chief editor should report it jointly within at least fifteen days after. Failure to report within the time specified subjects the proprietor or director and editor or chief editor to a fine of one hundred dollars each.

IV.—No other person than Japanese subjects can be proprietors or directors, editor or chief editors.

V.—The proprietor or editor may himself be also the editor or chief editor.

VI.—Where there are two or more editors one shall be selected and made chief editor.

The names of the editor and printer shall be inserted at the end of each number or volume, and where there are several editors, of the chief editor. If the editor or chief editor is ill, a substitute should be provided, and his name published instead.

An infraction of this rule subjects the editor, chief-editor or substitute to a penalty of not less than 100 *yen* and not more than 500 *yen*, and the printer to a fine of 100 *yen*.

VII.—If anything contained in the number or volume infringes the prohibitions of Clause XII and the following clauses, or if an offence is committed against the law of slander the editor will be considered the principal, and the accessory, if the proprietor or director is cognizant of it, he will be considered as if he were the responsible editor.

VIII.—With the exception of the ordinary paragraphs of news, of articles in newspapers or magazines (in which contributors are included) must sign their names in every case where the discussion turns upon foreign or domestic politics, finance, the feelings of the nation, the aspect of the times, learning or religion, or matters affecting rights of officials and people.

The writer who signs a feigned name subjects himself to imprisonment for thirty days and to fine of ten *yen*. If he signs another man's name he subjects himself to imprisonment for seventy days and to a fine of 20 *yen*.

Either or both of the above-named punishments may be inflicted. The same rule holds for the punishments mentioned below.

IX.—When articles are translated from foreign newspapers or magazines, the translator, except in the case of ordinary paragraphs of news, must sign his name to them, and if such articles infringe the prohibitions of Clause XII and the following clauses, if they offend against the law of slander, the responsibility is the same as that of the writer in Clause VII who is considered an accessory.

X.—If the editor only is sentenced to imprisonment for an offence, the proprietor or director may appoint an acting editor or a new editor and continue the publication, except it has been at the same time suspended. If the publication is continued without an editor having been appointed, it will be suspended.

XI.—If in any newspaper or magazine, any public office, company or private individual is mentioned by name, the newspaper or magazine must publish in their next issue after receiving it any explanation or correction which such public office, company or person may furnish to them. An infraction of this rule subjects the editor to a penalty of not less than 10 *yen* and not exceeding 100 *yen*.

XII.—Any person who in a newspaper or magazine incites to the commission of any crime will be considered equally guilty with the person who has been caused to commit it, and if his inciting has not resulted in any offence being committed the penalty is imprisonment for not less than five days and not more than three years and a fine of not less than 10 *yen* and not exceeding 500 *yen*.

Any one who incites to riot a number of evil-disposed persons or who stirs up to a violent attack upon the authorities will be considered equally guilty with the ringleader. If his persuasions do not result in causing a crime to be committed he will be punished as above.

XIII.—Any one advocating a revolution in the Government or the subversion of the State or who attempts to stir up rebellion is subject to imprisonment for not less than one year and not more than three, and in the case of crime committed (owing to such instigation), to the same punishment as the principal offender.

XIV.—Any one who reviles existing laws, or confuses the sense of duty of the people to observe them, or who by perverted reasoning attempts to justify offences plainly contrary to the criminal law, will be punished with imprisonment for not less than one month, and not more than one year, and with a fine of not less than five *yen*, and not exceeding 100 *yen*.

XV.—It is not allowed to publish the preliminary proceedings in Criminal Courts before sentence has been publicly delivered, nor the deliberations of the judicial officers respecting the trial. Any breach of this rule is punished with imprisonment for not less than one month and not exceeding one year, and a fine of not less than 100 *yen*, and not exceeding 500 *yen*.

XVI.—Memorials and petitions may not be published without the sanction of the *In, Shô, Shi* or *Chô*. Any breach of this rule subjects the offender to the same penalties as in the preceding clause.

* The *Fu* and *Ken* authorities will act as prosecutors in the case of offences against this law.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ADDITIONAL REGULATION.

Any person who has already received authorization to publish a newspaper or magazine before this law was notified need not send in a fresh application, but he should report to the Home Department, through his *Fu* or *Ken*, within ten days counting from the day following his receipt of the notification, the five items specified in clause II. If after ten days have elapsed, this report has not been sent in, the *Fu* or *Ken* will suspend the publication. Fresh application must follow the rule laid down in clause I.

When there have hitherto been several editors but no chief editor, a chief editor or provisional chief editor must be appointed within two days, counting from the day following the receipt of the notification.

If after two days, the newspaper or magazine continues to be published without the name of any chief editor, the *Fu* or *Ken* will suspend the publication. Fresh application should follow the course described above.

THE JAPANESE LAW OF LIBEL.

THE following is a translation of the newly instituted Law of Libel which possesses significance in connexion with the revised press regulations which have been simultaneously issued.

ARTICLE I.—Any statement, whether it be intrinsically true or false, which tends to injure the character of the individual is a *zangen* † and that which tends to give him a bad reputation is a *soshiri*. ‡ Whosoever shall exhibit, sell, or paste up books, manuscripts, pictures or likenesses for the purpose of disseminating *zangen* or *soshiri* will be punished in the manner hereinafter described.

ART. 2.—Should the object of slander be of Imperial rank the offender will render himself liable to imprisonment for not less than three months and not exceeding one thousand *yen*.

ART. 3.—Should the object of slander be a *kadzoku* (member of the Imperial family) the offender will render himself liable to imprisonment for not less than fifteen days and not more than two years and a half, or in lieu thereof may be fined a sum not less than fifteen, nor exceeding seven hundred *yen*.

ART. 4.—Should the effect of the slander be to bring into contempt any official, the punishment to the offender shall be not less than four days imprisonment nor more than two years; or a fine not less than ten *yen* nor exceeding five hundred; the offence of *soshiri* being punishable with imprisonment for not less than five days and not more than one year, or with a fine of not less than five nor exceeding three hundred *yen*.

ART 5.—Such as may slander *Kadzoku*, *Shidzoku* or *Hinin* render themselves liable to imprisonment for not less than seven days nor more than one year, or, in lieu thereof, may be fined not less than five and not (exceeding three hundred *yen*).

ART. 6.—Should information tending to bring to justice guilty persons be laid before the officers of the Government or of Justice, then shall the first article of these laws be without force. But a false accusation shall be punished as the law directs.

ART. 7 provides that prior to investigating a charge of slander the alleged criminality of the accused shall be fully enquired into. If substantiated then he shall be punished for such offence as the common law of the land shall take cognisance of, and, charge of slander against his accuser shall lapse. Should the offence, however, be not proved the charge of slander may be proceeded with.

ART 8.—Unless an accusation be laid against offenders in the cases provided under the Articles 4 and 5, the Government will take no cognisance of such offence.

† *Zangen* is a libel which may [illegible] be susceptible of proof.
‡ *Soshiri*, a libel which is [illegible] ce.

KOBE.

(Hiogo News.)

That the undeveloped mineral wealth of Japan is very great is so firmly believed by a very large proportion of the foreigners resident in the country, that we have long been desirous of seeing for ourselves on what kind of evidence this very prevalent belief is founded, as we know that some persons, whose opinions carry much weight, hold an exactly opposite opinion, based apparently on the absence of sufficient evidence in the shape of mining enterprise. A notice in the recently issued Annual Report of Mr. Consul Annesley of the great success which had attended the introduction of European machinery at the silver mines of Ikuno, and the proximity of the place to Hiogo, induced us recently to pay a flying visit there and see the workings. At the outset we were much struck by our personal experience of the immensity of the disadvantage which all industrial enterprise in this country labors under by the want of good roads, and the chief result of our visit, apart from the confirmation of the favorable impression made by the prospects of the mines is the strengthening of our conviction, expressed long ago, that the Government would have done much more wisely had it expended capital on the making of ordinary good roads in the country before it proceeded to enter into contracts and officially plunging us under into schemes of railway communication. The beginning is made, and the result will be made the surer, but we adhere to our opinion that the results would have been brought about in a more wholesome and healthy way by beginning at the other end. Most foreigners here know, namely, that Ikuno is "beyond Himeji," and in certain states of individual one has to go to Himeji to get there. In a direct line Ikuno is not much nearer to the latter place than to Hiogo. Arima is more than the direct line to it. To the latter place practical junks (sailing boats) have been opened, but there is nothing but a wandering bridle foot-path between Ikuno and Hiogo. The French engineers employed at the mines have shown the Government what the country wants, by making from Ikuno to Shikama (the port of Himeji, and one visited by the writer of this paper) by far the best road, beyond all sort of comparison, that we have yet seen in the country, here (eighteen feet) wide and Himeji being reckoned from Ikuno exactly fifty kilometres in length or thirty-one miles, one hundred and twenty-two yards, on it is excellently engineered, built, and admirably drained, and cost, including several fine girder bridges, exactly over 50,000—one-fifth more than Fukushima to the river at present employed in keeping it up to the standard and of coolies per week employed, year and a half ago, while owing to the non-completion of one very long bridge close to Himeji it was opened into that town only on the 8th instant.

We were received by the mine-masters in a most perfect manner—like old friends. The hospitality extended to us by Mr. Gowen, the Chief Engineer in Charge, was wonderful, and we can never be sufficiently grateful to him for the immense pains he took to produce in our fellow understanding a clear comprehension of all the processes of the special industry which he unfolded to us. Here we shall make no effort to explain with minuteness, because such an effort would involve us, and our readers, in a mass of technical verbiage, and because any one can find it probably much better done for him than we could do it, in any Cyclopedia, under the head of the extraction of silver from its ores by the process of amalgamation with quicksilver—which is the plan followed at Ikuno. The first thing that strikes the eye of the visitor is the works themselves, with their tall chimney in Japan, which incidentally illustrates the dauntless rivalry so strongly developed in the Japanese. The Mint at Osaka was generally credited by foreigners as possessing the smoky distinction above quoted,—and it for a short time did; but the Ikuno folks, finding out the fact, ran up their chimney a few feet higher, and, we still hope, put the faces of the wretched Osaka people to standing shame. On the hill side above the works are to be seen the house on a small platform of a stationary engine to work the shaft now being driven down in the rock; a number of places like large rabbit holes; and a tramway which runs round the face of the hill, connecting the said holes with a series of shoots, down which the extruded ore is passed to the works. After a clamber up the hill face, we enter one of these holes, which turns out to be mouth of a gallery about six feet square. After reducing ourselves, by a judicious change of clothing, to a more perfect representation of dirty blackguardism than in our moments of deepest humiliation we had heretofore considered possible, we traverse in the pursuit of knowledge one of the eight miles of these galleries which the workings at present contain, and see the first process of removing the ore by blasting, the fuses for which were at first imported from abroad, but are now all made on the premises, at a saving of more than seventy-five per cent. Emerging, we find the ore at the deliveries of the shoots being broken with hammers into pieces varying in size from one's fist to a walnut, the richest portions being broken the smallest. The least rich and those containing a preponderance of other minerals are set aside for consumption at convenience, and the more choice morsels set out according to quality in five classes (for different treatment) of an estimated value on appearance of bearing silver in the proportion of from eighty dollars per ton to five thousand and upwards. These fragments are then pounded into dust in crushing mills, and the dust baked in ovens, with common salt—chloride of sodium. Hitherto the silver has been combined with sulphur, but in these ovens a chemical change takes place—the chlorine of the common salt com-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

bining with the silver (and the ten to twelve per cent of gold which the ore contains) and the sulphur of the silver combining with the sodium of the salt to make Epsom Salts, which we may mention goes off in the rivers, poisoning the fish. The ore—now a red earth—is then, by means of water and iron balls, thoroughly mixed with a large quantity of quicksilver by means of revolving drums. Under this process the quicksilver takes up the precious metal, and when the amalgamation is complete the drums are emptied and the now comparatively valueless mud washed away. The combined (and still fluid) metals are then treated with hydraulic pressure against a leather sieve, through which fine mercury is extruded, leaving a putty-like brilliant white amalgam. Heated in iron retorts, the remaining mercury contained in this amalgam is driven off into a condenser, to be used over and over again. The resulting lumps of metal, having been fused with borax, which brings away some scoriæ and other impurities in the form of scum, is run into moulds and sent to the Mint at Osaka. It contains in this form, in which it leaves Ikuno, about seventy per cent of pure silver and ten of gold, the remaining twenty per cent being nearly pure copper. Hitherto we have spoken almost exclusively of silver, for hitherto and up to the present moment it has been and is the specialty of the mine. Till four years ago the Japanese worked it for silver only, discarding other metals, it being even asserted that they were ignorant of the quantity of gold the silver they produced contained. When Mr. Coignet was first appointed by the Government, for a year and a half, hesitated to admit that even with the inferior appliances at his command he could produce $4,000 a month of silver, but being once convinced they made an appropriation of $400,000 for European machinery, which arrived about two years ago and by the aid of a foundry and machine shop on the premises, supplemented by the efforts of the Yokoska Arsenal and the Kobe Iron Works, is now nearly all in working order, the output at this moment averaging $30,000 a month, exactly half of which goes to pay working expenses, leaving the Government a clear profit of $15,000 a month. As we saw before that the population mainly supported by the mines is 15,000, the population of Ikuno and outlying hamlets is supported at little more than $1 per head per month. The power utilised to drive the machinery is mainly water, brought four miles and a half in an artificial canal, and may be taken for nine months in the year at 250 gallons per second, with a fall of 100 feet. For three months in the twelve this supply fails and the works are driven by steam, for which purpose (in addition to four other engines otherwise employed) there are four engines of 25 h.p. each, the work of which is regulated by the fluctuations in the supply of water. In addition to the silver which is at present the principal object of attainment, the hills contain copper, iron, lead and zinc, copper being commercially the greatest of these in importance. The copper is at present unworked dependently, but next Spring copper works are to be erected, and M. Coignet considers that the yield of the workings may be increased to an indefinite extent and for an indefinite period in simple accordance with the quantity of the machinery which may be employed. In the present imperfectly developed state of intercommunication in the country, transport is necessarily a heavy item of expense in illustration of which it will be sufficient to state that coals, which cost at Shikama $5 a ton, cost at Ikuno $9.

With reference to the mineral wealth of Japan, a subject of great importance to the future of the country, M. Coignet's opinion is entitled to the highest respect. He says he believes that except with regard to the less familiar metals, such as zinc, &c., further investigation will discover no heretofore unknown valuable veins of minerals. The Japanese, as a people, are remarkable, beyond any Western nation with which he is acquainted, for a generally diffused knowledge of the more easily known metals, such as gold, silver and copper; but he believes that the mineral wealth of the country is great, and that where the Japanese have the will to work their minerals, it is want of capital, and not want of knowledge, which stands in their way.

The first part of the return journey—down hill, on the new road under a brilliant moon—was the most pleasant travelling we have ever experienced in this country, but after that the sufferings of the previous day were repeated. With one or two trifling exceptions, in the shape of generally unsuccessful attempts at extortion on the part of the keepers of jinrikisha houses—not the coolies themselves—nothing could exceed the politeness with which we were treated throughout by people and officials alike, which we are bound to say has been personally our invariable experience of the Japanese, whereby we are always the more convinced that any cases of incivility and jack-in office-ism should be throughly sifted, to ascertain the hidded springs which have brought them about.

We cannot conclued without noticing the deplorable condition of the crops, especially between Akashi and Himeji, from the prevalent drought. In this district fields both of rice and cotton are ruined beyond hope of recovery, and coolie labor is employed day and night in raising such water as still remains amongst the weeds in the bottoms of the ponds, to the level of the fields. The conformation of the country is such that any general failure of one particular crop is not to be appreheded, but there must inevitably be many districts as heavily visited as the one we have mentioned, and the coming winter must needs be a trying one to very many among the poorer classes of the people.

Shipping Intelligence.

ARRIVALS.

Aug. 31, *City of Quebec*, British ship, Davidson, 707, from Sydney, N.S.W., June 23, Coal, to P. M. S. S. Co.

Aug. 31, *Ocean*, British steamer, Brown, 970, from Hongkong, Aug. 23, General, to Jardine, Matheson.

Sept. 1, *Tanais*, French steamer, Reignier, 1,010, from Hongkong, Aug. 25, Mails and General, to M. M. Co.

Sept. 3, *Paulsen*, German three-masted schooner, 270, from Takow, Sugar, to Chinese.

Sept. 4, *Malacca*, British steamer, Bernard, 1,698, from Hongkong, Aug 29, Mail and General, to P. & O. Co.

DEPARTURES.

Aug. 30, *Friedrich*, Austrian frigate, Baron Oesterieicher, for San Francisco, Aug. 28.

Aug. 30, *Flintshire*, British steamer, Reynolds, 1,400, for Hiogo, Aug 28, General R. Fischer Co.

Aug 28, *Oleander*, British barque, Joss, 348, for New York, Tea, despatched by P Heineman & Co.

Aug. 29, *Mercury*, British 3-m. schooner, Thomas, 361, for New York, Tea, despatched by Smith, Baker.

Aug 29, *Carlew*, British gun-boat, Capt. Church, 784, for Hakodadi.

Sept. 1, *Sunda*, British steamer, Edmonds, 1,682, for Hongkong, Mails and General, despatched by P. & O. Co.

Per *Tanais* from Hongkong—Messrs Chapsal, Luther, Puglio, Cenotta, Uglases, Mazzochi, Ricardi, Meurier and Robinsoni.

Sept. 3. H.M.S. *Charybdis*, Captain Smith, 1800, on a cruise.

Sept. 4, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and ports, Mail and General, despatched by P. M. S. S. Co.

Sept 4. *Kanagawa Maru*, Japanese steamer, Young, 1,325, for Shanghai and ports, Mail and General, despatched by M. B. Co.

PASSENGERS.

Per *Sunda*, for Hongkong—Mr. and Mrs. H. K. Terry, Joseph Smith, J. Rogers, Captain Stevens.

Per *Malacca* from Southampton:—Messrs. S. Mori, K. Kurobe, G. Yamada, S. Matsuda, H. Moridera; Madam Kourimoto, Mrs. T. Scott and Mr. T. Bellamy. From Hongkong:—Lieut. J. G. Jones R. N. Mr. F. W. Fry, J. S. Cox, Mr. J. Wilkinson, Mr. Estinford, Mr. Marshall and child.

Per *Oregonian* for Shanghai and ports.—Comdr. Parrish, and over G. W. Muir, F. A. Cope, T. C Swift, E. A. Bird, Thos. Grey, Miss Payson, 2 Messrs. Woolston, Mr. Mendel, H. Balton, Mr. Randorf, Mr. Underhill, Mr. Fiske, Mr. Curtis, 28 Japanese in Cabin, and 369 in the steerage.

Per *Kanagawa Maru* for Shanghai and ports.—Mr. Hamesh, Mrs. Ayashi, Mrs. Omoto, Mr. Bouger, Mr. L. Van der Pol, Revd. AJ Hocking, wife and servant, Dr. Lauing, M. Pettijean, Miss McLean, Mrs. Hirakawa and 2 children, Mr. Katajima, Mr. Numah, Mr. and Mrs. Makazima and daughter, Mr. and Mrs. Shuzi, Mr. Sato, Messrs. Kimura, Yamakawa, Ogawa, Houda, Tawatsu and Mikawa and 184 Japanese and 3 Chinamen in the steerage.

CARGOES.

Per *Sunda* for Hongkong.—

Silk .. .. 383 bales.

Per P. & O. str. *Malacca* from Hongkong:—

Cargo from Europe &c.

162 Packages of general merchandise.

from Hongkong.

Sugar... ... ... 1,595 bags.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking "Norton's Camomile Pills." I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

„ No. 3 Ke-pak		„ 6.20 to 6 60	Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah		„ 5.50 to 5 90	Kerosine Oil	per case	2.30

EXPORTS.

Silk.—Supplies continue to come in freely; they are in excess of last year for the same period of the season. Clean Hanks are scarce. Those best qualified by their inquiries for giving an opinion on the subject declare that cocoons being of bad quality in most of the Hank districts, and the much talked of improvement in the methods of reeling being in fact very slow in its progress, Hanks as a whole are scarcely better than last year.

Since the 23rd inst., arrivals are 950 bales, and settlements may be estimated at about 800 bales.

Under the influence of an active demand prices have regained the ground they had lost at the beginning of the fortnight. We quote:—

Hanks.—Extra to No. 1		$490 to 500	Oshu.—Extra		$540 to 560
„ Best No. 1 to 2		$460 to 470	„ Best		$510 to 530
„ Good No. 2		$440 to 450	„ Good		$480 to 500
„ Medium No. 2½		$400 to 430	Hamatsuka—23 to 60		$440 to 470
„ Common No. 3		$380	„ 30 to 63		$420 to 430
			Kakeda.—Best		$500

The latest telegram from Lyons quotes for Best Hanks 11/15d. fr. 47, say $450; from London they quote for No, 2, 3 and 4, 13/6d. say $350.

Silkworm's Eggs.—The first supplies of the season are expected shortly.

Tea.—The market continues with a downward tendency and decidedly weaker for Good Medium and Medium classes, whilst lower grades shew a marked decline: fine grades are in small supply, and a limited business has been done at quotations, finest and choice Teas are scarce, one or two parcels have made their appearance and a small lot is reported as closed at $49 per picul.

Settlements for the week amount to 2,580 piculs against arrivals about 4,200 piculs, and stocks in Yokohama are increasing.

The *Lothair* and *Hoogly* are filling for New York, the former nearly ready for sea.

The following are about current rates.

Common		$19.00 to 23 00	Fine		$36.00 to 38.00
Good Common		24 00 to 27 00	Finest		$40.00 to 42.00
Medium		28.00 to 31.00	Choice		nominal. $48.00 to 52.00
Good Medium		32.00 to 34.00			

EXCHANGE AND BULLION.

Exchange.—There has been a considerable decline in rates during the past week, without, however, bringing out any Private paper, and with only a moderate demand for Bank Bills.

Gold Yen as last reported are only bought for local requirements.

Rates close as follows:—				
Sterling—Bank 6 months' sight	4s. 1½d.	On Hongkong—Bank sight	½	per cent disct.
„ Bank Bills on demand	4s. 0½d.	„ Private 10 days' sight	1	„
„ Private 6 months' sight	4s. 1½d.	On San Francisco—Bank Bills on demand	98½	
On Paris—Bank 6 months' sight	5.20	„ 60d. sight Private	101	
„ Private 6 ms. sight	5.27 to 28	On New York—Bank Bills on demand	98	
On Shanghai—Bank sight	72½ to	„ 30 days sight Private	101	
„ Private 10 days' sight	73	Gold Yen	403	
		Kinsats	404

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 37.] YOKOHAMA, SATURDAY, SEPTEMBER 11, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The week just passed will long be remembered as noteworthy for the repeal of the old laws which fettered the Book-Press, and the issue of a new code which makes it practically free. We can do more this week than present our readers with a section of the code, the remainder of which shall be placed in their hands in our next issue, nor shall we enlarge on the subject until the whole is before them. But we regard the measure as one full of rich promise to the nation, and the issue of it at this moment harmonizes so completely with all that we have said on the subject of the Press-Laws, that we cannot but feel a peculiar gratification in announcing it. It is curious that, so far as we know, the native newspapers have expressed no opinions on the subject. (A short article, which will be found elsewhere, has reached us since this was in type.) The silence of the foreign press is far more intelligible.

It is obvious to the readers of the native newspapers that important changes are afoot in the system of land taxation throughout the country. There are not wanting, too, signs that the land is overburdened by taxation, and that some measure of a very large nature will be resorted to before long with a view of lightening this burden. It is not difficult to see in what direction these signs point. A vast class has been quartered on the country for centuries, and has steadily stood in the way of its advancement, preventing any accumulation of wealth, creating none, and living of course on the labour of others. It is impossible that this can go on for ever. But the adjustment of its legitimate claims will be a matter of extreme difficulty, especially where lands, once the property of families, has been handed over to the nation. The change, should our suspicions be correct, will constitute another step in the revolution Japan is undergoing, nor can it be contemplated without some anxiety. It is, however, certain that, as a paragraph in our daily issue announced early in this week, the condition of feeling even among the privileged classes is rapidly growing in favour of such a reform as that which we presume to be now contemplated.

It is wholly a mistake to suppose, as seems to have been done, that any instructions were given to the Japanese newspapers that they *should* omit the titles given to the Western Sovereigns, though the misapprehension is due perhaps, to the use of the word *should* instead of *might* in a short translation which appeared in our daily issue of [illegible]. The newspapers seem to have imagined that there was some necessity for speaking of "His Imperial Majesty," or "Her Majesty" &c. as the case might be, instead of simply "The Emperor" or the "King" or "Queen" of such and such a country. The object of such representation as has been made on this subject was to prevent the use of a gravely derogatory appellation to the European crowned heads. Of course [illegible] personages should be written of as His or Her Majesty. It is, of course, as entirely right that terms implying inferiority, if not a tributary relation, to the Sovereign of this country, should not be used in speaking of Sovereigns of the Western Powers, as it would be entirely wrong to insist on any one adding the title of 'Majesty' to their designation. To suppose that the British Minister would make any such representation is to transfer the obvious fatuity of the writer of the paragraph in last night's *Gazette* from himself to the Minister.

The paragraph from the *Mail* (*Times*) relating to proposals for the cession to Germany by China of the Island of Formosa may have caused some of our readers surprise. But ten years ago this report frequently cropped up in the political gossip of the day among the China residents; of late little has been heard of it, and the only surprise it now causes to those familiar with the East is its sudden revival. Germany would, of course, enormously like to possess the island, but she would for a long time find the burden of its maintenance a serious one, relatively to its actual value to her, and the German Government is very frugal. No white race could colonize the island on account of its climate, though of course it might be converted into a kind of German Java. It may be doubted, however, whether a far-sighted statesman would push out a piece so far while the pawns are so much wanted for work nearer home. The Germans enjoy a large share of the China trade, and do so at very little expense to themselves. Formosa would be a feather in their cap, which they would wear with pride; but it is questionable whether a calm survey of the probable future would justify a move in this direction.

Whether or not it may be desirable for any qualified person or body of persons to frame a short reply to the Japanese work "Bemmo," which has lately been translated and placed before the public, is a question of some importance, into which, however, we shall not enter at present. But we observe that an attempt has been made to depreciate the value and importance of this piece of Japanese criticism on our Sacred Scriptures, and this demands a few words. The author of this attempt says that all well-informed natives with whom he has conversed, have, "with one accord, expressed intense disgust at the idea that one of their countrymen should disgrace the national character by writing and publishing such a foolish, drivelling book." He goes on to say that the "puling and sickly" nature of the work deprives it of all right to reply from 'a respectable opponent,' and winds his letter up with something about "Tom Paine," "weakly legs" and a reflection on the mental powers of the author of "Bemmo."

Now, we make bold to say that nothing can be more unsatisfactory than such a mode of dealing with this great question; nay, more, we think it a most idle and dishonest way. What are the facts? A Japanese

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

who has justly acquired a certain reputation as a scholar in his own country, sits down with the Bible before him and goes steadily through it with at least as much care as an average western scholar would go over a Japanese or Chinese work of the same kind which he intended to review. He finds a large number of extremely improbable stories in it, and points out the difficulties which reason opposes to the reception of these as true. He writes calmly and sensibly from his own point of view, he uses no offensive or discourteous expressions (in this setting an excellent example, by the way, to his Christian opponent) and neither by word nor deed does he forfeit the right to reply. What then is this retort about "respectable opponent" and "Tom Paine" and "intense disgust" and all the rest of it? This is not the spirit in which Christ replied to Nicodemus, Philip to the eunuch, or Paul to every one. Christianity may fitly reply by her attitude and her influence, and by these alone, to those who assail her with odious or infamous charges. But she claims, and, in our opinion, claims with a large share of justice, to be capable of proving the truth of her mission by an appeal to man's highest and profoundest reason, and this claim she may be fairly called on to substantiate. The writer of the letter in question talks of Paine as if he were a fool and a silly scribbler. Did he ever read "The Age of Reason" or any of Paine's political works? If so he cannot be ignorant—that is, if he can distinguish between a strong and a weak writer—that Paine was a man of very remarkable powers, almost great powers, that he struck blows which the distilled and combined power of fifty, or fifty thousand, of such writers as "Passing Bell" could not equal, and that he inflicted a great and deadly wound upon Christianity in England. Paine's life was a bad one in every way, and he has not, so far as we know, a single claim on our respect, except the courage with which he opposed, amidst a howl of obloquy such as never assailed any writer, doctrines which he thought false, if not pernicious. But in this he was superior to J. S. Mill—a very wise and good man—if the statement of Mr. Fitzjames Stephen is to be believed that Mill wrote his 'Logic' with the express purpose of forging a weapon which would give a death-blow to Christianity. Those who know Mill's Autobiography may remember that his father warned him against making open attacks on Christianity, as being useless in the present condition of the English mind, which was far too prejudiced to accept anything resembling truth on the question. Both the Mills saw that open attacks were useless, and agreed that the only way in which what they considered a pernicious, or, at all events, an absolute, delusion could be dispelled, was by readjusting the instrument employed in analysing it. And hence Mill's book, though the motives of the writer were wholly unsuspected by the world at large, and have only just been revealed (as we are informed) in a late essay in the *Contemporary Review*. That Mill's 'Logic' largely plays the part for which he destined it, no one can doubt who knows it, though it acts as a perfectly impassive solvent in which Christianity disappears as Antony's pearl did in the vinegar which he drank to Cleopatra's health. This is all by the way, however, and is only adduced to show that Paine deserves praise for having that "courage of his opinions," which, though a marked feature of Mill's character, did not distinguish him to the same extent or in the same case.

Marcus Aurelius was one of the best and wisest rulers who ever sat on a throne, and he persecuted Christianity and the Christians with a thoroughness and determination which leave us no doubt of his sincerity. He thought that the doctrines of Christ would annihilate the foundations of the polity of the Roman Empire and for this reason he fought them at every step. Shimadzu Saburo evidently thinks the same thing and opposes them for the same reason. What right have we to doubt the sincerity and earnestness of these men in a cause which they think a holy one? What sense or honesty or manliness is there in using such words as 'puling' and 'sickly' and 'disgust' and 'drivelling' and so on in reference to a pamphlet which, had it treated any other subject, would have been praised for its incisiveness and calmness?

But lest we should be supposed to be covertly taking the side of the writer of "Bemmo" or espousing his argument, we will in a few words say what, if the case were ours, we should do with the pamphlet. We say 'if the case were ours' because though most desirous of seeing the religion of Christ, his doctrines, precepts and example the foundations of the new life of this Empire, profoundly convinced as we are that they would give light and heat and vigour and freedom and stability to it—we have calls on our time and attention which simply prevent our undertaking the task. More than this. We should abandon at once half the tumble-down old forts which are supposed to be necessary to the defence of Christ's doctrines, and hand them over bodily to the enemy, if he cared to occupy them, glad to be rid of such worthless positions. We should confess at once that all the probabilities and appearances were utterly against the truth of Christianity. But we should argue from its effects. We should appeal to actual facts, standing before men every day of their lives, and capable of verification in a week beginning at this very hour. We should point, not to articles or creeds or miracles or mumbo-jumbo jargon or Hebrew wardrobes of old clothes, but to the passage, "If any man shall do his will, he shall know of the doctrine, whether it be of God, or whether I speak of myself." We should point to the conduct of the men and women and nations who at this moment make the Bible the daily guide of their lives, and ask our opponents to explain its operation on the mind and conduct by any other hypothesis than that of its supreme value. Those who may take up the question—if indeed they do so—may be appalled at such views and come to some conclusions regarding our empirical proofs extremely confortable to themselves and condemnatory of us. They may do so in welcome. We shall survive it. But if they think to advance the interest of a great cause by such letters as that which has suggested these few words, we frankly tell them they are miserably deceiving themselves. The time has gone by for replies of this nature, and they are now associated in the mind of every honest thinker with impotence, indolence, or dishonesty. Let Christianity, at all events, go hand in hand in the minds of the Japanese with all that is generous, courteous, manly and high-minded. Among the "fruits of the Spirit are gentleness, meekness, temperance and patience," and the reply before us makes these qualities conspicuous by their absence. We see nothing in Bemmo which in the smallest degree tends "to disgrace the Japanese national character," while we see much in the letter of his opponent which tends greatly to illustrate the bad spirit of theological controversy, its virulence and, we fear, proverbial dishonesty.

We have from time to time drawn attention to what we conceive to be a serious error in the disposal of the young men whose successful pursuit of their education here has entitled them to the distinction of being sent abroad to finish it. A week or two ago we announced that nine such young men are to be sent off to America, two to Germany and two to France, None are to be sent to England. Of course this must afford an exquisite gratification to a little knot of Americans in Yedo who think that it involves a slight to England, and who imagine that it is well to foster in every Japanese who comes within the range of their influence a bitter hatred to the first European Power in the East. To them we say nothing. They are as incapable of understanding the action and policy, the character and motives of England and Englishmen as they are of weighing the sun. But we appeal in all confidence to the liberal-minded American gentleman who presides over the most important foreign portion of the Educational Department. He may not agree with us; but we shall have a fair hearing from him. We would ask him, then, whether it seems wise that none of these young men should be sent to England. He, of course, knows as well as any one that a class of education, accompanied with advantages of which no other country in the world can boast—we say this in no national vanity—can be had in England, and that these advantages are no more to be had in America than an abbey like Westminister or a palace like Windsor. And, apart from the range of studies which, in a narrow sense of the word, constitutes education, what is it most important that a young Japanese should learn to fit him best for public

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

or even private life in this country? Certainly he should first be made to feel the importance of sound and lasting foundations for the polity of a country, and the danger of sudden organic changes, especially of those having their origin in doctrines derived *ab extra*. He should learn how great age may be associated with great vigour by timely changes which repair but never disturb, and which, without altering the plan of the structure, enlarge it where necessary, and always with a better material even than that which they replace. He should learn how the utmost freedom may be associated with the utmost respect for law; how a monarchy may be made partly the source and mainly the guarantee for such freedom; how an old aristocracy may be preserved in a vigour fully equal to that of the body of a nation unsurpassed in vigour; how political and official life may attract to it all that is worthiest and best in the mind and heart of the nation; how a judiciary unsurpassed in learning, acuteness and purity guards alike the prerogatives of the Crown and watches over the rights of the people; how halls of learning clustered together in a profusion which makes Oxford and Cambridge wonders of the world, preserve every thing that is worth preserving in the past and diffuse every influence which tends to improve the future and make it more stable; how a free press unmatched for its influence, its ability and character, and taking for its province the present and future welfare of humanity, combines the discussion of domestic and foreign affairs in a sweep of often statesman-like breadth and acuteness; how a wealthy church retains the affections of the poor, and commands the service or the homage of some of the most powerful intellects of the nation; how commercial and industrial enterprise is taught to rely on freedom and honesty as its most certain basis; how a vast moral and material force reposes in majestic placidity, and rarely is set in motion without a distinct benefit arising to humanity as the result. This is what the young students from Japan may see in England, and they can see it in equal perfection nowhere else. No travelled or instructed man will attempt to gainsay us in this, nor will it be denied that these are the lessons which above all others the young Japanese should learn. Let young men be sent by all means to France, to Germany and America. In each of those countries they may learn something they could not learn in England, both of what to do and what to avoid doing. But to leave young Japan without any knowledge of the mind of England, or to offer to it as knowledge the bundle of ignorant prejudices with which original American historical class-books abound, to call this a knowledge of England and English institutions, is to ensure a race of narrow-minded, prejudiced youths growing up in this country, profoundly ignorant of the constitution of that power, ignorance of which in the east can only be compared to ignorance in a pretending astronomer of the nature of the sun and the relations of the earth to him. We beg Dr. Murray's earnest consideration of this point, and if he requires an illustration of the truth of our remarks, let him read a letter signed M. S. Toyama, dated from Ann Arbor, Michigan, the 3rd August, which appeared in the *Japan Gazette* of the 10th inst. Is this the style of mind he will be content to produce as a monument of his labours in this country? The letter tells a truly lamentable tale, and we augur extremely ill of any system or influence of which it is the result.

We desire to draw attention to the publication in a book form of the notes published under the title of *Fu-so-Mimi-Bukuro* in this journal. It would not be becoming in us to dwell upon their richness or variety, but we make bold to say that they contain more information upon the every day affairs of Japanese life, upon customs, traditions, sports, legends and a vast variety of subjects, than any book which has been published for many years. The author has employed the leisure time which so many men waste or misuse, in adding to his store of information, in extending his knowledge of the language, in converse with the people, in reading Japanese books, at least with the assistance of a teacher, and in the familiarising himself with the thoughts, the manners and customs, the habits and nature of the Japanese. Some of the fruits of this experience are preserved in the book for which we ask attention. It throws light from every quarter of the compass upon Japanese affairs, and while it does high credit to the author, it gives to his reader the results of many years of experience and labour and condenses these into a wonderfully small space. A book-maker would have expanded them into five times the bulk of the work before us, but Mr. Pfoundes has been content to throw his knowledge into something of the form of pemmican, and packed into a small space a mass of information which has often astonished us by its value and variety.

The Notes retain the title under which they were originally published, and the work has been placed for sale in the hands of Messrs. Wetmore & Co., Yokohama.

The amateurs to whom the Public is indebted for the theatrical performances of the past season have formed themselves into an Amateur Dramatic Club, the committee consisting of Messrs. Russell Robertson, Pearson, Bayne and Townley, and arrangements are in progress for the purpose of relieving the old Committee of their engagements with regard to the Public Hall, which will be taken over by the newly-formed Club. A play is already in course of rehearsal and we are promised a performance in the early part of next month. We feel justified in anticipating the best results from the formation of the new Club, and venture to predict a season of dramatic attractions which will do much to chase away, be it only for a few brief hours, the gloom engendered by our every day cares.

Signora Palmieri has announced a Concert for Monday evening next, which we hope will draw a good house at the Gaiety Theatre. It is indeed rare that foreign residents in the East have any opportunity of listening to artists accustomed to take the great *rôles* of Italian opera on the European stage, and the reports which have preceded our accomplished visitor are a guarantee that a rare treat is in store for those who may do so on this occasion. Signora Palmieri is accompanied by her husband and Signorina Persiani, who have shared her triumphs and helped her to achieve them.

(From the Japan Mail Daily Advertiser.)

Some fear has been entertained that the disease called *pébrine* has attacked the silk-worm in certain parts of the country, but all that is proved in regard to this question is, that the *corpuscules* which were the invariable concomitants of the disease in France and Italy have been disclosed by careful miscroscopic examinations of the silk-worm of Japan. M. Pasteur, however, announced the existence of these *corpuscules* in the Japanese silk-worm as early as 1865, when a perfectly healthy progeny was reared from it. There is therefore nothing to warrant the conclusion that *pébrine* actually exists in the country.

Waku, the acting editor of the *Akebono Shimbun*, was summoned before the Police authorities on the 3rd inst., and placed under the surveillance of the district officers.

The *Hochi Shimbun* says that a Japanese consulate is to be established at Tientsin to which Mr. Ikeda has been appointed consul.

The *Nishin Shinjishi* has an extract from the letter, lately published by Capain Cotter of the *James Paton*, which testified so fully and satisfactorily to the kind treatment he, his family and crew had received both from the Japanese officials and people on the occasion of his shipwreck.

The *Hochi* says that as His Majesty the Mikado was driving through Sakada, Tokio, on the 4th instant, a farmer made an attempt to hand a letter to him.

It would appear that a growing feeling exists among the *samurai* class that the burden of their pensions is greater than the country can bear. Some appear to forego them, and others to devote them, or a large part of them, to public pur-

poses. Thus, there is a large private school at Kagoshima, supported by the elder Saigo and others from these funds. The *Hochi Shimbun* says that this school is being fast brought into a flourishing condition.

The *Hochi Shimbun* says that the Okurasho is reducing its staff of officials. Some thirty of them have been dismissed, and more are expected to follow them.

Yokose, the Editor of the *Hioron Shimbun*, was fined 5 *yen* on the 4th instant, for violating the Press-laws.

A notification has been published announcing the establishment of a model sheep-farm under Government superintendence. A certain number of pupils will be admitted for instruction in the management of sheep.

A curious story is told by the *Choya Shimbun*. While the *Kucho*, *Vice-Kucho* and an officer were engaged in measuring certain lands in the Nara *Ken* for the purpose of making some alterations in the land taxes, they were requested by the farmers to postpone their proceedings pending the irrigation of the fields. To this request the *Vice-Kucho* was disposed to assent, but he would seem to have met with opposition and insult from the *Kucho* and the other official for, in a fit of passion, he fell upon and killed them both.

The accounts of the condition of the cereal crops, which reach the capital from the districts unaffected by the recent serious inundations, are said to be on all hands satisfactory. It is not improbable, therefore, that a large quantity of rice may be available for export this year.

The P. M. S. S. s.s. *Coloradlo*, which will convey the next mails to San Francisco, sailed from Hongkong for this port yesterday afternoon.

Half hour guns were fired by the American Men-of-war in harbour this morning in honour of the late ex-President Johnson.

The *Choya Shimbun* informs its readers that the proprietors of the *Nisshin Shinjisshi*, one of the oldest native newspapers, have resolved upon making some improvement in their property. The paper has exhibited signs of weakness and it is intended to infuse some new blood into its management.

The *Nichi Nichi Shimbun* reports that the drought has been so severely felt at Marugame in Shikoku, that not only have the crops suffered seriously but drinking water has been very scarce.

A seaman of the American ship *Benjamin Sewell* charged the second officer of the vessel with assault at the United States Consulate yesterday. His Honour ordered the discharge of the complainant from the vessel.

The hearing of the case of Ito Hachibei *v.* Walsh Hall & Co. will be resumed in the U. S. Consular Court on Monday, 13th instant.

The *N chi Nichi Shimbun* says of the Akatame mine in the province of Yetchigo that it has of late yielded large quantities of coal. The mine has now been four years open.

The reform in the dress of public officers would not appear to have extented to the Sakata *Ken*. The police of that district adhere to the old Japanese costume "*cap-a-pie*." While on duty they wear two swords in their girdles and carry a bâton in their hands.

A native newspaper draws attention to the autumn flowers in the gardens on the Sumida River, which are now in full bloom and attract large numbers of visitors.

There lives in Kioto, says the *Hochi Shimbun*, a Satzuma *samurai* named Takushima, a vigorous admirer of old customs and literature. Some sixty persons of sympathetic tastes meet in his dwelling, enjoy their fencing bouts and seek refuge in the Chinese philosophy from the afflictions of the new "civilisation."

The following teas have been shipped by the O. & O. S. S. *Oceanic*: For New York, 16,702 packages; for San Francisco, 1,845 packages; and for other cities, 3,165 packages. From China 10,376 packages.

A ROWING MATCH between four Scotch and four English members of the Club is arranged to come off in the beginning of October. The crews are not yet fixed upon, but the Scotch crew will be selected from amongst Messrs. Hamilton, Dodds, Leckie, Henderson, Hutchinson, and Thurburn; whilst the English four will probably be Messrs. J. J. Dare, A. H. Dare, Jeyes, and Milsom or Kilby.—*Herald.*

GERMANY AND CHINA.

(FROM OUR OWN CORRESPONDENT.)

Paris, July 22.

It has been rumoured here to-day, in circles which are usually well informed, that the German Government has made overtures to China for the cession of the island of Formosa. The reception of the proposal by China is, it is said, of a nature to render the arrangement very possible. It must be remembered, however, that previous reports of the attempted acquisition of foreign station by Germany have invariably proved unfounded.—*Mail.*

CORRECT JAPANESE DESIGNATIONS FOR CROWNED HEADS.

AN article apppeared in the *Japan Gazette* of last Wednesday evening, calculated to create erroneous impressions upon a question on which it is well that the Public should be rightly informed. The writer of it would have us believe that some grave interference with the liberty of the native Press had been made by one of the Foreign Representatives, and adduces a late debate in the House of Lords on the Belgian Question as evidence that any such interference is entirely out of harmony with English opinions. In this, of course, he is perfectly right, and he would be equally right and instructive if he said that two and two made four. The matter concerned really was, whether terms of a very derogatory nature should be applied to designate the Sovereigns of the Western nations in writings largely circulated among the people of this country. Whether used in ignorance or with intention, such terms cannot but tend to place the relations between the Japanese people and ourselves on an undesirable footing, and the Japanese Foreign Minister, concurring in representations made to him to this effect, gave the proprietors of newspapers to understand that the use of such terms was not in accordance with the proprieties due to the occasion. Our readers will understand the subject better if they will favour us with their attention to the following explanation of the real circumstances of the case.

The Chinese characters 女 (*Nu*, woman) and 王 (*Ô*, chieftain or prince) possess precisely the same meaning in Japanese as in Chinese, that is, the Japanese use those simple substantives in exactly the same sense as the Chinese do. There cannot therefore be any question as to their signification. The same may be said of 皇帝 *Kô-tei*, which is a pure Chinese title, adopted by the Japanese simply because it had been assumed by the Chinese Sovereign.

In ancient times in China 王, (Wang) was the ordinary term for King, but in the feudal period, every feudal chief took it as his title, and a higher one therefore had to be created for the Sovereign paramount. 皇帝 Hwang-ti (pronounced Kô-tei in Japanese) was therefore adopted now more than two thousand years ago, and for convenince sake this term has been translated 'Emperor' by foreigners. It means the *Exalted* or *Supreme Ruler*, the chief over all other rulers, and the Chinese soon wished it to be inferred, and eventually persuaded themselves to believe, that the supremacy which the term denotes extended not only over the chiefs within their realm, but beyond it also, to tributary rulers of course, and thus to all other outside rulers. If any among the latter did not confess themselves tributary to China, they ought, in the opinion of the Chinese, to have done so, and the omission stamped them either as rebellious or beyond the pale of civilization. The term *Wang* (which could not be used by a *Hwang-ti*) was then passed on to foreign Khans or Kings when they were heard of, and, in later times, to the Tartar Mongol, Mantchu and other chieftains. Residents in China will recollect that all the Taiping generals assumed the title of *Wang*, and that they gave that of Emperor to the madman whom they recognised as their head.

It was not surprising that the Japanese, who did not care to use a title for their Sovereign inferior to that used by the Chinese, should also drop the *Wang* and take the *Hwang-ti*. But, with the term, they also adopted the ideas which the Chinese attached to it, and loved to think, as so many other oriental nations have done, that their Sovereign was the Light of the world, the Vicegerent on earth of God or the *Kamis*, and that all other rulers were his inferiors. The difficulty of two suns shining in the same hemisphere is, of course, the root of the long estrangement between China and Japan. Like the Chinese, the Japanese gave the term *Wang* to the Sovereigns of other Powers, but took very good care never to apply it their own. Like the Chinese, they put it into the first translations of the treaties, applying it alike to the Queen of England, the Emperor of France, the King of Prussia or the Czar of Russia; and, like the Chinese, thay had to remove the term from those treaties when the Foreign Representatives became aware of its derogatory signification. The correction was, of course first made at Yedo, and was one of the earliest points of form learned by the Government when it came into office in 1868. It was natural that the subordinate and ignorant officers in the provinces should acquire the necessary knowledge more gradually, and from time to time the use in their official correspondence of the term *Wang*, as applied to foreign sovereigns had to be corrected and apologized for. But it was rather surprising that such an error could be committed in Yokohama in 1874, and that the official who made it, being none other than the Superintendent of Customs, should defend the use of the insulting term, instead of retracting it when called upon to do so. The only excuse that can be urged in his defence is that he acted on bad foreign advice. To remove, however, all reason for doubt as to what the conduct of officials on this point should be, the following notification was issued by the Japanese Government :—

NOTIFICATION No. 95.

To In, Shô, Shi, Fu and Ken.

The titles of the Sovereigns of the countries allied with Japan are different in the original languages, but it is hereby established as a rule that in official documents in Japanese they shall all be styled Kô-tei (皇帝) irrespective of what the title may be in the original.

In the case, however, of republics such as America, France, or Spain, or Peru the term *Dai-tô-riô* 大統領 should be used.

(Signed) Sanjô Saneyoshi,
Prime Minister.

25th July, 1874.

The gradual abandonment of the derogatory term *Wang* by the people generally, either in their speech or writings, could of course only be a work of time and education, but it was perhaps not too much to expect that a Government wishing to be friendly and courteous to other Governments, and in a position to instruct the Press upon the proprieties pertaining to such relations, should intimate to the latter that the application of a derogatory term to the sovereigns of these Governments was not acceptable to the Japanese Government. Without some such intimation, indeed, a Japanese writer would think that he ran some risk of incurring the displeasure of his own Government if he gave to a foreign sovereign a title equal to that borne by Mikado.

It will thus be seen that the question at issue is the general one of what is the proper title to be used by Japanese to denote female sovereigns, and it is not confined to the rendering of the word *Queen*. It is very clear that if the vulgar and illiterate expression *Nu-ô* (woman or female chieftain) could properly be applied to the Queen, then the correlative *Nan-ô* could with equal propriety be applied to the Mikado. Every loyal Japanese, however, would shrink with horror from applying so low a phrase to His Majesty, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

it has been reserved for an Englishman to prove so renegade to his own Sovereign as to advocate the application to Her of a contumelious appellation.

As the titles borne by Japanese Queens or Empresses when they have filled the throne have some bearing on this subject, it may be sufficient to say that they have been designated by the same title as the Mikados, and never as *Nu-ô*

The writer closes his article by upbraiding us with being the "organ" of the British Minister; while his evening contemporary abuses us for being the "organ" of the Japanese Government! We may safely leave the two to fight it out, for we can't possibly be both, and it would be wholly superfluous to deny either one of two charges which mutually destroy each other. "Why, look you now," says Hamlet, "how "unworthy a thing you make of me. You would play "upon me; you would seem to know my stops, you would "sound me from my lowest note to the top of my com- "pass, and there is much music in the little organ; yet "cannot you make it speak. 'Sblood, do you think, I am "easier to be played on than a pipe? Call me what "instrument you will, though you can fret me, you can- "not play upon me."

THE PRESS-LAWS.

We have to announce, and we do so with great satisfaction, that all restrictions upon the Book-press have been removed, and notice of the intention to publish is the only formality now requisite to be complied with. We trust that the Government, having resolved on this liberal, but necessary, measure, will carry it out with *entire loyalty* to the mind of the nation and to the writers who are the exponents of that mind. Among the first fruits of the measure there will be a certain number which are poisonous; and they will act as poison, causing disturbance, heat, delirium and inflammatory symptoms of various kinds. But it is equally certain that antidotes will come from other quarters, and diseases which have hitherto been chronic in the body politic will disappear under this more enlightened system of treatment. The Government must be prepared for some trouble and perplexity in dealing with this matter. These cannot be escaped. But we trust it will stand firmly by its resolve, and let the measure work freely. By this means alone can it be made to work easily. No demand for further liberty, from whatever quarter, can now, and perhaps for some years to come, be considered otherwise than factious. There is ample room for the play of the national mind in every direction, and if the Government deals loyally by the present measure, it will be fortified in exacting obedience to enactments which, though less palateable, are quite as necessary for the national welfare as that which we announce with so much gratification this morning.—*(Japan Mail Daily Advertiser,* Sept. 6th.)

We note that the Queen has been graciously pleased to give orders for the appointment of Lieut-Commander Frederick Pearson, of the Navy of the United States of America, to be an Honorary Member of the Military Division of the Third Class, or Companions, of the most Honourable Order of the Bath. Both the conferring of this distinction on, and its acceptance by an American citizen, make the appointment somewhat unusual.—*China Mail.*

SPIRIT OF THE JAPANESE PRESS.

The Land-Tax.

("*Hôchi Shimbun*" *of August* 26, 1875.)

I am a rustic from the country, and with my travelling hampers across my shoulders, I lately paid a visit to the capital. I there chanced to read some arguments on the land tax, by a Mr. Adachi, in No. 754 of the *Hochi Shimbun,* and am convinced that his remarks are devoid of error. Upon considering them in comparison with the state of poverty and exigence of the lower classes of which I myself have been an actual witness, I went on sorrowing for a long time. In my opinion the observations of Mr. Adachi, although perfectly correct, still do not seem to have thoroughly exhausted the subject. At the present moment, the work of revision has been commenced throughout the various *Fu* and *Ken,* and amongst the ignorant country folk there is no lack of persons who express their dissatisfaction and start foolish opinions. I therefore follow in the track of Mr. Adachi, and make a few additional observations, which I beg to refer, through the medium of the Press, to all gentlemen of learning.

In very old times in Japan, the tax regulations seem to have been exceedingly light. Other contributions, however, had to be paid instead of actual service, and military duties to be performed, while, in addition to these, the charge of lands or timber was committed to certain provinces or departments. (This is written down in the historical records, and so is not specially noted here). From the very outset our country was an independent one, its position being as it were that of a house that holds no intercourse with its surrounding neighbours on all sides, that neither gives nor takes a single question or reply, and is not subject to any pressure from those neighbours. Thus the desire to stand in the same line with others is unfelt and all thought of their ridicule is uncared for, and the various members of the household are sufficient to provide their own sustenance. But as events change and ages alter, it becomes necessary to hold intercourse with one's neighbours,—one must stand in the same line with others, and it does not do to be unprepared to prevent encroachments. And yet a single household is from the first deficient in such preparation, and consequently has no option but to look elsewhere for the means. The poverty into which it has gradually fallen then becomes felt. Now, in the present age, our country is desirous of taking her position amongst all other Powers, but the desire that the taxes should be as light as in ancient times may be likened to a person sitting still while anxious for fame. Again, with regard to the lightness of the tax in England, which is adduced as a proof by Mr. Adachi,—(but consider the heavy nature of the miscellaneous taxes there,)—seeing that some countries are great and some small, and that some are backward, while others are far advanced in reform, no one general rule can be applied to every case.

Mr. Adachi observes,—"In the present condition of "our country, it may be said that a 'second' or even a "'third tax' (is levied) &c., &c. Upon comparing this "with an evil Government that enforces cruel measures, "think how the matter stands!" Now, even though he adds the words "How about this time of perfect revision?" —still, if the above expressions were to be credited by the ignorant people, through error, it is to be feared that cause for hating the Government will spring up. I have a word to say;—(it matters not whether I am accused of flattering the Government)—have not you, Mr. Adachi, heard it said that if the amount of the Miscellaneous Taxes be raised to 2,000,000 *yen,* then the Land Tax will go down as far as one per cent of the value of the land? We ought confidently to await this,—(though an exception may be made in the case of suspicious minds). Now, although the present times, as argued by Mr. Adachi towards the end of his remarks, are a period when a hundred different affairs are started for the first time, these affairs are not entrusted by the Government to the people. Upon the Government then, arriving at a state like that detailed above—of the one household entering into relations with its neighbours,—in what light are we to regard its actual condition? The present regulations for taxes in our country may certainly be in the same state as of old, but upon comparison being made with the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

time of the Tokugawa régime, it will be found that while we have often heard of instances of the decrease of taxation in the Fu and Ken, there has never yet been heard an instance of its increase. Thus, then, it is believed that after the coming revision has been made, the amount of the land tax will become lessened by one degree. Furthermore, there exists the notification that it will by degrees be diminished to 1 per cent on the value. Many superfluous taxes that had been included amongst those that have come down to us from two centuries ago, have, since the revolution, been abolished, and the laws relating to forced service (corvées) have also been cancelled, so that at the present date we are in the enjoyment of manifold bounties. To suddenly urge the necessity of eight taxes, and under present circumstances to long for old times—(even though only in argument)—surely this is not far from blindness as to the state of the age, and disregard of actual affairs? Let all persons of learning give their earnest attention to this.

The terms "second tax" or "third tax" signify the levying of extra taxes upon a single article. I will explain my views on this point. For rice-field and arable-land there is a land tax, and there are also separate taxes on male or female servants, on horses and carriages. (No tax, however, is imposed upon apprentices of farmers, merchants, or artizans.) These taxes are for the purpose of affording protection to the persons or things taxed. How has this title of "second" or "third" arisen? Supposing that an argument be publicly advanced even though that argument may certainly by its specious and apposite appearance exercise influence over the ideas of the age, I nevertheless fear that it might, upon being put into actual operation, prove to be wholly untrustworthy.

Mr. Adachi's remarks about the alternately heavy and light nature (of taxes) has, again, not yet exhausted the subject. The reasons for the case being (as he states) are many in number. One of these is that during the feudal times when lands were inspected and measurements effected by the old lords of the manor, even sterile and unfruitful lands were portioned out in like manner to lands capable of cultivation; this act was styled "assessment upon land that does not actually exist," and thus an extra amount of taxes was obtained. A second is that under the different names of "labourer's rice," "reserve rice," "store rice," "additional (dues)," and "diminished (dues)," there were cases of many other taxes being added on, over and above the real tax, and thus, even in the case of lands adjoining and projecting into each other, the state of ease or burden, prosperity, or distress was different, inasmuch as the respective jurisdictions were distinct. A third is that even though lands had undergone change owing to floods, &c., they had still to make good their dues as heretofore, when actually unable to do so. A fourth is that there were cases when the taxes were for some time lightened in regard to lands where irrigation was imperfect, which lands, however, even after dykes had been constructed and perfect irrigation effected so as to make them fruitful fields once more, still continued to be charged with the diminished taxes:—while on the other hand, there were cases too when fruitful fields became inundated owing to some (defect in) rivers, marshes, ponds or drains, and yet were not relieved from their heavy taxes.

A fifth is that the old taxes were levied in like manner both upon lands of which a portion had been lost owing the effects of landslips, and also upon those which had been extended by means of cuttings into mountains and moors. A sixth is that owing to the skill or ignorance (of the farmers) in manuring or mowing, &c., there were different degrees of productiveness or otherwise. A seventh is that consequent upon the position of the farmers' dwellings the facilities for tillage differed, so that the fields became divided into first or second class. Apart from these there were many other sources of difference—(in consequence of which there has been laid down the regulation for revision every five years in future)—and on account of the separate kinds of land being different from each other, a careful revision becomes necessary. In cases, such as those upon which Mr. Adachi remarks, when on one *tan* of land there was paid only the amount due on one-half that extent, both those who sold and those who bought such land did so in the full knowledge of the unlawful nature of this proceeding. How can we, then, feel pity for them now that the time for the revision has arrived!

In regard to rice cultivated by tenants, Mr. Adachi merely argues from outward appearances, and I am sure that he is not yet aware of the actual state of circumstances. In a case such as that of a piece of land,—A—of 1 *tan* in extent, yielding 1 *koku* 8 *to* of rice, while another piece of land,—B,—which measures 1.8 *tan* produces in like manner 1 *koku* 8 *to*, there is no need whatever to observe that there is a difference in the degree of labour bestowed again, in the case of two equally productive pieces of land, each measuring one *tan*, and each yielding 1 *koku* 6 *to*,—if A be near at hand and easy of cultivation, while B on the other hand is far removed and without facilities for cultivation then, even though the two lots be land of similar quality, the price of the land must necessarily differ in consequence of the possession or absence of such facilities. If we make a calculation as to the value of these two lots, and work out the amount of profit, we find as follows:—

A.—1 *tan* OF RICE FIELDS: LAND HELD BY A TENANT.

Amount of rice grown thereon.....1 *koku* 6 *to*
Deduct, as cost of seed and manure, 15 °/₀= 2 „ 4 *shô*

Remaining amount of rice.....1 *koku* 3 *to* 6 *shô*
Deduct, as cost of labour, paid to tenant, 20 °/₀= 2 „ 7 „ 2 *gô*

Remaining amount of rice.....1 *koku* 8 *shô* 8 *gô*

	Yen.	sen.	rin.
Value of the above, @ 3 *yen* per *koku*=	3.	26.	4
Deduct.—			
Land-tax, 3°/₀ on the value of the land,—such value being 40 *yen* 80 *sen*.=	1.	22.	4.
Village expenses 1°/₀ on the some amount.=		40.	8.
	1.	63.	2.
Remainder, being 40°/₀ profit ..... *Yen*	1.	63.	2.

B.—1 *tan* OF RICE-FIELDS—LAND HELD BY A TENANT.

Amount of rice grown thereon..... 1 *koku* 6 *to*.
Deduct, as cost of seed and manure, 15°/₀ = 2. 4 *shô*.

Remaining amount of rice..... 1 *koku* 3 *to* 6 *shô*.
Deduct, as cost of labour, paid to tenant 20°/₀= 2. 7. 2 *gô*.

Remaining amount of rice..... 1 *koku* 8 *shô* 8 *gô*.

	Yen.	sen.	rin.
Value of the above, @ 3 *yen* per *koku*=	3.	26.	4.
Deduct.—			
Land-tax, 3°/₀ on the value of the land,—such value being 39 *yen* 80 *sen* 6 *rin*.=	1.	19.	4.
Village expenses, 1°/₀ on the same amount.=		39.	8.
	1.	59.	2.
Remainder, being 42°/₀ profit..... *Yen*	1.	67.	2.

The value of the land A is 40 *yen* 80 *sen*, while that of the land B is 39 *yen* 80 *sen*. They both produce in like manner 1 *koku* 6 *to*. By subtraction we find there is a difference of 1 *yen*. The cause of this is only to be found in the fact that A possesses facilities for cultivation, and is therefore much sought after, while B, on the other hand, being destitute of such facilities is desired by but few. In this way it comes to pass that even though the two be exactly alike as regards their productive capabilities, their value cannot but differ.

That "tenant-farmed rice" ought to be treated according to a general average is a perfectly trustworthy argument. This, again, is a matter of similar nature to the profits shown by the calculations and substraction upon the data of difficulty or facility of cultivation. If the rice produced be 1 *koku*, it must

Digitized by Google
UNIVERSITY OF CALIFORNIA

be determined according to the difficulty or facility of cultivation in each case, whether the "rice paid to the tenant" may not rise from 6 to 7 *to*. There is not any necessity to lay down a rule for the "15 %" or "32 %." The Government notification about the Revision Regulations will take this for its chief object and will strike an average for the whole. Mr. Adachi's remarks about "the deduction, as cost of seed and manure, or of 15 % in "the case of land cultivated by the holder in person and "of 32 % in the case of that tilled by tenants, &c., is "believed by me to be an unfair arrangement that is "merely a usage having for its object the increase of the "value of the land &c. &c." cannot have been carefully weighed by him. Seeing that "tenant land" is entrusted to others for cultivation, it follows that, apart from the cost of seed and manure, there must also be paid hire to the persons who work for the holder of the land, and thus it comes to pass that the landlord's gains are but small. In the case of land farmed in person, even though there may be separate hire to be deducted, still the profits that accrue are considerable. The large amount of the gains are, however, owing to the labour of the landholder himself, and so, in point of fact, the profits would be in no way different were the whole land to be farmed by tenants.

In regard to land farmed out, if in each village a sort of auction were held, and thus the actual quantity (of rice produced) were plainly determined, the average could of course be found upon a comparison of this and that bid.

The condition of the poorer classes, upon which Mr. Adachi remarks, exists in each several Ken, and so I act in concert with him and address a few words to the *kuazoku* and *shizoku*. The fact that their incomes must be abolished,—(although this may seem an invidious idea, when expressed by the *heimin*)—is the object upon which all eyes have ever been fixed. And how can the Government, too, be unmindful of this? Upon their forming a picture in their mind, they may feel pity on account of the circumstance that, under present conditions, if the incomes were suddenly withdrawn there would be amongst these men without occupations some who would be driven to straits of poverty, and do they, then, await the day when such persons shall have gradually become able to gain their livelihood by their own exertions? (I am afraid however, to state this positively.) If, then, the (nobles and gentry) feel no shame at doing nought, but eat, what is to become of the duties of mankind? now that the time has come for all matters to revert to public discussion, and for the inconsistencies in the tax regulations to be removed, so as to give assistance to the people, how can they merely stand looking on! Let all gentlemen of learning give their earnest attention to this. No additional words from myself are needed.

(Signed) INAGANO INUNEOMI,
Heimin of the Kokura Ken;
dwelling at No. 13, in the 4th
ward of the Hirakuwa-chô in
the Kōji-machi, at Yedo.

The Editor remarks:—There are some points on which the line of argument given above has fallen into slight errors through imperfect comprehension of Mr. Adachi's meaning. Both the articles, however, advocate the revision (of the land tax).

THE REFORM OF THE LAND-TAX.

(Choya Shimbun.)

As the reform of the land tax involves a great and important change, ignorant people like ourselves cannot be expected to exhaust it. But as articles upon it have appeared in the *Nichi Nichi Shimbun* and other newspapers, I will also place my own views on the question before the public.

Land is the foundation of a country, but there is nothing in which more injustice is displayed. Although the area of a field may be called one *tan*, it may actually be two or three, while another similarly called may only measure 200 *tsubos* or less. Some lands measuring one *tan* are assessed for yearly rental at one *koku*, while others of equal extent only pay two or even one *sho*. Extensive domains, assessed at low rates of taxation, have become the property of wealthy men, while small properties heavily taxed have become the portions of the poor. This tends to make the rich richer, and the poor poorer. Although these wealthy men become constantly richer, none of them turn their thoughts towards the welfare of the nation, and they grow more and more luxurious and idle.

As we are daily advancing in civilization we think that the boundaries of land should first be settled and the tax on all land be made uniform. This is the most important work of the present day, and urgently requires reform. But it must not be done without full preliminary consideration. For if we go to work on the *chiken* system lately begun, we should have but the name and not the thing itself, and it would further be the source of great expense and consequent suffering to the people.

The work we have mentioned is of vast importance, and we think that each *kenrei* should take with him some officers specially qualified by their knowledge of agriculture and go from village to village measuring and examining the lands and fixing the proper tax upon them. But if this work is entrusted to the *kucho* and *kocho* nothing will be done straightforwardly.

Some of the lands are specially subject to drought, while others are marshy and subject to floods. Some are poor while others are rich, and the value of a piece of land also differs greatly according as it is farther from or nearer to habitations or towns, so that the value of land is by no means uniform. The value should be settled according to the rent which a lessor would be willing to pay, and then there would be no injustice.

Some say that we ought to find out what the average produce of land is during two or three years and thus the taxes could easily be assessed. I have tried this form of examination, but it would not work, and I have no knowledge of any new and acceptable plan. Yet without some such plan, I do not know how the work could be properly done. The present system is, however, an inequitable one, the taxes should be more justly imposed, and to effect this the real value of land should be properly arrived at.

THE CHANGE IN THE WRITTEN CHARACTER.

(Hochi Shimbun.)

The backward condition of our learning and education, and the decay into which our popular literature has fallen arise wholly from the obstructions offered by the characters which we employ in our writings. The complicated formation of these letters is undoubtedly a great stumbling-block to us in our progress, and as we can make but little practical advancement so long as we continue to employ them, the demand for a simpler character which has of late obtained would appear to be based upon reasonable grounds.

On the one hand we have reformers who call for the restricted use of the Chinese characters to be used in connexion with *kana*, a reform which we conceive to be of an eminently unsatisfactory character. Since the introduction of the Chinese character our language and literature have become a strange medley. Our peasants are unable to read the character in use, and were they even able to read it would fail to comprehend its meaning. And as our literature and language have been so powerfully influenced by those of China it is clear that no satisfactory acquaintance can be obtained with them unless the mind of the scholar has been previously prepared with a knowledge of the language in which they originated. Surely there can exist no such incongruity as our literature! On the other hand it is said that we should employ Roman letters—a course which would hinder rather than accelerate our education —, or abolish the use of Chinese characters and employ *kana* exclusively. Many other reforms have been suggested, all more or less indirect and none of them sufficiently concise. With the view of putting an end to the difficulty occasioned by our mixed character I should be glad to see the following changes adopted.

In the reformation our language I would suggest that the necessity of assimilating our written and spoken language as in European countries should be taken into consideration. I would further recommend that our dictionaries and grammars should be written in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tôkio dialect, not necessarily because this is pure, but because it is the most generally diffused and best known. I would abolish the use of Chinese characters, excepting, however, the numerals, using *kana* alone for writing, not only Japanese but such Chinese words as may have become incorporated in our language. All publications for tuition must necessarily be at once changed, and all books of what nature soever should in future be written in *kana* character. This will undoubtedly involve present inconvenience, but it will render instruction more easy in the future. By doing away with the perplexities which now surround the learner it will facilitate the acquisition of knowledge, and there can be but little doubt that the unification of both our written and spoken languages cannot fail to prove an enormous boon to the students of the future.

It has been alleged that if *kana* were to come into general use it would be difficult—if indeed possible—to distinguish between words of similar sound. Words of one sound but of differing meaning are not peculiar to Japan. They abound in all European languages and their true meaning is always indicated by their context. There is little fear of any misunderstanding from this cause; we make no mistakes in our every-day conversation. Some again say that the use of *kana* to express Chinese words would lead to confusion, but the effect will be the same as if we were using an European language, and if their signification cannot be understood the dictionary must be resorted to.

In English many foreign words are incorporated without any change, and these eventually become anglicised. They occasion no difficulty to the reader.

Yokohama no Kaigandori ye toritateta Yasokiokai no reihaido ga dekiagatte kongetz tôka ni, Borubek, Tamuson, Buraon nazo ga kawaru gawaru ni dete Kio o tonai oshiye no wake o nobe mashita. Commas and periods should be used as in the above, and the names of places should be indicated by *kata kana* writing. Care must also be taken that such words as *to-ho ri* or *ku-wa-i* should not be spelled *to-o-ri* or *ka-i*.

Some portions of the foreign grammars it may be desirable for us to employ, but we must use care in adopting them. The translations of the parts of speech are now made into Chinese; this is not desirable. They should be used as they are, and should our language supply an equivalent expression there can be none more eligible.

If we resolve to reform our language thus we may reasonably hope for a favourable result since the alteration is most natural. But it is to be apprehended that some of those short sighted critics who can only see the length of their nose will urge the inconvenience to the present generation without taking into consideration the benefits to posterity. Let them beware. The longer the postponement of the settlement of such questions as this the more difficult they inevitably become, and it is possible that, unless made now, this most desirable reform may not be made at all.

I shall be glad to learn the views of contemporary writers upon the subject.

Reform of the Written Character.

(Choya Shimbun.)

While a portion of our language remains unchanged from ancient times there are certain words, originally introduced from China, of which the pronounciation has, in course of time, become modified. There are also no doubt many words which preserve their sound unaltered while the same words have, not improbably, undergone some alterations in China.

It has been said that we possessed written characters in remote times. But it is hard to believe this since we only began to use the *kana* after the introduction of the Chinese characters now called *manyokana*. It is from these indeed that our *katakana* and *hiragana* are derived. Our literature admits the following styles: That now known as *wabun* (ancient literature) which in course of development of the language has ceased to be generally used. The *kanbun*, or Chinese literature, was first used in the middle ages, but it was not until the Tokugawa family took the reins of Government that any writers of skill presented themselves in this school. Being of foreign origin the literature was never thoroughly adopted and was chiefly employed by the *virtuosi*. The *Zoku-bun*, or common literature, was in general use. But after the revolution our literature underwent a sudden change and whether in Notifications, Memorials, or Newspapers all writing is now in *Kan-bun*, which is used in conjunction with the *kana* when the latter is necessary. It is, in fact, the supplementing of the Chinese character with our own.

From ancient times we have been accustomed to make reading and writing matters of difficulty. It used to be the habit of eight or nine out of every ten men to declare that all the literature that was necessary to them was the knowledge how to write their own names. A lover of study was classed among the moths who eat up the paper of the books, for even to the last he continued his studious life and thought of nothing else until the King of Terrors severed him from his fascinating pursuit. Is not this very deplorable?

The reformation of a language is by no means easy, especially when no grammar exists to facilitate the process. But it is a difficulty too serious to be overlooked on the one hand or to be assumed as insuperable on the other. To the learned who have mastered its difficulties our literature would probably not appear very difficult. To the unlettered, on the other hand, it must appear more difficult than either Chinese or European literatures. We feel to some extent jealous of countries which possess a systematised language, regulated by grammatical forms and letters, so much must these facilitate the acquisition of indigenous and foreign languages. Let us take for instance the words "*Choya Shimbun*" If these be placed before a Chinese he will read them *Chuye Sauman* and some of own people would say *Asano Shimbun* (Morning's News). But the Chinese would probably make no such mistake in the meaning, for the characters are his own and not, as in our case, borrowed.

The languages of Europe and America may be written with only twenty-six letters, and we also, by employing our forty-eight letters, could write anything precisely as a child writes *akebono*. The arguments for the abolition of the Chinese characters may no doubt again arise, but I think that, as in the case of the celebrated Chinese physicians Giba and Heiken with an incurable patient, the question will finally be given up.

Turning to the Indians of North America we learn that as they were unable to write they selected objects of various shapes which they committed to memory. After their intercourse with foreigners Jojiges, better known as Sekoya, invented a mode of writing by dividing the sounds of his language into eighty-five, attaching to each its peculiar symbol. Thus writing commenced and is now in use among the various tribes.

But in our country we have no parallel to Sekoya of the Cherokee tribe or to the Chinaman Soketz who first devised letters for his countrymen, and this is our misfortune.

The Proprieties of Writing.

(The following article is curious as showing that the Press is quite ready to recognise the importance of adhering to proprieties in speaking of the Sovereigns of the western nations. Of course, some statements made in it are erroneous—(the personal expostulation of the resident Representative, &c.)—But the outline of the facts is true and the remarks on them are sensible.)

(*From the Nisshin Shinj shi, No.* 74, *July* 31, 1874.)

The officials who have to come in contact with foreign countries and foreigners individually ought to be selected with great care, for if the Government does not get hold of the right men, the national dignity is lowered, the national rights injured, and we are subject to constant contempt, the end of which is that we shall be prevented from maintaining a position of equality. Great care ought therefore to be taken. We are privately informed that a certain Mr. Hoshi, Superintendent of Customs at Yokohama, in addressing a letter to (? concerning) the English Sovereign (王 *Ô*) made use of some extremely rude language. The resident Representative of that country earnestly expostulated with him, and returned the letter, but Mr. Hoshi was still unable to see that he was wrong, and replying that no rudeness had been committed sent

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the letter again. Upon this the Representative became very angry, reproached our Minister for Foreign Affairs, and argued that "this inferior person ought not to be left at the head of the Custom house." The matter was eventually brought before the Courts, and the other day, after being fined a considerable sum, he was dismissed from the office of Superintendent of Customs and ordered to rejoin the central bureau (in Yedo).

We have been informed that Mr. Hoshi possesses a profound knowledge of English and is widely read in law, so that it seems an extraordinary thing for him to commit such an error. He refused to admit his error at first, and after it had been pointed out to him in a friendly manner, instead of recognizing it he blindly repeated it. It reminds us of the story of Bafu kun's son Chô Katsu, who though he had read his father's writings on war, fled in haste the first time he went to battle. A man's offence may be a small one, but it becomes very grave when the result is that his country's dignity is lowered and its rights are injured, that foreigners look upon its officials as "inferior persons" and freely criticise their behaviour. What is most ridiculous is that in order to conceal his offence, he assembled all the Custom House officials, when he was about to quit his post, and explained to them at great length that he was dismissed without cause. We may say of Mr. Hoshi that he could not "be commissioned with authority "over *a state* of hundred le," and that when sent to "any quarter he will disgrace his Prince's commission."* How can he thus shamefully usurp a high office? As he is certainly a very erudite person he will no doubt repent his act, resign his office and retire for away into concealment. It is not that we like to expose men's faults unnecessarily, but we earnestly hope that all officials and readers of books will take deep warning by this case.

The Same.

"Choya Shimbun" of September 7th, 1875.

According to an order promulgated from the Foreign Office on the 4th inst., with regard to the official notice of the 3rd ulto., in making mention of the Sovereigns of the various Treaty Powers, the characters *K'wo-tei* (皇帝) must always be used, but the addition of the characters Heika (陛下) is not compulsory. However, in rendering the word in the original by *Kana* characters, this rule need not be observed.

The Freedom of the Book-Press.

(Choya Shimbun.)

In all countries measures are passed from time to time which aid the cause of civilization, but nothing does this so much as a free Press.

I have this day seen the Notification of the Daijokwan and the new code of Book-press laws. Casting our eyes over the past and forward towards the future, we ought to render grateful thanks to the Government. Oh! it was not expected that our just Government would issue such laws as these. They are tokens of the freedom of our Book-press. Be industrious, then, my brethren; blessings hang over our heads and are ready to fall. I cannot keep silence and thus have written the foregoing. What think ye of it, my countrymen?

Pretty Political Philosophy.

(Akebono Shimbun)

The following is what Arai and other of the Jijosha (Self-help Society) desire to place before the people. (It was written by Nakano, the *kocho* of the Awa district, but the Society, thinking that should it be sent to the *kenchô* as a memorial it would cause unnecessary ill feeling between the Government and the people, did not present it. It was accompanied by a draft relating to the powers of the Ruler, the executive, legislative and judicial bodies, but this will not be published here.)

The people ought to pay great attention to the Imperial decree of the 14th April,* and it is wrong for them merely to glance at it and think no more of the matter. The administration up to this poriod was absolute, but the present form of government is more limited, and one in which the Ruler and people govern the nation together. The officials of all denominations are public servants and and employés of the people. The present Emperor is nothing like the former Tenshi, and ought to be called Ruler. And from this point of view, the people are not the Government's, but the Government is the people's. It may be said that if this be so, the whole of the people had better govern themselves; but as this would be inconvenient, representatives should be chosen, whose views should be carried up to the Ruler for him to decide whether they are good or not, and whatever he approves should be handed over to the executive and the people made to observe it. Thus the administration is the child of the people and not that of the Government. Up to this time all the land under the sun and the people on its very shores were the property of the Mikado. But it is not so now, as is proved by the fact that the *chiken* or register of the values of the property of various landowners has been issued, and all the houses and lands named on it are the property of the people and do not belong to the Government or Ruler for him to do whatever he likes with them. The people, however, who are very ignorant, do not know these things. They have not shaken off their old feelings of slavish submission, and think that whatever the *Kucho* or *Kocho* says, they must do, however much against their will. And how much more subservient still are they to the Kencho! When an officer of a village says that they must pay so much as taxes, they immediately consent without even checking the amount, and although the officer may spend the whole of it himself not one word would they utter. When our Government sent a hostile expedition to Formosa, nothing was said about it to the people, who had to find men and money for it to their own inconvenience. Was not this a great mistake?

The members of our Society, sincerely deploring this, and being desirous that the people should know what are their rights, and also that they should advance in civilization, wish to address the people as above, and the *kucho* and *kocho* should consult with the people before they put any of their own ideas into practice. The people should of course object to the orders of the *kucho* and *kocho* and even those of the Government when they are not in harmony with their own will, and should agitate against and evade them.

This will be printed, and will be sent to every *ku* (ward) and it is hoped that it will be explained to the people (by the ward officers.)

* Quotation from the Sun Yu.
* Decree constituting the Genroin and Daishinin.

THE BOTANY OF JAPAN.*

(Second Notice.)

The volume before us resumes as we have said all the known dicotyledonous plants of Japan—in other words all the exogens and conifers. 1699 species are enumerated, distributed in 643 genera which latter are collocated in 122 orders. In Lindley's Treatise upon the Vegetable Kingdom, an introduction to the flora of the whole world, there are described some 231 natural orders of Dicotyledons while 6500 genera are enumerated containing about 67,000 species. Thus in Japan we have represented nearly half the natural orders, about ten per cent of the genera, and nearly three per cent of the species of dicotyledons known to exist on the surface of our globe. Future research will probably largely increase the above proportion of species and, though in a less degree, also add to the genera indigenous to Japan; but enough is now known of the botany of the country to warrant us in saying that the number of natural orders will not in any considerable degree surpass the one we have given.

On comparing the flora of Japan with that of the British Isles we are hardly astonished to find the flora of the former country very much richer in genera and species—for it is an invariable rule that the warmer a region is the greater will be the abundance of botanical forms met with in it.

Taking Bentham's excellent work as our guide we find

† Enumeratio Plantarum in Japoniâ sponte crescentium hucusque rite cognitarum adjectis descriptionibus specierum pro regione novarum quibus accedit determinatio herbarium in libris Japonicis, So mocou Zoussets (Sômoku dsussetsu) xylographice delineatarum auctoribus A. Franchet et Lud. Savatier Med. Doct. vol. I. Paris F. Savy libraire, 24, Rue Hautefeuille.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the exogenous plants of the British isles divided into 74 orders, 357 genera and 927 species. It will be seen that the proportions existing between the numbers of orders, genera and species are pretty much the same in both countries, viz about 5 genera to an order, and 3 species to a genus on the average. It is however doubtful whether any useful conclusions can be drawn from this similarity, for if we take certain particular orders and genera we shall find the number of genera belonging to the former and of species distributed under the latter in this country greatly in excess of the number of genera and species belonging to the same orders and genera respectively in the British Isles. Some such comparison of figures on a large scale would afford very interesting results, and would teach us whether warmth tends to increase the proportion of genera chiefly, or that of species.

The geographical position of Japan hardly explains the marked resemblance of its flora to that of Atlantic America on the one hand, and to that of the Himalayan region on other. Yet such is undoubtedly the case as well shown by Dr. Asa Gray in his report upon the Phœnogamous plants collected in Japan during the visit of the United States North Pacific Exploring Squadron under Captain (now Admiral) John Rodgers. Thus the Magnoliaceœ are neither found in Europe nor in Western North American but are about equally abundant in Japan, and in Eastern North America, more especially in the more southern of the Atlantic states. *Illicium* and *Schizandra*, both typical Atlantic American genera, are represented in Japan, and the genus *Magnolia* exhibits here eight species. The small but very curious and interesting order *Lardizabaleœ* is represented by two genera and five species (one being of *Akebia*). The order is neither European nor American, but essentially Himalayan.

Among the members of the Barberry tribe we have two strictly Eastern North American species. *Caulophyllum thalictroides* and *Diphylleia cymosa*, each the sole species of its genus.

The Japanese examples of the genus *Rhus* (Anacardiaceœ) are chiefly of the Eastern North American type while the species of *Celastraceœ* are connected with those found in Europe, in the Himalayan region and in Eastern North America. The genus Hydrangea is only found in Japan (where seven species are known) in the Himalayas and east of the Alleghany range. The genus Diervilla or Weigela of which various species are so common around Yokohama, is an Eastern American type. It would be tedious to go into further detail on this point. The results of Dr. Asa Gray's investigations are summed up as follows :—Of the plants that excellent botanist examined about :—

48 per cent. had corresponding European representatives.
37 „ „ W. N. American „
61 „ „ E. N. American „

While

27 per cent. were identical with European species.
20 „ „ W. N. American species.
23 „ „ E. N. American species.

Dr. Asa Gray's report was drawn up in 1858 when Japanese botany was little known and considerable alteration might now have to be made in his figures, but there can be little doubt that the general result would be the same.

It may then be taken as a tolerably certain fact that the flora of Japan resemble that of Eastern North America more than those of either Western North America or Europe. The abundance in which such distinctively Atlantic ferns as *Onoclea sensibilis* and *Osmunda cinnamomea* are met with in Japan would indeed almost of itself lead the American botanist to expect to meet with many familiar forms, an expectation in which, as we have already seen, he would not be disappointed.

We must now pass briefly in review some of the principal orders. The Ranunculaceœ are well represented by 18 genera including 63 species. The genera *Glaucidium* and *Cimifuga* are peculiar. There are three aconites one of which *A Fischeri* now in flower very much resembles the common monkshood of the British isles. The common buttercup of home (*Ranunculus acris*) is found here in abundance, so also are the lesser Thalictrum and the Marsh Marigold (*Caltha palustris*). Among Berberids the common barberry (of which Yorkshire people make such excellent jam) is not uncommon about Hakodate. This order is much more numerously represented in Japan than in England where only one species is indigenous (B. Vulgaris), while in this country we have 7 genera and 13 species.

Both the garden and field poppy are frequently met with, but generally, we think, escaped from cultivation and hardly indigenous. Celandine (*Chelidonium majus*) is common on every hedge bank. There are no Fumitories, but the allied genus Corydalis is well represented by 9 species, One of the most striking members of the Poppy-tribe found in Japan is a tall, stout, coarse-looking plant with an abundant terminal florescence called *Macleya cordata*, examples of which in full flower are at this moment to be seen growing on the bank overhanging the Camp Hill.

The Cruciferæ are less well represented than in the British isles. Here we have 15 genera and 36 species only against 27 genera and 64 species enumerated in the British Flora. The common gilliflower is found here, the common and marsh watercress (Nasturtium) the watercress (*Barbarea vulgaris*) and the common Rockeress (*arabis perfoliata*) in the vicinity of rice-marshes. *Cardamine* is represented by 6 species, one of which (*C Impatiens*) is frequent in England. There is only one *Sisymbrium* identical with the *S. Sophia*, or flixweed, somewhat rare in Britain. Only one *Brassica* (B. Sinensis) has been found and this is probably an introduced plant. So but one Thlaspi seems to have been met with in Japan which every one will easily recognise as identical with the not un-common *T. arvense*, or pennycress, of English fields.

There appear to be no *Resedaceœ* (Mignonette family) in Japan. Of violets there are 13 different kinds, not one of which is identical with any British violet. In the Pink Tribe (Caryophyllaceœ), we have two *Silenes*, *S. inflata* and *S. Gallica* three *Cerastiums* (C. Vulgatum, C. arvense, C. alpinum) and two *Stellarias*, (*S. Media*, chickweed and *S. uliginosa*) identical with home species. *Honckenya peploides* (sea purslane) and *Spergula arvensis* (com. spurry) are common to England and Japan.

The *Ternstræmiaceœ* contains the Camellias, the tea bush, the sweet scented *Cleyera*, and the fœtid *Eurya Japa*. The Camellias are all supposed to be distinctively Japanese, but in Japan the genus is represented by two species only, while in the little island of Hongkong there are four species. The tea bush of course has been introduced.

Among *Malvaceœ* we find M. rotundifolia identical with the home Dwarf Mallow. But the order is best represented in Japan by the genus *Hibiscus* of which seven species are met with. Pink, blueish and whitish or yellowish flowered Hibiscus are commonly found in hedges round village dwellings.

There are but three geraniums indigenous to Japan. Both the British *oxalis* are found, together with a third, *O. obtriangulata*, in the northern provinces.

The true English Holly is not a native of Japan, but of the genus to which it belongs (Ilex.) 14 species are known as Japanese. The wild vines too are numerous, there being 7 species of *Vitis*, *V. labrusca* known by its vine like large leaf with brown cottony under surface being common in every hedge. The maples of Japan are peculiarly abundant, there being 22 species of the genus *Acer*. The common maple and sycamore of Britain are, however, not among them. The American genus *Rhus* has six representatives in Japan, one of them *R. Vernix* supplying the varnish used in lacquer-work. Of the 470 genera with 6,500 species resumed under the Leguminous order 42 genera and 86 species are found in Japan against 18 genera and 70 species indigenous to Britain. The common broom (*Cytisus scoparius*) is mentioned by our authors as found in Japan, but we ourselves have never seen it. The purple and white clover of English fields are common enough. The American genus Wistaria is represented by two species. The hairy vetch *Vicia hirsuta* is not infrequent, but the ordinary vetch *V. Sativa* is not found in Japan. The mimosa-like tree so common in gardens with a red florescence is an *Albizzia* (*A. Julibrissin*). Among Rosaceœ the genus *Rubus* (to which our blackberry and raspberry belong) is extremely well represented in Japan where we find 22 species of it—among them *R. Idæus* the wild raspberry of European

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

countries. There are two native strawberries one (*F. Vesca*) identical with the wild strawberry of hilly districts in Europe, of which the garden strawberry is a cultivaled variety) the other an uneatable kind (*F. indica.*) Both *Potentilla* and *Geum* are well represented so also are *Agrimonia* and *Poterium*. The common hawthorn or May is not met with but a very similar *Crategus* is abundant. There are ten Rosæ, none identical with home species. Among Pears *Pyrus communis* is cultivated and *P. Aucuparia* (Mountain ash.) is mentioned in the 'Enumeratio,' but this species we have never seen here.

Saxifrages, including Hydrangeas, are abundant. *S. Sarmentosa* is often grown in England in pots but is not indigenous there; it is indeed an essentially Chinese plant. The pretty Sundews *(Droseræ)* of our own country, immortalised of late by Darwin in his essay upon carnivorous plants, are met with in Japan; there are probably five species. We have also 7 Hydrangeas, each with two or three varieties, and the handsome flowered deutzias (three species) are to be seen in June and July in every hedge and at every woodside.

The extensive but chiefly tropical order of Melastomaceæ, the members of which are known at once by their curiously ribbed leaves, resuming 166 genera and more than 2,000 species, is represented in Japan by a single species of *Osbeckica* (O. Chinensis.) Some other melastomads are found it is true but these have been all introduced.

The 41 species of Umbelliferæ mentioned in the "Enumeratio" cannot be taken as by any means resuming the whole of the members of that widely spread and abundant order (1,600 species) which exist in Japan. The specific differences in this order are very difficult to appreciate and depend chiefly upon the characteristics of the fruit. Collectors commonly pass them over and in no single order except perhaps in Grasses and Sedges does so much remain to be done so far as the flora of Japan is concerned.

The Araliaceæ, represented in England by the Ivy alone, show here 6 genera and 14 species, one of the commonest of which is the low tree with enormous prickles on its trunk and branches so common in the woods around Yokohama, the *Aralia Spinosa*. The common ivy (Hedera holix) is abundant here, but the leaves often assume a rhomboid form.

The most familiar of the Cornaceæ is the *Aucuba Japonica*.

Among Caprifoils we find ten species of honeysuckle (*Lonicera*) one of which (*L. Xylosteum*) is the Fly Honeysuckle, indigenous (or said to be so) in South Eastern England.

The common Valerian and the Marsh Valerian (Valeriana dioica) are frequent in shady places, and genus *Patrinia* of the same order is represented by several species.

We now come to the vast order of composites comprising over 1,000 genera and 9,000 species. Our authors enumerate 52 genera and 164 species. In Britain there are enumerated by Bentham 40 genera and 114 species. Among the genera must numerous in species in Japan we note *Aster* (13 species) *Artemisia* (10 species) *Senecio* (21 species) *Saussurea* (11 species) and *Cnicus* (16 species). It is curious that only one indigenous species of *Chrysanthemum* is mentioned. The variety of coltsfoot *Tussilago petasites* so common at home is far from rare in Japan. The only *Aster* indigenous in Britain (*A. trifolium*) is found here with 12 other species. The very familiar *Solidago virgaaurea* of English fields is almost equally familiar to the collector in Japan. Common elecampane (Inula Helenium) is mentioned by our authors but we do not think it abundant. Artemisia vulgaris is met with almost as frequently as in Britain but absinthe or wormwood does not seem to be a member of the Japanese flora. Of the well-known and easily recognised genus *Gnaphalium*, *G. margaritaceum* is common to most European countries and to Japan. The brilliant-coloured *Senecio Cam estris* of Britain is also found in hilly districts here, especially upon the hills around Hakone.

Only one carduus is enumerated (*carduus crispus*) also found all over Europe. The common thistle *Cnicus arvensis* (sometimes *Carduus arvensis*) is not rare about Hakodate.

The dandelion, or a closely allied species, is abundant everywhere, so too is the sow thistle (*Sonchus oleraceus*). One of the most interesting of the composite plants is *Pertya Scandens* common on every wayside around Yokohama and just now commencing to flower. On different stems springing from the same root the leaves often have a completely different form. That the lower and upper leaves on the same stem should differ is a common phenomenon enough in the vegetable kingdom, but so marked a polymorphism as that shown by *Pertya Scandens*, where all the leaves on one stem frequently differ entirely in their form from all those on the other stem, is rare. It is a somewhat curious fact that in the specimens we have gathered in the vicinity of Yokohama, we have noticed this peculiarity much more frequently than in those we have met with in our rambles about Yokoska. The heath family is comparatively speaking poorly represented in Japan. Of *Rhododendrons* (including *Azalea*), an essentially Himalayan genus, we have, however, 20 species, the commonest being R. indicum.

Of Gentians five are enumerated, one of which with a bright blue flower (*G. Buergeri*) is very common about Yokohama. The Convolvulus-like climber so abundant every-where is *Calistegia Japonica* Of the Foxglove tribe the most striking example is the Kiri tree (*Paulownia imperialis*), with its large sweet-scented flowers and its singular resemblance to a huge foxglove. There is no Digitalis (true foxglove) in Japan. Of Veronica there are 13 species of which *V. anagallis*, *V. spicata*, *V. agrestis* and *V. hederæfolia* are common in Britain.

The Labiates are tolerably abundant. Ground Ivy, *Nepeta glechoma*, is not rare, *Scutellaria* and *Prunella* are fully represented and the erect bugle (*Ajuga genevensis*) of Europe is common throughout central and northern Japan. *Plumbaginaceæ* show but one species of one genus, *Statice Japonica*.

Of the five plantains enumerated by our authors only one *(P. lanceolata)* is identical with any British species and this seems to have been introduced quite lately; of the seven docks mentioned five are common in Britain inclusive of the two sorrels *(Rumex Acetosa* and *R. Acetosella)*. Polygonum, as one would expect, is represented very abundantly, some 35 species of this genus are enumerated. Of mistletoes, besides the common one of Europe, *Viscune Albumur*, two other species, *Kœmpferi* and *Articulatum*, are mentioned. Of spurge *(Euphorbia)* twelve species are presented, two of which are British. The castor-oil plant is found, but this has been probably introduced.

Of elms the most noteworthy is the *kiaki* tree (*zelkowa keaki*). Among cupuliferæ we remark the enormous number of species of oak, twenty two in all. Of these at least seven may be seen in the course of a walk over the hills round Yokoska. The eatable chestnut (*castanea vulgaris*) seems hardly indigenous. The horse chestnuts (*Aesculus*, one of the maple tribe) must not be confounded with the *Castanea;* of *Aesculus* there are three species enumerated.

The common beech *(fagus sylvatica)* is found in the north; of hornbeam (*carpinus*) four species are enumerated; of hazels two, neither identical with the cob-nut and hazel of Britain; of walnuts *(juglans)* there are three species mentioned; of gales one only (*myrica rubra)* but the common alder (*alnus glutinosus*) is not enumerated, though a close ally of the latter (*alnus viridis*) is mentioned. Seventeen species of *salix* (willow) are enumerated of which only one *Salix purpurea* appears to be indigenous to Britain. The Aspen tree *(populus tremula)* is occasionally met with in the neighbourhood of Yokohama. Conifers are tolerably abundant. There are four pines, the commonest of which is *P. massoniana* forming the bulk of the pine woods throughout the country.

We are glad to see that Mess. Franchet and Savatier do not share in the mania which induces so many botanists to create species out of mere varieties, a mania which has introduced more confusion into the classification of conifers than into the systematic arrangement of any other botanical order.

Of Firs nine species are enumerated. There are five Junipers, none of them, however, identical with the Juniper of Britain. Nor is the common yew *(Taxus bac-*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

caias) found in this country, though two other species of the genus are not rare.

Such is a brief outline of the contents of this remarkable work. The second volume will give the endogens and cryptogams, descriptions of all new species, and alphabetical lists of the Japanese and Latin names of the plants enumera ed in both volumes and of those figured in the illustrated native treatise on the Botany of Japan known as the *Somoku dsussetsu*, now unfortunately out of print. As we said in our previous notice, the work is much more than a mere catalogue. Of each plant enumerated the habitat, time of flowering, the varieties, the Japanese name or names, and the synonyms are given. The student is in each instance referred to the proper authorities where he may find the plant in question described, and its place in the natural system assigned to it, while all new species will be described in full. In addition, a mass of useful and curious information is appended to many of the articles, and it is difficult to conceive how our authors could have performed their task in a more complete and exhaustive manner.

No one need be afraid of the book because it is written in Latin. In all botanical works formal descriptions are invariably written in that language, as being briefer than any modern tongue, and accessible to the botanists of all nationalities. The Latin is of the simplest possible kind and intelligible to the veriest tyro. The authors' own observations are, however, written in French. To one point we would call their attention. The spelling of the Japanese names is very faulty, and as the work is destined for the use of botanists of all nations it would have been much better to have adopted the system of spelling used by English and Americans and commonly resorted to by the Japanese themselves than the redundant ear-spelling of Frenchmen. The briefest and most perspicuous system is the one first referred to and employed in Dr. Hepburn's dictionary, the vowels being sounded as in Italian and the consonants as in English. None but a Frenchman would recognise in "Phonzo" Honzo, in "Ts'tigouri" Tsuchiguri, in "Tourou Foudsi" Tsurufuji.

It is too late to make any alteration in the body of the work but there may yet be time to do it in the Index of Japanese names to be added to the second volume.

As Englishmen, too, we must confess to a prejudice against books printed on unsized paper. Nothing is more annoying than to find that your attempt to make a marginal note has resulted in a ghastly blot.

The typography and 'get-up' of the book leave nothing to be desired, the clearness of the print, broadness of the margin and opacity and thickness of the paper are such as to content the most fastidious bookbuyer. We have omitted to mention that a most useful bibliography of Japanese botany follows the author's preface. We feel sure that the book we have attempted to review will meet in Europe with the success it deserves but we trust that the authors will not be disappointed in awakening some botanical enthusiasm among foreign residents in Japan. We repeat that no such exhaustive work on the flora of any country East of Singapore has ever appeared and a thorough and conscientious study of it enables us to say without any doubt or hesitation that the Enumeratio is an absolutely indispensable guide to all who may wish to made themselves acquainted with the floral treasures of the beautiful country in which we live.

A Budget of Japanese Notes.

Dreams.

*Yumé**

There are various opinions about the importance of dreams amongst the Japanese.

During sleep the thoughts wander into various channels and are not within the control of the dreamer. There is an old Chinese book called "Shin-rai" which contains an account of an official named "Sen mu" who divined fortunes from dreams, therefore in ancient times dreams must have been deemed of importance.

In Kan (China) there lived a man named Tei-ke who dreamed that a pine tree grew from his abdomen. He eventually rose to the rank of Dai jin.

In the times of the *To* (dynasty of China about 618). Rihaku dreamed that flowers *budded* from the point of his pencil.† He became a celebrated caligraphist, and learned scholar.

There are many instances similar, even in more modern times.

Dreams are divided into five classes *(Go-mu)*.

First *Re-mu* are dreams of *Kami, Hotoke* (Gods and Idols) Ancients, Ancestors &c., and olden times.

Second *Jitzu-mu*. Dreams of matters unthought of in waking hours but these dreams are usually complete, and perfectly remembered upon awaking. This class of dreams is that from which fortunes are usually divined.

Third. *Shin-mu*. Dreams in accordance with daily thoughts and events, past or present. These are not real dreams of fancy, but merely the thoughts of our waking hours continued in sleep.

Fourth. *Kio-mu*. Dreams of impossibilities. These originate from a wearied mind or body and are useless for divination.

Fifth. *Datzu-mu*. This class contains miscellaneous dreams, such as receiving gifts, outwitting opponents, or being guilty of "sharp practices."

There are various spells, charms and other means to avert the evil influences of unlucky dreams. One of these is to write these Chinese characters *Ba-san-ba-yen-te*‡ on a piece of paper and paste it on the ceiling of a sleeping room; *Shu ya jin*, the god of night, (the Morpheus of Japan) is herein addressed.

Baku (Tapir §) is said to "eat dreams." If sketched on screens, or on the paper wrapper of the pillows, or used as a design in the patterns of the bed quilts, dreams will be warded off. Those who awake in a state of fright after horrible dreams are to call out. "*Baku kuye, Baku kuye*" (Tapir come eat, Tapir come eat.)

The following are of good portent to dream of.

A summer scene with green Wistaria.
In the first dream‖ of the new year to see a hawk (or falcon) or to see egg plant (*Nasubi.*)
To mount to the skies.
To dream of fine weather succeeding a storm.
Placing large stones in a garden.
Climbing cliffs.
To be buried in the earth, dead or alive,
Of planting trees.
Digging drains.
Of land slips.
Of being in a cave.
Trees growing from the mats of a room.
Crossing the sea.
Chewing unboiled rice.
Having one's hair dressed.
Meeting a Genii.

* There is a book called "Yume Han Dan" in which the student will find much information as to native ideas about dreams and the way to interpret them.

† The pencils used by Chinese and Japanese in all time, being only a reed about 6 inches long, holding a brush of rabbit or deer-hair.

‡ From evil dreams and harm deliver (me).

§ Baku is translated Tapir by Hepburn, it is said by natives to have a horn on its forehead.

‖ At *Hatzume*, or the second day of the new year, a slip of paper is sold on which is printed a native ship which contains the seven gods of luck Yebisu, Daikoku, Bishamon, Benten, Hotei, Fukuroku jin, Jiuro jin and placed under the pillow in the night.

Original from UNIVERSITY OF CALIFORNIA

Praying at a Shrine.
To meet important or celebrated people.
The hair growing white.
Seeing *nobori*—(flags on bamboo poles.)
Sitting in an elevated room.
One's own body giving forth radiance.
To have side-arms at hand (swords &c.)
Removing to a newly built house.
Wearing new clothes.
Wearing a hat of hemp *mino gasa* or *kasa*.
Women wearing a sword.
Having ulcers on the face.
Wearing a *Kamori* (head dress).
Cleaning out a well.
Of rice bags.
Of spitting out gold and silver.
Seeing a looking-glass.
Of sweeping away cobwebs.
A ship in full sail.
Riding in carriages.
Travelling on a wide road.
Crossing a bridge.
Drinking milk.
A wine-drinking party.
Of a funeral
Of archery (targets, bows and arrows.)
Collecting wild flowers.
Rice raining from the skies.
Drinking water from a valley.
Of *Tori i* (perches at Shintô shrines.)
Of rainy weather.
Receiving a present of a fan.
Being in prison.
Scattering seed.
Climbing hills.
Gathering dragon flies.
Being stung by a centipede.
Of turtle or of tortoise.
Of bats.
Horsemanship.
Cats and rats.
Bathing.
Of being wounded by robbers.

The following are unlucky subjects to dream of.

Frosty weather.
Black lowering clouds.
Mulberry trees broken.
Eating persimmons.
Giving a friend a sword.
The hair falling out.
Perspiring violently.
Catching cold, or coughing.
Mirrors breaking.
Ants on the mats.
Eating wheat flour jelly *(ame.)*
Eating fruit.
Playing on *tsusumi* (small drum).
Meeting a crowd of people.
Using a walking stick.

To dream of the sun or moon shedding tears of blood is a sign of the approaching death of a parent.

Females who dream of swallowing the sun or moon bring forth children who become remarkable characters in history. The mother of Nichi ren sho nin dreamed she swallowed the sun, hence the boy's name.

The mother of Hideyoshi, when enceinte, had a similar dream, from which the child was named Hideyoshi maro.

To dream of a bear is a forerunner of begetting a good child.

To dream of the Ni-ô-son or of folding up screens is a sign of old age.

Dreaming of running water is an emblem of family happiness, (peace between husband and wife.)

To dream of eating pears is an emblem of family broils, or of having teeth pulled out, of loss of friendship of one's relatives.

If the outer shutters are split, it is an indication that the servants are faithless and will desert the dreamer's service.

To dream of getting wet from a sudden shower of rain, foretells an invitation to a feast.

If one dreams of rapid promotion, great care is necessary, or something may occur that will bring disgrace, and dismissal from the present position.

Bad dreams should not be told, until a mouthful of water is used to rince the mouth, and ejected facing the east, using the following incantation—*A ku mu so moku wo arawasu* (behind a bad dream there is good)*. *Ko mu shin gioku wo mesu* (good dreams are followed by evil).†

The wife of Yoritomo was the daughter of Hojo Tokimasa. There were two sisters, the younger was the beauty, and Yoritomo coveted her and wrote love letters to her. The night before these letters arrived she had a dream that she was attacked and wounded with a sword. Telling her dream to her waiting maids, they recommended secresy, as the dream was one that portended good fortune, but being anxious, she spoke to her older sister, who when she heard the details offered to purchase the dream. The younger sister hesitated to sell her senior an unlucky dream, but she was at length persuaded into selling it for a mirror that had been given the elder sister by their mother before her death. Therefore all good luck that came to the younger girl the elder was to benefit by. Eventually she succeeded in displacing her more comely sister and became Yoritomo's wife.

When Iyeyasu was the Chief of the province of Mikawa, Imagawa was one of the Trustees during the minority of Iyeyasu. When Iyeyasu was 18 years old on the eve of new year's day he dreamed that in his left hand he held the Chinese character *Kore*. This is composed of the character "*Sun*" under man. Abe Okura an old man read the dream thus. This character if divided means "To hold in the left hand all men under the sun," and therefore the young lord was fated to be the "Chief over all men under the heaven."

Nanori (Name rider.) or *Imina* (Especial Name)

This is a distinctive name given when the youth of Japan are admitted to manhood.

The name of the Ten O, or rather the Chinese characters used, were prohibited from vulgar use.

The gentry and cavaliers (*bushi*) or *samurai* ‡ used in addition to their family name, their given name, and their *sei*, the *na nori*, in the order named, but if given the title *kami* the given name was omitted, and replaced by the *kami*. Thus Matzdaira Gerozaimon, would be Matzdaira Sagami no Kami Minamoto Tadachika, *Tadachika* here is the *Na nori*, but of late this name, *nanori*, is used as the *yobi-na*, or given name, after manhood is reached.

The period of admission to manhood is marked by a ceremony called *gem-buku*, explained elsewhere in these notes, and is the time the *nanori* is chosen, which is composed of two Chinese characters. Many families have characters that are frequently used from generation to generation, one of the characters of the name of some former celebrated man of the family *sei* is sometimes chosen, if from the name of a man of high rank the underneath character is chosen. Books are frequently ransacked for names of good omen for the boy thus entering upon his career.

Titles of Rank. (*Kurai.*)

The members of the Imperial family such as *Mia* and *Tenshi no ko* were and are still designated as *Shin O* (of Royal parentage) and are divided into four grades, thus, I *Itzupon* (read Ippon) written *Hitotzu*; II *Ri on*; III *Sambon*; and IV. *Shion*.

The Nobles and high officers, including the Kugé, were designated by the title *I* of which there was the front grade, *sho*, and the vice grade or *jiu* for the first three;

---

* A silver lining to every cloud.
† Laughter is followed by crying.
‡ *Bushi* is the *on* and *Samurai* the *Kun* of the same character. The *on* or *koge* is the Chinese reading, of which there is the *kan on* or ancient classical, and *Go on* or modern buddhist, and *Kun* or *Yomi* the Japanese reading. See Alcock's, also Rodrigues' and Hoffman's Grammars for disputations on this matter.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

thus *Sho-ichi-I, Jiu-ichi-I, Sho-ni-I* &c. § From the fourth down there was again the upper or *jô* and the lower or *gé* of these. Thus *Sho-shi-I no jo Jiu-go-I no gé* to the 8th eighth or *Jiu-hachi-I no gé*. The next and lowest grade was *Shoi i*.

Official Titles.

(Kan mio.)

There are one hundred names that were formerly bestowed by the Ten-O. Most of these called for no service to the State, unless when residing within the *Dairi* (palace), and were sought for merely to establish precedence at audiences; the following are the principal ones.

Sessho (*Setzu seu.*)—Regent (Representative of Government.)

Kanbaku (*Kuwan baku.*)—Imperial speaker (Portal mouth piece.)

Dai jo dai jin.—Great Government Important officer. The Premier.

Sa dai jin.—Left Important officer. Vice Premier of the left.

U dai jin.—Right Important officer. Vice Premier of the right.

Nai dai jin.—Private Imperial officer. Chief of Imperial Household.

Jun Dai Jin.—Equal to Dai Jin. A honorary rank given to old officers, as reward for long and faithful service.

These two latter are not now held by any Japanese, and seem to have fallen into disuse.

Dai Na Gon.—Great Protest enterer.
Gon Dai Na gon.—Vice Great Protest enterer.
Chiu Na gon—Middle Protest enterer.
Gon Na gon.—Vice „ „
San gi.—Reasoner, Discusser, Councillor.
Sho Na gon.—Lesser Protest enterer.
Tai Sho.—Great Commander.
Chiu jo.—Middle „
Sho sho.—Lesser „

Of the three last *sho* or *jo* there are *Sa* left and *U* right of each—thus U Tai Sho, Great Commander of the Left, &c.

The eight departments *Husho*, or *Has-sho*:

Nakatzhasa	Home Affairs.
Shiki-bu	Board of Rites.
Ji-bu	Board of Music.
Min-bu	Public Welfare.
Hio-bu	War.
Gio-bu	Law and Police.
O-kura	Finance.
Ku-nai	Court.

had each a *Kio* or chief. *Tai yu* Great assistant, and *Sho yu* Lesser assistant. All equivalent to the *Choku nin Kwan* ‖ of the present.

The remaining names are only of interest in so far as they were bestowed as rewards, (for a pecuniary consideration paid to the *Dairi*) and not even hereditary as a rule.

The title *Kami* was generally solicited by the relatives of the young nobles, Daimio and Hatamoto, who succeed to the chieftainship of the clan or family, and also young Daimio cadets, when admitted to manhood. Formerly the name of the province from which revenue was drawn gave the title, but latterly this was not the case, and the applicant chose the name of the province or office that became his title, pretty much like a baronet, barons, &c. of Europe lately, especially England, raised to the peerage. For instance, the same name, such as Kaga no kami was held by the chief of the Mayeda family, prince Kaga, who had a revenue of 1,200,000 *koku*, and by Hattamato of 500 or 1,000 *koku*. Certain families managed, generation after generation, to gain permission to use the same old title. Besides names of countries or provinces and places in Japan, there were many such as Kamon no Kami. *Kamon* meant sweeper and scrubber. Therefore the title inferred that he was the chief of the sweepers of the Imperial Palace. The Regent, prince of Hikoni, who was assasisnated in 1861, bore this title.

Dai Zen no Dai Bu, borne by the chief of the family of Mori, and prince of Choshiu, means great chief of the Kitchen (Imperial of course).

Oribe no Kami borne by a Hatamoto, means chief of weavers. *Hiogo no Kami*, Chief of military Stores,

This title of Kami, like the foregoing official titles or grades of rank, was not hereditary, but some families succeeded in having the patent renewed, so long as they did not get into official disgrace.

§ At present *Sho-ni-I* is the highest, and as yet held by but a couple of natives. The next grades, to the fourth, are also only held by the most powerful of the former Daimios and influential Kuge. The *Sho* and *Jiu-go-I* are held by the majority of the Daimio. Kuge and Bureaucracy of influence. such as heads of Department &c. The sixth rank is not as yet extensively given—or much sought after—by the *Bushe*, but is occasionally met with.

‖ *Choku nin Kwan.* Appointed by Imperial Commission. (Crown Appointment.)

BOOK-PRESS LAWS.

(*Nichi Nichi Shimbun*, of September 5, 1875)

[Notification.]

No. 135,

It is hereby made known that the laws relating to Publications, which were notified by the Educational Department in the 1st month of the 6th year of Meiji (February 1872)—have been abolished, and the following rules drawn up anew in their stead.

(Signed) Sanjô Saneyoshi,
Prime Minister.

September 8, 1875.

Publication Laws.

I.—Persons who have composed any works or have translated any Foreign work, and are desirous of publishing the same, must report the matter to the Home Department, prior to such publication.

Note.—Regulations for Companies, rules for private schools, or short advertisements which are not printed for sale, are not included in the above.

II.—When a work of one's own composition or a translation of a Foreign work, is published, there shall be granted the right of exclusive sale for the space of 30 years. This right of exclusive sale is styled copyright. (*Han Ken*).

Note.—It is, however, at the option of the person concerned to make application, or not, for the copyright. Accordingly those desirous of possessing it must send in a petition and so obtain leave, while, in cases where no such application is made, any person whosoever may publish the work.

III.—Although, in making the report prior to publication, or the application for copyright, it is not necessary to forward a draft copy of the work, still a copy may at times be demanded and examined.

IV.—Should there, upon examination of the draft copy or of the presentation work, be found in such any writings that injuriously affect Government affairs, the publication and the sale thereof shall be prohibited, and the blocks may also be caused to be destroyed.

V.—The report prior to publication, or the application for copyright, must be made through the Local Government office, either one's own office or that of the place of one's residence.

Note.—When the Author or Translator belongs to a different Local jurisdiction from the Publisher, it should be made through the office of that in which the Publisher resides.

VI.—In the case of works that are of exceptional importance permission may be given for an extension of fifteen years on from the termination of the period of the copyright.

VII.—For the purpose of giving permission for copyright, a certificate inscribed with the period of years, will be issued. Upon the termination of such period, any person whosoever is allowed to publish the work.

VIII.—In the case of original compositions. or translations, that are very voluminous works, the compilation of which extends over several years, successive portions only being published at different times, copyright may be granted and the period of years calculated in the case of each separate portion of the work.

IX.—Any person desirous of continuing a work, composed or translated by another, for which copyright has already been granted, must make arrangements with the original holder, and send in a petition bearing the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

seals of both persons. In case of the death of the original holder, his heir may be considered as the holder.

X.—Any one who desires to revise, abridge or add notes, appendix, or plates, &c., to a composition or translation by another person, for which copyright has been granted, and to publish the same, must in like manner, obtain the consent of the original holder. The forms for the petition in such case must be in accordance with the foregoing rules.

XI.—Should any one be desirous of republishing, with corrections, abridgements, or additions of notes, appendix, or plates an original composition or a translation of his own for which he already possesses copyright he cannot obtain such copyright unless he make a fresh petition. The old copyright will, however, continue to hold good in cases when it is only the form of the work that is changed, as for instance by an increased or diminished number of volumes, or when the work is republished in its original form.

Note.—The application by petition, and the presentation of copies of the work must be in accordance with the Book Laws.

XII.—If, upon the death of the author or translator, his heir come to possess the power of publication, copyright shall be granted to him upon his making petition for the same.

XIII. The unexpired portion of the period of copyright shall pass on to the heir of the original author.

Note.—The heir must report to the Home department the fact of his having received the transfer of the copyright.

XIV.—A Person publishing an original composition or a translation by another person must in any case obtain the consent of the author or translator. His petition for copright, and his report regarding publication, must necessarily bear the seal of the author or translator in addition to his own,

XV.—It is not permitted that works for which copyright has been granted shall be pirated either in whole or in part, by other persons.

Note.—This rule does not, however, apply to commentaries on the works, or quotations from them adduced for the sake of proof.

XVI.—Should two, or more persons, make petition simultaneously, or at a very short interval, for copyright to be granted for identical compositions, or translations of the very same work, copyright may be granted in each several case. Should the facts of the case be confused, the matter must be sifted, after which the permission may, or may not, be granted.

XVII.—In the case of foreign works that have already been translated by some one else, should a properly guaranteed person again translate the same work, correcting the others errors, filling in ommssions and making the whole more easy of comprehension,—and petition for copyright thereof, such may or may not be accorded after enquiries have been instituted.

XVIII—No objection is raised in the case of original works or translations bearing the same name but being different as regards the text.

Note.—Outside the cover must be written. "Original Works, or Translation by so and-so."

XIX.—There will be kept at the Home Department, an Index of all works published, and this will be notified from time to time.

XX.—After a work has been prepared for publication, three copies of it must be presented to the Home Department; and in the case of those for which copyright has been granted, there must also be paid, as Licence fee, the value of 6 copies of the work. The sale of the work is not permitted until after the presentation of the copies and the payment of the Licence fee.

Note—After publication, the price must be stamped on each separate volume.

XXI.—Upon works published must be inscribed the residence and full name of the author or translator. In cases when the name is unknown, a statement to the effect must be written down. There must also be added the date of publication, and that of the quantity of copyright together with the residence and name of the publisher. It is not allowed to use an assumed name.

In the case of the copyright being inherited, or sold, or in the case of publication of portion of a work (being granted to another person,) then there must be given instead the residence and name of the heir, purchaser, or person who has received the right of partial publication.

XXII.—The copyright may be purchased or sold at will. When such purchase or sale takes place, a report, bearing the seals of both the parties, must be sent in to the Home Department.

XXIII.—There is no objection to a copyright being distributed by transfer or sale of a share thereof, so that the same work may be published by various persons at once. This is called "distributed publication" (*bumpan*)

Note.—A report must be sent in, as shown in the foregoing rule, bearing the seals of both parties.

XXIV.—Any one neglecting to send in a report upon the inheritance, or purchase, or sale, of copyright, or upon distributed publication, or revised publication of a work, shall lose such copyright.

XXV.—In the case of alteration of the name of a work subsequent to the petition being granted, or adding a preface after the presentation of copies of the work, the fact must be reported and a fresh presentation made. Any person neglecting to furnish such report or to make such presentation shall forfeit his copyright of the work.

XXVI.—Should anyone lose his certificate of copyright a fresh one should be issued to him upon his making a report to that effect.

Note.—There must be paid, as fee, the value of 3 copies of the work.

XXVII.—Persons publishing novels, or books of poems must also conform to these Rules.

XXVIII.—In the case of illustrations, a report must be made in each separate instance, in conformity with Rule I.

Note.—Copyright will be granted.

LIST OF PENALTIES ATTACHED TO PUBLICATION LAWS.

Article I.—Persons publishing works without giving notice to the Home Department, or giving out that they are in possession of a certificate of copyright without having obtained this, or commencing to sell a publication without having supplied copies of it to the Government or without having paid the copyright fees will forfeit their type, all the printed copies (of the publication) and the proceeds of its sale (up to date).

Article II.—Persons violating the copyright of other people by publishing works after making fraudulent imitations of the type, or by publishing works with slight alterations in certain words or passages or in the illustrations, or by publishing works under new titles with a few additions, will be subject to a fine of not less than *yen* 20 and not exceeding *yen* 300, and will forfeit the type, all the printed copies and the proceeds of sale (up to date) to the publishers.

Article III—Persons selling works knowing them to be publications in respect to which articles I and II have been violated will be subject to a fine of not less than *yen* 5, and not exceeding *yen* 100. In the case of persons selling books, or other publications knowing that they are works in respect to which Article II. has been transgressed,—all the copies of these works on hand and the proceeds of sale (up to date) shall be taken from them and given to the publishers.

Article IV.—Persons publishing works which do not bear the names of the authors or in which the residences of authors do not appear, and persons selling such publications, and persons publishing works which bear names which are not the names of the authors, or names which are the names of other persons, and persons who knowingly sell such publications, shall be subject to imprisonment for a period of not less than ten days, and not exceeding six months. N. B, the forfeiture of type in these cases is the same as in Article I.

Article V.—In the case of publications, being either original works or translations, which transgress the law of libel or violate Article XII or following Articles of the Press Laws the authors will meet with the punishment provided for such transgression. N. B. the Authors of such original works or translations will be considered the chief offenders.

Article VI.—The Authors of original works or of translations which are indecent and calculated to corrupt men's morals,—all kind of novels, songs,

and pictures being comprehended, will be subject to imprisonment for periods of no less than 30 days and not exceeding one year and to a fine of not less than *yen* 3.00, and not exceeding *yen* 300.

Article VII.—Should the officers of the Judicial Department receive a complaint stating the transgression of these Regulations by any publication, the type and number of printed copies on hand will be seized, and on the offence being proved will be confiscated to the authorities.

Publishers of such works who having printing type have conducted the printing themselves, and printers who have printed such works to order knowing them to transgress the regulations will forfeit all their type and plant.

Article VIII.—In the case even of persons who have received certificates of copyright but whose works after publication are found to transgress these regulations, they will be punished according to the articles of these Regulations.

APPENDIX.

From the date of the issue of these Regulations all previous notifications relating to publication are cancelled. With regard to all publications previously issued, within four months from the date of the issue of these regulations, fresh applications must be sent in in accordance with these regulations. It is to be borne in mind that in the case of all publications in respect to which fresh applications are not sent in within this period—the right to publish will not be accorded.

In the case of applications made with reference to publications previously in issue, copyright fees must also be paid.

N. B. Copies of these works however need not be supplied.

In the case also of all works published by In, Shô, Shi, Chô, Fu and Ken, with the exception of Edicts and public notices, and the Gazette and Regulations of each office, notice must always be given to the Home Department.

(To be continued.)

Law & Police.

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul-General;
And
F. R. WETMORE and C. DRAKE, assessors.

ITO HACHIBEI vs. WALSH, HALL & Co.

Monday, 6th September, 1875.

In this case, plaintiff claims a sum of $10[illegible],715.42 balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,183.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Cross-examination of Ito Hachebei's continued.—The entries of 200,000 *rios* and $239,000 odd were made from items given by Mr Irwin to Benzo. I was present when the entries were made by Irwin's requests. They were made upstairs at Benzo's house. I was not present when the figures were agreed upon, I enquired how those figures had been arrived at. I satisfied myself of their incorrectness, and having done so, I put my half-seal at the top, but not at the bottom. There was no necessity to see Mr. Irwin about it, and I did not. There was no account from which those amounts were made up shown to me. If I had known how the figures had been arrived at I should have been satisfied, but I did now know. I ascertained that the entries were false, but I permitted the half-seal to be used as I was assured that the correct entries would afterwards be made. I do not know why those figures were used, but the entries were made on account of the expected return of Mr. Walsh. Zengiro and Rikichi were fully aware of the proceeding from the beginning. Saito knew about it too. Benzo is still responsible to the end of the transaction. The reason I allowed the fraudulent entries to be made was, because it was promised that corrections would afterwards be made. I was deceived about the promises made of having the correct entries afterwards made. It was not done exactly to oblige Irwin, it was a regular business transaction done on the understanding that correct entries were afterwards to be made. The House of defendant's being such a large and important one I allowed the false entries to be made, as I believed that the promises given would be carried out. It did not benefit me. I thought there was no harm in doing it as Benzo promised to bring me corrected accounts: Benzo was requested to make the entries for the purpose of their being shown to Mr. Walsh on his return to Yokohama. I did not think there was the least harm in doing it, as Benzo promised to bring me corrected accounts. Benzo was requested to make the entries for the purpose of their being shown to Mr Walsh on his return to Yokohama. I did not think there was the least harm in doing it as I concluded the accounts would afterwards be corrected. Beyond Irwin's request there was no reason why I should oblige him by making the false entries. The false entries were to be corrected that day. That was the intention, but they were not corrected. If the entries had been corrected there would have been no lawsuit like the present one. They have never been corrected. I borrowed $20,000 on the 22nd November 1871, and 5,000 rios on the 30th November 1871. The receipts shown me are those I gave for the two sums I borrowed. The tag attached to the book in which the receipts are entered in is a memorandum. I did not destroy the foregoing receipts, because the corrected accounts had not been given me. On the 10th day of the 10th month 4th year of Meiji I stamped the receipts for $20,000. The whole and half seal were put on.

If a seal as well as the word *adzukari* is attached to a receipt it is all right, but if the word *adzukari* is used and the seal is absent the receipt is incomplete and would be valueless. It is the presence or absence of the whole seal at the bottom of a receipt that makes it genuine or valueless. The use of the word *adzukari* has nothing to do with an agent using the seal of his principal. On the 23 of December last year Mr. Irwin requested to see the book "D," I showed it to him and gave him a copy of it. I made an exact copy on a small piece of paper and gave it to Mr. Irwin. The paper now shown to be is copy I gave [handed into court and marked exhibit "L."] Namekawa who acted as my interpreter wrote the entries now shown me. The whole seal does not appear on the copy, but it does in the original receipt for $20,000. I do not know why it does not; the party who made the copy can tell. In the receipt for 5,000 *rios* the whole seal appears both in the original and copy. The seals on the copy with that one exception agree with the original, The word *uketori* appears in the $5,000 receipt and the word *adzukari* in the $20,000 one. On the 23rd day 12th month I took the book shown me to the defendants and showed it to every one present. Nakamura Sobae entered into a partnership with me to do a dollar business, when I borrowed the $20,000. I gave no security. I do not know if *Shosha* rice receipts were given as security as I was in Tokio. I was in Yokohama when the money was borrowed, but I was not present when the money was paid over. At the end of the 6th year of Meiji I considered that the defendants owed me about $100,000, I knew this from certain statements made by Irwin at the end of the 4th year of Meiji. Defendants held securities of mine to the value of about $100,000 during the whole of the business. On December 10th, 1873 I borrowed $10,000 from drafts. The note produced is the one I gave. The interest and commission was to be 12% per annum. It was understood in the partnership arrangement that whenever I wanted to borrow money defendants were to lend me it. I just happened to want that sum so I borrowed it.

Court re-assembled at 2 P. M.

Cross-examination of Ito Hachibei continued:—The word 'commission," is not used in the promissory note I gave for $10,000. In January last year, I borrowed 5,000 *rios* from defendants. (note produced and acknowledged by witness.) [Note read: "At the end of March, 1874, I promise to pay to Messrs. Walsh, Hall & Co. $5,000, value received with the interest of same as before, signed Ito Hachebei to Messrs. Walsh, Hall & Co., 28th January, 1874."] At the time I borrowed this money I thought that defendants owed me about $100,000. The arrangement was that I was to borrow money when I wanted to. I wanted the use of the $5,000 for extra purposes. In the 10th month 1872, I think I borrowed $25,000 from defendants. I was borrowing and depositing money at that time with defendants. There were times during the year 1872, 73, 74 when I was pressed for money. I was often at defendants' office during these years. Sometimes I saw Mr. Irwin about the accounts and sometimes Mr. Walsh Iske was present at times and I saw him, but I did not say much to him. Iske being a new comer I did not say much in his presence. There were no conversations in Taketamé presence about this business. In the 3rd year of Meiji I had conversations

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

with Taketamé, but since this business commenced I did not speak much to him. I sent Benzo frequently and Kaske only on important occasions to defendants, about this business. Kaske was Benzo's clerk. Uchida Rikichi was my accountant or clerk. Kaske was not directly connected with me, Benzo would sometimes employ him to make up accounts. Saito was employed as an accountant and was sent with the accounts to defendants, so explain them. Saito had no authority to act for me with defendants. Saito was there to account for me on the subject of accounts. I will stand by whatever Saito did about the accounts by my instructions. Saito was never a servant of mine, dismissed and taken back again into my employ. I had every confidence in Saito so I employed him. I have no fear that Saito went beyond his instructions. I received some letters on the subject of the accounts from Tametake and I have replied to some of these letters. The letter shown to me is not an answer of mine to Tametake. I sent my son to defendants to try and get back the promissory note for $10,000. I gave my son authority to settle the $40,000 business. I did not send him on the subject of general accounts. I do not know if he exceeded his authority on the subject of accounts. The document now shown to me, I think is in Kaske's hand writing but I can't say positively. I do not remember writing and sending the above letter to defendants. The bonds not having been returned it looks like a document put into the hands of defendants. I do not recognise it or know anything about it. If Kaske and my son had sent this to defendants they would have acted very wrongly towards me. Being on friendly terms with Iske doubtlessly letters passed between us. I cannot tell just now, if Iske in 1872 wrote to me asking that I would settle a balance of account against me of about $12,000. I do not remember if Mr. Walsh wrote to me to square up and pay a balance of account. I do not remember asking defendants to give me time to pay. Kimura was not my clerk, he only came occasionally to help when we were busy with important business. In helping he kept my books and wrote letters for me. The document shown me is not in Kimura's handwriting. I was on excellent terms with Mr. Walsh at the time of the $15,000 transaction; we had no disagreement till the 6th month of last year. Before Mr. Walsh refused to enter into the $1,000,000 government bond speculation we disagreed. It caused me great inconvenience, but I did not get angry. It gave me great annoyance. I met Irwin afterwards at No. 14, and I requested him to make a settlement of the accounts. Took Kimura and Kaske with me and two people from Mr Walsh's. I repeatedly told Irwin that I was sorry, but that I should be obliged to bring a law suit if the accounts were not settled. Mr. Irwin neglected to furnish me with accounts. On the 18th December last year that I went to Mr Irwin's at No. 14. The 23rd December was the last time that I went there. I think it was in June, 1874 that I first went to Irwin's house. I did not ask Irwin to recover money from Mr. Walsh. I never offered 30 per cent of the claim to Irwin if he would get me the money I claimed from Mr. Walsh. I remember nothing about any such offer. I employed Namekawa as interpreter at that time. I know Mr. Smith of No. 14. On the 18th and 25th December, 1874. I saw Mr Irwin at No. 14, but not Mr. Smith. Mr. Irwin was alone in his office. I think it was in the 10th month of last year that I first rendered my accounts to defendants. I did not render it before because it was Mr Irwin's request that it might stand on account of the large losses. I would not do anything that Mr Irwin requested. It was let it stand at Mr Irwin's request as he said it would seriously affect his position. A large speculation was to be discovered to cover up the losses. I did not know that Irwin ceased to be a partner in 1873. I only found it out on the 6th June last year when I went to defendants about the million dollar speculation. I did not know it when I borrowed the $5,000. I did not tell Mr Walsh about the false entries, the thing was done and the book then returned. I do not know when Mr Walsh actually returned. There was no written contract about the rice speculation. The reason why there was no written contract can be found out from Mr Irwin. Mr Irwin did not want one, and none was made. The parties who kept the accounts of the Rice transactions are the ones to give information about those accounts. A perfect record was kept.

Mr. Ness here called for the original record of the Rice transactions which was put into the hands of the witness.

Witness continued.—I was in Yedo at this time, and I don't know anything about it.

Case adjourned till 10 o'clock, to-morrow morning.

Tuesday, September 7, 1875

Cross-examination of Ito Hachibei continued: There was a special contract between myself and defendants about charging compound interest. It was a verbal contract made with Irwin in defendants' office in the latter part of the 12th month 4th year of Meiji. At that time it was promised to me that the extensive losses should be made up to me, and that if I would wait for a settlement, interest would be allowed me. I was present when this was agreed on. It was in the latter part of the 12th month 4th year of Meiji. I think Mr. Walsh had then returned. I did not see him; but Benzo and Iske probably saw him, and borrowed the $75,000. I heard, and knew, that Mr. Walsh had returned. I do not know if I and Sobae borrowed $125,000 on the 10th Nov., 1871. I was not here then. I know a large sum was borrowed about that time. I was present. It was the occasion of the $181,000 transaction. I, Sobae, and Benzo went to defendants, and informed them that I should want $181,000. I was not in Yokhama on the 26th 9th month 4th year Meiji, and don't know about $120,000 and $15,000 being borrowed from defendants. It is possible that some money was paid to defendants about the 1st day 10th month, by Sobae and myself. The party who had charge is the only one who can say if receipts were obtained.

Mr. Ness again called for the entire records of the rice transactions kept by plaintiff in 1871.

Mr. Dickins said book "D" and exhibit "K" contained all rice cash transactions with the possible exception of certain money left over from the exchange transactions.

His Honour thought that plaintiffs could not give any further information.

Witness re-examined by Mr Dickins: I do not know if some of the entries in book "F," without my whole seal, are genuine. The party who kept the book can tell. If my clerk says the entries are correct, I will acknowledge them.

Mr. Dickins called again for the production of the securities of the plaintiff, deposited with the Hongkong and Shanghai Bank by defendants.

Mr Ness said they could be produced if any hour was named.

His Honour finally ordered them to be produced this afternoon.

Witness continued: Mr Irwin did not ask for a written paper at the commencement of the rice transactions. I handed defendants exhibit "H" at that time, but it refers to dollar transactions only. My agent (Saito Kaske) prepared them. Kaske and Rikichi kept the accounts. The false entries in book "D" were to be rectified the same day, or the next, and the proper accounts made up as soon as possible. I did not see Mr. Irwin at the time the false entries were made. I do not think there was any intention to defraud Mr. Walsh through the false entries but I thought it very strange that the false entries were required at all, as they were not to be used or shown to any one. I never saw any statement of accounts bringing out the balances mentioned in the false entries. I remember when the book "D," containing the false entries, was given back to me. It was in the latter part of the 3rd month, 5th year of Meiji. Benzo, Zengiro, and I were present when this book was handed back to us. The corrected account was not prepared, so this book was handed back to me. It was so previously agreed. It was agreed originally between Benzo and Irwin, and was finally ratified by Zengiro, Rikichi, and myself. I heard of the agreement having been made between Irwin and Benzo. I did not have any conversation personally with Irwin about it. Irwin never asked me to return the book "D"; he has asked to see it. When shown it he did not ask to have it given back to him; he requested a copy, and I ordered Namikawa to make him one, and it was given to him. I do not know if any request was ever made by Irwin to have my whole seal put on the false entries. Nobody that I know of has ever asked that my whole seal should be put on the false entries. During the years 1873, 1873, and 1874, I cannot remember receiving any account from defendants containing the false entries. I remember the account now produced [dated 12th January, 1875] being shown to me by my counsel. I think that no account previous to that one was sent me by defendants. I cannot remember receiving one. I recognise the paper (accounts) shown to me. I think Fukutame wrote it. It is an account between defendants and myself.

The paper shown me does not contain the false entries. The entries of $40,000 in the paper refer to the sum of $40,000 which was borrowed, and for which a promissory note was given. Hashimoto Benso knows about this loan, as he had charge of it. The rice business agreement was the same in every particular as the one concerning the exchange business. The percentage of losses was to be the same.

Court adjourned till 2 p.m. On reassembling

Mr. Ness announced that Mr. W. H. Harries, of the Hongkong

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and Shanghai Bank, declined to produce the securities of Ito Hachibei, deposited by defendants with the bank as security for money borrowed, unless he was compelled by an order from the English Court to do so.

His Honour said he would see if he could not compel the production of them, and would take steps to do so.

Re-examination of Ito Hachibei continued by Mr. Dickins: The value of the securities deposited with defendants (as mentioned in the 6th paragraph of the petition) is 100 035 yen. If they were negotiated they would bring that sum. They were deposited as security against a possible failure on my part to make good moneys received from the defendants from time to time. I deposited $20,000 with defendants. That was my share by the agreement. No further sum was required from me by the agreement. My residence was in Tokio, and I know nothing about any matters that were transacted by my agent. I was present sometimes at business transactions, and those I know about. The business with Sobae was commenced on the 26th, and I did not come down to Yokohama till the 30th, so I do not know what was done on those days. I have no other reasons to give than those I have already given as to why I did not press for a settlement of accounts in the year 1872 and 1873, and first half of 1874. It is my business to lend money in Yedo, and I sometimes required money from defendants to carry on the business transactions we were engaged in.

Adjourned till Friday morning at 10 o'clock.

A MESSAGE TO THE JAPANESE.

To the Editor of the "Courier-Journal."

If it were possible through the medium of a newspaper to communicate with the inhabitants of some of the out-of-the-way corners of Japan—and who knows? for "in the fall" leaves are scattered in most unexpected places—it might be worth while to give a hint or two to those strangely-refined and cultivated creatures who are preparing for "The World's Fair" at Philadelphia next year.

Would it be too much to ask of them to set aside for one year the prejudices of their late education amongst us, and their admiration for the manufactures and habits of "machine-driven nations," and to unearth the real art-treasures of their store-houses for the benefit of the world?

In the London International Exhibition of 1862 the contributions from Asia, and especially from China and Japan, attracted the greatest interest and admiration (for they taught us in a limited sense some great art truths), and the inhabitants of Europe, as well as America, will flock to Philadelphia in 1876—not to see what I once saw in Boston, a highly-cultivated and "crammed" Japanese student, with "stove-pipe hat" on his head and a chromo-lithograph under his arm, exhibiting his skill in modern sciences—but rather to meet face to face, for the last time in the history of international Exhibitions, the marvellous decorative work of old Japan, as seen in its embroideries. its metal work, its enamels, ivories, porcelains, Satsuma and all keramic wares.

If perchance a leaf of this newspaper should drift into the interior of Japan—far beyond custom-houses and "treaty limits," where "*Tojins*" fear to tread—it might alight in a quaint little colony where certain high born exiles still work and weave in primitive fashion, exchanging their silks for the necessaries of life; and it *might* suggest to them to exhibit their fabrics for once to the outer world, not so much for their profit as to their honor. If another of the leaves on which these words are printed, drifting down a stream between hanging woods, came suddenly to a stand in a quiet pool (surrounded with thatched sheds on which grew the purple iris), where a paper-maker was busy at his work, he might be touched with pity at its poverty and incompleteness, and choose to reveal some of the secrets of his art at the world's fair. Other leaves borne upon other winds—for a publisher's breeze is strong—might bear the general message that in England it is still a part of our creed to believe in "the inborn truth and beauty of the decorative art of Japan;" also that a great and monumental book is now in preparation in England on this subject, and that a distinguished artist, lecturing lately before the Royal Institution of Great Britain, pointed to the study of the principles of Japanese art as the source of his power.

In the interests of art, then, I appeal to the Japanese, who we hear are to be largely represented at Philadelphia next year, not to do what some of their countrymen did in 1862, send goods prepared for foreign markets, but rather show us the primitive and curious handiwork of their forefathers, and any and every object of interest of *native invention*. Let us have models of houses and villages, showing the principles of decoration practically applied. Let us extend our knowledge of the use of leaves and grasses, and even trees, in decoration, and learn to treat bouquets and cut flowers as maimed and imperfect things. Let us see and handle the exquisite fabrics in which the privileged of their people have lived and moved for generations. Let us learn, by Japanese example, to show mourning for the dead by shades of blue, or other distinctive tint, and see how possible it would be to *banish black* altogether from the costume of civilized nations. And let us, above all things, learn from them the secret of that marvellous power of expression by the hand which is said to be the "heritage of Asiatics," remembering that "modern nations are just beginning to value what ancient nations are casting off.

If anything will tempt us across the wide waters to celebrate a "centennial of independence," it will be to see the works of Asia, which the energy of the American people will, for the first and probably the last time, have brought within our reach.

HENRY BLACKBURN.

London, July, 1875.

Shipping Intelligence.

ARRIVALS.

Sept. 5, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Aug 21, General, to Mitsubishi Co

Sept. 5, *Golden Age*, American steamer, Coy, 1,870, from Shanghai, and ports, Aug. 22, Mails and General, to P. M. S. S. Co.

Sept. 7, *Jessie Jamieison*, British barque, West, 465, from Liverpool, April 7, General, to J. C. Fras r & Co.

Sept. 7, *Cremona*, American barque, Gove, 608, from New York, April 23, General, to Chipman, Stone & Co.

Sept. 8, *Belgic*, British steamer, Metcalfe, 2,652, from San Francisco, Aug. 16, Mails and General, to O. & O. Co.

Sept 8, *Calnakyle*, British ship, Gordon, 573, from London, May 10, General, to Wilkin & Robison.

Sept. 8, *Oceanic*, British steamer, Jennings, 3,700, from Hongkong, Sept. 1, Mails and General, to O. & O. Co.

Sept. 8. *Parmenio*, British barque, Abbott, 369, from Sydney, N S.W., July 25, Coal, the Captain.

Sept. 9, *John Bunyan*, American barque, Graves, 666, from Newcastle, N.S.W, July 5, Coal, to P. M. S. S. Co.

DEPARTURES.

Sept. 7, *Nation's Hope*, British ship, Livingstone, for Puget Sound, in Ballast, despatched by Captain.

Sept. 8, *Menzaleh*, French steamer, Pasqualini, 1 008, for Hongkong, Mails and General, despatched by M. M. Co.

Sept. 9, *Belgic*, British steamer, Metcalfe, 2,652, for Hongkong, Mails and General, despatched by O. & O. Co.

Sept. 10, *Benjamin Sewall*, American ship, Pennell, 1,433, Destination uncertain, Ballast, despatched by Captain.

Sept. 11, *Oceanic*, British steamer, Jennings, 5,050, for San Francisco, Mails and General, despatched by O. & O. Co.

Sept. 11, *Ocean*. British steamer, Brown, 2,652, for Kobe and Nagasaki, Ballast & General, despatched by Jardine, Matheson & Co.

Sept. 11, *Golden Age*, American steamer, Coy, 1,870, for Shanghai and ports. Mails and General, despatched by P. M. S. S. Co.

Sept. 11, *Tokio Maru*, Japanese steamer. Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

PASSENGERS.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—After the despatch of our last mail summary a revival of trade in most descriptions of cotton goods took place, and a fair advance was established. As we close, however, trade is less active but prices, which remain unchanged, continue firm.

Grey Shirtings:—					White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.	$1 97½ to $2.05	60 to 64 reed	40 yds.	35 in. nom. per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„ nom.	2 25 to 2 60	Turkey Reds	24 yds.	30 in. 2¼—3 lb. per lb.	0.75 to 1.02½
8 lbs. 4 to 8 lbs.	6 „	39 in.	„ „	2.30 to 2 65	Black Velvets	... ...		8.75 to 10.00
9 lbs.	„	44 in.	„	2.55 to 3 00	English Drills	15 lb. 40 yds, 30 in.	... ...	3.30 to 3.40

Cotton Yarn.—

No. 16 to 24	per picul	$30.00 to 35.50	No. 38 to 42	per picul	$41.00 to 45.00
No. 28 to 32	per picul	$35 50 to 40.50			

Woollens.—More inquiry was noticeable during the week and slight advances on the still very unsatisfactory rates could have been established. *Plain Orleans, China figures* and *Chimagoro* were in some request, while Cloth still shows no sign of Improvement. *Mousselines de Laine*, although stocks are abundant, are readily taken off the market at former rates.

Plain Orleans	40—42 yds.	32 in.	6 25 to 7 80	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4 75 to 5.50	Multicolored „	30 yds.	30 in.	0.32 to 0.36
Italian Cloth	—30 yds.	32 in.	0 25 to 0.34	Cloth, all wool plain or fancy	48 in. to 52 in.		8.00 to 1.20
Camlet Cords	29—30 yds.	32 in.	6.25 to 7 25	Presidents	54 in. to 56 in.		7.00 to 0.80
Camlets Asstd.	56—58 yds.	31 in.	18 50 to 19.00	Pilots	54 in. to 56 in.		0.45 to 0 52½
Lastings Japan	22—30 yds.	32 in.	13 00 to 14 50	Union	54 in. to 56 in.		0.50 to 0.70
Plain Mousseline de Laine	—30 yds.	30 in.	0.18½ to 0.20½	Blankets, scarlet & green	7 to 8 lbs.	per lb.	0.40 to 0.42½

Sugar.—Stocks of all descriptions are heavy, and the demand is but limited.

Sugar:—Formosa in bag	per picul	4.50 to 4.60	China No. 5 Kong-fun	per picul	4.70 to 5.10
In Basket	„	4.30 to 4.40	„ No. 6 E-pak	„	4.50 to 4.60

„ No. 2 Ching-pak	„	7.20 to 7.70	Daitong	„	3 30 to 3.80
„ No. 3 Ke-pak	„	6.20 to 6 60	Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah	„	5.50 to 5 90	Kerosine Oil	per case	2.30

EXPORTS.

Silk.—Our fortnightly report dated 10th instant, was to the following effect.

"Total arrivals are in excess of last year for the corresponding period of the season, and it is remarked that Oshius are brought to market earlier than usual. Since the 24th ulto., settlements are 650 bales of Hanks, and 200 bales of Oshiu, leaving a stock of 800 bales.

Prices have been well maintained for all good Hanks and only show some signs of weakness for the common and inferior sorts. It seems to be felt that the comparative value of Oshiu Silks can no longer be maintained at the same rate as before, and they begin to show a downward tendency.

The shipments of the last three weeks are 1,262 bales making the total export since the 1st July 2,103 bales against 1,451 last year for the same period.

Silk Worms' Eggs.—The first supplies of the season are expected to arrive shortly."

Since the above was written, stocks have further increased, and prices under the pressure of unfavorable advices from home have given way to an extent which the short period under review does not allow us to determine.

			At Exchange 4s. 1¾ in London.	*At Exchange 5.27 at 6 m.s. in Lyons.*				*At Exchange 4s. 1¾ in London.*	*At Exchange 5.27 at 6 m.s. in Lyons.*

Common to Inferior		$370 to 390	14s. 3d. to 14s 11d.	frs. 38 to 41	„ Good	$530 to 550	19s. 10d. to 20s. 6d.	frs. 55 to 57

Tea.—Since the departure of the last American mail on the 24th ulto., our Tea market has continued steady but firm, and a fair amount of business has been done at undernoted quotations.

The demand seems almost entirely to run on the medium grades which comprise the bulk of the settlements; fine Teas are scarce, and finest and choice very difficult to meet with, in fact the supply of the latter class has been extremely limited this season.

Total settlements for season to date amount to 90,000 piculs, leaving abundance of supplies to come forward if required. This point the Yokohama dealers are quite willing to admit, the only question in point being the price to be paid. Our market is to-day rather weaker, and holders seem inclined to realize if they could do so with a further reduction of rates.

The *Lothair*, full, will have despatch for New York, on the 15th inst., and *H. A. Litchfield*, for same port, will speedily follow. Freights £2.5 to £2.15. The *Hants County* is loading for San Francisco at $8 per ton.

Common	$20.00 to 23 00	Fine	$36.00 to 38.00
Good Common	24.00 to 26 00	Finest	$39.00 to 42.00
Medium	28.00 to 31.00	Choice	nominal.	$45 and upwards; [very scarce.
Good Medium	32.00 to 34.00			

EXCHANGE AND BULLION.

Exchange.—In the early part of the past fortnight there were large sales of Private Paper at 4/1⅛ to ⅞ and at the close there has been a fair demand for Bank Bills, and rates are consequently very easy both for Bank and Private Paper. In *Gold Yen*, business is restricted to local requirements.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 1⅛d.	On Hongkong—Bank sight	⅛ per cent disct.
„ Bank Bills on demand	4s. 0⅞d.	„ Private 10 days' sight	⅛ „
„ Private 6 months' sight	4s. 1¼d.	On San Francisco—Bank Bills on demand	98
On Paris—Bank 6 months' sight	5.20	„ 30d. sight Private	101
„ Private 6 ms. sight	5.27 to 28	On New York—Bank Bills on demand	97½
On Shanghai—Bank sight	72½	„ 30 days sight Private	101
„ Private 10 days' sight	72½	Gold Yen	402½
		Kinsats	404½

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s., 1s 3d., & 1s. 6d per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s, 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s. 15s., and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical.

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞*CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

YORKSHIRE GAME PATES.
YORKSHIRE PORK PATES.
TONGUES, GAME, POULTRY.
PLUM PUDDINGS.
LEA AND PERRINS' "WORCESTERSHIRE SAUCE."

Fresh supplies of the above and numerous other table delicacies may always be had from every Storekeeper.

CAUTION.

To prevent the fraud of refilling the bottles or jars with native productions, they should *invariably be destroyed* when empty. Goods should always be examined upon delivery, to detect any attempt at substitution of articles of inferior brands.

Every Cork is branded with Crosse & Blackwell's name.

CROSSE & BLACKWELL,

PURVEYORS TO THE QUEEN.

SOHO SQUARE, LONDON.

At the Paris Exhibition of 1867, THREE Prize Medals, and at Vienna 1873, Two Grand Medals were awarded to CROSSE & BLACKWELL, for the marked superiority of their productions.

June 5, 1875. 1f. 12ms.

DIETZ & CO.,

St. Paul's Buildings, Carter Lane,

LONDON,

INVENTORS & MANUFACTURERS OF THE CELEBRATED

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

Unrivalled for Simplicity, Economy, Durability, Safety & Brilliancy of Light.

OVER 5,000 PATTERNS OF

Handle Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

May 22, 1875. B. 24ws.

BETTS'S CAPSULE PATENTS.

To prevent infringements, notice is hereby given, that

Betts's Name is on every Capsule he makes for the principal merchants in England and France,

thus enabling vendor, purchaser, and consumer, not only to identify the genuineness of the Capsule, but likewise the contents of the vessel to which it is applied.

The LORD CHANCELLOR, in his judgment, said that the capsules are not used merely for the purpose of ornament, but that they are serviceable in protecting the wine from injury, and insuring its genuineness.

Manufactories:—1, Wharf-road, City-road, London, and Bordeaux, France.

Yokohama, 6th July, 87. 12m.

ASTHMA AND

CHRONIC BRONCHITIS.

The most effectual remedy will be found to be

DATURA TATULA,

prepared in all forms, for smoking and inhalation, by SAVORY & MOORE, 143, New Bond-street, London, and sold by them, and all Chemists and Storekeepers throughout the World.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 38.] YOKOHAMA, SATURDAY, SEPTEMBER 18, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressea and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Our remarks in the issue of last week on the distribution of students sent into foreign countries were suggested by the report which reached us, that none of them were to receive the advantage of education in England. We have now good reason for thinking that this report was erroneous. The scheme of the Department of Education contemplates their eventual location at English institutions, for a portion, at least, of their foreign residence. As the students whom it is proposed to send out hereafter are to be those who have had all the training they can receive in the schools here, the foreign residence is intended to enable them to acquire the special instruction in technical and professional branches, which they cannot so well get here. In the attainment of such an object, no one country can claim a monopoly of advantages.

A translation of a notification from the Home Office referring to the proposed establishment of sheep-farms and schools where sheep-farming will be taught, will be found elsewhere. It seems to us that if a hundred or so of picked intelligent peasants could be encouraged to go down to Australia, serve on the sheep-runs for two or three years, and see how sheep are there raised by the million on very scanty herbage, the Japanese would learn vastly more than by their present project, though we shall be right glad if it succeeds. We are afraid of these schools under Government direction; it is a hot-house system which does not infuse into men the vigour and vigilance requisite for sheep-farming. You can't kill trout by learning to throw a fly in a drawing-room. However, we hope for the best.

It has been remarked that while the spurious articles made by the Japanese under the names of foreign manufacturers have been exposed, nothing has been said about those imported into this country by foreigners and palmed off upon the Japanese as real—the remark applying chiefly to spurious drugs and medicines. In our defence we may say that we have a clear recollection of writing on this very subject, but as we cannot trace the paragraph in our columns, the censure implied by the omission is not undeserved. We believe that a large trade in such spurious drugs is carried on, and we happen to know that on one occasion an official of one of the Treaty Powers flew into a violent passion with a Japanese official for refusing to pass this trash as being what it pretended to be. Had we been in the place of the Japanese and been threatened with any protest on these grounds, we should have employed the short and emphatic formula once used by the Duke of Wellington under some such menace—"Protest, and be——".

A letter appeared in one of the evening journals of yesterday stating that the newspapers have been lulled into silence by bribes given for this purpose, and rumours to the same effect which have reached us make us think that this is true. If so, the whole Press movement is in great danger, the success of the experiment is utterly doubtful, and the statement, if founded on fact, proves the truth of what we have said twenty times, that a free Press is an anachronism in the present political condition of this nation. Of course in the act of bribing and being bribed, both sides are wrong. The true first remedy is the establishment of a powerful organ of the Government, explaining its views and course of action, carried on by men who are made acquainted with these and who can ably uphold them. The idea involved in a free press, or a press enjoying a large amount of freedom, is fundamentally the idea of self-government. Will any one in his senses plead that the Japanese are fit for this? The question must be looked at from the common-sense side of statesmanship, not from *à priori* views of a public morality as impossible in this country at present as self-government itself. The point is simply this: Is a Government to allow itself to be undermined in carrying on the business of the country, under a thousand difficulties of a most formidable nature? The press represents no Opposition capable of taking the reins, the material of which it frets like a moth in a garment, and gradually reduces to rottenness. In its present condition it is, for political purposes, almost wholly a disintegrating force. It has not exhibited a particle of constructive genius or tendency, and its long cry for representative institutions has not been backed by the country to any such extend as to make us think they are possible. The theory of the government of this country is not that of a free people governing themselves, and you cannot yet get an institution to work properly here which has its root in this theory and in this alone. It is very well to say, that this is the theory everyone wishes to see supplanting the old theory of absolutism. Even this may be very visionary. But, presuming it to be sound, it is folly to jump into the water because the vessel you are in is not constructed on the most modern and philosophical principles. What you all want is to be kept from drowning. What all sensible men do is to look facts straight in the face, and the first fact which has to be faced is that with a free press going in this country for a few years, the paper money which is its present currency would most assuredly tell a tale which would make the Government, and every native and foreign merchant in Japan, curse the day that such an engine was set in motion. It is to the manifest interest of every man, woman and child in Japan, native or foreign, that this Government should be supported, at least until there is some party not only willing to take, but capable of taking its place. What we must all dread is revolution: what none of us can hope to see is the establishment of a government like that of the free nations. This would take generations, even if it be possible under any circumstances, which is by no

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

means certain. Whatever mistakes a government can make, there can be none so bad as to let a nation drift into revolution. But bribing the press is a miserable expedient to prevent it. We can understand the Press-Laws—we are sure they are necessary. We can understand the extinction of the newspaper Press—though we should deplore the necessity, and think it would now strain the power even of a government as absolute as is that of Japan. We can understand fighting the press by the press, that is, employing able men to defend the policy and acts of the government. But an absolute government may be paternal, and at the same time far too self-reliant to need any such resort as that now commented upon, of which we utterly disapprove, whether as a question of public morals, a question of national progress, or a question of general policy. If any student of history, however, will look back to the time between the accession of William the Third to the throne of England and the end of the reign of George the Second, he will see that popular feeling, expressed by us in the House of Commons, and in this country, so far as it expressed at all, by the newspapers, has sometimes to be so managed by one means or another that government continues possible, instead of being rendered impossible. But the truest statesman is he who takes just, even if they be forcible, means, to bring about this end. The wholesale corruption of the House of Commons under Walpole which had its real termination under Pitt, perpetuated an enormous deal of mischief. But Walpole was certainly sounder than the opposition which eventually beat him and brought discord, shame and ruin on the country. The picture of this struggle has been drawn by Macaulay, and we give it in his own words.

We have no reverence for the memory of those who were then called the patriots. We are for the principles of good government against Walpole, and for Walpole against the opposition. It was most desirable that a purer system should be introduced; but, if the old system was to be retained, no man was so fit as Walpole to be at the head of affairs. There were grievous abuses in the government, abuses more than sufficient to justify a strong opposition. But the party opposed to Walpole, while they stimulated the popular fury to the highest point, were at no pains to direct it aright. Indeed they studiously misdirected it. They misrepresented the evil. They prescribed inefficient and pernicious remedies. They held up a single man as the sole cause of all the vices of a bad system which had been in full operation before his entrance into public life, and which continued to be in full operation when some of of these very brawlers had succeeded to his power. They thwarted his best measures. They drove him into an unjustifiable war against his will. Constantly talking in magnificent language about tyranny, corruption, wicked ministers, servile courtiers, the liberty of Englishmen, the Great Charter, the rights for which our fathers bled, Timoleon, Brutus, Hampden, Sydney, they had absolutely nothing to propose which would have been an improvement on our institutions. Instead of directing the public mind to definite reforms which might have completed the work of the revolution, which might have brought the legislature into harmony with the nation, and which might have prevented the Crown from doing by influence what it could no longer do by prerogative, they excited a vague craving for change, by which they profited for a single moment, and of which, as they well deserved, they were soon the victims.

We are not of those who think that these precedents from English history are useless and inapposite. The constitution of human nature is the same in all nations, and no true political philosophy ignores this fundamental fact.

The China papers contain the following remarks on the recent Press-laws and the manner in which the discussion on them has been conducted by the local foreign press. We regret the necessity of reprinting matter in any way complimentary to ourselves, but it may be well to afford our readers an opportunity of judging how far our views find acceptance with intelligent observers elsewhere.

PROSECUTIONS AGAINST THE NATIVE PRESS IN JAPAN.

It is not only interesting but instructive to watch the rapid transition of Japan from the old to the new civilization. Some of the details of this change assume even grotesque forms, and are therefore sometimes calculated to give a false impression to those looking on from a higher level. The experiences through which native journalists are at present passing, however, convey a meaning probably more significant than any other of the multifarious features of this chrysalis stage of Japanese political life. We have already noticed the Press Laws recently introduced for the government of young native publishers and their high-spirited but slightly radical editors; and more than one prosecution has already been noticed as having been instituted under these regulations. By the present mail, however, we have news that the newspaper contest waxes warmer and still warmer: and we are willing to express regret, as it will prove an admirable test as to [illegible] of the sensible fledglings of the Fourth Estate in that part of the world. This happy result, it may be said, has already been accomplished in many cases; and when it is borne in mind that two of the prosecuted editors have been acquitted for want of a case, we may presume that such liberal action on the part of the Government will tend to strengthen the influence and standing of the more thoughtful and moderate writers —while the greater freedom of the press may safely be left to the contemporaneous advance of the people in real knowledge, which, preeminently in this sense, is power.

The tone in which this state of things is treated by the native journals is rather amusing, but cannot certainly be regarded with anything but satisfaction. In truth, as it seems to us, some of the foreign journalists might borrow a hint from a comparison which outsiders cannot fail to make between a few of the native and one or two of the foreign sheets. In one article published by the *Herald*, the writer flings about as much mud upon his contemporories and others as would build a fort, and apparently for no other reason in nature than simply because they venture to differ from him in opinion and publish their differing views. This appears to be but a very sorry mode of teaching the young Japanese how to guide with moderation their use of editorial weapons; and it is much to be regretted at the present stage of journalistic life in the country. The views of the *Japan Mail*, on the other hand, seem to us to be those of a well-informed and thoughtful mind, desirous of advancing truth and civilisation among the mass of the peculiar people who come within its influence. But as it is just possible that the writer of the *Herald* may class us amongst those mercenary and venal editors, who so disturb his equanimity of mind, for so exercising our freedom of opinion, we shall leave the journals in Yokohama, both foreign and native, to carry on the inevitable crusade now entered upon between right and wrong, knowledge and ignorance, freedom and oppression, which is now going on all over the globe, and which must terminate in favour of right, freedom and truth.

We reproduce in another column one or two samples of the native criticisms of the "situation," and only add that one feature of the movement does credit to the people, viz., the proposed aid by subscribers to their suffering and incarcerated editors.—*China Mail.*

---

* * * * * * * * * * * *

But let a paper in the East print the mildest of terrific suras upon the advisability of more frequent drills, or the relative merits of skirmishing and street-practice among the Volunteers, or the expediency, say, of the new press-laws in Japan, and the Philistines are down upon him at once. If the paper expresses a calm judgment upon some question of Treaty-right or international polity, slightly at variance with the generally adopted view, its offence is more heinous than ever; it is, bidding for the patronage of publicans and tax-gatherers—it is in the pay of the Government—it is persistent in its vile course of invariably calling wrong right—it has no conscience, no morality—it is a 'Jesuit in disguise.' The foolishness of this is apparent. Apart from the dunder-headedness that refuses to take an impartial and unprejudiced view of things upon their own bases, it is absurd to suppose that a man takes delight in raising hostile feelings. The *Japan Mail* for example, cannot open its mouth without attracting a tempest of coarse invective from its contemporaries, a shower of misrepresentations and abuse: while the editor himself acknowledged not long ago that such-and-such an article had cost him not only much painful effort, but even a friend or two. The scurrilous attacks of other journals however cannot hurt one who never condescends to reply in a similar vein, even if he replies at all; while the absurdity of imagining that he or any man *enjoys* alienating friends and exciting the renewed hostility of foes is at once apparent. We protest against this foolish tendency to impute interested motives of whatsoever nature, to one whose duty it is to write in accordance with his convictions; and assure those who find so much delight in cavilling, that the task of such a man is often a very hard and anxious one.—*The Celestial Empire.*

The *Hochi Shimbun* says that the Satsuma men are coming in large numbers to Kioto, and though it is unacquainted with their names, the most prominent men of the clan are said to be among them. It is very probable that they have come (the writer says) to take the air after the hot season; but the quiet people there are terribly alarmed.

The *Sydney Morning Herald* of 2nd August supplies the following telegram having reference to the Australian Silkworm eggs sent to Europe:—

The British Consul at Milan states that the Italian market is open for Australian silk-worm grain. The cocoons fetch a high price; and he recommends increased planting in Australia.

It is reported that the Government has made over to the Mitsu Bishi Company the steamers now employed on that line, and is to give a subsidy of $250,000 a year towards its support. The terms of the arrangement have not transpired, but the project is a commendable one.

SIGNORA PALMIERI'S CONCERT.

It is not easy, after many years of residence in the East, to offer an accurate criticism of such a musical performance as that of Monday evening last. Dissociated from the advantages of life in Europe, the mind loses its hold upon those relations and bearings, so to speak, which guide it in the difficult navigation of artistic criticism. There, we have but to cast our eyes around to see the various constellations or brilliant isolated stars, and no very great experience is required to judge of their relative magnitudes and ranks in the firmament of art. We soon learn to classify the objects of our study, with only such departure from scientific accuracy as may arise from fascinations not addressed to the ear alone. But here, we live under different conditions. Our ears grow somewhat dull; our critical insight leaves us, or at all events expends itself on the shadows of the more substantial realities we have lost. Our standards of comparison vanish; our photometers are broken; we have ceased to compare; the analytical faculty has somewhat given way before a condition of mind which is purely receptive, and almost refuses the labour which under other circumstances it would willingly, and almost mechanically, have undertaken. Nor need we, perhaps, regret in this anything but the causes of such a condition of mind. It is agreeable to abandon oneself wholly to pleasure, without a thought of estimates and criticism and ranks and magnitudes. It is delightful to be caught up and spirited away again into realms, known, indeed, but long since left; to be dazzled once more with the shimmer of a thousand precious stones, each one of which has its known place and purpose in the design of the general decoration. It is delicious for the long unaccustomed ear to drink in the old sounds, whether falling lightly as dew, or raining down in prodigal showers,—delicious to have the old memories conjured up, to find the mind peopled again with figures which had faded into shadows, and vivified with scenes which have so long disappeared that they now seem little more than faint intimations of prëexistence. It is a delightful thing to come face to face again with the embodiment of a loved art, long, alas! disembodied—to feel again the old glow and rapture—to be swept over by the old chords and to revel in the delicious draught of long lost sounds. Yes! all this is delight, and it is grateful to find that the capacity for it is still unimpaired, that the weary round of work has not dulled the edge of enjoyment, and that the loss of entertainment has not spoiled the dainty sense to which it appeals.

The concert was opened by Signorina Persiani, who sang *Una voce poco fa* from the immortal *Barbiere*. This song, like all the others, being sung in costume, recalled the casement of the Spanish house, the long cloaks of the men who are searching the court-yard, the lanterns, the brigand hats, the graceful Count, the still more graceful Rosina, old Bartolo and Basilio. And what a treat it was to hear the old air!—Old do we call it? Let us rather say, the air which can never grow old, in which immortal youth is crystallized, and which can no more grow old than can a diamond. Signorina Persiani's fresh young voice gave it all the delightful character which belongs to it—showed us all the beautiful embroidery which Rossini's prodigal facility lavished on it—all the vivacity, grace and bewitching freshness with which it sparkles. The ease which comes with Italian study is like the unconscious grace of beautiful flowers, the fragrance of which is as delightful as their form and their hues. And then we had Signora Palmieri as Norma, in the great *aria*, *Casta Diva*, which she delivered with a breadth akin to grandeur, and a deep impressive pathos which found its proper accompaniment in lofty and dignified gesture. Nor can it be denied that there is a splendid sweep and great beauty and tenderness about the *aria* itself. It is Italian music of the highest class, of noble outline and rich colouring, stately and magnificent, and worthy of a *rôle* inspired by lofty views of the character and office belonging to it. Flotow's Romanza from *Martha* came next, and was sung by Signor Palmieri with power and intelligence. In "*Roberto, Roberto,*" which followed, Signorina Persiani was hardly as effective as in the part of Rosina. And, above all, the song wants the orchestra behind it. Of course it is often sung to the piano-forte, but it cannot be performed away from the stage. Its weight is so great that nothing but the orchestra can fitly sustain it. The first part closed with "*C'era un re di Thule*, or, as we prefer it a thousand times—so strong is the power of association and the witchery of Goethe's diction—*Es war ein König in Thule.*" Signora Palmieri led us through the *scena* with all its variety of outline and modulation into the jewel scene which closes it, and in which Gretchen, intoxicated with the glittering toys Faust throws in her way, pours out all her girlish heart—little recking, alas! that her next song would be,

> Meine Ruh' ist hin!
> Mein Herz ist schwer;
> Ich finde sie nimmer
> Und nimmermehr.

The *scena* was admirably delivered, and nothing would content the house but a repetition of the "jewel-song."

The second part opened with *Tacèa la notte*" from *Trovatore*, to which Signora Palmieri's fine voice, method, and easy, practised action on the stage did full justice. The air is not one of our choicest favourites, nor Verdi our most attractive composer: but he always writes with power and a masterly knowledge of Italian effect. Then came the pretty *aria* from *Linda di Chamouni*, bewitchingly sung by Signorina Persiani. There we had the pretty Swiss maiden, as she might have looked under the shadow of her own Mont Blanc, innocent and artless in all, save, perhaps, that unconscious art which catches us with a silken thread and holds us with hooks of steel. Signor Palmieri then sang a Romance of Ascher's, "Alice, where art thou." But he is too distinctly Italian in his school to approach German or English music with the advantages he possesses in the art of his own country. The duet "*Mira, O, Norma,*" sung by the two sisters, closed the concert with the greatest effect and amid the enthusiastic applause of the audience. How beautiful is the transition from the tender pathos of the *larghetto* to the brilliant *allegro* which closes the scene! How easy it is, when removed from the immediate influence of such melody, to put on our critical caps and say that German music alone awakens the highest emotion! The fact is that when the flood comes, of which, in our colder moods, we have underrated the strength, it sets all our easy-chair criticism at defiance, sweeps us away with its resistless force, and makes our hearts laugh to scorn the cold estimates of our heads. Let us thank Heaven for the infinite variety of our sources of pleasure, for the Italian grace, the German depth, the French vivacity, and, if we have still a corner left, for such little flowerets of music as spring up on our own more barren soil.

We understand that Signora Palmieri intends giving a concert at Yedo, if a suitable room can be found. If this be so, we are very desirous that some of those of the upper classes Japanese who have not visited Europe, should attend it. The of the Japanese are undoubtedly a musical people. A *samisen* may be heard at some time or another in every house, above the poorest, in the Empire. But their music is altogether false and has no true foundations in Nature. Their gamut is all wrong, as wrong as it can be to be a gamut at all; of graceful melody they know little; of harmony, practically nothing. We are entirely persuaded that the finest and even the clearest part of the greatest German symphonies, performed by the most perfect orchestras of Europe, would be to them an unintelligble and very displeasing din. A succession of major chords they could no more understand than they could a debate in Parliament. We are convinced that our music is to them as displeasing as theirs is to us. They disguise this from motives of politeness, but an attentive observer will easily discover it. Nor must it be forgotten that the better the musician, the more displeasing the effect. But whereas the European nations have found out Nature's secret in musicial science and art, the gamut of music, which is its alphabet, has yet to be learned by the oriental nations. A visit to the Opera at home would simply bewilder a Japanese. Apart from the difficulty presented by the story illustrated, he would never understand the relations between the singers and the chorus and orchestra; the complexity of the harmonies would entirely prevent his following the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rhythm of the melodies. But, in the proposed performance, the accompaniment is for the most part so simple that his mind would not be thus diverted from the melody, while, in the concerted singing, the effect of the thirds and sixths, one of which the Japanese recogize—we doubt if they have the other—would appeal to him us a friendly concord. Music is still among this people a purely sensuous, as opposed to an intellectual, enjoyment. Of the art, and its true office in the economy of life, they know nothing, and we ardently desire to be missionaries to them of this second gospel. We spoke of it some years ago, but the times were not propitious, and now we would again draw attention to it. It is in no Quixotic frame of mind, no over-riding of a favourite hobby, that we state our belief that the introduction of the European gamut into this country would prove, in the course of time, a great addition to the stock of national happiness, and a means of elevating and purifying the national character. If the two accomplished sisters now here should be the first instruments in working out this result, nothing short of canonisation, or *kaminization*, would repay or reflect the national gratitude due to such teaching!

(From the Japan Mail Daily Advertiser.)

A private telegram reached Yokohama yesterday afternoon, from Hakodate announcing that a fire of unusual magnitude was raging in that town.

We are informed that the Yokohama Gas Works have been taken over by the Government. It is said that $200,000 has been paid for the plant and appurtenances.

The following anecdote reminds us of the reply of Lord Palmerston to the petition from Glasgow, praying for a day of humiliation to be set apart in order that the spread of cholera might be stayed.

A farmer of Yamanoshi *ken* went to his *Kencho* and begged the governor to issue an order that the pestilence which prevailed in his village might be removed, alleging that a previous governor had under similar circumstances promulgated the following notice: "If you, god of pestilence, do not take your departure I will fight against you with the angles of the god Yakumo." Since then however a new order of things has been introduced, and the farmer was recommended to get the services of a good doctor.

The *Nisshin Shinjishi* announces that a local popular assembly has been called together in the Chikuma *Ken*.

The *Hochi Shimbun* mentions that the Acting-Editor of the *Akebono Shimbun* was examined (on a charge of offence against the Press-Laws?) at the Yedo Saibansho on Saturday.

The *Nichi Nichi Shimbun* writes: When Mr. Syle took his departure for Nikko this year he hired a *jinrikisha* man named Kanbe, whose advanced age, however, prevented him from completing the journey. Mr. Syle on his return to Yedo, sought the old man out and, handing him 15 *yen*, recommended him to endeavour to find some less exhausting employment. The grateful coolie lost no time in apprising the Tokio *Fu* of the foreigner's generosity, and hence the event has become public.

The *Nichi Nichi Shimbun* says that the excessive rain which fell at Kanbara in Yechigo caused several land-slips. At one of these spots kerosene oil mingled with water was observed to issue from the hill-side.

The *Akebono Shimbun* says that Mr. Kawamura, Vice-Minister of Naval Affairs, has been ordered to proceed to Nanao, a port in the province of Noto.

A further notification on the subject of local assemblies will, says the *Hochi Shimbun*, probably be issued within a few days.

Intelligence has been received by the *Nichi Nichi Shimbun* from the Chikuma *Ken* to the effect that the production of silk-worm egg cards in the district has been large.

The P. & O. s.s. *Sunda*, with English Mails *viâ* Brindisi to the 6th August, sailed from Hongkong for this port on the 12th instant.

The M. M. S. S. *Volga* is coming up the harbour as we go to Press.

The *Hiogo News* publishes the following telegram dated Shanghai September 5th:—

Yunnan difficulty settled. China sends Envoys to England and pays indemnity. Opens Yunnan route, and regulates the Likin taxes.

The following paragraph which appears in the *North China Daily News*, of the 6th instant, leads us to believe that the intelligence requires confirmation.

We are informed on what we believe to be good authority, that affairs are practically settled in the North. There remain details to be arranged, but the heads of agreement have been consented to.—Such at least is our information, which is not official, and must be taken for what it is worth.

The following runs were scored at the Cricket Match yesterday. The Scotch won upon the first winings by 21 runs:

The Revd. Sholto Douglas, Vicar of all All Saints, Derby, to whom reference is made in the paragraph which we extract from the *Celestial Empire*, is at present at Kobe and may be expected in our settlement by the next incoming steamer. The high and sacred motives which have impelled Mr. Douglas to devote himself to his self-imposed labour have awakened a very large interest among all classes in the Eastern communities which he has visited, and we are not astonished to learn that a great measure of success has attended his exertions. Christ Church in this settlement will, we learn, be placed at Mr. Douglas' disposal during his short stay among us.

The Japan steamer last Saturday took away from Shanghai a visitor who is distinguished from the majority of our passing guests by both his motives and his mission. The Rev. Sholto Douglas has come to the Far East in order to awaken a deeper interest than at present exists in the minds of men in the all-important subject of religion. He has exerted himself here without stint; his energy has been indefatigable, and his self-sacrifice for the good of others such as none can think of without being deeply touched. No one can have failed to recognise his zeal and devotion in the great cause he has at heart, and we are sure that the Mission-week of 1875 will be long and gratefully remembered by many of those who attended his services in the Cathedral, Union Chapel and the Lyceum Theatre. There are those doubtless who, as unable as the Chinese to comprehend the purity of motive which leads men to live a life of self-sacrifice for the good of others, are not ashamed to indulge in cheap, ungenerous sneers, at what they are pleased to call fanaticism or charlatanry. Such however are not peculiar to Shanghai. We are content with the knowledge that our community has cause for much thankfulness that Mr. Douglas was induced to make a sojourn in our midst; and believe that there are many who will join with us in wishing him most sincerely, God-speed.

The *Hochi Shimbun* intimates that a notification by the Prime Minister prohibits the publication of all communications which may be made by the various departments to each other.

The *Kakke*, a disease which has hitherto baffled the investigations of European physicians, has broken out among the soldiers of the Imperial Guard. Thirty-seven men have already died. The disease now forms the subject of a special medical enquiry.

A native newspaper says of Osaka that trade is excessively dull there. Unoccupied houses are numerous even in the busiest mercantile quarter, and the list of bankrupts is largely swollen.

A correspondent (writer?) of the *Akebono Shimbun* has been fined five *yen* for an infringement of the press regulations.

Our people, says the *Hochi Shimbun*, complain greatly of the large salaries paid to our Government officials. The best paid officer of whom we can hear is he to whom the firing of the noon-day gun for the foreigners at Yedo is entrusted: he is paid 300 *yen* per month, for his services.

The *Nichi Nichi Shimbun*, referring to the Satsuma *samurai* of whom there are now some 300 in Kioto, says that they occasion much trouble to the police of that city. They retain their old dress and customs.

The Female Normal School at Tôkio requiring some gate porters, 160 men presented themselves for the situation. The writer moralises upon the poverty which the competition for a post of such slender remuneration evidences.

The Minister representing Belgium was honoured with an interview by H. I. Majesty on the 15th instant.

A telegram received yesterday from London announces the probability of the Bank of California being shortly in a position to resume specie payments.

The *Akebono Shimbun* mentions that it was intended by the authorities to fine its Editor a further mulct of 5 *yen*, but as he is still in prison the fine has been remitted.

Yesterday being the festival observed in honour of the new harvest was kept as a partial holiday in the Government Departments.

A notification from the Public Works Departments announces the establishment of a branch telegraph office in Hamamatsu which will be opened on the 20th instant.

The farmer who some months since endeavoured to place a petition for redress in the hands of The Mikado has made a second attempt which has again ended in his being removed to the *Saibansho*.

SUMMARY OF THE TRADE OF 1874.

THE Summary of the Trade of 1874 brings to an appropriate conclusion the Trade Reports for last year which we have from time to time placed before our readers. Would that it were more encouraging! It tells of a falling off upon the returns of 1873, which were in their turn a falling off on those of 1872. It tells of a drain of bullion to which we hope some styptic may soon be applied by better times. It tells of a reduced export of Silk, of a very poor increase in the export of Coal, of a diminution in the Tonnage Return, of a decline in the importation of Cotton manufactures. Against this we must place the fact that more Sugar and Raw Cotton have been imported, that more Metals have been required, that more Cotton Yarn and Shirtings have gone into consumption, that the value of the dried fish and miscellaneous productions exported has increased, that the import trade in local and eastern produce has also increased, and that the value of the Tea exported exceeds for the first time that of the Silk. At the same time this very fact affords ground for regret, inasmuch as the value of the Silk exported should by rights be far higher than it is. But low prices in Europe for all silk, together with a steady deterioration of the quality of that shipped from Japan, have combined to reduce the value to a very low figure, and it seems improbable that consumption will overtake production for many years, and thus raise prices again to the rates which ruled with more or less fluctuation between 1855 and 1873. We have, however, nearly closed the period of the silkworm egg export, which has certainly poured large sums of money into the country, but has as certainly impoverished the breed of worms and lowered the quality of their produce. All evidence hitherto points in this direction, and we shall lay before our readers next week a paper on this subject which can leave doubt on any reflecting mind that the accusation brought against this trade is well founded. But everything should be done meanwhile to direct the attention of the silk-growers to the importance of only breeding from their best moths and reeling their silk with the utmost care. The steady deterioration of their produce arises from causes lying deep in the constitution of human nature. They were offered prices for bad silk far higher than they had ever formerly obtained for good silk, and they could sell any quantity of it at these prices which they could bring to market. Of course they reeled it as fast as they could, and as ill as they chose, and parted with it with abundant satisfaction. Then came the great demand for silkworms' eggs with the effects we have pointed out. The growers obtained far more for their *cartons* than they would have for the silk which might have been made from them; and if he incurs no blame who prefers the bird in the hand to the two in the bush, how much less shall they who get two in the hand for a prospective one in the bush!

There is hardly a subject touched upon in this Summary which has not been brought fully under the consideration of our readers during the past twelve months, and it tells its own tale so plainly that it is supererogatory to enlarge upon it. It does not clear up the mystery connected with the export of bullion, nor, perhaps, has any entirely satisfactory solution of this been offered. It lays the same stress upon the importance of good roads as we have constantly done, and looks forward to a grain trade springing out of the recent edict removing the prohibition on the export of rice, if only the measure is persevered with.

SPIRIT OF THE JAPANESE PRESS.

The Abolition of Capital Punishment.

(Meiroku Zasshi.)

Is the taking of life for punishment the same as the use of torture in examination? I have already urged on many occasions the abolition of torture, and I propose now to show that death should not be inflicted as a punishment.

Punishments are inflicted for the purpose of deterring men from committing crime. But what does 'deterring' mean? It means that the criminal shall repent of his past deeds, renounce them, and return to the paths of virtue, and this should be the aim of all punishment. But if life is taken, the criminal cannot be reformed; and although he might have been brought to contrition, how can he, if his life be taken, be restored to virtuous courses? The taking of life is not therefore a proper punishment.

Both the legislative and judicial bodies are composed of men and are governed by men, and unless they have power to restore life they have no right to take it. No: killing cannot escape being called cruelty.

In our criminal code there is a clause to the effect that those who take the lives of others must forfeit their own lives. But this is employing one form of atrocious wickedness to get rid of another form of it. Some say that the infliction of death as a punishment is useful in order to deter many others from crime. Now, our population exceeds thirty millions, and there are not less than a thousand executions in a year, and this has gone on for hundreds of years. But have these millions been deterred from crime on this account? If we compare the population of Europe and America with our own, we find it is many times larger, while those who are punished with death are far fewer in number. How is it that there is relatively so much more crime in Japan? The laws of those countries differ widely from our own laws, and crimes such as those for which our people are executed are scarce in them. Some States, too, have abolished capital punishment, and these various differences reflect different conditions of civilization.

It used formerly so be acconnted a noble deed to slay any one for revenge. But assuredly this was not good; on the contrary, indeed, it was very wrong, and those who take life in revenge are now treated in the same way as those who commit murder for any other reason; nor can this be called otherwise than just. At the time when the change in these laws was effected, many protested against it, and, of course, I cannot coincide with them. It was the advance of civilization which prohibited this taking of life for revenge, and this was good. But I cannot understand why the execution of criminals has not also been abolished. It seems to me like prohibiting drinking and presenting those who violate the prohibition with a wine-glass!

The execution of criminals with a view to the extirpation of crime seems reasonable enough; but surely some alternative punishment might be devised. It might be well to banish criminals to some penal island, though this would merely remove the evil from one place to another, and I am inclined to think that hard labour is the best punishment for punishment's sake.

In the ancient laws of China, it is said that punishments are inflicted in order to get rid of punishments, but such sayings are of the nature of paradoxes and have no practical bearing. My desire is to see capital punishment abolished.

It is something like a hundred years since propositions to this effect were brought forward in Europe, but even up to the present day it has been found impracticable to act upon them. How much less possible is it in an oriental country?* And therefore I can only hope that the day will come when this form of punishment will be abolished. I also well know that it is too early yet to discuss such a question. But, like Mr. Bakkariya, I wish to arouse my dreaming countrymen.

* If this amiable writer had come to this conclusion a little earlier and had remained satisfied with it, he would have spared himself and us some ill-spent labour.—[Ed. J.W.M.]

The Reform of the Pension-list.

(Choya Shimbun.)

Everything now-a-days is settled by reason and calculation, therefore when we do anything without serious consideration, we may be sure it will not work properly.

I do not think that the pensions of the *Kadzoku* and *Shidzoku* will be either reduced or abolished until a House of Commons is established, in which the representatives of the people can express their views. For though the people say it is a vain thing to give money for the support of the *Kadzoku* and *Shidzoku*, it must not be forgotten that these classes have not come into existence only during the past few years. They have existed for many generations, and if their pensions are abolished, they will not have the wherewithal to subsist. The Government might therefore say with ample reason that it was a grievous thing that they should be so suddenly deprived of their incomes. But the people would retort that the *Kadzoku* and *Skidzoku* enjoy these pensions without giving anything in return for them, and they would be quite right in this retort. The pensioners, on the other hand, would plead that they receive their pensions from the Government, and that therefore the people have nothing to do with the matter. If, however a House of Commons were established, and the people find out that their hard-earned money goes to pay these pensions, their representatives would say that they would pay them no longer; and for this reason I have said that the establishment of a House of Commons will be required to abolish these pensions. Were such a House established, it is very clear that they would be swept away, and it behoves us to begin at least to think in what manner the money thus saved is to be used, because, although the *Kadzoku* and *Shidzoku* now consume it in idleness, it is quite conceivable that just as vain use may be made of it when the pensions are abolished. Let us suppose that there is a family with many unavoidable dependents on it, who are gradually consuming the estates of this family. The men-servants and maid-servants receive but low wages, they work hard and are poorly fed; but still they continue to labour industriously without becoming disheartened or angry. The time comes, however, when these dependents leave, and the fortunes of the family begin to improve. No sooner does this happen, however, than the mistress of the establishment becomes luxurious, and brings in a large retinue of new servants to gratify her own vanity. She does not improve the position of the old servants, so that it remains all the same to them whether the dependents disappear or remain.

The present farmers and merchants resemble the servants of the house. Those who urge the abolition of the pensions of the *Kadzoku* and *Shidzoku* are among the lower classes (having but a small interest in the question?) and those who have already had their pensions commuted. The remainder do not know the vain use that is made of the money and trouble themselves but little about it. But if they knew that they would pay far less taxes and duties were these pensions but abolished, there would not be one among them who would not urge that the *Kadzoku* and *Shidzaku* should work for their living. These pensions are, in point of fact, all taken from the people, and it is the fashion now-a-days to enrich the towns and cities and leave the country poor. Then where ought the pensions of the *Kadzoku* and *Shidxoku* to go if they are abolished or reduced? The answer it clear; they ought to go towards reducing the taxation now levied on the people.

The Book Press-Laws.

(Choya Shimbun.)

As we have long urged the necessity for assimilating the Book Press-Laws with those existing for the guidance of the newspaper press we are naturally gratified to observe by the Notification issued on the 4th instant, that our Government has at length taken action upon the subject and introduced such reforms as practically to throw both sets of regulations into the same form. We feel gratified for these reasons:—First, that the valuable time heretofore wasted in examining books will be saved;

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Secondly, because the Government has wisely consulted and been guided by the wishes of the nation. And lastly, because the facilities they have granted will permit of the more rapid diffusion of useful knowledge. These are the grounds upon which we are pleased to acknowledge the wise action of the Government.

But a sombre shadow overcasts our newly-born gratitude and this is its cause. The composition of a book is a vastly different matter from that of a newspaper, in which style is of comparatively smaller importance and the patience of the author less seriously taxed by his labours. No matter how cautious his composition shall be, hereand there some phrase may be found to which a captious Censorate may choose to assign an arbitrary importance, or in which it may discern a meaning unthought of by the author. Should these, or such as these, be construed as violations of the law scarcely a book will be published or an author escape fine or even imprisonment. And this we will tell the officials in support of our statement.

Taishiko, a famous Chinese writer, composed a celebrated history of the "Flowery Land" styled *Shiké*, a work which comprised the biographies of various parasites and flatterers. How would such a work escape the vengeance of the law under our present order?

Again Kantaishi and Riushiko were men of high literary repute in their day; but, were their works to be published under the existing *régime*, they would hardly themselves escape fine and imprisonment or the type and machines with which their books were printed be safe from seizure and confiscation.

Some may say, 'Why do you perplex yourself so much 'in this matter. It is impossible that the Government 'would so construe a phrase or a sentence of the great 'writers' works whose names you have enumerated as 'to prohibit their publication. It only desires to guard 'itself against the publication of dangerous and inflammatory doctrines and cannot wish to cavil at mere phrases. 'Besides this, as our present authors are far inferior in 'calibre to those of the old school there would be no great 'harm if even they wrote no more; the country could 'afford to lose them.' To this we reply: such a supposition would be wholly erroneous; a government does not make a law in order to modify, but to maintain, its interpretation. Nor would excellence in other respects save any work from condemnation which, in one tittle, contravened the regulations of the press. Look at the newspapers, for instance, and the slight indiscretions for which they are made to suffer! And as for the literary profession, though it may no longer count among its members the giants of former days, each man does his best and the value of his writings is to him as great as the wisdom of the classics.

Are, then, the new Book Press-Laws useless? We would reply, by no means useless. Penalties are required to preserve the law from infringement, and all we can hope is that they be not invoked for trivial causes, nor the wrath of justice be called in to punish a thoughtless word or sentence. Where these occur rather let the author be permitted to revise his text, and to substitute for the faulty passages others which offend not. But where the whole tenour of a book is seditious and aims at the solidity of the Government, then, in such case, should the extreme weight of the law fall upon those who have infringed it.

We earnestly hope that the officials of the censorate will not push their hypercriticism so far as to cavil at isolated phrases, or to punish their authors with the severe retribution which justice awards to the robber or traitor.

The Press.

(Choya Shimbun.)

There are some wonderfully absolute Governments in the world! A foreign merchant informs me that it is some twenty years since the Javanese began to trade with foreigners, during which time they have wonderfully advanced in knowledge and education. It is uncertain whether the Government of Java does or does not know the actual circumstances of the people; but, at all events it permits no criticism upon itself. The people, however, have been aroused, and have begun to debate matters in a manner which shows that they care little for their lives. "I have," said the merchant, "been trading in all parts of the world, and am acquainted with the state of the various places I have visited, and the anger of the people of Java is growing stronger and stronger and may lead to rebellion. I do not know whether the Javanese Government is obstinate or foolish, but it has pursued all kinds of cunning devices and finally has given money to the most eloquent of those who urged the rights of the people, in order to induce them to be silent on the question. But be the bribes never so pretty, those who urge the rights of the people know that their cause is a righteous one and will not yield in the least, so that what I have now said will show you what progress the Javanese have made in power.

I have written the above just as I heard it, and now send it to you, Mr. Editor.

Katashi.

Pretty Political Philosophy.

(Rejoinder.)

(Akebono Shimbun, of September 4th 1875.)

Upon a perusal of the article contributed by Mr. Tamano of the Ehimé *ken*, concerning the views promulgated by the members of the *Jijosha*, we have been enabled to arrive at a general knowledge of the object of that Society.

[*Note.*—This article is published amongst our "Contributed Articles" of to-day. It contains some points that are not clear of comprehension, but we have printed it as it stood in the original draft. Judging from the note prefixed to it by Mr. Tamano, it would appear that the desire is to have this article made known to the people, through a request made by the *kuchô* and *kochô* to the religious teachers.]

The general tenor of the article seems to be to the effect that at the present moment there has already been formed a jointly-administered Constitution;—that our revered present [1]*Tennô* is not the [2]*Tenshi* of former days, but should be styled the [3]*Koku-ô*; that in the present situation of affairs we should not assent to what is spoken merely by a *Kuchô* or *Kochô*, or by the *Ken* officials;—that every single matter ought to be referred by the *Kuchô* and *Kochô*, to the people,—and that in the case of anything that does not meet the ideas of the people they should argue out the matter even though it be a Government order. Ah! do the *Jijosha* hold that by the [4]Sacred Edict of the 14th of April, last a Constitution jointly administered by the [5]Ruler and the [5]People has already been firmly established;—that the People have been called on to elect Senators, and that the right of participating in the national administration has been granted them? What a gross instance of want of thought is this! What is styled by the society "the participation of the people in the national administration" does not mean more than the possession of the right of electing their own representatives. Were the people of our country to thrust their beak into the executive branch of the administration, and to object and argue about every single thing which happened not to be quite to their taste, even to taxes, military, and numberless other matters, the whole age would be agitated and thrown into confusion. Would not the affairs of the land be broken up? And how, then, could we explain the condition of the constitution or of the country's strength! We are told, "The origin of the administration and code comes "from the people;" and it is also observed that "the "officers of the various Departments of the Government "and of the *Fu* and *Ken* are the employés of the people." Is not this, too, a monstrous display of effrontery! If the ignorant lower classes in the country districts be excited by these arguments, we know not what results may occur therefrom in our land. Ought we not to feel chilled at heart about this!

Dwelling under (the rule of) one single line, and being

1.—*Tennô*. A title of the Mikado.
2.—*Tenshi*. "Son of Heaven;" another title of the Mikado.
3.—*Kokuo-ô*. King, ruler or chief of the country.
4.—*Sei-Shô*.
5.—*Kun*; *Min*.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

in the enjoyment of Heavenly favours of the most beneficent and gracious character, who is there that would not pray for the daily prosperity of the family of the [6]Sovereign and for the perpetual continuance of the [7]august House!

At the present moment, when there has just been conferred upon us the Decree granted by His Majesty the Tenno for the exceedingly benevolent and enlightened purpose of gradually establishing a constitutional form of Government, there are some who say, in a haughty manner, "The present [8]*Jôtei* is the Head Official *(yakunin)* "of the People,—he is not the 'Son of Heaven' as hither-"to, and should be styled *koku ô*."[3] How can the people of the [9]Empire of Japan bear to say such a thing as this! Those who use such language disregard their own duties, and merely set set on foot arguments about the appellation of one who is of exalted and dignified position. Upon thinking over the minds of those who put forward these arguments, we are of opinion that the object desired by them is that we shall not stop only at a constitutional government.

Sheep-Farming.

Notification No. 110,

"Tôkiô Nichi Nichi Shimbun" of September 5, 1875.

To *Fu* and *Ken*.

It being the intention (of the Government) to engage foreigners and to open a sheep-farming establishment, and when the sheep increase in numbers to gradually distribute them throughout the various localities. Students are to be assembled to receive instruction in this branch of business. Consequently in those *Fu* and *Ken* where it is proposed to institute sheep-farming, those who are earnestly desirous of learning this business are to be carefully chosen, and in accordance with the 1st Article of the rules for admission into the said establishment, after examination, the names and ages of these individuals will be inquired into and details forwarded to the Board for the Promotion of Industries.

With regard to the date for proceeding to the capital, notice will be given later on by this Department.

The above is notified.

(Signed) Okubo Toshimichi,
Minister of the Home Department.

Meiji 8th year 8th month, 31st day,
August 31, 1875.

Foreign Languages.

(Choya Shimbun.)

It is now some fourteen or fifteen years since our countrymen began to study the European arts and sciences. There were indeed a few who did so earlier, but they studied in Dutch and chiefly applied themselves to Medicine, and it was from the Dutch that we derived all our knowledge of European science in those days. But when our students found out that Holland was weak and small, and not so far advanced in the arts and sciences as England or France, they all began studying English and French in about equal numbers, and those who still studied Dutch were very few. Then German made its appearrance, and the study of it was pursued by as many as there were learning English and French, so that when the Kaiseigakko chose its teachers, it selected representatives of those three nationalities. We do not mean to say that any one of these nationss is ahead of the others so far as science goes. But there must be among the parents of the pupils many who have preferences as regards which language their children should study, and, such being the case, the rules of the Kaiseigakko have lately been altered, and the French and German scholars (besides those languages of course) are only instructed in Chemistry and Natural Philosophy. Thus some of the students have changed their course of study, while others have left the school.

There is much to be learnt from these new rules, and it is stated that when the school is again opened, after the summer vacation, there will be a hundred students over the number previously there, and these will be taught Law, Chemistry and Engineering in English, while the French language will also be taught. Naval and Mining Engineering will also be taught in English, so that those who desire to pursue these branches of science will do well to study English. Military science is taught in French and Medicine in German, so that those who intend pursuing either of these studies should perfect themselves in the required one of these two languages. Five sevenths of the knowledge conveyed at the school is therefore conveyed in English, and this language should be made a prominent feature of study, otherwise time will in many cases be lost.

Niigata.

(Choya Shimbun.)

An article appears on this subject, in which the writer claims that as the port does not pay its expenses and is useless for the purposes of foreign trade, it should be closed, and Nanao, also a port on the west coast, opened in its stead. He says Nanao has a fair harbour, and, being situated in the neighbourhood of rich producing and manufacturing districts, a good trade may be expected to spring up there.

GO-GAKU HITORI ANNAI.*

[Second Notice.]

The feature of Mr. Brinkley's book which for many a year to come will make it indispensable to Englishmen aspiring to the mastery of the Japanese language, is its copious collection of idiomatic English sentences translated into their Japanese colloquial equivalents. How frequently the most advanced foreign scholars are at a loss to render with exactness into the Japanese vernacular the more delicate shades of meaning and the nicer turns of expression, is known to no persons so well as to themselves. Valuable as are the works published by Mr. Satow and Mr. Aston, they go but a small way in these the higher walks of their domain. As introductions to the grammatical principles of the spoken and the written language, Mr. Aston's two treatises are not likely, in this generation, to be surpassed, unless, indeed, it be by the author himself; but they are not, and do not profess to be, exhaustive; and indispensable as is the *Kuaiwa Hen* to beginners, there are, of necessity, a multitude of the more difficult idioms not mentioned in its pages. Indeed it does not fall within the scope of either of these authors' works to supply—he want we are speaking of. That task belongs properly to the lexicographer. And when the name of Dr. Hepburn is added, we have enumerated all the writers in English who, up till the appearance of this book, have done anything worthy of mention for the advancement of Japanese philology. To this trio Mr. Brinkley's name must now be added, as even this necessarily meagre and imperfect notice of his book will show.

In common with every foreign student of the language of this country, we are under obligations to Dr. Hepburn's Dictionary too deep to allow of our referring to that work in any other spirit than that of grateful acknowledgment. If, therefore, in the course of our criticism, we have occasion to touch upon some of its manifold deficiencies, it is not with the intent to find fault for fault-finding's sake, but simply to show, by comparison with the existing standard, the extent to which the author of *Go-Gaku Hitori Annai* has advanced the front line of accurate scholarship in colloquial Japanese. The task of making this comparison is much facilitated by the full index with which Mr. Brinkley has wisely crowned his work.

The wisdom of the ancients has seldom found embodiment in simpler phrase than the adage which declares that "there's nothing like leather." Let us endeavour to translate this into Japanese with the aid of Dr. Hepburn's Dictionary Turning to Part Second, the English and

6.—*Tei*. Sometimes translated "Emperor."
7.—*Kô*. Sometimes translated "Imperial."
8.—*Jôtei*. Supreme Being, used in China to express the Deity.
9.—*Tei-koku*. Qu: Is "Empire" a correct translation of this term? It means a country of a *Tei* or governed by a *Tei*. Should *Tei* or *Kô-tei* be translated "Emperor" and if so why?

* Go gaku Hitori Annai &c (Guide to Self Instruction in the Language, by Mr. Brinkley, English Officer of Artillery. Printed at the Government Press, Tokio, 1875, 3 vols.)

Digitized by Google

Japanese Dictionary, we find under the adjective 'Like' the following renderings given:—*Onaji, nitaru, niru, hitoshii, gotoki, ayakaru;* and under the adverb 'Like' the following: *Gotoku, yô, tôri, sô, rashiu,* supplemented by a few useful phrases such as "it looks like rain," "to talk like a dunce." Looking up the Japanese-English portion of the Dictionary under each of the words thus given, we search in vain for the equivalent of the idiom we are dealing with. Let us now try Mr. Brinkley. His index refers us to page 271 of the third volume, and there we find *like*, its shades of meaning and its synonymes, treated with the method and clearness of a master hand; and, amongst the examples, the idiom of which we are in quest:—"'Going too far is the same as not going far enough' as the saying is; there's nothing like the proper mean in everything." The rendering of this, given opposite on the same page, but printed of course in the native character, reads as follows:—*Sugitaru wa oyobazaru ga gotoshi to môshite nani ni yorazu kwa-fusoku naku hodo yoku suru ni shiku wa nashi.* Hereupon we perceive that Dr. Hepburn while giving us the Japanese equivalents for 'like' in the sense of "to resemble," "to be similar to," has altogether omitted to give its equivalent in the sense of "to be as good as" namely, *shiku.* Having got the clue from Mr. Brinkley, we of course find the meaning of *shiku* correctly given under that word in the first part of Hepburn; but the worthy Doctor's offence does not stop short at omission; the commission of a grievous mistranslation must be noted too. Under the negative form of the same verb, *shikazu*, is quoted the phrase *waga gaku wo konomu ni wa shikadzu,* which is thus construed "is not so fond of learning as I." This is a bad blunder, for the meaning of course is "There's nothing like being fond of one's own line of study." Another form of the idiom, namely *Koshita koto wa nai,* not to be found in the Dictionary, is given on page 181 of the second volume of the Guide.

Itsu-mo nagara hon wo haishaku itashitai, Dr. Hepburn renders "according to my custom, I wish again to borrow a book." The apologetic purport of the phrase is here missed altogether. The proper rendering of *itsumo nagara,* as will be seen from Mr. Brinkley's concluding Chapter, treating of expressions of courtesy is, "I am sorry to trouble you so often, but, &c., &c.

Nani to ka ii-kata ga arisô na mono, Dr. Hepburn supposes to mean "he appears to have something to say." The reader of *Go-Gaku Hitori Annai* will not have to go far on in the work to be able to detect such a mistake as this. The Japanese expression means "There must be some way of saying it."

The most frequently recurring difficulty, perhaps, to the English speaker of Japanese is the proper mode of distinguishing between the closely allied shades of meaning which lurk in the auxiliaries employed to differentiate the modality of the verb. Take for example the auxiliary verb *may,* which most English grammarians dispose of in very short compass, setting it down as being simply the sign of the subjunctive mood. Now *may* is used in every day conversation in not less than three distinctly marked shades of signification. In one sense it enounces the speaker's permission of the performance, or indifference to the occurrence, of some particular act, as for example "You may come if you like," "She may go to Hongkong for me." Again it is used in the general affirmation of physical or moral possibility, as, "From a tiny seed a stately tree may spring", "Any citizen of the United States may become President." But perhaps the most frequent use of the word is to indicate merely the speaker's uncertainty or ignorance in respect to some particular allegation, as "he may have done so" "the report may be true," "it may rain to-morrow." Now in Dr. Hepburn's English-Japanese Part, *sub voce,* is given a selection of examples of the ways in which *may* should be rendered; and as regards the permissive and potential signfications these examples are correct. But of the third and most common usage of *may,* the dubitative, the true equivalent is missing. The Doctor comes no nearer to it than this: "Also by the fut. or dub. A suffix *shô, mashô, ô, de-arô*; also in other ways." Undoubtedly in one other way, at all events; which, in spite of several indications staring him in the face in his own first part, he somehow fails to catch; and consequently misrenders the expressions in which it occurs. For instance "I do not know whether it is going to rain," is a pointless phrase, in which the suggestive force of the remark *Ame demo furu ka shiranau* is altogether lost. "It may perhaps be going to rain," is the true meaning of the words. And the example immediately preceding this one, *sub voce* DEMO, is another lamentable instance of shooting round about the target when the bull's-eye was so easy to hit. *Inu demo neko demo niwatori wo toru ka shiranu,* expresses apprehension, under given circumstances, for the safety of the fowl; a dog or a cat *might* take it. Dr. Hepburn's rendering "I dont know whether it was a dog or a cat which took the fowl," is very wide of the mark indeed. His error in these and in other instances we might adduce arises from attempting to render literally expressions the meaning of which can only be rendered idiomatically. He will be a very inapt scholar who falls into this error after reading Mr. Brinkley's invaluable chapters on the auxiliary verbs of the various forms of the subjunctive mood, in the beginning of volume second. In a series of well chosen examples, all the varieties of use and meaning of such key-words as might, must, could, would, ought, &c., are brought out and illustrated by comparison and contrast with the Japanese modes of expression which exactly represent them.

It is not only in the moods, however, that the Dictionary is weak, while the work under review is particularly strong. In the much simpler matter of the voices of the verb the lexicographer occasionally stumbles. "Sorry I had to give up before having completed it" as a rendering of *Chiu-to de yamerarete wa komaru.* betrays a misapprehension of a singularly clear case of the middle voice, not to dwell further on the concomitant mistake made of supposing the subjunctive mood to be the indicative. "It would be a nuisance to have him stop in the middle of the thing" is the form of expression required to bring out the true bearings of the original. Mr. Brinkley's chapter, the 125th, on some peculiarities in the use of the active voice, will well repay perusal. He there brings out with admirable clearness the absence in Japanese of that trick of speech, common to all the languages of Europe, by which causation is predicated actively of facts, attributes, and impersonal objects. To assert directly in the active voice, that such and such a fact or circumstance shows, proves, facilitates, retards, argues, or justifies something else, is a locution foreign to the spirit of the Japanese language. For instance:—

Eng.—"The lateness of the treatment will retard the cure,"

if translated literally would be unintelligible.

It must be rendered:—

Jap.—Rôji ga te-okureta ni yotte naori-kata ga temadorimasho.

There are many English idioms in this book of the Japanese equivalents of which Mr. Brinkley may be called the discoverer, in the sense of having made them known to foreign students of the language for the first time. We proceed to instance a few of them. Of the word *dake* Dr. Hepburn tells us thus much:—

"Dake, *n.* Much, quantity. *Kore*—, so much. *Dore*—, how much? *Ari*—, all there are, Syn HODO, GURAI."

Mr. Brinkley has explored the mine to better purpose:—

Eng.—"He { has all the ability that fame gives him / is as clever as he is famous }

Jap.—Hiyôban dake atte saichi-ga aru."

Eng.—"Yes; 'Give me a cherry-blossom for a flower, and a soldier for a man,' as the saying is; the cherry's nature is beauty, and these have all the beauty of their species.

Jap.—Sayô sa; hana wa sakura ni hito wa bushi to môshite, utsukushii no wa sakura no tate de gozaimasu dake atte yoroshiu gozaimasu, ne.

Eng.—With your usual extravagance about houses, you have made your present place a perfect gem.

Jap.—Anata wa go fushin-dôraku de irassharu dake atte kondo no o sumai wa sun-shi naku o rippa ni dekimashita.

Of the word *kurai,* Dr. Hepburn's account is too long and too defective to be worth quoting; no hint is given of its capacity to represent expressions of the following kind:—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Eng.—"It looks handsome enough to have cost a thousand *riyos.*

Jap.—*Sen riyô kakatta to itte mo yoi kurai rippa ni miyemasu.*

Eng.—He might safely be called the best actor in the world.

Jap.—*Seken ni hitori to itte yoi kurai na yakusha da.*

Eng.—She must have been a great beauty to have been pronounced pretty by a man who abuses everything so.

Jap.—*Aa nandemo ken-su hito ni utsukushii to iwareta kurai jaa yohoda bijin dattarô.*

Eng.—Do you think it too severe a policy? I think it too mild, if anything.

Jap.—*Anata wa sore wo kibishi-sugiru shochiburi to oboshi-meshimasu no ka? Watakushi wa mada kwan-sugiru kurai da to zonjite orimasu ga.*

Eng.—It is too hot, if anything.

Jap.—*Atsui kurai da.*

Eng.—If one is to begin to help a person and then stop half way, it would be better &c.

Jap.—*Hito no sewa wo shikukete chiuto de yameru kurai nara &c.*

Eng.—Yes, if one do it at all, one should do it thoroughly * * *.

Jap.—*Sayosa, suru kurai nara, sumu made shinakereba &c.*

But we must stop short for want of space. The above is but a small selection from the linguistic gems with which Mr. Brinkley's pages are studded. To the Englishman and to the Japanese studying each the other's language the book will be a treasure. It has a great sphere of usefulness before it. The channel of intercommunion between the mind of Japan and Europe will be cleared and widened by it. And its publication marks another step towards the fulfilment of Grimm's prophecy that English will yet be the language of the civilized world.

PUBLIC WORKS.*

The circumstances of India and Japan are, in some particulars, in reference to the carrying out of Public Works, so analogous, that lessons may be obtained from the experiences gained in one country which may prove of immense assistance to the other, in its first attempts at efforts of this nature. The great question of Engineering education which has already received some attention from this Government, has, for many years, been a subject of anxious investigation for Indian administrators. The formation of a network of roads, which is being agitated in this country at the present moment, has already been accomplished in most parts of India, and a consideration of the methods adopted there will probably be of value to those before whom this question may be brought. The best description of Railways, their gauge and general character, the districts most necessary to be accommodated, and the most advantageous methods by which to raise the necessary capital for these—are questions which have all been worked out in India, and which form more or less subjects for controversy in Japan. Another subject which is being agitated, and which is of the greatest importance, is the extent to which Government aid should be given, or Government control applied, to the carrying out of Public Works, and how far it is consistent with advantage to the country that private enterprize should be invited for this purpose. On this subject also the example of India affords valuable information.

In the volume before us these matters are severally treated by one who has had the active direction of Indian Public Works for so long a series of years that he may be considered one of the most experienced and trustworthy authorities upon the general portion of the entire subject.

When we state that during the last twenty years, one hundred and eighty millions sterling have been expended on Public Works in India, we do not wish in any way to discourage the Japanese mind, or to place a damper upon an evident desire to carry these out in this country. India's trade, revenue, and extent are so disproportionate to those of Japan, that anything approaching a similar outlay need not be thought of in this country. But the fact of the prodigious sum of nine millions sterling per annum having been expended provides a most forcible illustration of the value set upon Public Works, and may teach the Japanese that the diminutive efforts, and the half measures which they are too much inclined to adopt, are not consistent with a vigorous and rapid improvement of the country. About one half of this sum has been expended by the Public Works department proper, while the other half consists of private investments in Railways, the capital expended on which, is guaranteed by the Government.

This fact leads the author of the volume before us to the consideration of the question of Government interposition in the execution of Public Works. While his opinions on this point are very decided, and expressed most unmistakeably, he admits that, under certain circumstances of constitution and authority in a Government, an opposite conclusion from his may be preferable.

"That the State should do nothing for the public "which the public can do equally well for itself has "almost passed into a proverb, the soundness of which I "am myself so far from disputing, that I should rather "be disposed to carry the maxim to an extreme. "Evidently however, what is done for the public by "individuals the public does not do for itself, nor is there "any way by which a public can exercise any executive "functions except by delegating their execution to some "presiding authority." "When, then, works of national "dimensions are concerned, to say that the State should "leave the Public to construct them, is a contradiction in "terms, for in no other mode can the Public undertake "the construction, than by entrusting it to the State. "Besides, it is plainly desirable, not simply that public "works should be as suitable as possible for their special "purposes, but also that the public should have the use "of them on the lowest possible terms, which it obviously "cannot have, if private speculators are permitted to "make a profit from them, while, without the prospect of "profit, private speculators will not undertake them. "That surely cannot be the best arrangement for the "public under which public needs become the subject of "private gain; under which particular persons profit at "the expense of the generality."

These opinions are clear enough, and there are probably few persons who are un-biassed and independent in their views who will be found to disagree with them, as general principles. There may be circumstances however, as has already been said, under which the assistance of private enterprize would not only be beneficial, but absolutely essential to the proper prosecution of public works. In the case of an utterly ir-responsible government whose members are inexperienced, indifferent or incapable, and who may be tainted with cupidity and duplicity, there need be little question that the execution of public works would be more profitably left in private hands. "But, "our author remarks, "in these days most civilized Gov- "ernments are becoming more and more responsible to "public opinion, whose keen, and even captious vigilance, "when exerted through the medium of popular assemblies "and an unfettered press, operates almost as effectually "as feelings of self interest could do, to keep in "check official vagaries, to restrain official extravagance, "and to convert official apathy into activity."

Whether it would be altogether advantageous for the Government of this country to dispense with the assistance of private enterprize is a question, upon which there may exist not unreasonable doubts. Are its officials imbued with that sense of integrity and conscientiousness which leads them to devote their energies to the service of the government with the same energy and faithfulness, as if their own private gain was their immediate object? Does the government itself, as a body, possess that sense of responsibility to the public feeling of the country as would restrain it from conduct unwelcome to the public? Do such undertakings as have been completed, afford favourable instances of efficient and economical management during their execution? Have the public funds been laid out to the best advantage or uselessly squandered? Until it is possible to return fair and satisfactory answers

* Indian Public Works and cognate Indian topics by William Thomas Thornton, C.B. Secretary for Public Works in the India Office, London, Macmillan & Co. 1875.

to such queries as these, it might probably be beneficial to this country that its public undertakings were under the control of other than its own officials. The weightiest objection to an arrangement having this end in view, is a matter which affects the national spirit of the people, and this is, that owing to the absence of any collective wealth in the country, these private interests must be foreign interests. And further, the uncertainty of direct and immediate remuneration from many of the undertakings required in Japan, would cause another and probably an insurmountable difficulty.

There is no reason, however, why such un-remunerative works should not be undertaken by the State. The profit accruing directly from a Public Work forms generally but a small part of that which may, indirectly, benefit the State. Such a consideration is ably expressed in this volume as follows.

"Public Works, in which private enterprise could not "engage without loss, may sometimes, nevertheless, be "advisably undertaken at the public expense. A public "work cannot adequately remunerate private under-"takers unless the payments made by its immediate "customers for its use are such as to yield adequate profit "on its cost, but the same work may quite possibly be "indirectly productive of compensatory public advantages "for which its immediate customers will not consent to "pay." But it must be patent to all that such works can only be executed by the State or with capital borrowed on the security of the State.

The system of Government guarantees to private enterprise is one which is largely treated of in this volume, and it is possible that some adaptation of the same system might with advantage be introduced into Japan. The power of purchase after a stated term of years is thus described. "By the contracts between the "Indian Government and the several Railway Companies "guaranteed by it, power is, in every instance, reserved "on the one hand to to the Government of purchasing, "at specified periods, generally after intervals of twenty-"five years, the railway concerned, paying for it the "average market value, during the three years imme-"diately preceding, of the capital stock of the company— "on the other hand to the company of, at any time during "the currency of its lease, surrendering the railway to "the Government, receiving in exchange the full amount "of capital that may, with the sanction of Government, "have been laid out upon it."

There are certain stipulations in these contracts which if properly worked out, might, with advantage, be adopted in a country like this, whose present circumstances and whose future prosperity are so much dependent on active movements of improvement. These are such that they enable the Government of India "to acquire most of the "railways without paying one farthing for them—without, "that is, paying one farthing more than it must have paid, "whether it had purchased or not."

"It fortunately happens that the contracts with most of "the railway companies give to the Government the "option of instead of paying the whole purchase money "down at once, commuting it for an equivalent annuity "for 75 years, calculated at a rate of interest during "the two preceding years received in London on public "obligations of the Indian Government. Now, as there "are no longer any such public obligations, on which rates "other than 4 and 5 per cent are received, the average "rate must be something between 4 and 5 per cent. "Just now it is 4·441 or a trifle less than £4.91, below "which figure it may not improbably fall a little, but "above which, it is pretty certain not to rise within the "next four years. £4.91 therefore may be taken as the "highest rate at which the annuity can have to be calcu-"lated, and, at that rate the annuity for 75 years "equivalent to 34½ millions"—which is the amount payable by the Government for the East India Rail-way—"is in round number £1,600,000. But the net "earnings of the East India Railway are, at present, "about 6 per cent, on its capital stock of 30 "millions, and, for our present purpose, may be con-"fidently regarded as sure to continue at not less "than that percentage." "But 6 per cent on 30 mil-"lions is £1,800,000, out of which amount of annual "net earnings therefore, Government will, throughout "the whole 75 years, be able to take £1,600,000 a year "for the payment of the annuity, without once putting "its hand into its own pocket, except to deposit therein "an annual surplus of £200,000. It thus appears that "the purchase of the East Indian Railway, the least "manageable of all the Railways, would in all probability "cost the Government, not simply nothing; would take "nothing out of the pockets of the purchaser, but, on the "contrary, would annually divert into them considerable "sums which would otherwise become divisable among "the sellers."

If a contract, in some way similar to this, could be concluded between the Japanese Government on the one hand, and a body of capitalists on the other, we believe that, on all sides, it would be the most satisfactory possible. The Government would, in a certain series of years, be entire possessors of a Railway, without having incurred any expenditure, that is, if the Railway made an ordinary profit in working. It would, further, a very few years after its completion, have control of the Railway, and for these few years only would it require to sacrifice that entire authority which is now the object of such jealous care on the part of its officials. On the other hand, there would be some surety for the rapid and efficient completion of the works, as they would be carried out by experienced contractors, who would place such a staff on them as would warrant their satisfactory accomplishment. But there are, of course, many considerations which we confess do not give us much hope that any such arrangement will be concluded in the present temper of this country.

We do not desire, in the above remarks to be understood to give an unqualified approval of the Indian guarantee system, or to argue for its introduction into Japan precisely on the same conditions as exist in India. The author in the volume before is loud in condemnation of it, but his remarks are directed more to the unskilful and paradoxical manner in which the agreements with the Railway Companies are drawn out, than to the general principles of the system. He points out that Lord Dalhousie, who inaugurated the scheme, had his proposals altered, and changed, by the Court of Directors of the East India Company, and that that body is responsible for the defects in the system. He, however, also lays to its charge, that under it, the construction of Railways was not vigorously conducted, and that their cost is greater than it should have been. "It took the guaranteed com-"panies 20 years to make 5,300 miles of Railway, that "is to say, they made on an average 265 miles annually." "Yet, though free from some of the items which "figure most conspicuously in capital accounts of "English lines, with every acre of land given free, with "no parliamentary battles, and no battles of the Ganges "to fight, railway construction in India, during the first "20 years, averaged £17,000 per mile, or just double "Lord Dalhousie's highest estimate." In reference to the question of cost, as also of the rapidity of construction, there were difficulties in commencing works in such a country as India, which may form a sufficient reason for these being higher, and slower, than the original promoters expected, and it is needless to say that many formidable arguments have been used in opposition to the author's views. The officials of the present guaranteed railways combat them to the letter, as well as a great portion of the Engineering profession. But the Indian Government, while under the administration of the Duke of Argyll, came to the conclusion that the guarantee system should be abolished, and that radical changes should be made, with the object of reducing as far as possible the cost of constructing new lines. "It was resolved that "the construction of fresh Railways should thenceforth "be a State affair, and also that on the State lines the "width of gauge should be the French metre, or 3 feet "3⅜ inches."

This guage was adopted principally on account of a supposed saving in the cost of construction, which a line formed to it would afford. The difference in cost between it, and the former gauge in India, *viz.* 5 feet 6 inches, which has been the subject of warm discussions in the Institution of civil Engineers, and in other quarters, is still far from being definitely settled, and the other advantages which its promoters claim for it are still mat-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ters, upon which there exist great doubt and uncertainty. The most patent disadvantage resulting from the introduction of a narrower gauge into India is, undoubtedly, that it will cause a break of gauge in the country, and this always leads to immense inconvenience, and increased cost in the transport of traffic. Most English authorities are agreed that the confusion, and extra expense, which will result from this, will counterbalance any saving in the cost of construction. But there are also many authorities, who object *in toto* to a narrow line, basing their arguments on the fact, that the purpose of a railway is the conveyance of traffic, and that therefore its carrying power is the real criterion by which to judge of its efficiency, the mere width between the rails being an insignificant consideration. That the closer the wheels are together, the greater over-hang in the carriage becomes necessary, and that therefore to lessen the distance between these displays an absence of true mechanical reasoning. That it is not necessary, if it is desired, to construct a light railway, to make it narrow. The lightest lines, having the lightest rolling stock, may as easily, and as well, be made with a broad base, as with a narrow base, and the advantages of a broad base are apparent to all. The author, in the volume before us, is most vigorous in his commendations of narrow gauge lines, but, that he has ranged against him most of the engineering profession, there can be little question.

Curiously enough the present Consulting Engineer to the Japanese Railways, Dr. Pole, is one of the greatest opponents of these. The adoption of the 3 feet 6 inch gauge in Japan did not perhaps, at the time of its adoption, receive that consideration to which it was fairly entitled, and its advantages are still of a questionable character. In a discussion before the Institution of Civil Engineers, Dr. Pole says "He might add, that he now "had charge of the Imperial Railways of Japan, which "had been laid out, before his connection with them, "on a guage of 3 feet 6 inches. He did not find this "to be any advantage, but the reverse; he had reduced "the vehicles to as small a size as he dared, but he could "not provide for the traffic with a less width of vehicles "than about 6 feet 6 inches, and, under this condition, the "narrowing of the wheel breadth only gave rise to bad "and inconvenient construction, both of the engines and "carriages; while it saved nothing in the cost. It was "under consideration whether the gauge should not be "widened, before the evil became too much extended."

On this point, we would desire to express an opinion, that, apart altogether from the engineering or mechanical view of the question, the description of railway best suited for this country, should be judged from the traffic they will likely be required to convey; and that persons in the country, who have been afforded facilities for forming an opinion on this, are the only fit judges on the question. When Dr. Pole says, therefore, that he could not provide for the traffic with a less width of vehicle than 6 feet 6 inches, we should like to enquire what traffic he means? Is it the passenger traffic which is now carried on the two lines which are already opened? Or is it the probable traffic which may be conveyed when the Railway system has been extended throughout the country? And, if it is the latter, whether he has been supplied with those statistics and information which are necessary to lead him to form a correct idea of what that is likely to be? Because we should be inclined to imagine, from the general resources of this country, and on account of its financial position, that the Railways best suited for it, are the lightest and cheapest possible, consistent with safety in working, and durability in their different parts. We should be therefore, inclined, rather, to recommend, instead of widening the gauge of the present lines, as Dr. Pole has in contemplation, that the width of the vehicles should be lessened, until they lose the overhang which is objected to, and have a width bearing the proper mechanical proportion to that of the Railway.

The subject of the construction of Roads, of which means of communication Japan is lamentably deficient, does not form a very large portion of the volume before us. The paramount importance of roads in a country is of course dwelt upon.

"A family that does not produce for itself all the "necessaries of life cannot subsist without exchanges, but "for exchange there must be carriage, and for carriage "some sort of land-ways or water-ways. Of these, fortunately, no country is ever left absolutely destitute by "nature, but it is only in proportion as they are multiplied or provided by art, that civilization, in its earlier "stages, can make very sensible progress.

"The first care of these sagacious pioneers of material "progress, the old Romans, after entering Spain, Gaul, "Germany, or Britain, was to cast over the land a "network of roads, primarily for the passage of their "legions, but along which, the arts of peace promptly "followed in the track of war, raising the social condition "of the aborigines nearer and nearer to the Roman level."

We were pleased to see that this subject had, some months ago, been brought before the new "Assembly," in Yedo but, as has recently been pointed out, in a leading article, the manner in which it was then handled does not hold out any brilliant expectations that an early improvement of the roads in this country will be accomplished. It is probably unnecessary here to point out the absolute necessity of roads to the well-being or advancement of a country. The example of India as of all other parts of the world demonstrates this most fully. To quote some old authorities, whose opinions are none the less valuable from the present more rapid means of communication being unknown to them—one remarks that "after giving pro-"tection to property and person, a government can bestow "on a nation no greater benefit than the improvement of "its harbours, canals and roads." Another says, speaking of roads, "Let us travel over all the countries of the earth, "and whenever we shall find no proper facilities for travelling from a city to a town, or, from a village to a hamlet, we may pronounce the people to be barbarians."

A third remarks that, "the conveniences and beneficial "consequences which result from a free and easy com-"munication between different parts of a country are so "various, the advantages of them so generally and so "extensively felt, by every description of individuals, "from the highest to the lowest, that no labour or ex-"pense should be spared in providing them."

But one question which seems, at the present moment, to be in an unsettled state in Japan is, whether the Government, in its efforts to provide means of communication throughout the country, can the most profitably expend its energies on the construction of Railways, or, the laying out of roads. As a guide on this point, the author's opinion is of value; he says, "Another point "particularly to be borne in mind, in circles betraying a "tendency to railway mania is, that common roads are "not so much the proper supplements of railways, as "railways are of common roads, and it can only be where "local conditions are very exceptional that railways are "entitled to precedence." Giving British Burmah as an instance, to which territory the attention of the Public Works department has only recently been directed—he says, speaking of the advantages which were derived from a recently executed road. "Such being the efficacy of a well "placed common road in stimulating tillage, the case for "an equally well placed railroad may, perhaps, be con-"sidered complete; nor is there indeed anything stronger "to be urged in opposition to this than that, in Burmah, "to begin with a railway might be beginning at the "wrong end. In order to exert any sensibly beneficial "influence beyond its own immediate vicinity, a railway "must be easily accessible from places at a distance, either "by feeder roads or feeding waterways." "A preferable "plan would apparently be to begin by providing some-"thing like a system of the simplest and least costly, and "therefore most easily extensible, yet, at the same time, "most indispensable means of communication."

Although these arguments are applied to a special case we should say that, in the present condition and circumtances of this country, they may be found to be the most advantageous for the government to follow. Several practical pieces of advice in the laying out and formation of roads are also given in the volume, which will, no doubt, be of value to those engaged on such undertakings here.

"It might be well to begin by tracing out before hand, "as completely as may be, a comprehensive scheme of the "roads likely to be required, advertence being had to any

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"projected railways to which the roads might serve as "feeders; otherwise there will be considerable risk of "thoroughfares, constructed at a cost which can ill be "spared, being before long superseded and falling as completely into disuse as portions of our own Great North "Road on which grass now grows where once cart and "coach wheels were perpetually grinding." Then inasmuch "as it must generally be better that one set of travellers "or traders should be enabled to get quite to their journey's end, than that two or more sets should be stopped "midway by insurmountable obstacles, it would also be "better that no more roads should be commenced at "one time than there were means of finishing off hand." These remarks strike upon two defects which are more less apparent in the Japanese character. One is the absence of concerted action in the government departments, and the proneness to independent and individual movement, whereby it is difficult to have any matter affecting the entire country comprehensively treated; the other is a lightness of character which tends to a want of persistence in carrying out arduous undertakings.

Of the gigantic Irrigation works which have been carried out in India, and of which the volume before us treats very fully, we will say nothing, as our remarks have already been much extended, and, as these do not possess any points of interest bearing directly on works in this country.

The example of India, in reference to the construction or improvement of harbours does not afford much valuable information. "Few countries possessing so extensive "a seaboard as India are so poor in natural harbours," and we may, with safety, add that few countries, possessing the trade and revenue of India, has done so little towards increasing harbour facilities. A few erratic efforts have been made to improve the course of the Hooghly, but these have not been very successful. Wet docks, sufficiently large to accomodate 26 large vessels have been commenced at Bombay, but it now possesses few other facilities than what nature affords. The only really great and successful work has been accomplished at Kurrachee, where the bar at the entrance of the harbour has been cleared away and breakwaters constructed, at a cost of £450,000. Mr. Robertson C. E. has recently made an elaborate series of reports upon Indian Harbours, and many places are now spoken of as favourable for operations being commenced on. Notable among these is Madras, where harbour works on a large scale are about to be commenced. These are to consist of "two parallel piers 24 feet thick, 3½ feet "above high water level and 1,000 yards apart, "projecting 800 yards from the breach." "The harbour is intended to serve less as one of refuge "than as a gigantic dock where cargoes may be "landed or shipped in smooth water, instead of in "the midst of surf." Great doubts are expressed regarding the remuneration likely to be derived from these works, but, recalling a discussion which appeared some months ago in relation to a proposed scheme for a harbour in Tokohama Bay, it might enlighten some to know, that the Madras Harbour scheme does *not* depend for justification on the prospect it holds out for direct pecuniary remunerativeness. "And that in case some vessels did "not choose to use the harbour, any deficiency in the "expected receipts from port dues might have to be made "good at Imperial expense. For irrespectively of their "inestimable national value as guarantees against loss of "life and property by shipwreck, the services, rendered "by good harbours, are of the same nature, though different in degree, as those obtained from good roads or "good railways. By facilitating access to market, they "increase the value of produce, raw as well as manufactured, and therefore that of land and consequently "in a country like India, where the Government is landlord general, increase too indirectly, if not directly, the "revenue of the State."

In the discussion above referred to, it was advanced on one side, that, owing to the local position of Yokohama, and, with its present trade, no improvement of the harbour was called for, and, when such was required, private enterprise was the proper means by which to carry it out. As this latter is an important question, which may arise in the consideration of any future proposals for harbour works that may be entertained in this country—we may be pardoned referring to it for a short space. We have already pointed out how, in the author's opinion, harbours render the same services to a country as roads and railroads, but they are different from each other in so far that, while the latter may generally be said to be directly remunerative, and to offer advantages which are tangible and patent, the returns from the latter are generally indirect, and its benefits more ulterior and distant. In such case, it evidently can only be by the Government, that such undertakings can be carried out. This fact is now recognized by the English Government who has hitherto allowed unaided private enterprise to carry out and control all public works; but who now assist, by a system of loans, harbour works—and the most material advantages have been experienced at many places from this concession. Mr. Webster, an authority of considerable weight in a volume entitled "The Ports and Docks of Birkenhead" affirms "that if it be a true principle of "commercial policy that docks should be in advance of "the actual wants of trade, that stations should be freely "afforded on the highway of the seas in which the products, artificial and natural, of all nations may be "collected for interchange and distribution, it follows that "capital must be employed on an object which, for the "time being, or, on a limited view of the case, may be "regarded as unproductive; and hence arises the difficulty, in questions of this nature, of providing ample dock "accomodation for a rapidly increasing and variable "state of commerce at the minimum rate of charge consistent with profitable investment."

We may therefore safely lay it down as a guiding principle, which is quite as applicable to this country as to others, that to delay the execution of Harbour Works until there is a certainty of their affording a direct pecuniary gain on the capital invested, will be, to materially cramp the prosperity of a country, and to indefinitely retard its progress.

Lighthouses do not receive much attention from the author. He quotes from a report by Mr. Markham that "the Lighting of the coasts of India is not perfect, is not "even in so satisfactory a state as that of Spain or that of "Greece." But he does not mention what steps are being taken to remedy this, or what is the best system of control over the Lights or by whom they are now managed.

Telegraphs are almost as lightly passed over. There are in all 16,000 miles of Electric Telegraph in India and these have cost about £170 per mile! or in all £2,730,000. This exceedingly high cost is explained by the presence of white ants in India rendering iron poles necessary—also by most of the lines having to be reconstructed after the Sepoy war. The earnings of the Indian telegraphs were, in 1873, £172,000 and the maintenance and working expenses amount to £247,000 shewing a balance on the debtor side of £75,000. But the author remarks, "The telegraph system of India must not be "judged by its pecuniary earnings. It is an indispensable "administrative engine which must be maintained at any "price, and the Government must be content to accept in "diminution of that price whatever commercial or social "exigencies may constrain merchants and others to contribute."

We now come to a question which already has, we are glad to say, received a considerable amount of attention in Japan, viz that of Engineering education. An "Imperial College of Engineering" in Yedo has been established, according to its founders, "with a view to the education of Engineers for service in the Public Works Department of the Government."

This is a step in the right direction which we would be far from attempting to depreciate in any way, but it should never be forgotten that the profession of civil engineering, by which a person is enabled to design and direct the execution of works, is one, in which proficiency can only be gained by practical experience, and that no book learning or theoretical knowledge will be of any value without this.

Probably, the more theoretical knowledge an engineer has, the more useful he will be, but the gaining of practical experience generally militates, more or less against the acquirement of this, and practical knowledge

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is of infinitely greater importance. It is not the rule that any one man can, in himself, combine all the mathematical knowledge necessary to enable him to work out the design for any structure, and, at the same time, the practical knowledge requisite to bring the work to a successful completion. In point of fact, this extensive mathematical training is not altogether absolutely required. In the ordinary practice of the profession, few questions of theory arise which have not already been worked out by such men as Fairbairn, Rankine and others, and have been reduced to formulæ by them, the application of which is simple in the extreme. And therefore, in such a country as Japan, where no novelty in construction is likely to be required, practical knowledge in the profession is probably the branch to which most attention should be given. In England, in the early days of railways, and even before these, when the demand for engineering knowledge was out of all proportion to the supply, the recruits to the ranks which succeeded best, and upon whose example the present Engineering culture of England is based, were men whose principal recommendation was their great practical acquirements. In example of this, we may point to George Stephenson, Brindley, Telford, and Smeaton, some of whose works are still models to the present race of Engineers. In India, on the contrary, when the construction of Public Works was actively commenced, those persons who, in the absence of trained Engineers, were entrusted with the execution of these, were men who had gone through a scientific training of more or less rigour, but whose experience in practical work was very small. "The Boards, composed of the heads of the civil departments of the army, sought for executive instruments almost exclusively among their professional brethern the favourite objects of their patronage being young Engineer and Artillery officers who had obtained their superior commissions by competition at the East India Company's Military College at Addiscombe At about the same age, and with about the same stock of the technical knowledge indispensable for the due conduct of the public works at, and with which, an Addiscombe cadet usually embarked for India, a young civilian, proposing to himself a civil engineering career at home, commonly enters the office of some eminent practitioner, under whose tutelage he continues for from three to five years. At first, he is set to copy drawings and specifications, and to prepare estimates from working drawings, after calculating the amount of different kinds of labour and materials involved in the design—next he is directed to make finished working drawings from the sketches of his chief and to apply formulae to various constructions in masonry, brickwork, timber, or iron. When qualified to be of service in the field, he is employed in transferring ground plans of earthwork and masonry structures from the drawings to the ground; in boring to examine the nature of foundations, or of materials to be excavated; in taking levels, and running trial sections along a proposed line of road or railway. Thus he qualifies himself for employment as assistant engineer, in which capacity he superintends the execution of a work, seeing that it is prosecuted with proper materials, according to proper lines and levels, and otherwise in exact conformity with the contract drawings and specifications; and, even after completing his term of pupilage, he continues to be similarly engaged, being rarely entrusted with the planning and direction of any important work of his own, until he has acquired ten or a dozen years practical experience by superintending the execution of the designs of other people."

This description of the training of a civil engineer in England, at the present day, is an exceedingly correct one and displays, most accurately, the weight and influence which is accorded to the practical part of his education. But the author continues "While, however, a young civilian of the the last generation was thus slowly and and painfully advancing, step by step, towards perfection in his art, his military compeers from Addiscombe, if ordinarily lucky, would have been running gaily along a royal high road to emolument and honour," and being presently appointed assistant engineer had been at once set to make roads and bridges, canals and annicuts."

While the author admits, that it was from amongst such men, that these deservedly celebrated Indian Engineers, the Cautleys, Cottons, and Baird Smiths emerged, he also points out that they were exceptions to the general rule—and he gives some instances of the manner in which work was done which are interesting and worth transcribing.

"The traveller along the Great Trunk Road is still liable to be stopped by bridges that have either been broken through by floods not finding sufficient waterway, or that have sunk by reason of weakness of the foundation, or of some other constructive defect. On the Juggernauts' Pilgrims' road at Cuttack, there are on an average more than two bridges to every mile, raised originally on arches so narrow, that the floods finding no sufficient passage, periodically overtopped the road, and damaged it to an extent which, in a single year, is costing £16,000 to repair. Once upon a time, a navigation canal, from which great things were expected, was opened in the neighbourhood of Madras, but no sooner was it opened, than it was reported to have been so ill planned that, to make it fit for its purpose, would cost more than to cut another canal parallel to it, as was accordingly recommended. About the same time, in the Bombay Presidency, a newly built bridge sunk down through internal weakness, but not, as was naively remarked in the official report of the accident through any fault of the officer who designed it, and superintended its construction, and, who, having had no previous experience in bridge building, could not reasonably be expected to succeed the first time. To fail as soon as built, indeed used, apparently, to be almost a habit with some classes of Anglo Indian structures. Which fell down just as it was ready to be used,' was an *obiter dictum* of Sir Frederick Halliday when, Lieutenant Governor of Bombay, with reference to a fives' court erected for invalids at Darjeeling. Evidently in Sir Frederick's opinion this occurrence was too common to deserve more than parenthetical notice. 'I have known' said a Bombay executive engineer, in a self vindicatory letter 'the works of many officers tumble down as fast as erected.'"

With such specimens as these before us of the effects of entrusting men, having an imperfect practical training, with the execution of works, we would desire to draw attention to the syllabus which was issued from the Imperial College of Engineering in Yedo in 1873, the first year of its existence. It is proposed in the course of six years study to transform a Japanese youth, having probably but a limited knowledge of English, and a very partial acquaintance with those other branches of education which are known to all European schoolboys, into a "Master of Engineering" proficient in the various styles of mechanical drawing, in not only the elementary, but the higher branches of mathematics, natural philosophy and chemistry, also in geology, metallurgy, surveying, levelling &c., and further, having had practical training on such special work as the student may have selected. We fully appreciate the value of this institution, and the able manner in which its constitution has been arranged. But we feel obliged to express our apprehension that in the effort to accomplish too much, little real gain may be acquired. To condense into a space of six years the acquiring of such a variety of information, and so great an amount of technical knowledge, as to warrant the distribution among the students of a diploma of "Master of Engineering" which implies a capability to design and conduct the execution of Engineering work, is an impossibility, and further, the attempt tends to raise false hopes in the Japanese mind, the general bent of which requires just the contrary treatment. What is such a "Master of Engineering" likely to know, more than the Addiscombe Cadet whose performances the author, in the volume before us, so plainly exposes? Or, than the youth of eighteen in England, who just enters an Engineer's office, and commences his technical education, this occupying him ten to twelve years? In India where there is a steady demand for engineers, it was deemed the best way, from various considerations, such as the unhealthiness of the climate, and the necessity for acquiring the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

native language, to reinforce the staff by young men who were required to pass in England a very simple examination upon various subjects connected with Engineering, but who would complete their training in India. The numbers who came forward, for this purpose however, did not give hopes of the system proving successful. So the Duke of Argyll, conceiving that if greater facilities were offered in the special education required, in spite of strenuous Parliamentary opposition, secured the establishment of the Indian Civil Engineering College at Cooper's Hill. The whole theory of Engineering is taught in it and, by its means, youths, on their arrival in India, are ripe for that practical training which is necessary to fit them for a due exercise of their profession. The experiment of Cooper's Hill College was a doubtful one, but it is said to be attended with a much greater success, than was ever anticipated. We are inclined to the opinion however that the general establishment of such institutions, by lessening the time which young men have to devote to the practical part of the profession, and by destroying their taste for it, will more or less tend to lower the high reputation in which English engineers stand in all parts of the world. Whilst the theoretical part of the profession can be reduced to formulæ which can be mastered by the veriest tyro in mathematics, the practical part is unreduceable, and can only be mastered by years of patient application and hard work.

It may not be out of place here to give an extract bearing on this subject, from a voluminous report, issued by the Council of the Institution of Civil Engineers upon Engineering education.

"It is not the custom in England to consider *theoretical* knowledge as absolutely essential."

"The *practical* education in England is perhaps the "most perfect possible, if the opportunities obtained "during the pupilage are ample, and the pupil properly "avail himself of them; for nothing can give a stu- "dent so thorough and useful a knowledge of practical "works as being actually engaged upon them for a "length of time, in a really working capacity; in "addition to this, the habits of business and the fami- "liarity with all subsidiary arrangements, acquired in "this way, have a beneficial influence on the student's "future career. This thorough proficiency in practical "matters tends largely to compensate for—in many cases "to outweigh—the deficiency in theoretical attainments "and it is undoubtedly this, influenced in some degree by "the natural self reliance and practical common sense, "inherent in the English character, which has given "such a high standing to the profession in this country."

Among other authorities of high standing on the same subject, Sir John Rennie gives it as his opinion, that a boy should receive an elementary training at school, and college, until he is sixteen, and should then commence the practical work of the profession. He says "With regard "to the higher classes of physics and mathematics these, "although not absolutely necessary for the practice of "Civil Engineering, still, no doubt they form a most "valuable accomplishment, for those who have time and "taste to acquire them."

Mr. Fowler, past president of the Institution of Civil Engineers, says "In drawing attention to a compari- "son between our own and other countries, let me be "guarded against the possibility of being understood "to suggest that this theoretical quality ought to be "obtained by any sacrifice whatever of our great practi- "cal knowledge; indeed, on the contrary, I think that "the attention to the greater opportunities which young "engineers in this country enjoy, by reason of the num- "ber and character of our new public works than is "attainable in other countries, should be constantly en- "couraged to the utmost possible extent, and that our old "superiority as practical Engineers should be ever main- "tained."

Professor Fleeming Jenkyn, of Edinburgh University, also remarks. "But even in the higher walks of the "profession design and invention is required much less "than is usually supposed. The leading engineer must "be a man of good business habits, able to advise the "directors of great companies prudently as to the proba- "ble cost and revenue of proposed works. He must have "the head of a lawyer in drawing up specifications and "revising contracts. In a word he must be a man of "great common sense. As a mechanical engineer or as a "contracting engineer, a knowledge of trade, a keen eye "for economy in details, and a thorough practical know- "ledge of the properties of the materials he employs "must be added to the above list of talents: and when we "reflect how very few of the above qualities can be taught "at colleges, we understand how it is possible that our en- "gineers should justly take a high rank in the estimation "of the world."

"How much theory, as it is called, does the engineer "want to enable him to judge soundly, and design cor- "rectly? Certainly much less than is given abroad."

With such opinions as these before us it is difficult to resist the conclusion that too much importance is given, in the Engineering College in Yedo, to theory. What we imagine the Japanese desire, and what will probably be of the greatest value to them is to learn how to build a bridge, how to form a railway, or how to make a harbour, and they in all likelihood desire to gain this knowledge in the shortest way possible. The "valuable accomplish- ment" of a knowledge in the higher branches of Physics and Mathematics is not likely to be of much service to them for many years to come.

We will conclude this lengthy notice by a few remarks upon the supervision and direction of Public Works dur- ing their progress, which is, in Japan, at the present mo- ment, in anything but a satisfactory condition.

The first and most important object for the Govern- ment is naturally to obtain Engineers in whom they can place reliance. Having procured these, the fewer restraints placed upon their actions in the professional discharge of their duties the better. The author before us remarks— "A wise private employer understands that he cannot get "the best service out of the best servants without trusting "them sufficiently to allow of their exercising considerable "latitude of discretion. He may summarily discharge his "gardener or his coachman, if he suspects him of extra- "vagance or dishonesty; but as long as he retains either, "he leaves the one to judge when and what fires are "needed in the hot houses without standing over him to "see how much fuel is used; neither does he go into the "stables whenever the horses are fed in order to prevent "the other from stealing the corn." In this country, as is to some extent the case also in India "the aim seems to be "less to stimulate than to control activity, for which pur- "pose a regular gradation of checks has been created." In the Public Works Department the "Minister" dele- gates his authority to persons who are in the position of chiefs over the different sections. The chiefs have under them a number of assistants, each of whom has a control- ling power over the Engineers, and who do not hesitate to use their authority upon subjects of entirely a technical character.

In England, as will as in Japan, "before constructive "operations are commenced, plans and estimates framed "with whatever minuteness of detail is deemed desira- "ble, must receive the sanction of the supreme authority, "but that sanction having been accorded, and limits "thereby set which the Chief Engineer is bound at his "peril not to transgress, he is, in England, left to move "freely within those limits with the least possible let or "hindrance. Presumably, he has been selected for his "post as being the fittest person available for it, the one "best qualified by professional knowledge and skill, integ- "rity, and administrative ability. Having then been fully "instructed as to what is required of him, he is suffered to "judge for himself how best to carry out his instruc- "tions, with a tacit understanding between himself and "his employers, that his conduct of affairs shall be "judged by the result. Within the scope of a defined "project he is allowed free play for his talents, it is "chiefly when he has some alterations of plan to propose "that he need refer to his directors for further guidance "or additional powers." But, in this country, Engineers have but little communication with the Government, their actions are controlled and closely watched by subordinate officials, the carrying out of the smallest details in an authorized work is criticized and interfered with; all suggestions have to be laid before them, and, with them, the decision rests as to whether these are worthy of being referred to the Government or not,

Original from UNIVERSITY OF CALIFORNIA

"Every separate design and specification must have their "approval every draft upon the Government treasury "must have their endorsement. Swathed round so "tightly with cords" of official jealousy and suspicion, "the veriest engineering Samson would become helpless. "To what end have his services been engaged, if he is "denied the free use of his faculties?, denied the confi- "dence which, when worthily bestowed, tends, above all "things, to elicit zeal and public spirit, and treated instead "with a show of jealousy and suspicion, than which "nothing is so apt to engender precisely those failings "against which it is designed to guard?"

But, on the supposition that an Engineer requires to be so closely watched who, in the conduct of Public Works in this country are the watchers? Are they the superiors of the Engineers in capacity or integrity. "If "superior, their appropriate place is that of the Engi- "neers, it is they who ought to have been placed in "charge of a business which they best understand. But "if only equal, they are at best but useless encumbrances, "while, if inferior, the better judgment is compelled to "defer to the worst." We question very much if any intelligent or conscientious statesman in the Government will claim superiority over, or even equality with, the Engineers, for the officials under whom they are placed. And we would desire strongly to urge the abolition of a system, which is incongruous, paradoxical, and destructive of anything approaching an efficient prosecution of Public Works in Japan.

Public Works, we are constrained to say, do not hold their proper place in this country. On any shortness of money in the National Treasury, the first attack is always made on the expenditure incurred for these. So much so, that, latterly, their prosecution has resembled the progress of a hare, or the breaking of rollers upon the sea coast; at one moment, rushing, with impetuosity along the strand, to be followed by serene quietude, so soon as their energy is expended. We doubt exceedingly if the various other methods which the Government has adopted for spending its money will have so great a tendency to increase the material prosperity of the country, or her influence abroad, as the execution of these internal improvements which constitute one of the chief requirements of civilization.

It only remains for us now to give our humble meed of praise to the work upon which the preceding remarks have been based. The book teems with pregnant thought and valuable information, and although it may be said that opinions upon technical matters are expressed rather dogmatically—this does not, in any way, detract from its value to an intelligent reader.

R. H. B.

SUMMARY OF FOREIGN TRADE FOR 1874.

The falling off in the Foreign Trade of Japan which was pointed out in the comparison of the Trade of 1873 with that of 1872 is again noticeable in the Trade of 1874. The extent of this decline is shewn by the following statement of the operations of the three years.

	Imports.	*Exports.*	*Total.*
1872.....	$26,188,441	$24,294,532	$50,482,973
1873.....	27,444,068	20,660,994	48,105,062
1874.....	24,223,629	—20,001,637	44,225,266

Although these are the Totals given in the Returns it should be observed that the Imports for 1873 and 1874 are over-estimated in the above table, those for 1873 probably to the extent of two millions, and those for 1874 to upwards of one million of dollars, as many of the re-exports from Yokohama to Hiogo appear as fresh Imports in the trade of that port, and have thus been entered twice in the Custom-House returns.

According to the Returns the Total Decrease of the Trade of 1874 amounts to $3,879,796, Imports shewing a decline of $3,220,439 and Exports of $659,357.

IMPORTS.

The decrease in Imports is common to all foreign manufactures, whether Cotton, Woollen, mixed Cotton and Woollen, or arms and ammunition. The falling off in woollen manufactures is very marked, the Imports of 1874 being only $1,585,896 against $4,879,140 in 1873. The demand for *mousseline de laine*, however, continued steady, a circumstance which is worth noting by British manufacturers, as this trade remains in the hands of French and German Importers. Cotton Manufactures shew in the aggregate a decline of $684,738, but this appears to have been confined chiefly to the lighter articles of this branch of the trade, as the two staples, Cotton yarn and Shirtings exhibit an increase. Advance is also observable in Metals to the amount of 320,246, owing chiefly to an increased demand for Manufactured Iron. The Import Trade in Local or Eastern produce exhibits a remarkable advance, having risen from $2,863,842 in 1873, to $4,902,001 in 1874. This is attributable to the steadily increasing consumption of sugar and a sudden demand for raw cotton, both being of China growth. The imports of Sugar rose to $2,154,508 in 1873, to $2,613,959 in 1874, and Raw Cotton from $146,569 in 1873, to $1,156,076 in 1874, being an advance of upwards of a million dollars. The importation of Raw Cotton into Japan is subject to great fluctuations, and its appearance in the Returns as an Import is dependent on the home crop.

EXPORTS.

On the side of exports, Raw Silk shows a decrease in value of $1,545,166, and silkworm's eggs of $2,301,185. For the loss on these two staples of nearly four millions of dollars some compensation is provided in the increased export of Tea which shows an advance of $3,393,533. Copper, Tobacco and Wax continue to fall off, while Rice, which is now a free export, shews a tendency to advance, the shipments having risen from $521,709 in 1873 to $839,619 in 1874. Coal, which was supposed would become more rapidly an important article of export, continues in point of quantity to disappoint expectations. The value exported in 1874 was $551,360 against $489,278 in 1873. An advance of $185,184 is observable in dried fish, but other miscellaneous productions have fallen off to the amount of $274,265. The total decrease on exports as compared with those of 1873 amounts as already observed, to $659,357.

Three additional tables severally marked C, D, and E, are appended on this occasion. C gives the result of the year's trade at each of the open Ports, as compared with that of the preceding year; D shews what classes of Imports have been subject to increase or decrease; and E exhibits the same result in the various articles of Japanese production.

Judging from the Returns, the balance of Trade in 1874 seems again to be against Japan, that is to say, she appears to have imported Foreign goods and Raw produce to the value of twenty-four millions of dollars,—or probably, in consequence of the double entries above named, it would be more correct to say twenty-three millions, and to have exported her own produce to the extent of only twenty millions. These results, however, depend so greatly upon the manner in which valuations are calculated that it is impossible to assert how far the value of the imports exceeds that of the exports. In attempting to balance the account we naturally look to the Return of Treasure, and there are met with the surprising statement, prepared by the Custom House, that in 1874 Treasure to the amount of $15,278,256 was exported and only $1,018,589 imported, thus exhibiting an apparent loss to the country of $14,259,667. On examining the Custom House Returns it appears that of this amount $13,382,792 consisted of Japanese gold and silver coin, which was exported as bullion to be melted down. Allowing that $3,382,792 went to meet the probable balance of Trade above alluded to, and that two more millions are absorbed in paying the interest on and in the redemption of foreign loans, the question then arises, what has become of the remaining eight millions, which appear against Japan? Why has this sum left the country and what has been received in exchange for it? It has not gone to meet the cost of constructing expensive Public Works, as in 1874, no new works of importance have been undertaken. It does not seem to have been applied in payment of Government orders sent to Europe and America, as the Imports on Government account appear in the Customs Returns and swell those Returns in 1874 to the amount of $1,809,115. It adds to the mystery to be told

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

that the same drain of native coin continues in the present year (1875.) Is this large export of coin to be ascribed to some temporary disturbance of exchanges or of the usual currents of trade; or is it required in order to meet national indebtedness? Replies may doubtless be found to these questions, but they do not appear upon the surface.

There is little to note in the year 1874 as to the development of the industrial resources of the country.

The mines of Japan of which so much has been said, cannot be expected, while worked under the present system, to contribute materially towards the increase of those resources. The value of the present annual yield of all minerals throughout Japan has lately been estimated on a careful calculation at £800,000, and all that could be spared for export (coal and copper) in 1874 amounted in value to $1,110,757, being $144,336 less than in 1873, while foreign metals were imported to the value of $1,134,185. The most valuable product of Japan at the present date is silk, and this unfortunately has deteriorated seriously in quality in successive years, and, as a natural consequence, has fallen greatly in value. The trade in silkworms' eggs which represented a new annual interest of upwards of three millions of dollars, has now nearly come to an end, but few persons will see in this circumstance a cause for regret, as it is generally believed that the growth of seed has for some time past been unduly forced and that the present weak condition of the worms and the inferiority of Japanese silk is attributable in great measure to this cause. There is room, therefore, to hope that by the cessation of the export of seed, little of which is now needed in Italy or France, and by the exercise of greater care on the part of the Japanese in preparing their silk, this valuable industry will again recover its former position.

The cultivation of Tea on the other hand is rapidly progressing, and the Export, which now exceeds in value that of Silk, has risen during the season 1874-75 to twenty-two millions and a half of pounds. It is very desirable however that the Exports of Japan should not be practically limited as they are at present to Tea and Silk, as she has to compete in those products with the much larger growth of China.

It is satisfactory therefore to note that in March last the Japanese Government withdrew the prohibition on the export of Rice, and thus adopted the most important step probably within their power for stimulating the agriculture of the country. Whether they will permanently relieve the farming interests of this prohibition or impose it again after a short interval remains to be seen. In the interests of the Japanese it is to be hoped not, as in dealing with such a question nothing can be achieved by fitful or uncertain action.

Further encouragement in the same direction may be found in the fact, alluded to by Mr. Robertson in his report, that the Government are going to turn their attention to stock-farming and in particular to the breeding of sheep and it is hoped that the Japanese Commissioners who proceeded to Australia in May last will obtain serviceable information on the subject. Everyone who has any knowledge of the wide area in this country which is left untilled and unoccupied must cordially wish success to the introduction of this new industry. The comparative scarcity of animal food would alone render the step desirable, and its importance in an agricultural and commercial point of view needs no remark. It is only to be regretted that the Government should be obliged to take the initiatory steps in this and similar undertakings, and that some time will probably elapse before they can be relieved of the task by the natural enterprise of the people. The latter have little capital to invest in industrial improvement; their distrust of each other and their inexperience in business are among those causes which appear to prevent the effective utilisation of the limited means which they possess, and advances on produce are no longer obtainable from foreigners who have learned by painful experience that the risk they incur in making them is not compensated by the return.

It should also be observed that the necessity of providing the country with good roads appears to be appreciated by the Government, and that they have lately endeavoured to make this subject popular by calling upon the newly created assemblies, both local and central to give it their consideration. In the present condition of the roads it is only the productions that are grown on or near to the outer fringe of the country that can hope to reach the ports at prices that will pay for export. A man may grow rice, tea, tobacco, hemp, &c., on the rich land of the interior, where agricultural labour is cheap, at a slight cost but by the time he has conveyed such bulky produce to a market, on the backs of ponies or bullocks, which form the only means of transport, the price often becomes too high to enable him to compete successfully with the same produce of other countries. Fortunately for the Tea trade, much of the leaf is produced near the coast, and Silk, being a light and valuable article, can bear the charge of transport from the interior. But this is not the case with heavier produce.

A Comparison of the Tonnage Return G with that of 1873 shews a slight diminution under all flags of 69,465 tons, the total for 1874 being 899 vessels, of 969,942 tons. British shipping for the year amounted to 237,432 tons or 2,973 tons in excess of that of 1873. American shipping which amounted to 637,606 tons shows a falling off of 85,484 tons, and German shipping exhibits a gain of 22,184 tons on a Total of 51,506 tons.

Return H shows that the total number of Foreign Residents in Japan exclusive of Chinese is 2,408, of which 1170 are British. The Chinese residents are returned at 2723.

It is to be hoped that the succeeding year will show some improvement on the condition of Trade in Japan, which has now for several seasons been attended with very discouraging results both to foreigners and Japanese.

H. B. M.'s Legation, Yedo,
August 1875.

ON SOME RECENT ASCENTS OF FUSIYAMA.

Why wonder that to heavenly height
So many ladies roam?
What strength can stay their passage bright,
When angels hasten home?

Like Jacob's ladder, Fusi stands
Against the sapphire sky,
While up and down the shining bands
In stainless beauty hie.

O, were I that majestic hill,
In wrinkled age grown cold,
Which oft has trembled with the thrill
Of fervour uncontrolled,

Where'er I felt the dainty feet
Upon my rugged sides,
Each empty vein would brim and beat
With lava's glowing tides!

A DANGER AVERTED.

By Hakone's broad-bosomed lake as I paused,
And marked how the giant's throes throbbed far and wide,
Ah! little I dream't that his tremors were caused
By the patter of eight tiny feet on his side.

Yes, they've sculed his wild heights; on the crater's dread brink,
Twice four beaming eyes scan its walls of dark jet,
Little recking, as downward the burning rays sink,
That the giant 's not quite uninflammable yet.

Ah! forbear, gentle maids, the poor monster to pain;
Withhold those bright gleams for some softer spectator;
And keep in reserve for the youth of the plain
The incendiary rays that might fire a crater.

PACK-HORSES.

Reader! Before proceeding further it will be observed that I employ no seductive adjective in bespeaking thy attention. I scorn to entice thee. I love not to tickle thine ear with "kind reader" "good reader," "gentle reader," "fair reader." I single out no special student, but address myself to all. I would moreover be regarded as a friend, *et donum ferens*. I would whisper in your ear a moment. Have you ever made a journey on a pack-horse? You have? Well, then you're of the mystery and need no advice. But, to you, and you, who have not—uninitiated persons—trusting innocents—I would repeat the warning addressed by Mr. Punch to persons about to marry—"dont." Let no prospect of a change of air or scene induce you to single out a retreat which must needs be sought upon a pack-saddle. Faugh, the very name's a monstrosity. A lumpy, uncomfortable-looking affair, even in print. No, no, be advised to your good by a sufferer; better an easy chair, though it be in a stuffy back street, than fresh air upon a pack horse. Why? it may not unreasonably be enquired. A short dissertation upon the animal afore-said and its equitation may not be out of place as an answer to that enquiry, dividing it into heads for the better consideration thereof,—much as a physiologist would divide with the same intent the consumption of a mutton-chop into prehension, mastication, deglutition, digestion and such like, by which it will be obvious that much more can be said about so simple a business than if it were bolted in the lump. We will consider together then in detail, the mounting of—the riding upon—certain considerations relative to the foregoing clause, and the dismounting from—a packhorse.

Let us regard critically for a moment the demure, quiet-looking animal as he stands dozing in the sun and awaiting patiently the imposition of his daily burden. How harmless he looks! What a shock-headed innocent he is! How good-naturedly he permits the flies to congregate upon his nose! What slight and simple head trappings suffice to guide and manage him, docile creature! A mere string, metaphorically a silken thread. Poor inoffensive fellow,—he's fond of music, too, and must have his jingle to cheer him as he plods along—you would essay to mount him? Patient drudge! Reader, hast thou ever inadvertently inserted they hand into a Leyden jar and felt to thy surprise a shock therefrom! Which of the emotions had the upper hand of thee upon that occasion, surprise, anger, fear, resentment? A little of each per-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

haps, but most of all surprise, and of such a nature will thy feelings be upon thy first experience of a pack-horse. You *look upon* a lamb; *lay a hand upon him* and you rouse a sleeping devil. From a condition of complete repose he has started into the most vigorous action; his eyeballs glare, his ears have fallen back, his teeth are all exposed to view, his jingle rattles horribly as he tugs and strains at his halter, screaming and snorting viciously the while, and, to sum up all, it is ten to one but that he has left the print of a muddy straw-shoe upon thy sacred person, O would be *equés*! This pernicious habit of striking with the fore-foot (probably improved by centuries of natural selection) in which the pack-horse has learned to excel must be well remembered in attempting to mount him, as if not avoided the result can hardly be considered satisfactory perhaps by the mounter, whatever may be the private opinon of the mountee. Let us suppose, however, that owing to many devices for restraining the fractious beast, and indomitable courage and endurance on your part, you have succeeded in laying your hand upon his neck and would take advantage of a momentary lull in his proceedings to get upon his back; you are discomposed by finding that there is no stirrup on which to insert your toe, and that the saddle is mountains high above you, and incapable of being "vaulted into" were you so minded; nor do your discoveries end here for it is soon made plain to you (if you try to climb without assistance) that the saddle has no girths, and must be held down upon the one side whilst you scramble up upon the other, and that this unpleasant operation is yet further complicated by having to be performed upon the off-side. It's no use to remonstrate; you must do as you are advised and make the best of a bad job or—give it up altogether. You'd rather not give in, and in process of time you find you have gained the summit after many attempts, and with much panting and palpitation are seated astride the packsaddle. In your excitement and exultation at having gained your point it does not strike you until you have proceeded on your journey some quarter of a mile or so that you are suffering a bodily anguish which is aggravated at every step and becomes agonizing at every second one (which is invariably a stumble). You find that you are seated—with legs widely separated—in a box, whose edges are as sharp as knives and which is too small to admit of a *com*fortable session. Before and behind you rise two wooden peaks, angular and uncompromising but useful for holding on by. These horrors may to a certain extent be mitigated by filling up irregularities as far as possible by means of a quilt or *futon*, and by continually shifting your position. By such-like devices you will be able—when you have become accustomed to the ever imminent danger of being deposited upon your head from a stumble—to permit yourself occasionally to look about you. Probably the first impression which will strike you will be the remarkable altitude to which you have attained, the monstrous size of the superstructure and the minuteness of the horse beneath it. You can see his head below you (like that of a very small tortoise projecting from a very large shell) wagging from side to side, and bobbing towards the ground as he recovers himself from a stumble. You wonder if he's asleep, but are rudely assured to the contrary when he meets with another packhorse on a narrow pathway and wants to fight him, which he invariably does. Imminent as the danger seemed till now of falling over his head, it was security compared to that of being pitched off towards any point of the compass, or having your ribs kicked, or your legs bitten by the adversary. The position on such occasions is really perilous, when it is borne in mind that a perfect balance is requisite to be maintained upon a saddle unsecured by girths.

The miserable pace at which these horses travel—although they can do a good round amble if they are so required (by their masters) is an aggravation of all else which goes before. It is useless to strike them on the sly: not only do they refuse to take the hint, understanding not the *argumentum baculinum*, but have even been known to get their backs up in consequence, *actually*, to the detriment of the rider, and *metaphorically*, in as far as they sometimes come to a dead halt and refuse to budge, perhaps from a natural perversity of disposition, or with a view of reflecting upon the unusual circumstance. For a blow is seldom or never administered by their masters to these gentle brutes. They are so far amenable to reason that a word suffices. Have you never such reasons for hastening on your journey you can only hope to regulate your horse's pace by mouth of driver. A tribe will generally suffice for this purpose, but not always, for there are instances where from long and intimate association with a pack-horse, the man in charge has contracted so sour and surly a disposition that he openeth not his ears charm ye never so wisely. Now, what is to be done under circumstances so perverse? You are in a wilderness, and a necessity has suddenly arisen by which your presence is urgently required at home. Your horse is lazy, and the man on whom your hopes depend is deaf to the musical jingle of silver and gold! Thine ear again my friend. Herein lieth the pith and marrow of this my dissertation. Extended observations, ranging over boundless time and space, have convinced me that one little word is sufficient to make the pack-horse amble, trot, gallop, canter or caper. No clumsy "open sesame," but a neat and handy trisyllable. A little closer, friend! Is there any one behind that screen? The talismanic word is KURUMA.

"Only a cart," did you say with that contemptuous expression upon your visage? By no means a cart, my friend, but a complex word, composed of a verb and a substantive. *Kuru* to come and *ma* a horse—no matter what philologists may say to the contrary—is obviously the derivation thereof, (and here it might be profitable to pause and reflect upon the community of expression and disposition engendered all over the world by association with horses—Come, horse! Come up, horse! Come up, old horse! are expressions not unknown in the western world). At first sight *kuruma* would seem likely to be rather limited in its applicability, and to be incapable of many inflexions unless added to, as in the English version of the same idea. Such will not be found to be the fact as by whispering, shouting and reiterating—not to mention the number of variations accomplishable by altering the key—an endless variety of meanings can be attached to this kaleidoscopic word. Proficiency in this, however, can only be acquired by constant practice with a qualified teacher, say every day for six weeks—six hours a day—Sundays excepted—unless indeed the student be gifted with a good ear for music, in which case his progress would be quicker. The trouble you would urge. Bah! What of the trouble; every tourist armed with his *kuruma*—as much a matter of course as his Sangster or Mackintosh—is independent of the abandoned horse-boy.

But bless me! here we have been journeying together on the top of a pack-saddle for ever so long. Surely it's time to dismount. We're at our our journey's end and are cramped and stiffened as with the *rigor mortis*. *Facilis descensus Averni*—Yes! yes! Avernus is all well enough in its way, but descent from the giddy eminence it took such trouble to attain is quite another thing. To get one's leg over the peaked promontory in front and slide down is easy enough in theory, but difficult of practice when the leg in question is benumbed and paralysed beyond the control of its owner; and that enticing-looking "slide down" is hardly possible from a saddle which is not girthed, but so artfully balanced that you must be careful how you breathe when on it, lest the unequal expansion of a lung upset the equilibrium and deposit you amongst the horse's legs. It is true that there is far below you a horse's head which, if reached, might be of service, but then the reaching! There's the rub. My good Sir! you had better give it up, call for help and get lifted off. And now that you *are* down, and while your bones ache and your temper is ruffled, was I worth listening to when I solemnly advised you when projecting your ride upon a packhorse—DON'T.

The great Shintô festival will commence on the 7th of next month, by special permission of the government. It is now four years since the last Shintô festival was celebrated; and from all accounts the ceremony next month is to be conducted on a grand scale, the estimated cost of the demonstrations being $10,000, which will be contributed this year by the merchants residing in a certain part of the city, and the cost of the next festival will fall on the merchants residing in another part of the city.—*Rising Sun.*

Correspondence.

THE SILK WORMS' DISEASE.

To the Editor of the "Japan Weekly Mail."

Yokohama, 18th September, 1875.

Sir,—In reference to that dreadful disease of the Silk-worm called "*pébrine*," you stated in your *Mail* issue of the 10th instant, that the *corpuscules* which were its invariable concomitants in France and Italy had recently been disclosed in Japan by a careful microscopical examination. Taking that discovery as granted, what is to be inferred from it?

According to Pasteur the corpuscules are not simply the concomitants, they are essentially the symptom of the *pébrine*. As early as 1865, he discovered some in the eggs which were then for the first time imported from Japan. On the other hand it is well known that, since 1865, the supply of silkworms' eggs required for the European crop has year after year been almost entirely derived from this country; and also that the silk crop of Japan has rather increased during that period than decreased. At first, it seems impossible to reconcile these facts with each other, but the contradiction is only on the surface. Pasteur's doctrine is that the presence of corpuscules in a silk-worm is not necessarily fatal. It constitutes a morbid state, but between incipient disease and death there are many degrees; a few corpuscules may be innocuous, a great predominance of them in the organism will kill the animal. Analogous facts are so numerous that they will occur to every reader.

Let us not forget that, in practice, the immediate object of the silk-grower is to get cocoons; as long as the silkworm has enough life in it to turn out a tolerably good cocoon, he cares little whether the little toiler is corpusculous or not. Silk growers have every advantage of course in getting from their own worms a healthy progeny, but, failing that, they will buy in the market the best eggs they can find. Now, the neglect into which the Japanese eggs have fallen arises not from their having degenerated, but from the European breeds being apparently in course of regaining their former superiority.

In conclusion, let us admit that the *pébrine* virtually exists in Japan; that it is actually killing the worm we have yet to learn. Whoever takes upon himself to proclaim that the *pébrine* has broken out in any particular district must be prepared to prove: 1st, that he is a competent judge; 2nd, that he was on the spot and observed the disease through all its stages. If his evidence is based on the reports of uneducated Japanese, let us remember that vast interests are still at stake and suspend our judgment.

I remain, Sir,

Your obedient Servant,

E. P.

Law & Police.

U. S. CONSULAR COURT.

Before Gen Van Buren, U. S. Consul-General;

And

F. R. Wetmore and C. Drake, assessors.

Ito Hachibei *vs.* Walsh, Hall & Co.

Monday, 6th September, 1875.

In this case, plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Nèss for defendants.

Case of Ito Huchibei continued.

The re-examination of Ito Hachibei was suspended till the evidence of Mr. W. H. Harries could be taken.

W. H. Harries, sworn:—I am the Manager of the Hongkong and Shanghai Bank at Yokohama. I have seen and recognised the 6th paragraph of the petition. The securities mentioned in that have been deposited with the Bank. It was about October 1873. They were deposited as security by Walsh, Hall & Co. I do not know who personally deposited them with the Bank. They were deposited as security for a loan. The loan was made at the time of their being deposited. First $100,000 was loaned and then it was increased to $17,000 a few months later on. I have the documents and can produce them. I would have produced them before only for the threat that they would be impounded.

His Honour said the Court had no power to impound them and the witness then produced them.

Witness continued:—The two Japanese bonds now shown me are for $100 and $300 respectively.

Mr Nèss admitted that the documents produced corresponded in description to those mentioned in the petition.

Witness continued:—I have had the upper portion of one of the bonds translated.

Cross examination by Mr. Nèss:—On the first 12 documents produced as a banker I would not advance one cent [envelope of the documents read.]

Re examination by Mr. Dickins:—I do not know what value the first 12 documents may be to the plaintiff; as a banker, I would not advance a cent on them. I do not know if the sanction of the Government is necessary in transferring these bonds. I have never dealt in them. The first 12 were described as certificates for 50,000 *rios* in Government bonds. The loan of $17,000 was made to Walsh, Hall & Co.

Re-examination of Ito Hachibei continued: The two bonds shown to me, mentioned in the petition, are for 100 and 300 *rios* respectively. They are stamped by the Okurasho. The difference in the bonds is, that one is for 100 *rios* and the other for 300 *rios*. They are both endorsed to me, there is only a difference in the date and the name of the officer, who issued them. The 100 *rios* bond are worth 50,000 *rios* to me. The transfer of such bonds has to be made at the Okurasho and the officer stamps it. The transfer is written on the back of the bonds. [Form of transfer read.] The whole of the securities were handed to Kumagai Iske by Hachimoto Benzo. They were handed to Iske as a partnership security. I had a conversation with Iske about the advisability of depositing them with defendants as a partnership security. I had other conversation with Iske about it. Iske told me he had received the documents from Benzo. Iske said he would put them into defendants hands to be kept. Defendants were put to them away and keep them safely. Iske never asked me to deposit them as security with any other persons than defendants. I do not know if they are deposited with the Hongkong and Shanghai Bank. I have never had business with that bank, or borrowed any money from it. I never asked defendants to borrow money from that bank on my account. Defendants never asked leave from me to borrow money on my account. They never told me that they had borrowed on the securities. I do not know where the Hongkong and Shanghai Bank is or what number it is. I never authorise any of my *bantos* to go there with documents and transact my business. I first heard of the bonds being deposited with the Hongkong and Shanghai Bank during this trial.

Mr Dickins announced that he had finished his re-examination; he then called

Urbida Zenjiro, continued:—I am a rice broker. In the 4th year of Meiji I was a rice and exchange broker for the *Shosha* at Yokohama. In the 4th year of Meiji I was acquainted with the firm of Walsh, Hall & Co. I acted as broker for Mr Irwin, Ito Hachibei and Benzo, about the 7th month, 4th year of Meiji. I acted as broker in exchange transactions for them. I with Ito and Benzo went to Mr Irwin's, and Irwin advised me that as dollars were in demand for melting it would be profitable to buy them and send them down to the Mint. I was then employed by Irwin and Ito to act in the transaction. I was employed by both. I think it was on the 3rd of the 4th month 4th year of Meiji that this took place. There was an agreement between Irwin and Ito. Irwin was to have two-thirds of the profits or bear two-thirds of the losses, and Ito was to have a third share in the transactions. Irwin acted for the defendants. There was nothing else in the agreement. Defendants were to furnish the funds for the transactions. I have seen a document exactly like that shown to me [exhibit H]. It was taken to Mr Irwin, and that is the last I saw of it. Ito and I took it. No one else went. It was delivered into Mr Irwin's hands. This was on the 6th of the 4th month 4th year of Meiji. I remember 20,000 rios being paid by Ito to defendants on the 5th of the 7th month 4th year Meiji. The book "H" was handed to Irwin after the 20,000 rios was paid. I and Benzo took the 20,000 rios to defendants. We were alone. I do not know anything about the depositing of the securities by Ito with defendants. The exchange transactions ceased about the 11th month 4th year of Meiji. The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

money to carry on these transactions was all received from the defendants. I received some of it. The transactions were daily. Benzo and Uchida Rikichi also went. I only received some of the money. Sometimes I went alone and sometimes I went with Benzo to receive money. I have also been with Rikichi and Kaske. I received the greater part of the money. Entries of the sums received and paid were made by Rikichi and Kaske. The money that I received was handed over to Rikichi and the entries at once made in the cash book. The entries of the exchange transactions were made in Exhibit "C." There were memos. of the exchange transactions kept besides exhibit "C," but no other cash book. Defendants made entries in a book, there is another book like exhibit "C," and they kept it. [Book produced and recognised by witness]. The entries in the two books correspond, I know they do. All the moneys were received in Bank cheques, payable in dollars I do not know how much money was received by cheque I delivered the cheques to Rikichi for entry, and then took them to an exchange house in Nakadori and got *niboo kin* for them. I sold some of the cheques to the exchange merchant, and some to the Shosha, I used to buy *niboo kin* at the market price with them. I took the proceeds on the same days as I received the cheques to defendants. I took them myself. Sometimes Benzo went with me.

Court adjourned till 2 p.m.

Court re-assembled at 2 p m.

Examination of Uchida Zengiro, continued:—Records were kept of the transactions. I used to hand the records to Rikichi, and Koske kept these books [exhibits "C" and "F"]. Rikichi or Koske would make the entries in both books. Irwin made the English entries in the books. Rikichi kept account of the transactions between myself and other parties in several books. I used to make out accounts of sales and hand them to Rikichi who entered them. Rikichi will be able to explain all the entries. Koske had to do with it. Rikichi and Koske acted together in keeping the accounts. I used to report the daily rates of exchange to Irwin. Everything was done under Irwin's instructions. By *Jiges* I mean cash sales. By *Sake mono* I mean time contracts. In a time contract, I got a certificate from *Shosha*, after depositing a certain sum of money. It would be a certificate of agreement of a transaction to be completed at some future day, it would also confirm a receipt of an advance made by me as a guarantee that I would carry out my part of the agreement. This document is called *Kitte*. When the day arrives I take the *Kitte* to the *Shosha* with the dollars, and receive the *niboo kin*. I give up the document to the *Shosha* and receive an account sales *(Shikiri)*. It contains a full account of the transaction from beginning to end. In all the time transactions I received *shikiri*. I think Rikichi and Koske have them all, some may be missing. The *Shosha* keeps an account of all these transactions. I know Sin Coy, he is a Chinese compradore of defendants. I had two transactions with him. There were two transactions with the *Shosha* of which Sin Coy had cognizance. It was at Mr Irwin's request Sin Coy made the transactions with the *Shosha* in the name of Benzo. The transactions amounted to about $180,000. There was great loss incurred in these transactions. I was requested by Mr Irwin to settle the account. I re-purchased the dollars after they were sold by Mr Irwin's request and this was the account that Irwin requested me to settle. All the transactions I made were in Benzo's name. I know Nakamura Sobae. Irwin made a partnership with Sobae to do an exchange business. Irwin sent for me and Benzo and told us he intended to enter into a partnership with Sobae to do an exchange business. Mr Irwin and Ito were to have a half share in it and Sobae the other half share. There was no fixed time for the partnership to last. It lasted from the latter part of the 9th and ended I think about the 1st day of the 10th month. I think transactions to the amount of $600,000 or $700,000 took place during this partnership. One half of this money was received and used by me, the other by Sobae. I and Sobae's younger brother Rimbei had charge of those transactions.

The records of these transactions are in Sobae's possession. The proceeds of these transactions were handed over to defendants. I and many others took the proceeds to defendants. I do not remember anything much about receipts, but I think Benzo and Sobae got them from defendants for money that was paid to them. Sometimes Kumagai Shoske came from defendants to receive money. In the 9th month I had a communication with Mr Irwin about rice transactions. I sent for Ito and Benzo and the three of us went to Irwin's. Mr Irwin said as the government was about to remove the restriction on the export of rice how would it do to make transaction in it Mr Irwin decided to put the matter into my hand I agreed to this. There was an agreement. The agreement was the same as in the exchange transactions. At this time some of the exchange transactions were not completed. There was no fixed time for the rice transactions to last. They finished on the 12th month. I conducted the transactions together with Chojiro. Chojiro conducted the greater part. I received my instructions from Mr Irwin, and I made my reports to him. I frequently reported to him. There were rice transactions made daily at the *Shosha* by me. I daily received the price I was to pay, and other instructions from Irwin. Some sums of money remaining over from exchange transactions were used, together with other sums received from Irwin from time to time. The records were kept in a temporary Journal [exhibit "D"]. There was a memo or slip kept separate from that book [exhibit "K"]. Rikichi and Kuske kept that book and the slip. They would go and take the book, receive the money and give it to me. The transactions in rice were recorded by the *Shosha* in a book called the *Han-cho*, and copies were made by Rikichi. The copies are in Rikichi's possession. I have looked them over and they are correct. They form a correct record of the rice transactions. The proceeds of the sales of rice were taken to defendant's. Hachimoto Benzo took them to defendants. I went with Benzo; that is how I know the proceeds were paid to defendants. They were immediately handed over to Irwin. All the rice was purchased at the *Shosha*. It was sold in a lump to a Yokohama merchant, named Itoya Hatachi. One-half of the transactions were time ones The rice actually handled was sold to Itoya. I do not remember what that rice cost. All the proceeds of the rice sold to Itoya were not delivered to defendants. There was a deficit to be made up on the exchange transactions and it was applied to that with Irwin's permission. I took the promissory note for $40,000 to defendants. I know about it [exhibit "B."] I got a cheque or cheques for it the account of which was $40,000. This was on the first day of the 9th month 4th year of Meije. After about two days I returned the cheque to Mr. Irwin without having used it. I returned it same as I received it. I engaged to sell that amount to an exchange house and borrowed that amount, but the exchange house for want of funds could not do it, but promised to be ready by the next day. I went again but the exchange had altered compelling me to refuse to carry out the transaction. Two days were consumed in this business, and I returned the cheque to defendants. Uchida Rikitchi took it to defendants. I only heard he did so. I have been to defendants to request them to return the promissory note four or five times. I requested Irwin and Shosuke and Iske to return it, but they said they could not find it. They said they did not know where they had put it and could not find it. I have been with Uchida Rikichi and Benzo after it, and we got the same answer.

They never denied my right to have it back. I think on the 25th day of the 3rd month 5th year of Meiji I went with Ito and Benzo to Irwins. A conversation took place about the "temporary Day book" [exhibit "D."] The conversation was principally on the part of Irwin who had requested two entries to be made on account of losses in the exchange transaction and Mr Walsh was expected back from Home. The entries were made on the 10th of the 10th month 4 year, Meiji. I asked for the return of this book as the correct accounts had not been furnished us as promised by defendants.

Defendants replied "very well, we will return you the book" and Kumagai Iske handed it to Ito. I did not examine the book when it was returned.

Adjourned till 10 o'clock to-morrow morning.

Tuesday, 14th September, 1875.

The Court re-assembled at 10 a.m.

Examination of Uchida Zengiro continued: I consulted with Benzo, Rekichi, and Kaske about the advisability of making the two temporary entries, and I finally concluded that it would be wrong to make such false entries. Benzo urged me to do it, and I sent for the plaintiff. Upon his arrival a further discussion was held. Benzo stated that corrected accounts would be shortly handed in. The two items were eventually entered. Saito Kuske wrote them. As these two items were quite distinct from the proper account, the term *adzukari adzuke* was written on them. As a corrected account was not forthcoming, the seal was not affixed to the two entries. We made repeated demands to Irwin for the corrected accounts but they not being received in the following year Ito, I, and Benzo went to Irwin's office to demand the restitution of the book. We stated that the corrected accounts

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

must be made out, or the book returned. Mr. Irwin finally ordered Iske to give back the book, and plaintiff received it. I remember having a conversation with Irwin on the 27th of the 12th month, 4th year of Meiji; Benzo, plaintiff, myself and a foreigner were present during it. Mr. Irwin sent for us, and we went. Irwin stated that very great losses, to the amount of about 100,000 rios, had been sustained in the rice and exchange transactions and that if we would wait for a little while, till a large and profitable speculation could be discovered, he (Irwin) would make it all right to us. Irwin said the accounts should be made out with compound interest at 12 per cent. per annum, and if we wanted any funds the defendants would furnish them. We acceded to Mr. Irwin's request in this matter. That is all I have to say about that conversation.

Cross-examined by Mr Ness: Plaintiff, Benzo, and I constitute the "we" I have used in my examination-in-chief. Plaintiff agreed to Irwin's request, and the "we" I have spoken of consisted of Benzo and myself, who were listening. On the 12th month, 4th year of Meiji, duties to plaintiff as a clerk ceased. Since then I have acted as a rice broker, making transactions between Yedo and Osaka. Since that time I have made no transactions for plaintiff. Some time ago I received pay from the plaintiff. Nobody has been retained as a witness receiving pay from the plaintiff. I do not know if plaintiff has been put to any expense for maintenance of witnesses during July and August last. I have received no pay from plaintiff lately. I received some commissions on the rice transactions, but have not yet received any on the exchange transactions. I did not receive all my commission, because the accounts between plaintiff and defendants are not yet made up. I made up the accounts of the rice transactions, and handed them over. It was in the 12th month 4th Meiji I gave them to Rikichi. Plaintiff paid me my commission on the rice transactions. It was in the same month that plaintiff told me that he did not pay the commission on the exchange transactions because the accounts were not made up. I made up the rice accounts and received my commissions. I did not receive my commission on the exchange transactions because those accounts were let stand. I do not know if the rice accounts between plaintiff and defendants were settled. I know something about the nature of the rice agreement between plaintiff and Irwin. I was present when it was made, and Irwin said it would be the same as the exchange transaction agreement. It was in the beginning of the 9th month, 4th Meiji. I remember it was at that time, because the rice transaction then commenced. I can remember some interviews that took place four years ago; some I cannot. The accounts that I made at that time were made out under the instructions of Irwin. It was a partnership account between the plaintiff and defendants that I made out. It was not a partnership account. It was an account of the business that I had charge of. I do not know anything about the general accounts between the plaintiff and defendants. After an interview with Mr. Irwin I was engaged by both parties. As it was a partnership arrangement, I thought it was only necessary to hand an account to one of the parties. If compelled, I would have had to give an exact copy to defendants of the account I gave to plaintiff. The exchange accounts were not settled. I did not render an account of the exchange accounts as they are still in an unfinished state. I did not render them, because I was only buying and selling. My own particular accounts in the rice transactions were made up. There was no interpreter when the rice agreement was made. Mr. Irwin knows Japanese well. I received my commission on the rice transactions from Rikichi. Whatever way this case may go, I shall receive my commission all the same. Whenever I do work, I charge commission. I have not yet charged commission on the exchange transactions, because the accounts are not made up, and on account of the large losses that have been sustained, which keep the accounts open. I can't tell how much my commission will amount to yet. I do not know if Iske knows any thing about the rice transactions. I received my instructions from Irwin one by one. There was no written contract about the partnership, or any written memorandum about it. I know something about the exchange transactions; about others I do not. Rikichi made some entries in exhibit "C." I received some of the cheques in the exchange transactions. Rikichi and Benzo received some also. It is true that all payments made to me were by cheque. The dollar payments were by cheques. Other money passed back in *niboo kin*. I think it possible that the payments were made in bank notes, as well as cheques. I know what foreign bank notes are, as well as cheques. I know what foreign bank notes are. Immediately upon receipt of cheques or money I entered them in exhibit "C." The entry was made when the amount was received. I do not remember distinctly whether I received any compradore order from defendants. I received a great many payments. We never went to the Hongkong & Shanghai Bank to cash the cheques received from defendants. They were sold outside, so I do not know who eventually took the cheque to the bank. [Books "F" and "C" placed in witness' hand.] They contain all the exchange transactions. They are both alike. They should correspond in every item. [Page 1 in exhibit "F" shown to witness] The two entries on page 1 in "F" are also on page 1 in exhibit "C." I do not know when they were made; the party who made them must be asked. The entries to the exchange transactions are complete in these books. There may be memos. of exchange business besides these books. When there were extra items to be entered, memo. slips were used. At the time of the transactions with Nakamura Sobae, these books could not be used at times. As it would not do to have mistakes in these books, sometimes memos. were used. I believe there are payments and receipts not entered in these books. I do not know if there is a complete record of these memos. in the books. Benzo and Sobae went to defendants, and received $481,000 about the latter part of the 10th month. I was not there at the time. The purchases of money at the *Shosha* by Sin Cor (defendant's compradore), were time contracts. No money passed through his hands.

Court adjourned till 2 30 p.m.

Court re-assembled at 2.30 P.M.

Cross-examination of Uchida Zengiro continued:—I was present when the entries of 200,000 rios and $230,000 were made in the book "D." They were made in Benzo's house. It was during the 10th month at Benzo's house that these figures were arrived at. It was at Irwin's request that these particular entries were made. It was in the beginning of the 10th month that the request was made for these entries to be made. I heard this from Benzo. Irwin never made any request to me to make these entries. Mr Irwin never spoke to me personally about this matter. If a corrected account should be shown these entries would be correct, but in its absence the entries would be false. I know personally that previous to the preparation of the corrected accounts these two items are false. Those entries did not represent the actual balance between the plaintiff and defendants when they were written. Before I saw these two entries made I knew nothing about the state of the accounts between the plaintiff and defendants. I did not arrange with Ito Hachubei, to join in a fraud at this trial, by saying that these entries were false. I had nothing to do with any fraud. At the moment those entries were made I believed them to be false. These entries were made by request of Irwin. I do not know if they were made to deceive Mr Walsh. Ito, Kaske, Rikichi, Benzo and myself agreed to these false entries being made. They did not look upon them as false entries at that time as corrected accounts were to be put in. Without the corrected accounts they knew them to be false entries. There was no other reason to make them except that Irwin requested that they should be made. There is only one book with these entries in. There were rice receipts entered in the book subsequently.

The book was obtained back from defendants on account of corrected accounts not being made out. Ito received it back, from Iske, at defendants. I could not relinquish all connection with Ito as the accounts were still unsettled. I did not act as Ito's *banto*. Ito and Benzo asked me to go to defendants with them about this book. We went to get the book back because the corrected accounts had not been presented. This had been agreed upon. The book was of no consequence. It would be of value if the corrected accounts had been prepared. In the absence of corrected accounts these two entries would appear as fraudulent ones. The getting back of this book would have very little effect on the accounts between the plaintiff and defendants. The taking the book away would not alter the accounts. There were entries of rice transactions in the book. It was the agreement that the book was to be returned if the corrected accounts were not prepared. I do not know if it would alter the value of the figures entered in it. I do not know what difference the possession of the book would make to either party. I consider that in the absence of corrected accounts. Irwin had attempted a deceit and therefore I thought it advisable to have the book in plaintiff's possession. I never took back the cheque for $40,000 to defendants. I went to obtain that amount. Rikichi returned the cheque. I have never seen a receipt for that sum. I borrow it to use in the exchange transactions and not having any use for it I returned it to defendants. In the 10th month last year I made my accounts up and asked Ito to pay me my commission, but as the accounts between

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

plaintiff and defendants were not settled I could not get the money. I applied to Mr Irwin for my commission, but I agreed to wait till the accounts were settled when I was to receive my commission from both parties. I have not applied since that time, as the accounts are not yet made up.

Re-examined by Mr Dickins: - I was paid a little over 100 *rios* for commission on the rice transactions. The exact sum is stated in the accounts The reason it was paid was because I presented my account with those of the *Shosha*. It was merely commission. The transactions of defendants' Comprador Sin Coy were time ones and nothing was received; money was only advanced. Up to 11th month 3rd year of Meiji I was a paid clerk of plaintiff's I have never received wages from plaintiff since that time. I have made up no accounts in this case. As far as I know Kaske and Rikichi have had charge of the accounts.

This finished the re-examination of this witness and the Court adjourned till 10 o'clock to-morrow morning.

Wednesday, September 15, 1875.

Court re-assembled at 10 o'clock.

Mr Dickins then called and examined :—

Kudzusaya Chojiro, continued :—I am a rice merchant. In the 4th year of Meiji my business was the same. In the 9th month, 4th year of Meiji. I did some rice business in Yokohama. I was engaged by Iske and Shoske (father and son) to do some business They asked me to buy rice for them. They said nothing about representing any one; they merely requested me to act for them. In the succeeding 10th month I had rice transactions with Ito. I only took charge of the rice business of Ito, Iske, and Shoske. That business was confined to the purchase of rice at the *Sho ha*. I had no particular conversation with anybody about it. I do not know if anybody else was interested in it except the parties I have already mentioned. I went frequently to defendants' office about it, and I saw Ito and Shoske there. I saw many foreigners there, but I had no conversation with them directly. I only held conversation with Ito, Shoske, and Iske there. I went there with Rikichi to ascertain the reason of the delay of funds expected by Ito. The money was to come from defendants, and was to be advanced on the rice transactions at the *Shosha*. In the first place I received it from Shoske and Iske; after that from Ito and Rikichi. I do not know who was to bear any loss that might be sustained I do not remember how much rice I was to buy, but I believe it was a little over 21,000 *kokus*. [Accounts handed to witness] I do not know if this is a correct statement of these rice transactions without referring to my books. I do not remember the exact figures. The book in which I kept all the receipts and payments of these transactions was handed to Ito, and bears his seals. [Book produced.] My account-books, being useless, were put away, and are, probably not to be found. [Account-book handed to witness, and recognised.] It is correct throughout; the seals in it are mine. [Book handed into Court, and marked "Q."] The entries in it were made at the close of the rice transactions in which I was engaged. It is an account sales book. [Another book handed in, and marked "R"] This book is a day-book, in which the rice transactions were entered daily. The seal on it is mine. The rice transactions entered in it I made for Ito, Iske, and Shoske.

Mr Ness said he only desired to cross-examine on the book just produced; but as there was no translation he could not do it. He objected to the books being received unless they were translated.

His Honour ruled, after a great discussion, that they should not be received as exhibits in the case till their contents had been explained and proven, and that all Japanese documents or account-books, or such parts as are used in evidence must be accompanied by a certified translation, or translated by the interpreter of the Court.

Mr Dickins protested against this being done. It was not necessary at the present state of the proceedings to have them translated.

Uchida Rikichi, cautioned: I am in charge of Ito's account that I had charge of previously. I am in his employment. I have been in Ito's employment for ten years. I remember a partnership being entered into about the exchange business; it was between Ito and defendants. The defendants were to have two-thirds, and Ito a third share in the business. I know the document shown me [marked 'H"]. I wrote it. After I wrote it I gave it to Ito who took it to defendants. I did not go with him. The exchange transactions continued from the 7th till the 11th month. The last transaction took place in the latter part of the 10th month, I think. I know that the money to carry on these transactions came from defendants. [Exhibit "C," handed to witness.] I made some of the entries in it. Saito and Zenjiro's handwriting are in it. I made the majority of the entries. I put all the seals on that are in it. My instructions from Ito were to put the seal on all the entries, but as considerable time has elapsed I cannot tell without looking it over if the seal is on every entry. [Entry shown to witness without the seal on it.] I was very busy at the time that entry was made, and I neglected to put the seal on it. I know the book shown to me [exhibit "F."] It is a book containing payments and receipts between plaintiff and defendants. The book marked "F" is the original, and was handed to defendants. The books "C" and "F" contain all payments and receipts in the exchange transactions. In book "F" I made the majority of the entries; some were made by Zenjiro. I placed the seals on all the entries that are stamped with it. I can't say if all are stamped with the seal, because it is such a long time since. No complaint was made by defendants with regard to any entry that did not bear the seal. Mr Irwin made the entries written in English in the book. Whenever I went to receive money, Mr Irwin would send out the book from the inner office, with the English entries on it. I, Benzo and Zenjiro received the money. I used to receive it, and finally hand it over to Zenjiro. Some of the money was handed over to Murabiashi, who sold it for *niboo kin*. Murabiashi and Zenjiro handed in accounts of the transactions showing how the money was used, and I handed them over to Saito Kaske for entry. I kept accounts of the transactions as well. The accounts that I kept are mixed up together with those of Saito Kaske. We kept the accounts together, but Kaske did the larger portion of the work. I made entries when Kaske was busy. The proceeds of the transactions in the exchange business were given to me. I entered them, and at once took them to defendants. The whole of the proceeds were given to defendants. Considerable loss was experienced on the exchange transactions. I did deduct the losses before paying the proceeds to defendants. I delivered to the defendants the entire amounts I received from Zenjiro in the exchange transactions. All the proceeds in the cash transactions were handed over to defendants. There were no losses sustained in the cash transactions but only in the time ones. Murabiashi and Zenjiro had charge of the time transactions. Saito Kaske knows all about them. I know Hashimoto Benzo; he had nothing to do with the time transactions; his name was only used. Zenjiro acted on account of the plaintiff and defendants. [Accounts shown to witness marked 'A 7."] I have looked through these accounts. I only heard that they came from defendants. I saw these accounts in Tokio at plaintiff's house. I do not know Mr Talbot, or No. 89. I have never been called by any foreigner to assist in making out any accounts. I do not know about anything outside the exchange and rice business. I know something about Nakamura Sobae. Benzo and Zenjiro were sent for by defendants. I placed a seal on a note for $481,000 that was delivered to defendants. I think it was written by Saito Kaske. Ito's seal was placed on it. The $481,000 were wanted for exchange transactions. The amount was obtained from the defendants. Saito Kaske kept all the accounts of that transaction. I went with Kaske, by plaintiff's orders, to Sobae's house, to demand the production of the books in which this account was kept, and was told they could not be found. It was in the 9th month last year. We went frequently, but were told by Nakamura Sobae that the books could not be found. There was a loss on this transaction. I think it amounted to about $6,000 and $7,000. I do not know the exact figures.

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Examination of Uchida Rikichi continued by Mr Dickins:—Zenjiro had charge of the Rice transactions and kept them on slips of paper, which he brought me daily, and I entered them in an account book called the "Rice purchase and sales Book." He would bring me the *Kittes*, which are certificates of deposits, on time contracts given by the *Shosha*. Chojiro was instructed by Shoske, a clerk of defendants, to take charge of certain Rice transactions. In the latter part of the 9th month I was sent for by defendants and went to their office. I was told by Shoske that I was to have charge of the transactions between plaintiff and defendants, and I was given the rice book. Shoske ordered me to write out a memo receipt for 7,000 *rios* which I did, and I affixed Ito's seal to it. I then received 7,000 *rios* but I was requested to leave in the hands of defendants the major portion on account of rice transactions. I left 5 or 6,000 *rios* with defendants. The balance I took to Benzo's house where I turned it over to Chojiro and Zenjiro, to be used in the rice transactions of which they had charge. I received other money from defendant namely sums of 20,000, 5,000 and 3,000 both *rios* and dollars. I delivered these sums over to Chojiro and Zenjiro,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as advances on rice transactions [exhibits "K" and "D" shown to witness]. They contain entries of advances on the rice transactions and nothing else. Some of the rice was really bought; It was sold to Itoya Hayhachi. Uchida Zenjiro received the proceeds, and he with Benjiro went to defendant. I did not go with them. I and, Zenjiro kept the accounts; $75,000 was paid to defendants at that time. I received the balance, by Mr Irwin's permission, from Zenjiro. That was the finish of that transaction and I sent it up to Yedo to Ito. I do not remember the exact sum. I know about the loan of $40,000 from defendant's to Ito. Zenjiro borrowed the $40,000 and I returned it. It was a cheque payable in dollars. I gave it into the hands of Isuke, a clerk of defendants. It was in the early part of the 10th month 4th year Meiji; Benzo went with me. I do not know on what bank the cheque was drawn. I received the cheque from Zenjiro, it was received from defendants. Benzo came to me and said he had been asked to make the two false entries, and requested me to make them. I told him I could not do it. Benzo particularly requested me to do it, and I sent for Ito. Ito came down and refused to have anything to do with it. Benzo again urged that the entries might be made as Irwin had particularly requested him to do it. Ito said, Defendants are a very important company and perhaps we had better oblige them. Then I took the book to Benzo's house and requested Saito Koske to make the two entries. I only put the half seal on the two entries. They were considered as only a temporary account. Benzo promised that corrected accounts should be made out without any delay. The entries in Japanese writing were first made in the book. I have never been requested by anybody to put the whole seal on those entries. I do not know of my own knowledge how Ito got back the book containing those entries. I have never made out any accounts bringing out such balances. I have never seen such accounts. I do not know how Irwin got those balances. The two entries are incorrect at the present moment. [Exhibit "B" shown to witness.] I have seen that document before ($40,000 promissory note.) I have often been to get that document back; I have been alone and I have been with Zenjiro. I requested Isuke to ask its return from Irwin, Isuke said, A ship is going away to-day and we are busy; come to-morrow. Every other time that I went I was told that it could not be found. I went and asked about it in the beginning of the 7th month last year, Ito was with me. I saw Futami there and he said I will look for it come in the afternoon. I went, and Futami said, I made a mistake it cannot be found, I went in the 9th month again about it and I saw Shosuke and demanded its return, but he replied, Really we can't find it. I did not see Iske at that moment, but we demanded a duplicate of the document from Shoske if it could not be found. Shoske said, You must go to my father Iske. I went to Iske and he said, You need not trouble yourself about that matter, I shall live a few years more and in that time the matter will be settled. He said an account had been sent from defendants to plaintiff in the 8th month, and that the item of $40,000 was in it. I went and looked over that account, and the item of 40,000 was entered in it on both Cr. and Dr. sides. The dates of its return were entered. [Exhibit "P" shown to witness.] This is the account I refer to.

Mr Ness admitted the accounts.

Cross-examined by Mr Ness:—I have spoken to nobody about this case since the adjournment at 12 o'clock. I have not spoken to Ito about it—not a word. I hurried away to eat my tiffin [account "P" shown to witness]. The last item on the debit sides is $1,600,433.39. I did not write that account. I know nothing about it. I have compared the account rendered by defendants with those of the plaintiff. It was the exchange account that was received from defendants. Mr Dickins has it [exhibit "P" shown to witness]. That is the account. I have seen other accounts rendered by the defendants. They were rendered in the 5 or 6th *month this year.* I do not know the exact date; Ito would know. *I think I have not* seen any account of defendants previous to exhibit "P." I had charge of the seal (Ito's) and made impressions of it when money was sent for from defendants during the partnership between Ito and Sobae. I went to defendants on the occasion of the $481,000 transactions. I never went to pay or receive money from defendants. I know something of the accounts of the Ito-Sobae partnership. I know that money went from that partnership to defendants. Zenjiro had something to do with that partnership. When I took the $40,000 cheque to defendants I did not get a receipt. I asked for the return of the promissory note and I am positive I said nothing more. I did not frequently leave money with defendants without getting receipts. In this case I was requested to call again owing to the pressure of business in the office. I know nothing about the account now shown me [exhibit "P."] Some items marked with a red seal I recognize; the others I know nothing about.

I have looked it over carefully but there are many items that do not agree with my accounts, those that do are marked with red. I saw the item of $1,600,000 and odd but I did not understand it. I was in Yedo at the time. I looked the account over, and so did Saito Kaske, but we could not understand many of the items. I declined to write the two false entries in book "D." because there was such a difference in the amounts. If a corrected account is shown it will explain the two entries. I refused to allow them to be entered in the book because Ito was not present. I saw them written. I believed them to be false entries when they were written. Ito consented to their being written, I had charge of his seal and was acting under his orders. I do not know the object of making them. I never enquired. I do not know how the figures were arrived at; I only know that we were requested to make them. At that time I did not know the state of the accounts between the parties in detail.

Court adjourned till 10 o'clock to-morrow morning.

Thursday, Sept. 16.

Uchida Rikichi, cross-examination continued: The half seals are only put on as a tally. The figures were entered there by request of the defendants. The object of the half seal is simply to identify the entries. [Book F 2 shown to witness.] The amount pointed out is correct. There is only a half seal; it is my fault that there was not a whole one.

The entry read, "Paid to Ito 651 rios, 2 boos, and 12 tempos," signed W. H. & Co., and dated 16th September, 1871. Other entries in books F 3 and 4 for $20,000 and $50,000 were here shown to witness, which were acknowledged by him to be correct, although only having the half seal. On the same page was also an entry of the receipt of $20,000 from Ito, also bearing only the half seal, which was admitted to be correct.

Cross-examination continued: I put all the seals on the entries in this book (exhibit C). [Exhibit C 4 produced, which bore a whole seal and a half seal.] The whole seal on C 4 was put on when the entry was made, on the 19th of the 8th month: F is the original of C. although they are not exactly alike. [Counsel for plaintiff admitted that certain other entries in F bore the whole seal.] I did not go to the defendants at the time of borrowing the $481,000, so I know nothing about it. I did not receive the money, but I put the seal on the note. I do not know if Ito asked Walsh, Hall & Co. to collect a Mito *Han* loan. I do not know anything about the collection from the Government, as representing the Mito *Han*, of any sums of money. I had interviews with defendants in the latter part of the 4th year of Meiji. I did not count them, and it is long ago, but there were many. There was never any conversation at that time about a settlement of accounts. I was not present when the alleged agreement was made about the rice speculations. Ito, Benzo, and Zenjiro were there. I have not often been to defendants' office since the end of the 4th year of Meiji. I went there during last year. I do not remember if I was there in the 5th and 6th years of Meiji. I have been banto to defendant. I was then called Naito Rikichi. I am his banto at present. [Paper handed to witness.] I do not recognise the handwriting on the document produced. It is Ito Huchibei's name. [Another paper handed in.] This is Ito's writing. [Document put in, and marked "defendants' exhibit B."] There are some characters in this letter which I cannot read I do not know what is meant by the expression in the letter "my old indebtedness to American No. 1." Ito can explain it. I have not seen an account from Isuke claiming $12,000 from Ito, as due to Walsh, Hall & Co., in the 5th year of Meiji. During the 8th month of last year I saw an account from defendants having some such an item in it. In the 7th month of last year I went to Ito's.

Murabayshi Hikoyachi, cautioned: I am dealing in wax and oil at present. In the 4th year of Meiji I was buying and selling dollars. I remember doing dollar business about the 7th month of that year for Benzo and Zengiro. I got the money from Benzo and Rikichi. I retained the accounts of these sales myself. They are in my possession. I gave information as to what I bought and sold to both Benzo and Zengiro. I understood that the defendants and the plaintiff had an arrangement for exchange transactions, and I was requested to manage the business and to keep the partnership as secret as possible.

Court adjourned until Monday, the 20th inst, at 10 o'clock a.m.

UNIVERSITY OF CALIFORNIA

IN H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

Wednesday, September 15, 1875.

STEPHENS *vs.* WATSON.

This was a claim for $15 for rent due. Defendant admitted the debt, but pleaded a counter claim for $75 wages due for the month of March, 1874.

J. Watson, sworn :—In March, 1875, I was in the employ of plaintiff as blacksmith. I left on the 26th March. My wages were $75 per month. When I left, I claimed the whole month's wages. When I asked plaintiff for the amount, he told me that I owed Mr. Pitman some money, and that he would not pay me. I left because Mr. Stewart, plaintiff's partner told me to clear out. I have never been settled with.

J. Stephens, sworn :—Two years ago I engaged Watson at $75 per month and found. Some days of the month of March, 1874 he was not sober, and my partner, Mr Stewart, and Watson fell out about his not attending to his work, and some time between the 20th and 30th Stewart gave him notice to leave. He was paid for the days he worked. I do not know the exact amount, but can tell by looking at my books. He has never spoken to me about the wages. This is the first I have heard of it. I let him the cottage on the 1st of May at $15 per month, payable at the end of the month. He was only there one month and left of his own accord. I have demanded the rent from him at different times, and he always said that he would pay to morrow, but as he never paid I threatened to take legal proceedings against him. He has never spoken to me about this claim.

His Honor said that he must give judgment for plaintiff, as defendant had admitted the debt. With regard to the counter-claim, plantiff had sworn that the amount had been paid; if defendant could however get any witnesses to substantiate his claim, he could take proceedings against plaintiff to recover the amount. Judgment for plaintiff, the amount $15, with costs, to be paid within eight days.

IN HIS PORTUGUESE MAJESTY'S CONSULAR COURT.

Before H. P. M.'s Consul-General.

SEPT. 18, 1875.

CAMPBELL *versus* DA ROZA.

This was a motion on affidavit praying that the defendant be called upon to furnish due security not to leave the country pending the hearing of this suit, which is brought to recover a sum of $26,000 or thereabout, for breach of contract.

The affidavit alleged that the defendant had evaded an amicable arbitration, that a hearing of the case had been unobtainable by reason of the Consul-General's illness, and that unless defendant were made to give sufficient security, he was likely to leave the country and not appear to defend the suit. Further, that criminal proceedings were being prepared against him, and that he had stated "he had purchased his Consul-General" by means of a loan.

After filing the motion and affidavit

His Honour granted the motion.

H. B. M. SUPREME COURT SHANGHAI.

On Appeal from Her Majesty's Court at Kanagawa.

BEATO—Appellant,

and

DAVISON—Respondent,

JUDGMENT.

It has seldom been my duty to read or listen to an argument of a professional man, in which was displayed such an entire absence of professional feeling as is disclosed in the argument of Appellant's Counsel in the Appeal I am now considering; and at one time I determined to send the Appeal back, and refuse to consider it until ample apology had been made for the tone and style in which the argument was conceived. It is never to the credit of Counsel to forget that they are members of an honourable profession from which the Judges of the land are chosen, and to endeavour to lower the credit of the Bench by personal attack upon those who preside on it. And it argues very badly for both the knowledge and feeling of a professional man if, when irritated at losing a case, he attributes his loss or his mischance to the partiality of the judge. The present argument is full of the grossest charges and innuendoes against the learned judge who presided at the trial. At p. 5, for example, he says "the respondent, with the aid of the "learned judge, wins his case against the Bank by swearing, etc." Now to charge a judge with assisting one party in a case to win it is about as gross a charge as could well be made, against any one, because it impeaches the impartiality of the judge, and insinuates that except for the assistance of the judge, the party assisted would have lost his case. Then again with reference to the charge that the judge refused a special Jury, it implies, first, that under the procedure of the Court, it was competent to summon a special Jury, when, if the Counsel for the Appellant knows anything of the procedure of the Court, he must be aware that there is no machinery for summoning a special Jury. And it implies in the second place that the judge purposely refused a special Jury in order to favour one party—an inference supported in another portion of the argument, where it is stated that if the application for a special Jury had not been refused, the result might have been different. Again it is stated that "the "Judge improperly prejudiced the Jury against the Appellant "by ruling, etc." The inference of such a statement is too obvious to need comment. These are some only, perhaps the most flagrant, of the instances of the misconduct of the Appellant's Counsel in this respect, I do not care to enter more fully into the details of a line of conduct which I hope is, and which in my experience of twenty seven years is, unprecedented among professional men; and it is only out of regard for the interests of the parties and to save them any addition to the enormous expenses which they have been unnecessarily put to, in the settlement of a very simple question, that I do not send the case back in order that the offensive portions of the Appellant's argument be expunged or apologised for. On the merits of the case itself, I am inclined to think, with regard to one item, the Jury were wrong in finding for the respondent. It is clear to my mind that it was in consequence of the action brought by Mr. Davison against the Bank, that the Bank found themselves constrained to insist on the balance of the goods remaining in his hand being returned to them. It was not therefore the Appellant who withdrew them, but the withdrawal was the necessary consequence of Mr. Davison's own action against the Bank, and he therefore cannot recover as against the Appellant any commission in respect of such goods. The verdict therefore must be reduced by the sum of $4,393.75.

There will be no cost of the Appeal.

EDMUND HORNBY,—*Chief Judge.*

—*Celestial Empire.*

THE LATE PROFESSOR CAIRNES.

(The Academy.)

Professor Cairnes has been laid to rest with extraordinary honour. No other author's death in our time, save Mr. Mill's, has called forth so strong and general an expression of feeling; and Mr. Mill had been a leader of a philosophical school for a generation, and for several years a distinguished and active member of Parliament, while Mr. Cairnes had resided in England only for a few years, during the greater number of which he was the victim of a cruel malady which secluded him from the world and deprived him latterly even of the use of his pen. It is but thirteen years since Professor Cairnes, then holding a chair of Political Economy in Ireland, and known only to a few of the more studious economists in England, suddenly attained a wide celebrity by the publication, at the most critical moment in the American civil war, of *The Slave Power*; one of the most masterly essays in the literature of political controversy, and, even now that American slavery is extinct, one of the most instructive and interesting treatises which students either of politics or of economics can find in the English language. The progress of economic science, and the changes in the views of economists, of which there are indications all over Europe, may disturb some of the conclusions of Mr. Cairnes's other works, but *The Slave Power* will ever defy criticism; and no serious answer was attempted to be made to it, even when the war was at its height, and when the Southern States had the sympathy and support of some of the most powerful organs of the English press. The practical object for which *The Slave Power* was published has been triumphantly accomplished, but it had also a philosophical purpose which gives it a permanent value as an economic classic, for its subject was originally selected by Mr. Cairnes for a course of lectures "to show that the course of history is largely determined by economic causes." The skill and ability with which this purpose was carried into effect will, we believe, make future economists regret more and more as their science advances that Mr. Cairnes did not in his subsequent works develope another side of the relation between history and political economy, namely,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the connexion between the whole social history of a country and its economic condition as one of the phases of the entire movement, and not as the result of a single principle or desire.

Befor the publication of *The Slave Power*, two essays in *Fraser's Magazine*, "towards the Solution of the Gold Question," had attracted the attention of economists in this country, especially Mr. Mill, to Mr. Cairnes's remarkable talent for deductive reasoning and exposition in economics. We think for our own part, and we have reason to believe that such was subsequently Mr. Mill's view, that in his practical conclusion Mr. Cairnes took insufficient account of the influence on prices of the acquisition by France, Germany, and other continental countries of the power of production and communication by steam, contemporaneously with the diffusion of the new gold; but those who dissent from the proposition that prices have risen more, since the discovery of the new gold mines, in England than in any continental country, will nevertheless find nothing to dispute in the principles which Mr. Cairnes applied with consummate skill to the solution of the problem. The causes which have raised prices on the continent so greatly above their former low level are causes of the same order with those whose operation Mr. Cairnes discussed in relation to England.

Although an invalid, impeded in every physical movement by the malady from which he suffered, Mr. Cairnes took an active, though sometimes an unseen, part in the discussion of all the chief political controversies in this country during the last ten years, especially the Irish land question and Irish University education; and to him more than to any other single person it is due that University education in Ireland is not now under the control of an Ultramontane hierarchy, and that some of the chief subjects of historical and philosophical study have not been banished from the University of Dublin and the Queen's Colleges.

Last year, although then no longer able to write with his own hand, Mr. Cairnes published his *Leading Principles of Political Economy newly Expounded*, a work which ought to be regarded, even by those who dissent most from some of its principles, as an important contribution to economic science. To state with the greatest possible clearness and force the reasons for espousing one side of a scientific controversy, is to render one of the best services to those who seek to know all than can be said on both sides. And if any position which Mr. Cairnes takes up is unsuccessfully maintained, the student may feel assured that if literary and dialectical skill could have defended it, it would be impregnable. The second edition of Mr. Cairnes's *Logical Method of Political Economy*, which has recently been published, and which we hope on a future occasion to reviw, ought in like mannar to be welconmed by those economists who incline to the inductive or historical method, not only for the intellectual interest which the reasoning of a powerful mind must always excite, but also as a masterly exposition of the deductive method, and a complete presentation of all than can be said for it or got out of it.

We have no words to express our admiration of the heroic fortitude and public spirit without which no amount of intellectual power would have enabled Mr. Cairnes, under sufferings of the most prostrating kind, to maintain so high a place in the philosophical and political history of his time as that which is assigned to him by universal consent. His moral as well as his intellectual qualities won for him the reputation which has now become historical. T. E. CLIFFE LESLIE.

Shipping Intelligence.

ARRIVALS.

Sept. 13, *Naples*, British steamer, Flindt, 1,470, from Shanghai Sept. 8, General, to Jardine, Matheson & Co.

Sept. 14, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Mails and General, to M. M. Co.

Sept. 15, *Nevada*, American steamer, Williams, 2 145, from Shanghai and ports, Sept. 10, Mails and General, to P. M. S. S. Co.

Sept. 16, *Colorado*, American steamer, Connolly, 3,727, from Hongkong, Sept. 8, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Sept. 10, *Benjamin Sewall*, American ship, Pennell, 1,433, Destination uncertain, Ballast, despatched by Captain.

Sept. 11, *Oceanic*, British steamer, Jennings, 5,050, for San Francisco, Mails and General, despatched by O. & O. Co.

Sept. 11, *Ocean*, British steamer, Brown, 2,652, for Kobe and Nagasaki, Ballast & General, despatched by Jardine, Matheson & Co.

Sept. 13, *Caroline*, German 3-masted schooner, Paulsen, 370, for Chefoo, Ballast, despatched by Captain.

Sept. 15, *Malacca*, British steamer, Bernard, 1,698, for Hongkong, Mails and General, despatched by P. & O. Co.

Sept. 16, *Ukraine*, American barque, Melcher, 709, for Nagasaki, Ballast, despatched by Captain.

Sept. 18, *Colorado*, American steamer, Connolly, 3,740, for San Francisco, Mails and General, despatched by P. M. S. S. Co.

Sept. 18, *Niigata Maru*, Japanese steamer, Walker, 1,090, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Sept. 18, *Costa Rica*, American steamer, Conner, 1,917, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

PASSENGERS.

Per *Oceanic* from Hongkong.—Mr. and Mrs. W. Waddel, Messrs. Bennet, W. Graham. Chapman, T. Collins and Gibson in the cabin, and 163 Chinese in the steerage.

Per *Oceanic*, for San Francisco.—Mr. and Mrs. Waddell and Master Waddell, Mr. Bennett, Mr. S. R. Groom, W. T. Groom, Dr. Rein, Thos. Barr, A. Higginson, Ed. Gammar, J. Benavides, J. F. Twombley and wife, and 2 children. Mrs. Gibson, Mrs Chapman, Mrs. Stanford, Mr. Graham, J G. Meyers, T. A. Addicks, U.S.N., G Janlin, J. M. Kennedy, H. Blass.

Per *Nevada* from Shanghai and ports.—Paymaster Stevenson, U.S.N, W. Muirhead, E. J. Soder, S. Douglas, J. Millisch, and 23 Japanese in the cabin, and 2 European, 433 Japanese in the steerage, for Yokohama. For America.—J, S. Benson in cabin, and 2 Chinese in steerage.

Per *Malacca*, for Hongkong.—Mr. Moffatt, Campbell, H. Heinemann, W. Brown, W. Haswell, J. Wilkie, A. J. Davison, W. Edwards, Petermann, Sedgwick.

Per *Volga* from Hongkong.—Mr. and Mrs. Charles, Otei Takasaburo, Madame Lutzemberger and child, Mr. and Mrs. Antony, Messrs. Bolmida, Montalberto, Sala, Imberti, Pini, Gerosa, Rossi, Ragnoli, and Terreni.

Per *Colorado* from Hongkong. For Yokohama.—Messrs. J. W. Lowe, Antonio Williams, W. H. Taylor, and servant, F. G. Apcar. For San Francisco.—Mrs. Dulin, and child.

Per *Niigata Maru* for Shanghai and ports.—Mr. and Mrs. Wakajima, Messrs. P. Nott, D. D. de Segonzac, Yamanouchi, Migami, Masuno, Yamakawa, Mr. and Mrs. Muirhead, Dr. Renwick, Mrs. Ginsberg, Mr. and Mrs. Fishe. Mr. and Mrs. Galt, and 2 children, Messrs. Taylor, E. Major, H. Moss, Nicolayson, and Hanayone, 233 Japanese, 5 Chinamen, and 1 European in the steerage.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—A good general business has been done during the closing week, and in some instances a further advance has been established. This is more especially noticeable in Yarns.

Grey Shirtings:—					White Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce.	$1.97½ to $2.05	60 to 64 reed	40 yds.	35 in.	nom. per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„ nom.	2.30 to 2.65	Turkey Reds	24 yds.	30 in.	2¼—3 lb. per lb.	0.75 to 1.02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ „	2.30 to 2.65	Black Velvets				8.75 to 10.00
9 lbs.	38½ „	44 in.	„	2.55 to 3.00	English Drills	15 lb.	40 yds,	30 in.	3.30 to 3.40
					Taffachelass		13 yds,	43 in.	2.50 to 2.70

Cotton Yarn.—

No. 16 to 24	per picul	$30.00 to 35.50	No. 38 to 42 per picul	$41.50 to 46.00
No. 28 to 32	per picul	$36.50 to 41.50	Reverse Twist 16-24 „	$36

Woollens.—Business in *Woollens* during the past week has been extremely restricted, with the exception of *Mousseline de laines*, of which large quantities have been moved at rather hardening prices. Rates for other goods remained unaltered.

Plain Orleans	40—42 yds.	32 in.	6.25 to 7.80	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.75 to 5.50	Multicolored „	30 yds.	30 in.	0.32 to 0.36
Italian Cloth	—30 yds.	32 in.	0.25 to 0.34	Cloth, all wool plain or fancy	48 in. to 52 in.		8.00 to 1.20
Camlet Cords	29—30 yds.	32 in.	6.25 to 7.25	Presidents	54 in. to 56 in.		7.00 to 0.80
Camlets Asstd.	56—58 yds.	31 in.	18.50 to 19.00	Pilots	54 in. to 56 in.		0.45 to 0.52½
Lastings Japan	22—30 yds.	32 in.	13.00 to 14.50	Union	54 in. to 56 in.		0.60 to 0.70
Plain Mousseline de Laine	—30 yds.	30 in.	0.18½ to 0.20½	Blankets, scarlet & green	7 to 8 lbs.	per lb.	0.40 to 0.42½

Sugar.—We have no sales of *Formosa* to report in the closing week. *China Sugars* are in heavy stock and the market is very quiet.

Kerosene Oil.—An advances has been established since our last quotations.

Sugar:—Formosa in bag	per picul	4.50 to 4.60	China No. 5 Kong-fun	per picul	4.70 to 5.30

„ No. 2 Ching-pak	„	7.20 to 7.70	Daitong	„	3.30 to 3.80
„ No. 3 Ke-pak	„	6.20 to 6.60	Japan Rice	„	3.25 to 3.30
„ No. 4 Kook-fah	„	5.50 to 5.90	Kerosine Oil	per case	2.50 to 2.55

EXPORTS.

Silk.—Since the 6th inst., arrivals are 987 bales, and settlements may be estimated at about 900 bales. Not only is there no trace left of the weakness in prices reported at the end of last week, but there is a decided upwards tendency for all sorts: $485 has been paid for best Hanks, and $600 for superior Kakeda.

Tea.—Prices have ruled somewhat easier in the week which closes but we can as yet make no change in quotations. The settlements for the week are estimated at 5,700 piculs.

Common	$20.00 to 23.00	Fine	$36.00 to 38.00
Good Common	24.00 to 26.00	Finest	$39.00 to 42.00
Medium	28.00 to 31.00	Choice nominal	$45 and upwards; very scarce.
Good Medium	32.00 to 34.00		

EXCHANGE AND BULLION.

Exchange.—There has been very little doing during the past week in either Bank Bills or Private Paper, rates having again slightly fallen.

Gold Yen, are somewhat higher, and a few have again been exported.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 1d.	On Hongkong—Bank sight	Par.
„ Bank Bills on demand	4s. 0½d.	„ Private 10 days' sight	¼ per cent disct.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 39.] YOKOHAMA, SATURDAY, SEPTEMBER 25, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

We desire to record our protest against the reported intention of the British Government to ask or accept an indemnity in the form of money from the Chinese Government for the murder of the late Mr. Margary in the province of Yunnan. We are of opinion that the demand or acceptance of money under such circumstances is derogatory to the character of the English nation, and to the dignity of its Government, and is only justifiable in cases where any British subject so murdered, being unconnected with the Government service, has had relatives dependent upon him, as wife, children, father or mother. We are of opinion that the honour of the British nation and the safety of British subjects will be better preserved throughout the world by a conviction that no sum of money whatever is any equivalent for an Englishman's life, be his rank what it may, and that punishment of a far more severe nature than pecuniary mulct inevitably awaits that Government at whose instigation, or by whose connivance, that life is taken.

There has been some disquiet in the capital this week, and there are rumours of important changes in the Cabinet. If Kido and Itagaki have resigned, it can only be for very important reasons connected with questions of home policy. The Satsuma men are making themselves prominent, and are said to be protesting strongly against the present progressive policy of the Government. A movement is on foot to reduce the number of officials in the public offices, who are undoubtedly too numerous, and to diminish the expenses of the Government. The payment of the *Shidzoku's* pensions is stirring the public mind. All feel that the Land-tax is too heavy, and that the only means by which any large measure of relief can be obtained is by cutting down the pension lists.

The Revd. Sholto D.C. Douglas, Vicar of All Saints, Derby, has been holding some special services in Christ Church, which have been fully attended. He has come here on a gracious errand, with no thought but of the good he might be the means of doing. Of his earnestness, sincerity and zeal there can be no question, and it is idle to doubt that many have derived satisfaction and encouragement from his preaching. His reception, however, has been far from gracious. The newspapers have abused him and his work with zealous unanimity, though, we ought to say, entirely by means of anonymous communications. This very unworthy and ungenerous mode of making personal attacks has been in full play, nor can it be said that its results have been very satisfactory. Strong arguments may be adduced in favour of representing public opinion in all its phases, and we should be the last to deny their strength: arguments, too, of equal strength may be adduced in favour of anonymous writing—a matter on which we have said a few words elsewhere. But it certainly cannot be pleaded that the exhibitions produced by these two desirable forms of freedom, have been at all edifying; rather, indeed, have they been more unsatisfactory than anything we should have imagined possible in a settlement where the main force of public opinion is certainly English in its character.

The believers in the theory that anonymous writing conduces to the benefit of the commonwealth, have had what the Americans call "a bad time" during the past fortnight. It is of course conceivable that society in a certain state secretes poison in certain definite proportions, greater or less according to the strength of the exciting cause and the concomitant circumstances, and that some means of carrying this off is absolutely necessary.

Leaving metaphor, however, it seems well to stop for a moment and enquire how far the system works well in a place like this. Speaking generally, and referring to conditions of society which are sound and healthy, in which the organs of public opinion are in the hands of gentlemen—men, we mean, of equally good feeling and education,—where the sentiment of personal honour is strong, and a mean or cowardly action is a disgrace, we are for anonymous writing. In England the system works perfectly, as it does in most English colonies or settlements abroad. But let us see how it works here. We will appeal to the facts.

A clergyman, whose church at home is under repair, and who has an urgent call from an old friend, a bishop in India, gets leave from his own bishop to make an eastern journey—which he could not do without shewing very good cause—visits Madras, and is advised there to extend his tour, in view of the good he may possibly do further east. He preaches everywhere on his way, and thousands are grateful for his advice, assistance and encouragement. He comes among us with no thought but of our good. He bears the charges of his own journey, and is invited, by those who have the power to extend the invitation, to hold special services in our church. He preaches on Sunday. On Monday evening the anonymists open fire. One plainly tells him he is guilty of malversation of the funds derived from his own parish, which he ought to spend there and not here, the simple fact being that the provision made for looking after his benefice during his absence absorbs not only the revenues derived from it, but £100 a year besides. Another makes no scruple whatever of attributing to him words in the pulpit which he never used, and which no man of really good sense and good feeling would ever have supposed that he could have used, or certainly never would have charged him publicly with using until he had carefully verified them. To men of this class, it is the pleasure o
